Jets or Turboprops? Airlines Face Big Decision

- Orders must be placed within next few months
- American signs $65-million order for 35 Lockheed 310s

By ROBERT LOEBELSON

TOP EXECUTIVES of the world's major airlines last week were faced with a decision they had postponed as long as possible. They not only had to choose between turboprop and turbojet transports, but also were compelled to place their orders within the next few months or lose ground competitively.

The stimulant came in the form of two announcements within 24 hours of each other:

• American Airlines signed a $65-million order with Lockheed Aircraft Corp. for 35 turboprop transports.

• Douglas Aircraft Co., which lost out to Lockheed in the AA turboprop competition, announced it would go ahead with construction of the DC-8 turbojet.

Certain to follow AA with orders in the very near future were two other carriers included in the so-called Big Four—Eastern Air Lines and United Air Lines.

• EAL board chairman E. V. Rickenbacker has indicated Eastern wants at least 100 turboprops delivered by 1960 that are capable of flying 425-450 mph on ranges up to 2,500 miles. He says Eastern expects to pay $250 million for the planes, plus an additional $50 million for facilities and equipment to handle the turboprops. EAL's requirement, however, is beyond the capabilities of the Lockheed Electra ordered by American.

• UAL president W. A. Patterson has said United's next long-range transport will be a turbojet and that the order will be placed within the next few months. United traditionally has been a Douglas customer, so no one would be surprised if it places an order with Douglas.

Another member of the Big Four, Trans World Airlines, had tried to buy a turboprop-powered version of the Lockheed Constellation, the Super G. But the Pratt & Whitney T34 engine could not meet the required performance specifications in time. As a result, TWA placed a $70-million order for 24 Model 1649s, using Turbo Compound piston engines, in April. The L-1649 can be fitted with turboprops when they become available.

Meanwhile, a report was heard that Howard Hughes, principal TWA stockholder, had started discussing a jet transport with Convair Division of General Dynamics Corp. However, J. G. Zevely, Convair's director of sales and contracts, who admitted that his firm is interested in developing a jet transport for either commercial or military use, said no discussions have taken place. "We would be delighted to have the opportunity to talk about such an airplane with Mr. Hughes, but the rumor that discussions have already started is without foundation."

• The American order for a turboprop was the result of a competition in which Convair, Douglas, Lockheed and Vickers participated (AMERICAN AVIATION, Jan. 31). When the range requirement was increased from 750 to 2,000 miles, only the Douglas and Lockheed entries remained. In ordering the Lockheed model, American (also a traditional Douglas buyer) gave the Burbank company its first AA order since the early 1930s when Lockheed Orions were used in mail service by what was then American Airways.

AA's anouncement of the order did not say that the engines used on the Electra would be the 3,750 hp. Allison 501 (T56s) used in Lockheed's design proposal. It was explained that the new plane is designed to use engines as high as 5,000 hp (possibly the Rolls-Royce RB-109) with few modifications.

Features of the Electra include "built-in" loading steps (consequently eliminating the need for "roil-up" loading ramps), provisions either to check or carry luggage aboard, an interior "several inches wider" than any transport now flying and resultant wider seats, and each seat will have its own table for eating or writing.

• New soundproofing techniques will reduce noise in the cabin and sightseeing windows (20 by 16 inches) will give passengers improved visibility. Weather avoidance radar and autopilots will be standard equipment. AA also says the reversing propellers will permit the Electra to operate from airports having 5,000-ft. runways without difficulty.

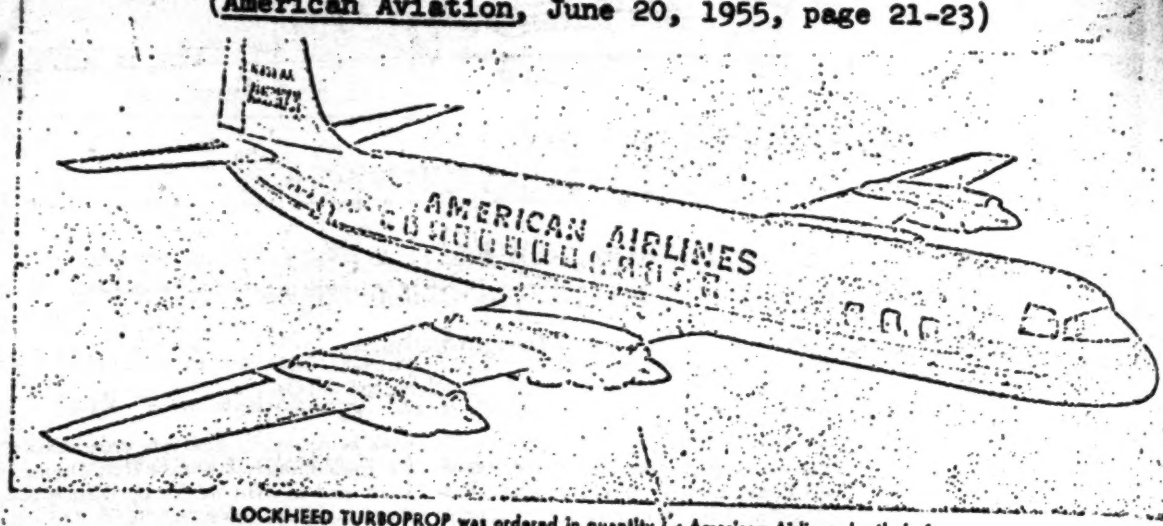
The DC-8, which may also be ordered by American, will be ready for

Lockheed Electra Specs

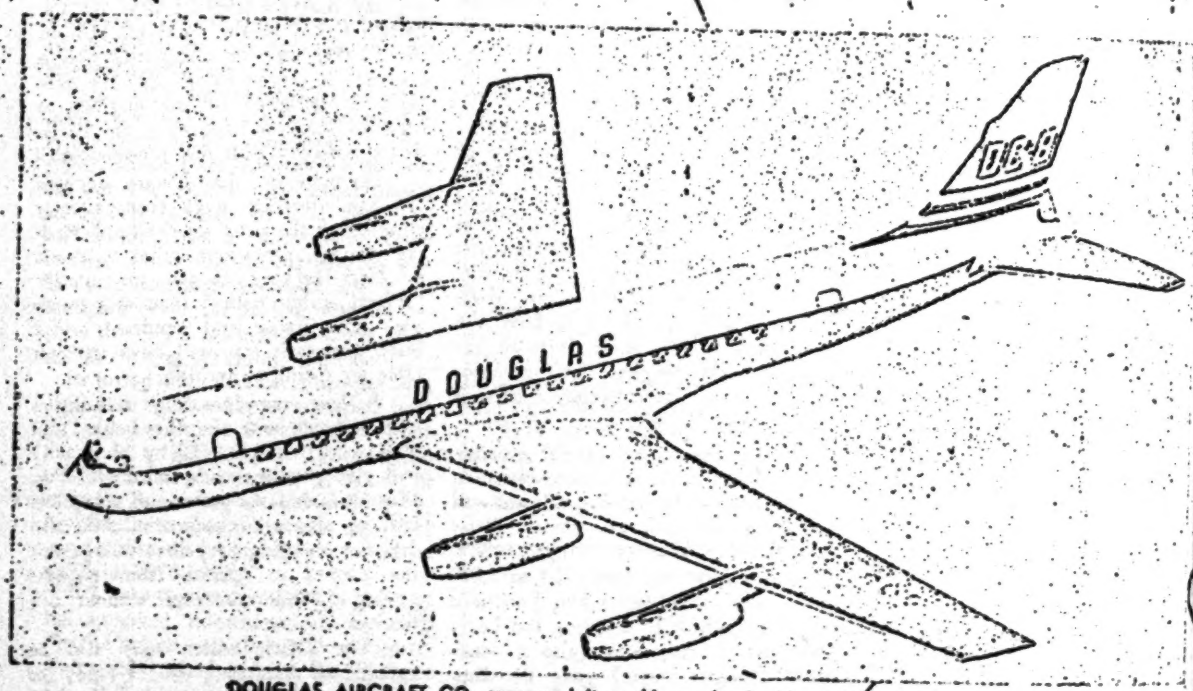
Design and performance data on the new Lockheed CL-310 Electra, 35 of which are to be delivered to American Airlines between the end of 1958 and mid-1959, include:

Gross Weight	[illegible],500 pounds
Cruising speed	[illegible]er 400 mph
Range	2000 miles
Seating capacity	64 plus 6 in lounge
Fuel capacity	4178 gallons
Cargo space	400 cu. ft. excl. of baggage space
Cargo capacity	4000 pounds
Cruising altitude	Up to 30,000 ft.
Powerplants	Undecided—design based on Allison T56
Length	101 ft. 4 in.
Wingspan	95 ft.
Overall height	34 ft.
Crew	5 (2 pilots, flight engineer, and 2 stewardesses)

(American Aviation, June 20, 1955, page 21-23)



LOCKHEED TURBOPROP was ordered in quantity by American Airlines shortly before . . .



DOUGLAS AIRCRAFT CO. announced it would go ahead with its DC-8 four-jet transport.

its first flight tests by December 1957, Douglas says, and airline deliveries will start in 1959.

The Santa Monica company made no reference to a prototype in announcing the go-ahead signal from the board of directors after a special meeting, indicating that Douglas will follow its usual procedure of starting with a production model. Full certification, according to estimates, could be completed by late summer 1959, and Douglas will probably have 12 or 15 ready for delivery at that time. No price was mentioned for the DC-8 but a figure of $4.5 million is said to be very close.

• Douglas has been working up the DC-8 for more than three years and the company's total investment to date, including the cost of preparing for the USAF's jet tanker competition, is placed at "several million dollars."

There are now at least three aircraft companies in the world with long-range jet transports beyond the paper stage:

• de Havilland in Britain with its Comet IV.

• Boeing at Seattle with its Model 707.

• Douglas at Santa Monica with the DC-8.

The British firm is struggling to retrieve its reputation, seriously damaged after a number of accidents to earlier Comets last year, and orders for the Comet IV (except from British Overseas Airways Corp.) have been slow coming in.

Boeing is hampered by its military commitments on the KC-135 jet tanker and is having difficulty in getting

nization for a commercial version of the advanced 7o7.

Douglas has no obligation to USAF, and therefore appears to be in a position to deliver the DC-8 first.

• Like the Boeing KC-135, the DC-8 uses four advanced Pratt & Whitney J57 turbojets mounted in pods. These engines, Douglas says, will give the DC-8 a cruising speed of 550 mph. The plane will carry between 80 and 125 passengers.

Overseas version of the DC-8 will have a maximum gross weight of 257,000 pounds, the domestic model 211,000 pounds. The plane will be able to operate from present airports "at costs even lower than current passenger models." Wingspan is given as 134.6 feet, length 140.6 feet, height, 40.2 feet.

Typical flight times of the Douglas jet were given as New York-Paris 6 hours 32 minutes; San Francisco-New York 4 hours 53 minutes; San Francisco-Honolulu 4 hours 23 minutes.

Thus, the long-delayed jet/turboprop era has arrived for U.S. and foreign flag carriers. Britain took the lead with the jet Comet and the turboprop Viscount but the two largest U.S. commercial plane builders have closed the gap. From here on, Burbank and Santa Monica are convinced, the world's airlines will have to start placing their orders.

Air Force Asks $60 Million More For Research and Development

By FRANCIS J. KEENAN

Growing Congressional concern over apparent inadequacies in military research and development programs—highlighted by vigorous Hoover Commission charges—has resulted in some action.

Air Force took the first step last week when it asked the Senate Appropriations Committee for an additional $60 million for "emergency" research and development programs.

The request was unexpected, coming as it did with the Administration's special request for funds to finance the AF speedup in B-52 production.

And while no "new money" is involved—it includes authority to transfer $60 million from another category into the R & D budget and restoration of a $10 million House emergency fund cut—the move did reflect awareness of growing Soviet airpower and recognition of Congressional doubts about the program.

The Hoover Commission report landed fortuitously in the middle of the Congressional furor roused by the first, cryptic Defense Department reports May 13 of Soviet gains. The Commission study, presumably already prepared, arrived two weeks later. In the meantime, several Senators were voicing complaints about U.S. progress in the development of advanced aircraft and missiles.

Sen. Stuart Symington (D-Mo.) estimated the USSR was ahead in work on the "ultimate" weapon, the Intercontinental Ballistic Missile. Sen. Richard Russell (D-Ga.), chairman of the Armed Services Committee, asserted that Defense R & D programs were "too scattered" but "might be sufficient" if better coordinated.

Sen. Henry M. Jackson (D-Wash.) emphasized qualitative requirements in secret hearings before his Military Applications subcommittee of the Joint Atomic Energy Committee.

Sen. Warren Magnuson (D-Wash.) blasted the Defense Department for its "failure" to recognize the role of R & D in maintaining airpower, which he said was reflected in too little training of scientists and too modest programs in developing new weapons and procedures.

The Hoover Report appears to confirm and elaborate on these charges. It warns that "the Armed Services are not sufficiently daring and imaginative in their approach to radically new weapons and weapon systems." It said even stepped-up R & D programs may be too late to maintain U.S. supremacy in weaponry, while current levels are entirely inadequate.

It maintains that Defense Department organization failed to provide sufficient opportunity for new approaches in weapon development. And it notes that "informal proddings" by civilian scientists and technologists accounted for most advances.

The Commission emphasizes that U.S. defense efforts depend basically on the success of its research programs. Therefore, it recommends these things are needed:

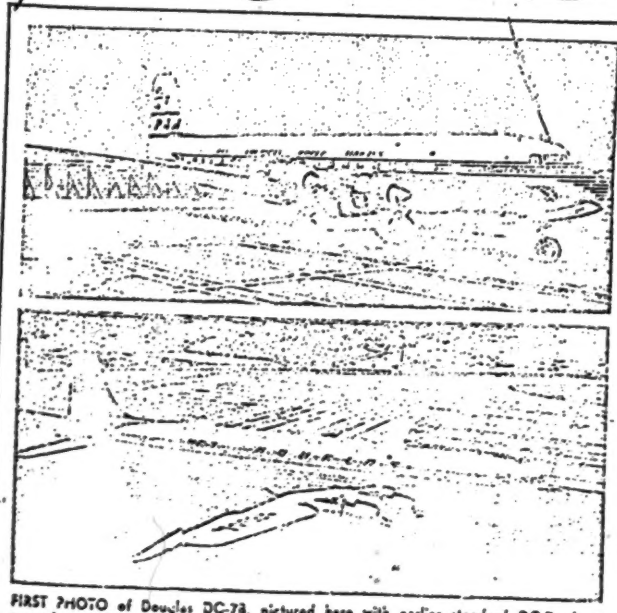
• Increased integration of R & D programs.

• Better personnel policies designed to keep military and civilian experts on the job.

• Greatly increased attention to basic research.

• More effective utilization of the nation's scientific and technical communities and private research facilities.

• An overall strengthening of the



FIRST PHOTO of Douglas DC-7B, pictured here with earlier standard DC-7, shows new wing saddle tanks fitted on Pan American's aircraft. Official difference between DC-7 and DC-7B is new Wright DA4 Turbo Compound engine. PanAm's DC-7Bs will have the extra-range tanks, but Eastern Air Lines' aircraft will not. PAA's airplane is approved for 126,000 gross takeoff weight, whereas EAL's is approved for 122,200 and Panagra's for 125,000 pounds.

(American Aviation, Sept. 12, 1955, pp. 84-85)

Airlines Weigh Jet Decision: DC-8 or 707?

Design vs. delivery advantages pose competitive problems; Pentagon security policy hurts foreign carriers.

A LARGE-SCALE jet transport buying spree by U.S. and foreign airlines has been temporarily sidetracked by behind-the-scenes jockeying by carriers for best competitive position in the future jet race.

Although firm jet orders from major U.S. airlines are still expected within weeks, and most certainly before the year-end, competitive aspects of the two available aircraft—Boeing's 707 and Douglas' DC-8—have created an unprecedented equipment procurement situation.

Carriers such as American, Pan American, Eastern and United, representing a market for about 100 jets, are weighing answers to the big question: Which aircraft will it be? Forcing the competitive equipment aspects right close to home is a fifth big airline, Trans World Airlines, historically a lone wolf in aircraft buying through its principal stockholder, Howard Hughes.

What the four carriers are now pondering boils down to a choice between the airplane they favor and a delivery schedule that will put them up front in jet operation.

• If they decide on the DC-8, fear is that Hughes would immediately step into the picture with a Boeing 707 order for TWA and gain a 1½ to two-year competitive edge in jet introduction in airline service.

• Should the decision favor the Boeing 707 to erase this threat, apprehension continues to exist as to whether they are getting the best jet buy for commercial airline service. First sign of this uncertainty came to light recently in a statement by United Air Lines' president W. A. Patterson.

Commenting on the relative merits of the two aircraft, Patterson noted that although the Boeing 707 prototype has been flying for a year, it has been built for military order. The DC-8, he said, is still in the design stage and is more flexible for tailoring to airline requirements.

General feeling among airline engineers is that any transport design being built primarily for military use is bound to suffer many hidden penalties in weight and performance when adapting it as a commercial transport vehicle.

A second factor that makes carriers hesitant to go "whole hog" for the 707 is the wealth of transport experience they have amassed in the postwar period with Douglas equipment, as contrasted with only limited experience by a few carriers with Boeing 377 Stratocruisers.

A third big element in the whole competitive scheme is that the high cost of jets makes it most profitable for the big carriers to deal with one manufacturer in order to realize the lowest per-unit costs possible. However, failure of one major airline to go along, as in the case of the Hughes-TWA combine, relegates the matter of pooled orders to an almost insignificant role.

• As a result, heads of two major airlines, C. R. Smith of American and Juan Trippe of Pan American, are reportedly in day-to-day discussions attempting to resolve their future course of action in an investment that could make or break their respective companies.

On the foreign airline scene, although it is taken for granted that orders from abroad will closely follow those of U.S. carriers, another obstacle has loomed. Negotiations for jet transports by these airlines, because of military security limitations of the classified Pratt & Whitney J57 engine, do not enjoy the same free exchange of performance data as do those of U.S. airlines.

For example, in dealing with a foreign airline, Boeing is permitted to give overall performance data on the 707 with J57s but cannot give details on engine performance. In theory, however, Boeing today can sell 707s to foreign airlines complete with J57s and the carrier could find out all there is to know about the engine.

By way of contrast, security-cleared U.S. carriers can learn all there is to know about J57 engine performance, a situation which foreign carriers feel represents a decided competitive advantage in negotiations for jet transports.

Attitude among aircraft manufacturers, here, as expressed by one official, is that the disadvantage, if it exists at all, is purely academic. Reason is that even if a foreign carrier were to order a jet today, it couldn't be made available until long after security wraps have been removed from the engine in question.

• The fact remains, however, that newly adopted Pentagon policy, which sets an arbitrary date on when classified jet engine data can be released, (see chart) gives U.S. carriers a full year's edge over foreign airlines in access to performance information as well as eligibility for delivery of any classified engine.

In the case of the J57 engine, which

How Pentagon Releases Jet Engine Data

New Pentagon policy of July 22 (Directive 5030.19) sets this release schedule for data on turbojet, turboprop and turbofan engines for commercial operation. Directive provides that changes in the international situation may either accelerate or retard release of data on a particular engine.

Type of Release	To Cleared U.S. Mfgrs.	To Cleared U.S. Airlines	U.S. Airline Operation	Foreign Airlines	Foreign Engine & Airplane Mfrs.
Prelim. Performance & Installation Data	After 50-hr. FRT	After 150-hr. ET	1 yr. after 150-hr. ET	1 yr. after 150-hr. ET	1 yr. after 150-hr. ET
Complete Performance & Installation Data	After 50-hr. FRT	1 yr. after 150-hr. ET	3 yrs. after 150-hr. ET	3 yrs. after 150-hr. ET	3 yrs. after 150-hr. ET
Delivery for Prototype Aircraft (Opn. and Maint. Data Only)	After 150-hr. ET	1 yr. after 150-hr. ET	2 yrs. after 150-hr. ET	3 yrs. after 150-hr. ET	3 yrs. after 150-hr. ET
Delivery for Production Aircraft & To Airlines	2 yrs. after 150-hr. ET	2 yrs. after 150-hr. ET	3 yrs. after 150-hr. ET	4 yrs. after 150-hr. ET	4 yrs. after 150-hr. ET
Production & Manufacturing Drawings	.....	.....	.....	.....	4 yrs. after 150-hr. ET

Notes: 50-hr. FRT—50-hour preliminary flight test rating.
150-hr. ET—Service approval of 150 hr. endurance test portion of engine qualification test.

received service approval of its 150-hour endurance test in July 1953, the magic date for release of data to foreign airlines comes in July 1955 and delivery of 707s to these carriers can start in July 1957. Since both dates precede any possible delivery of jet planes to either U.S. or foreign airlines, any advantage to U.S. operators by the one-year edge in Pentagon timing is obviously nullified.

• Big question, however, is whether this will continue to be true of future engine developments. Since most foreign carriers now involved in the purchase of U.S. transports are similarly associated with the U.S. in mutual defense activities, there appears to be equal question whether the penalty imposed on foreign airlines is not one borne of U.S. airline political pressures rather than of military necessity.

Last question to be answered is: Does the policy penalize U.S. engine producers in their negotiations with foreign operators? It has long been accepted that Pentagon restrictions on U.S. jet engine information have been an obstacle for manufacturers competing with British designs, and the arbitrary penalty imposed by the new policy might well mean the difference between selection of U.S. or British designs on aircraft of the future. • • •

CAB Resumes Nonsked Hearings Next Month

Civil Aeronautics Board will resume hearings October 5 in the Large Irregular Air Carrier Investigation which already has produced a record 30,000-page hearing transcript.

New hearings will be on the qualifications of 30 of the 60 nonscheduled airline applicants who did not previously get an opportunity to testify as to fitness, ability, etc. Examiners Ralph L. Wiser and Richard A. Walsh have tentatively scheduled the new hearings for Washington, Los Angeles, and Seattle.

In addition, the other 30 applicants who were heard on individual qualifications at previous sessions, will get a further opportunity to bring their cases up to date, either through supplemental briefs or possibly on the witness stand.

Meanwhile, the Board is expected to issue its decision soon on the policy phase of the case in which the nonscheduled industry's role for the next five years, at least, will be explained. Purpose of the new hearings is to determine which of the 60 applicants will be authorized to fill the spot outlined in the policy decision.

West Coast Talk . . . By Fred S. Hunter

- DC-8 power problem puzzler for Douglas.
- Augmented J57 engine behind schedule.

IT HAS BECOME an open secret in Santa Monica that Douglas is confronted with a perplexing DC-8 power problem. It has been re-evaluating all its performance data on the projected jet transport.

It will be recalled that last June when Douglas broke out so dramatically with its DC-8 go-ahead announcement, it spelled out plans for two versions, one a domestic model having a gross takeoff weight of 211,000 pounds, the other an overwater model to tip the beam at 257,000 pounds. The company reported it would be ready for airline deliveries in 1959.

Hunter

At that time, there was no hint of any timetable differences between the two versions. Now, however, it seems the augmented J57 engine Douglas was counting on for its long-range, overwater model won't be ready until a year or more later than a less-augmented J57 suitable for the domestic version. This would put the start of deliveries on an overwater DC-8 back to 1960. And by that time—who knows?—a commercial version of P&W's new, higher-thrust J75 might very well be pushing into the picture.

No augmentation would be required for the J75. On the other hand, it is a heavier engine. Also, it will be more expensive. Douglas currently prices the J57-powered domestic DC-8 at $4,600,000, the overwater model at $4,650,000. With J75s, the overwater version's price would have to be increased about $300,000.

• •

The J57 complication centers around the necessity for extensive water augmentation to up the takeoff thrust if these big jet transports, like the Boeing 707 and the Douglas DC-8, are to be capable of operating long-range (without throwing away all the payload. Latest reports from Seattle say Boeing is allowing for 450 gallons of water for thrust augmentation for the 707.

Information from Santa Monica indicates Douglas contemplates a somewhat lesser quantity for the domestic DC-8, but substantially more for its overwater model. Extensive augmentation like this compounds the troubles of the engine-maker. It adds to the engine durability problem. To illustrate, 39 gallons of fluid fills the water injection needs of the Douglas DC-6B. A 22-gallon tank suffices for Convair's twin-engine 440. It's a big step up to 450 gallons and more.

• •

All this has an important bearing on an important customer—Pan American. Word has been about for some time that Juan Trippe, PAA president, has had his contract-signing fountain pen all filled and the cap off, ready to sign on the dotted line for 25 planes. But not for deliveries a year or more behind a domestic carrier or for an airplane possibly having less performance than a competitor. Thus the predicament as Boeing and Douglas jockey for key customers in the two markets.

In a similar quandary, incidentally, is Convair on its Model 36 design for TWA, which has to have aircraft suitable for transatlantic as well as domestic schedules. There are even hints from San Diego that Convair may decide its best course is to bow clear out, at least for now.

• •

PAA Orders Both Boeing and Douglas Jets

- Rash of orders from other major U.S. airlines expected as result of Pan Am's $269-million decision.
- First delivery of 707s scheduled for December, 1958; DC-8s to start arriving year later.

By WILLIAM V. HENZEY

PAN American World Airways — "broke the ice" this month with a $269-million order for 45 American-built jet transport aircraft, all of which are scheduled for delivery within the next five years.

As tension mounted among airlines in the race to be the first U.S.-jet purchaser and between manufacturers to be the first U.S.-jet seller, Pan Am solved both races by ordering 25 Douglas-built DC-8s and 20 Boeing 707s.

The order was expected to touch off a rash of orders from other major U.S. lines such as United, American, Eastern and possibly TWA. Because of its split nature, it was also seen as assuring virtual success for both manufacturers in the commercial jet field, since Pan Am alone has given each about one-third of the business said to be needed for break-even projects.

• First deliveries by Boeing will start in December, 1958, ending in November, 1959. In December, 1959, Douglas will start delivering DC-8s to Pan Am, with the order scheduled for completion in January, 1961.

The Boeing 707s will be powered by four Pratt & Whitney J57 engines, cost a total of $109 million, including spares, and will carry 104 first-class passengers and 125 in tourist configuration.

The DC-8s will use more powerful P&W J75 engines, cost a total of $160 million including spares, and will carry 108 first-class or 131 tourist passengers.

Both planes, according to Pan Am, are designed to cruise at 575 miles an hour at 30,000 feet. By way of emphasizing these facts, Boeing flew its prototype 707 on Oct. 16 from Seattle to New York in record time of 3 hrs., 58 minutes.

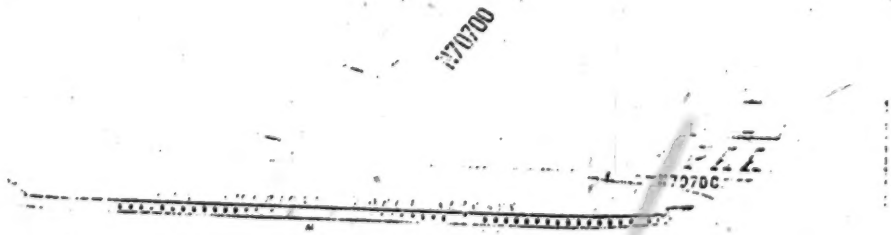
• Pan Am intends to place the new jets in transatlantic, South American, and transpacific services in the five-month period beginning December, 1958.

Sample times on proposed new schedules are: New York-Paris, 6 hrs., 35 minutes; New York-Buenos Aires, 11 hrs., 15 minutes, and Tokyo-Seattle 8 hrs., 32 minutes.

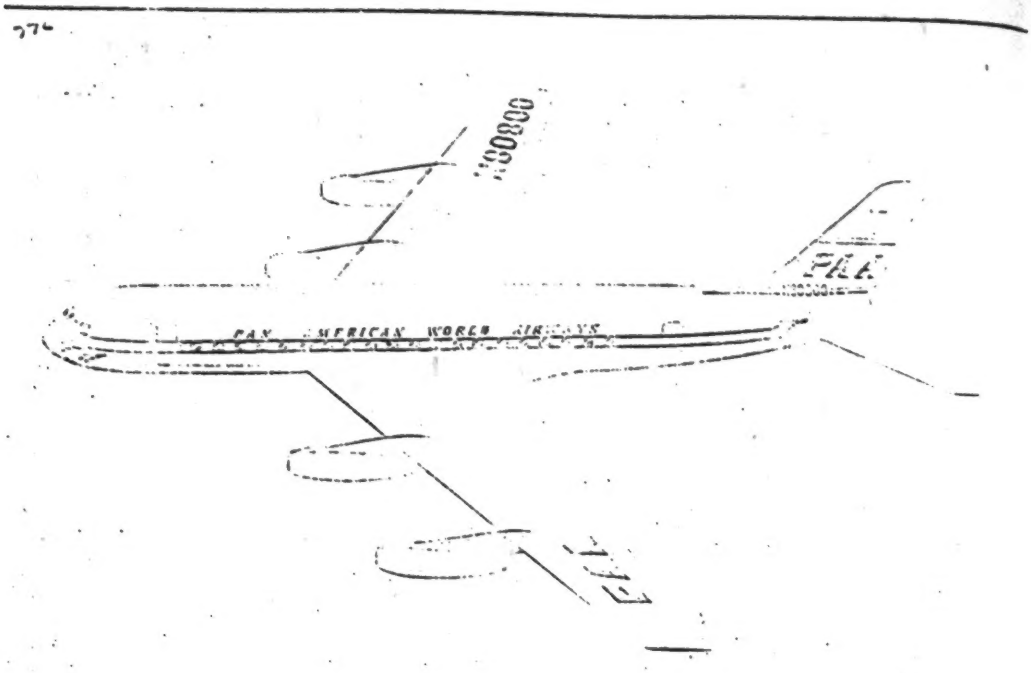
Donald W. Douglas, president of Douglas Aircraft, hailed his firm's deal with Pan Am as "the largest and most significant single contract in the history of commercial aviation . . . opening a new chapter in global aviation and bringing the jet age closer to the lives of millions throughout the world."

The Boeing-Pan Am contract "marks the beginning of a new era in air transportation," according to Boeing president William M. Allen, who added: "Introduction of the 707 Jet Stratoliner on Pan American's routes will, in effect, make the world 40% smaller."

• Pan Am's president, Juan T. Trippe said the new order plus PAA orders outstanding, which add up to a total aircraft commitment of $357 million, is "concrete evidence of Pan American's faith and confidence in the continued expansion of sound two-way international trade as well as greatly increased tourist travel between the U.S. and the 74 friendly foreign nations



Artist's sketch of Boeing 707 in Pan American dress.



Douglas DC-8 as it will look with Pan American markings.

which are regularly serviced by Pan American."

Vice President Richard Nixon, Secretary of Commerce Sinclair Weeks, Air Force Secretary Donald A. Quarles, and CAB Chairman Ross Rizley were among important Federal officials who hailed the Pan Am announcement as a tremendous lift to Aviation and a significant contribution to the national economy.

But while Pan Am, backed by a Douglas statement that the DC-8 purchase is the "first firm agreement for U.S.-built jet transports," appeared first in line, many other U.S. carriers gave evidence that little time advantage would be surrendered to competitors in the jet race.

Foremost in point of time, if not in size of order, was National Airlines, which still insists it has the first commitment for the Douglas DC-8. Last August, testifying under oath at CAB hearings in the New York-Florida Case, NAL president G. T. Baker said his company has placed orders for six DC-8s costing about $36 million.

Further, Baker said National has "firm delivery dates" for four DC-8s in 1959 and two in 1960. Whether Pan Am or National was first appeared to hinge on whether you wished to make a distinction between a written contract, such as Pan Am entered with Douglas, or an oral contract, which Baker says National entered with the DC-8 manufacturer.

United Air Lines was scheduled to make its recommendations to its directors on October 25. The Airlines' officials held final conferences with Boeing and Douglas in mid-October. UAL president W. A. Patterson, J. A. Herlihy, v.p.-engineering and maintenance, and W. C. Mentzer, chief engineer, headed the UAL team in the final talks.

• Eastern's board chairman, E. V. Rickenbacker recently said his company has allocated $125 million for 20 jet transports but had not yet made its mind up as between the DC-8 and the 707. A decision is expected at any time.

American, normally a heavy Douglas purchaser and a proud possessor of many "firsts" when it comes to new aircraft types, has not yet made its mind up and only last week had a team of engineering experts actively studying the 707 in Seattle.

Both American and Eastern, of course, previously announced so-called "gap-bridging" orders for turboprop Lockheed Electras.

• Trans World Airlines, a big question mark, is rumored interested in the 707 but such rumor must be considered as the purest speculation at this time.

Latest carrier to evidence jet interest was Continental Air Lines, whose president, Robert Six, was at Douglas in mid-October checking details with the DC-8 project group. Continental's interest in a jet transport is said to center around its equipment interchange operations.

Actually, none but the smallest U.S. lines can be eliminated from the race which, in terms of domestic orders alone, gives promise of a $1 billion pot to be divided between the two manufacturers. And this does not take into consideration inevitable orders from foreign airlines.

What effect increased orders have on pricing of the new jets remains to be seen. Early reports indicate the basic price of the Boeing 707 of $4.3 million will be adjusted downward to $4.1 million if 65 airplanes are sold.

• Price on the DC-8 powered with P&W J75 engines reportedly is just over the $5 million figure, or about $400,000 more than the basic price of the J57-powered DC-8.

The substantial cost of these planes, when related to past prices for piston-engined aircraft, is largely responsible for the cat-and-mouse game being played by various airlines.

Particularly adroit has been UAL's Patterson, who has alternately hinted at UAL leanings toward the DC-8 and the 707, and even suggested that U.S.

Oct. 24, 1955

777

companies may pool their orders with a unit price gain as a major advantage.

• Some indication of the amounts now required to stay in the competitive airline race can be obtained from the recent Pan Am order and that announced earlier by Eastern. Pan Am's total of $357 million for new equipment and Eastern's for $350 are each about equivalent to the total assets of the domestic trunkline industry ten years ago.

In fact, the combined net assets of the nine regional trunks and 13 local service airlines in 1954 was not as high as either of the two aircraft orders.

With such enormous amounts involved in each airline's order, therefore, even a 5% reduction in unit price, such as reportedly is contemplated by Boeing for quantity production, means substantial savings to the purchasers.

For example, the purchaser of 20 707s would gain $4 million or virtually the price of one additional plane if the 65-plane goal is exceeded. The same would hold true for Douglas purchasers, of course, if that firm is thinking along the same lines.

• But while extreme optimism has invaded the U.S. manufacturing picture, the potential U.S.-airline market for British de Havilland Comet jetliners appeared to be waning.

Pan Am's Boeing and Douglas orders appeared to wipe out PAA's previous order for three Comets. PAA's only comment was that it continues to be interested in de Havilland jet transports and there are "certain confidential understandings" between the two companies looking toward a "fruitful outcome."

There is, however, general industry belief that PAA's contract with de Havilland contained a clause nullifying the order if U.S.-built jets should be available for delivery at the same time.

Thus has the jet age in this country passed the talking stage. ◆◆◆

British Make New Bid For Turboprop Market

- Canadair, Bristol and Convair may join forces in production of Bristol Super-Britannia.
- British European Airways negotiating for fleet of Viscount 900s.

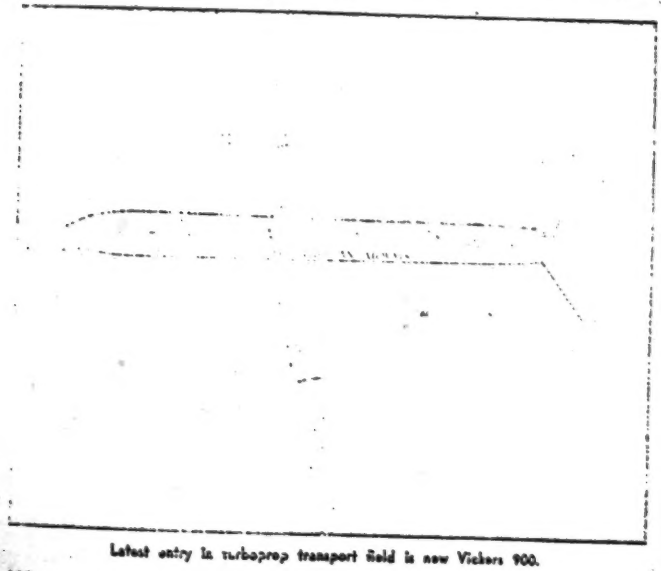
The role of British aircraft and engine producers as key contenders in the future turboprop transport market was further shaped last week in two major developments.

• Canadair, Ltd. disclosed first details of a projected three-nation tie-up under which it would join with Britain's Bristol Aeroplane Co. and Convair in the U.S. in the design and production of the Bristol Super Britannia turboprop.

• British European Airways announced it is negotiating with Vickers-Armstrongs Ltd. for a fleet (believed to be 30) of new Viscount 900 Vanguard turboprops for 1960 delivery.

Together, the new projects put British-designed turboprops powered by British engines in two open slots in the future transport picture.

The tri-nation Super Britannia project, if it materializes, will offer a 500-mph turboprop in the long-range, high-capacity category to fill the gap between the Lockheed Electra turboprop and Boeing/Douglas jets. On the other extreme, the new Vanguard provides a 425-mph turboprop for high-density operation at ranges up to 2,500 miles.



Latest entry in turboprop transport field is new Vickers 900.

Deal Not Yet Final

• Although the Canadair-Convair-Bristol deal is not yet finalized, Canadair officials conformed that it is currently "under intense study." But the project target, calling for 1960 delivery of the Super Britannia, virtually dictates that final decisions will have to come soon if the aircraft is to develop as a major entry in current airline re-equipment programs.

Best indications are that the plan would call for final assembly of the aircraft in the U.S. by Convair from components made partly at Convair and partly in Montreal by Canadair. In addition, other components would be imported from Bristol in England, as the new project does not affect that company's plans to build the Super Britannia in its Filton, England plant.

Use of Bristol's BE.25 "supercharged turboprop in the Super Britannia also makes probable the entry of a fourth major manufacturer, Curtiss-Wright Corp., in the project. Top officials of Convair and Bristol told AMERICAN AVIATION that both the engine and powerplant would have to be Americanized to give the Super Britannia its best chance of volume selling on the world market.

Current license agreements between Bristol and Curtiss-Wright are understood to give C-W "first refusal" on several Bristol engines, including the BE.25, thus making it the logical pro-

Both 707s and DC-8s

PAA Orders First U.S. Turbojet Fleet

Pan American World Airways last week signed contracts totaling $269 million for the first major American turbojet airline fleet, ordering 25 Douglas DC-8s and 20 Boeing 707s.

Boeing's jet Stratoliners will be delivered first, beginning in December 1958. Within five months thereafter, Pan American says it will place these American-built, American powered transports in service on its trans-Atlantic, South American and trans-Pacific routes. Boeing will complete its deliveries by Nov. 1959.

Deliveries of the Douglas jet airliners are scheduled to begin in December 1959 and to be completed by January 1961.

Both aircraft will provide 550 mph. transocean and transcontinental service. The 707, larger and faster than the prototype now flying, will have a range of more than 5,000 miles nonstop. Douglas states that the DC-8 will be "capable of nonstop operations in either direction between New York and London or Paris, [illegible]."

Both are designed to cruise up to Mach .88, and the contracts guarantee cruising speeds of 575 mph. at 30,000 ft. altitude.

Pan American lists these potential flight times with the new jet airliners: New York to Paris, 6 hr. 35 min.; New York to Buenos Aires, 11 hr., 15 min.; Chicago to London, 6 hr., 45 min.; Tokyo to Seattle, 8 hr., 32 min. and Honolulu to San Francisco, 4 hr., 30 min.

The Boeing 707s, powered by Pratt & Whitney J57 engines, will carry 104 passengers in standard (first class) configuration and 125 in tourist. Each airplane will cost just under $7 million.

Douglas' DC-8, with a wing area approximately 7% greater than the 707, is designed to carry 108 passengers in standard seating arrangements or 131 tourist class passengers. Pan American says the DC-8 will have "slightly greater range and will be equipped with a larger type Pratt & Whitney jet turbine engine," the P&W J75 (commercial designation, JT4).

Douglas said that its August announcement of the DC-8 performance was based on the J-57, but "the Pan American planes covered by the present contract are designed to utilize jet engines of even greater power and versatility as and when they become available for commercial use."

The DC-8 purchase calls for expenditures in excess of $160 million for the 25 aircraft and spares.

Jet turbine silencers and reverse thrust mechanisms will be installed. With the silencers, Juan T. Trippe, president of PAA, says, "The new jets will make little more noise on the ground than present piston-engined planes." Reverse thrust will be used for braking effect after landing.

The order for jet airliners does not effect the existing $88 million order for 33 DC-7Cs with turbo-compound engines. The first of these will be delivered in the spring.

The combined commitments, totaling $357 million for new flight equipment, are "evidence of Pan American's faith and confidence in the continued expansion of sound two-way international trade as well as greatly increased tourist travel between the United States and the 74 friendly foreign nations which are regularly served by the Pan American Clippers," Trippe stated.

Pan American is non-committal about its long-standing, and perhaps still existing, order for de Havilland Comet 3s. In a statement to AVIATION WEEK, the company said: "PAA has a continuing interest in the de Havilland jet program. Certain confidential written understandings exist between the two companies looking toward a successful outcome."

NEWS DIGEST

U. S. Navy last week grounded the North American FJ-3 Fury jet fighter pending modification of its Wright J65 turbojet engine to prevent overheating.

Convair is discussing a 500 mph. turboprop airliner with Canadair (another General Dynamics division) and Bristol Aeroplane Co. The design for delivery in 1960 probably, is the advanced, thin-wing version of the Bristol Britannia (AW Oct. 25, 1954, p. 13). It will be powered by the Bristol B. [illegible] 25 engines. Canadair is building a military reconnaissance version of the Britannia for RCAF.

A new and complete helicopter control system providing full all-weather operating capability has been developed by Sperry Gyroscope Co., division of the Sperry Rand Corp. Sperry has just received clearance from USAF to announce details.

United Air Lines September traffic reached a new record for the month with 536,000,000 revenue [illegible] and 9,693,000 [illegible], 16 and 19% increases respectively over the same period last year. Freight shipments were up 35% to 4,096,000 ton-miles, express up 27% to 1,276,000 ton-miles and mail up 6% to 2,007,000 ton-miles. Late summer vacationists and school returnees are credited for the traffic increases.

Slick Airways carried a record 4,320,379 ton-miles of airfreight on domestic scheduled service in September, 14% more than the same month last year. Figure does not include the carrier's domestic and overseas charter flights. George M. Bain, Slick executive vice president, predicts a 30% increase in the airline's volume this year over 1954 and a 20% increase in airfreight for all airlines.

Wright Brothers Lecture will be delivered by Raymond L. Bisplinghoff on Dec. 17 in the auditorium of the U. S. Chamber of Commerce Building, Washington, D. C. The lecture is sponsored by The Institute of the Aeronautical Sciences.

Plastic Star, Nat Corp. of America reports $1,161,755 profit after federal taxes for nine months ended Aug. 31. Net sales totaled $14,941,443 compared with $17,086,429 for the same period last year. Firm has voted a 25 cents common dividend payable Nov. 1 to holders of record Oct. 15.

Prototype Saab delta fighter, reportedly capable of 1,000-mph. speeds, is scheduled to fly soon at Linkoping, Sweden. Developed as a result of flight studies with the tiny half-scale Saab Draken, the new multi-engine fighter is about 50 ft. long and has a span of approximately 35 ft. According to present estimates, orders for the delta will total some $150 million and is designed to provide the backbone of the Swedish Air Force in the late 1950s and early 1960s.

Bendix Radio settled its 39-day old strike last week by giving the International Association of Machinists (AFL) a six cents hourly raise with another six cent increase to follow in September 1956. The settlement, which may serve as a pattern for at least part of the avionics industry, included a seventh paid holiday and improved pension and insurance plans.

Jet Race Quickens; UAL Orders 30 DC-8s

- Transport equipment on order may pass $1-billion mark before year is out.
- Biggest buying drive in industry history gets under way.

By ANTHONY VANDYK

JET and turboprop transport activity has moved further into the limelight. Less than two weeks after Pan American set the pace by ordering both the Boeing 707 and the Douglas DC-8, other developments came in rapid succession.

Before the year is out, transport equipment on order may well pass the $1 billion mark. Without question, the industry is in the midst of the biggest equipment drive in history.

The scramble for delivery positions is hectic. The destinies of many airlines may well hinge on how far up or down they may be on delivery schedules with relation to competitors.

More important than the actual orders announced to date is the back-stage maneuvering and negotiations now in progress. But the following are the latest tangible developments:

• United Air Lines, became the first U.S. domestic carrier to order jet transports with the purchase of 30 Douglas DC-8s at a total cost of $175 million for delivery in May 1959.

• Braniff Airways disclosed it is ordering four DC-8s (with an option on four more), has been given delivery positions by Boeing should it decide to order the 707 and is clickering for eight turboprop Lockheed Electras.

• Earlier National Airlines announced it had placed a firm order for six DC-8s, which were scheduled for delivery in early 1959. There were also reports that National was close to a decision on the purchase of a number of Vickers Viscounts. Earlier this year National announced a $65-million expansion program which included a provision for approximately 12 turboprop aircraft or undesignated make.

• At least half a dozen U.S. and as many foreign airlines were negotiating with Boeing, Douglas and Lockheed for delivery positions.

United plans to put its DC-8s in service in November 1959. They will be powered by P&W J57s while the 25 DC-8s ordered by PAA for delivery starting December 1959 will have the more powerful P&W J75. United's DC-8s will cruise at 550 to 575 mph. They will be able to seat 111 first class or up to 140 coach passengers and carry 7,000 lbs. of mail, express and freight.

United's president, W. A. Patterson, said: "Our studies conclusively indicate that on the basis of present-day costs, the per-seat-mile cost of operating the jet plane will be less than that for the latest piston-engine aircraft; this, combined with the traffic volume expected to be generated by the greater speed and comfort of the jet, will assure us of the profits necessary to support this new investment."

Meanwhile, the ever-present problem of the choice of new equipment is fast developing into a nightmare for airline managements the world over. At the International Air Transport Association's annual general meeting in New York last month it was generally conceded that never in commercial transport history has the dilemma been greater. Loaded with brochures and besieged by hordes of aircraft and engine salesmen, harassed top executives of carriers large and small were asking each other for advice on what to buy and when to buy it.

Douglas Announces Program

In the few months leading up to the New York meeting there had been news of various types to upset the most firmly established equipment plans. Douglas announced its program to build the DC-8; Lockheed unveiled its turboprop Electra with the announcement of an order from American; Kiwi, previously loyal to American equipment, ordered the Viscount; SAS and several other carriers gave the Convair-Liner a new lease of life buying the Model 440 Metropolitan; Eastern ordered the Electra.

On the negative side it became clear that the British were out of the running in the long-haul jet field; the British government has decided against putting the Vickers 1000 into production while the Comet has lost the support of all carriers except BOAC.

• Shortly before the New York IATA meeting opened the biggest news of all broke: PAA ordered the Boeing 707 and the DC-8. A few days later it became known that Canadair, Convair and Bristol were working on a joint design for a 500-mph turboprop transport for 1960 delivery. On October 17, opening day of the meeting, Vickers unveiled its turboprop Vanguard while Douglas and Lockheed revealed much new information on their DC-8 and Electra, respectively. By increasing the wing area, the Electra has been made into a 3600-mile range aircraft.

During the week-long IATA conference it was also disclosed that Canadian Pacific Airlines has ordered the Britannia and that Air France had decided to buy the SNCASE Caravelle jet.

These are only some of the developments which perplexed the executives attending the IATA sessions. It was clear that while a few of these developments were expected many came as a rude shock to the vast majority of the airline chiefs present in New York. The PAA order for 25 DC-8's and 25 Boeing 707s obviously caught competing European carriers off guard, as did

JET/TURBOPROP BOX SCORE

In the race so far for an estimated $7-billion jet and turboprop transport market are three U.S. manufacturers—Douglas (DC-8), Lockheed (Electra) and Boeing (707)—and four foreign producers—Vickers-Armstrong (Viscount and Vanguard), Bristol (Britannia), de Havilland (Comet 4) and SNCASE (Caravelle). Here's how orders by major world carriers shape up at deadline:

Firm Orders

Airline	Type	Number	Delivery
PAA	707	20	December '58
PAA	DC-8	25	December '59
United	DC-8	30	May 1959
American	Electra	35	August 1958
Eastern	Electra	40	August 1958
Capital	Viscount	60	In progress
National	DC-8	6	Early 1959
BOAC	Britannia	33	December 1955
BOAC	Comet 4	20	Fall 1958
BOAC	Viscount	12	1957
BEA	Viscount	49	In progress
TCA	Viscount	25	In progress
Air France	Viscount	12	Completed
TransAustralia	Viscount	12	In progress
KLM	Viscount	12	1957
Canadian Pacific	Britannia	3	1957
El Al	Britannia	3	March 1957

Pending and Currently Probable

Eastern	707 or DC-8	20
Eastern	Electra	30*
American	707 or DC-8	about 30
Braniff	DC-8	4 and 4*
Braniff	Electra	8*
Western	Electra	?
Northwest	707 or DC-8	8-10
National	Viscount	12
Continental	Viscount	15*
Canadian Pacific	Britannia	9*
El Al	Britannia	2*
Air France	707 or DC-8	about 10
Air France	Caravelle	12
KLM	DC-8	about 10
SAS	DC-8	5-7
Japan Air Lines	DC-8	about 3
Swissair	DC-8	about 3
BEA	Vanguard	30

Note: Space limitations prevent inclusion of all Viscount customers; 236 Viscounts have been ordered to date and contracts for more are under negotiation.

*Option.

the flurry of activity by other U.S. airlines in negotiating for delivery positions.

Major European airlines had assumed that the jet transport problem was not a particularly pressing one—something to be decided on in 1958, 1959 or maybe 1960. They were suddenly awakened to the fact that delivery positions are of utmost importance and that the prime positions are already gone or are going; they are now beginning to realize that a one or two-year time lag in deliveries may be disastrous to their dollar-earning, transatlantic business in the future.

Douglas Holds Advantage

• Despite the earlier availability of the Boeing 707 it was clear that most airline executives attending the IATA meeting in New York were more interested in the Douglas DC-8 than in the Seattle company's model. Lack of experience with Boeing products and highly satisfactory results with Douglas equipment seemed to be the main reason for this attitude. Boeing salesmen suffered a disadvantage in not knowing the airline men as well as did the Douglas representatives, who have made friends of many a top executive in the course of doing business with them for years.

Realizing that many airline presidents and high executives are confused by an abundance of technical data, Douglas tried to make its DC-8 presentation at New York as simple as possible. The company stressed that the DC-8, cruising at 550 mph, will carry more payload farther than any commercial aircraft in service or presently offered. It pointed out that the DC-8 can produce two and one-half times as many passenger miles, two and one-half times as many ton-miles, three times as much gross profit and one and one-fourth times as many ton-miles per dollar invested as the latest piston-engine equipment. Douglas also demonstrated with charts that the direct operating cost of the jet is nowhere nearly as high as turboprop advocates assert, even on short-haul routes.

In a DC-8 "flight profile" for a New York-Paris flight, the following revealing figures were disclosed: Take-off field length, 8350 ft.; take-off weight, 252,000 lbs.; payload, 34,110 lbs.; reserve fuel, 16,300 lbs.; block time, 6 hrs. 25 min.; average cruise speed, 550 mph (at 30,500 to 40,000 ft.); landing weight, 170,600 lbs.; landing field length, 6330 ft. (The reasonable landing field length is due to the use of reverse thrust.)

It is generally assumed that the powerplant of most DC-8s will be the J75, an engine which is making considerable progress. It passed a 50-hour test in August, reportedly at 15,800 lbs. thrust. It seems that use of the J75, possibly in a de-rated version, is preferable to the J57 with water injection; the weight of the water, running into several thousand pounds, would be a heavy penalty.

Nonetheless, availability of the J75, particularly to foreign carriers, is a big question mark at this time. An alternate foreign powerplant to both the J57 and the J75 is the Rolls-Royce Conway by-pass, although there is some doubt whether this engine will go into production.

Electra In Spotlight, Too

• Vying with the DC-8 as the center of attraction for delegates to the IATA New York meeting was the Electra. Elaborate displays provided tangible evidence that Lockheed will establish brand preference for the new model in the same way that it used advertising and promotional programs to build the Constellation and Super

In the lead in jet race is Douglas DC-8, shown here with United Air Line markings.

Constellation into the best-known transports in the world.

The turboprop plane needed little promoting in New York. Most of the airline men who saw it recognized that the Electra fulfills the need for an economical, wide-range transport. They liked its size (accommodating up to 91 passengers), its speed (over 400 mph cruise), its operational flexibility (permitting economical operations on short, medium and long routes) and its ability to use small airfields (it can take off or land in less than 5,000 ft.). Above all, they liked it because it looked right.

The technically-minded IATA delegates were impressed by the structural design of the Electra's airframe. This incorporates Lockheed's "fail-safe philosophy"—structural elements are arranged in such a manner that the failure of one element cannot result in the failure of the complete structural component. Larger structures such as forgings and integrally stiffened skins are used wherever practical in the Electra's design, avoiding the use of structural bits and pieces with their multiplicity of joints and connections.

The "fail safe" fuselage shell is of ring-stiffened skin-stringer structure with the rings attached directly to the skin. An inner shear metal grid, attached to the basic fuselage skin, gives effective area increase and stress reduction wherever the skin is perforated by rivets or other fasteners. This stress reduction where holes occur minimizes fatigue cracks in the skin.

If a crack should occur, or the skin should be ruptured by a foreign object, the grid would serve as a series of crack stoppers which would prevent or reduce the crack propagation. Similar fatigue crack propagation in the wing is minimized by the use of low tension stresses in the lower surface and integral skin reinforcing panels. Each surface is broken into spanwise panel strips about 20 inches wide so that if a crack originates in, and propagates across any one panel, the remaining panels have sufficient strength to support flight loads without failure.

While Lockheed had the maximum of information available on its Electra, Vickers was hesitant to disclose details of its Vanguard turboprop design. Inquiries about such basic matters as the new model's span, gross weight and price drew only approximative or evasive answers. Several airline executives at the IATA meeting commented that all they knew about the new Vickers design was what they had read in the press.

Vickers' coyness on the subject of the Vanguard apparently stems from the fact that the aircraft was designed to a British European Airways' specification which may not suit too many other operators. Developments of the original design are aimed, it would seem, to make the Vanguard competitive with the Electra.

If indications prove correct the Vanguard versus Electra sales battle will be a heated one, for the results of it may well determine whether Britain is in the world-wide commercial transport business for keeps or whether the Viscount was the exception that proves the rule. In all fairness, it should be said that at the New York meeting nothing but praise was heard about the Viscount. There is no question but that Vickers has won the first round . . . nor that the second will be the decisive one.

Meanwhile, despite all the talk of jets and turboprops, orders are still coming in for piston-engine equipment. Douglas and Lockheed are confident of selling many more commercial turbo-compound-powered DC-7s and Super Constellations. To a small airline operating nothing bigger than DC-4s, and there are many such operators today, the prospect of s leaping into the turbine era is frightening both financially and operationally. (In the latter respect several of the larger airlines will have difficulty in making use of a jet fleet because of the inadequate runways at the airports which they serve. Thus there are few carriers today which are without a serious equipment dilemma at this time. ◆◆◆

MORE ON JETS

For an up-to-the minute picture of airline jet financing read Selig Altschul's appraisal on page 27. Also in this issue see page 82 for Fred Hunter's views on Pan American's jet purchasing strategy.

Douglas Applies For DC-8 Certification

Formal application for certification of two models of its DC-8, a domestic and overwater version, has been filed with CAA by Douglas. Official paperwork was dated October 18 and submitted to CAA's west coast office by Douglas-Santa Monica chief engineer E. F. Burton.

Initial talks on DC-8 approval will get under way early this month when Harold Heckstra, Washington CAA engineering project officer visits Santa Monica. More detailed discussions with a team of CAA certification personnel are expected in December.

nautics, maintained, the Navy needed the planes for test and training purposes. Therefore, they decided to terminate the Westinghouse contract at about 150 engines and the McDonnell F3H-1 program at 66 airframes.

• This decision, originally challenged by the investigators as a belated one (it took effect in July, 1955), awaits the subcommittee's formal judgment.

In any event, Adm. Russell testified, the F3H-J40 program was not a total loss. Admiting "mistakes" were made, he argued the Navy "gained two years" in securing the high performance, all purpose F3H-2N fighter. He estimated benefits of testing, training, and flight time with the J40 at $50 million.

Total cost of the 60 F3H-1 aircraft delivered to the Navy, he said, was $154 million, including frame, engine, spares and other equipment. The J40 program, he added, cost the Government $147 million. This included termination costs to Westinghouse (though 6 of 11 contracts were no-cost terminations), and to Ford, which tooled up, but never produced, J40 engines. Additional termination costs were filed by Temco Aircraft Corp. of Dallas, Tex. ($8,930,000), and the Goodyear Aircraft Corp. ($303,000).

Russell, and Navy Assistant Secretary (Materiel) Raymond H. Fogler, stressed to the subcommittee that the Navy had learned from this bitter experience. They described their new FIRM plan ("Fleet Introduction of Replacement Models") as designed "to avoid large premature purchases and at the same time to permit early introduction into the fleet of new and improved planes."

• Nevertheless, subcommittee members had plenty to mull over:

• Can time and waste be further reduced when contract terminations are required?

• Is adequate liaison carried on between BuAer, its representatives in the field and research and materiel centers?

• Is proper care of Government property exercised by contractors?

• Can the U.S. have its pie and eat it, too—or, how great a "gamble" are we prepared to take in maintaining top levels of air power? ●●●

Financing Patterns to Change For Jet Transport Acquisitions

By SEIJO ALTSCHUL

With the announcement of major jet transport acquisitions, the airlines involved are also facing up to some far-reaching financing programs. It is becoming clear that past conventional financial patterns utilized by the air transport industry to acquire new equipment will undergo some radical revisions if the projected jet programs are to be realized.

This becomes clear when it is realized that the United Air Lines order for 30 DC-8s, plus spare parts, entail a capital expenditure of some $175 million. The company's net worth is less than $100 million and its outstanding long-term debt was last reported at around $37 million. Moreover, its net operating property, mostly aircraft, at June 30, 1955, was valued at about $127.6 million.

In other words, United's jet commitments for the future are in excess of its present net worth and outstanding long-term debt combined, as well as exceeding its present equipment book valuation.

• In fact, capital expenditures for the entire U.S. air transport industry are likely to be at least $1.5 billion and perhaps as high as $3 billion during the next ten years. By contrast, the group (including trunks, international, territorial and cargo), as of June 30, 1955, could boast of only $1.3 billion in net assets. This was supported by but $633.6 million in net worth and $234.6 million in long-term debt.

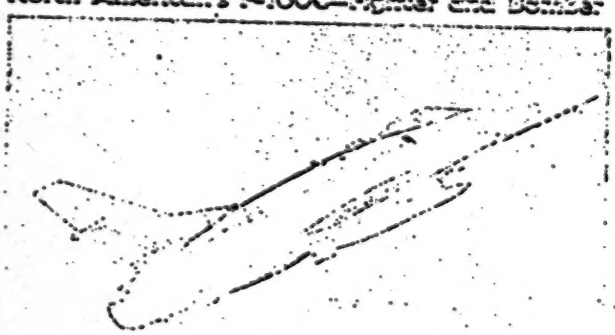
During the industry's past development stage, it was conventional to finance aircraft purchases through equity and interim self-liquidating debt. This picked up the period where the DC-3 represented an initial outlay of $100,000, moving on to the DC-4 with its $450,000 tag, up to the first Lockheed Constellations in the $750,000 class, the DC-6s around $1 million, the DC-6Bs for about $1.5 million and the Super-Constellations and DC-7s in the $2-million group.

Limited earnings were largely reinvested and supplemented from time to time by equity financing plus short-term loans. Long term debts were isolated exceptions, one being the $40 million in 20-year debentures sold by American Airlines in 1946. As aircraft were, and continue to be, written off over periods ranging from a minimum of four years to a high of seven years, substantial cash has been generated.

Further, in recent years, tax amortization certificates helped swell the cash flow. Such cash throw-offs were primarily applied to retire existing debt (created in past years to finance these purchases) and towards subsequent aircraft acquisitions. In this process, larger and larger capital formations were evolving in the air transport industry. For example, the domestic trunklines increased their total net assets from $387.1 million at the 1946 year-end to more than $894.5 million at the close of 1954. During this same period, net worth for the group increased from $130.5 million to $437.8 million.

• This pattern of large cash-throw-offs and the broader capital base of the industry would have been able to assimilate continuing aircraft acquisitions pretty much in the past conventional manner excepting for two significant

North American's F-100C—Fighter and Bomber



Fighter capabilities of Air Force's North American F-100C Super Sabre have been augmented in new line as a fighter-bomber. Photo shows conventional 500, 1,000 and 2,000-pound bombs slung under the wings of the supersonic fighter.

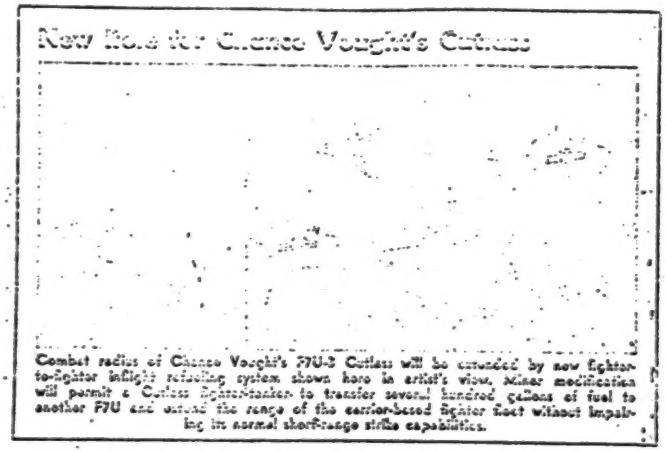
development. First, the cost of the jet transports, the Boeing 707 and the DC8, run from around $5.5 million to almost $6 million per copy, including spares and depending on the powerplant to be used.

This represents quite a jump in requirements from the capital formation stepped-up to the $3-million unit cost of a Super G or DC7. Secondly, it was not previously supposed that the initial jet transport orders would run to such individual large volumes. The sharp upward trend in traffic and the prospects of this condition continuing, however, are proving a strong motivation to have adequate equipment to meet anticipated demands four and five years hence. Despite the large number of aircraft orders in past years, the shortage of capacity available to a number of airlines at the present time is not without its effect on the entire industry in setting its future sights.

• The high unit cost of the jet transports and their number will therefore introduce greater elements of long-term debt to make their financing possible. The measure of stability being established and the broader equity base already established in the industry, further makes the long-term financing route feasible. A $6-million outlay for a single airplane may be regarded in the same light as a like expenditure for a brick and mortar industrial plant. In both cases, it may be anticipated that these expenditures will permit efficient and profitable operations to justify the outlay.

Moreover, the jet transport may be expected to have a useful life of at least ten years, perhaps longer. Financing plans accordingly will be geared to this expectation and be supported by depreciation charges and attendant cash-throw-offs geared accordingly. More importantly, it is the earning power expected to be generated by the new equipment which gives substance to the equipment acquisition and its financing. These planes cost more than double any planes flying in commercial service today but they are also expected to produce a seat-mile cost less than currently available from the latest piston-powered aircraft.

Thus far, none of the major airlines ordering jet transport equipment have indicated their definitive financing programs. Institutional investors, chiefly the insurance companies, will undoubtedly figure prominently in furnishing long-term funds. Banks will unquestionably remain in the picture with short-term credits. Equity financing in all of its facets, convertible debentures and preferred and common may be expected to emerge to complete financing programs.



Combat radius of Chance Vought's F7U-3 Cutlass will be extended by new fighter-to-fighter inflight refueling system shown here in artist's view. Minor modification will permit a Cutlass fighter-tanker to transfer several hundred gallons of fuel to another F7U and extend the range of the carrier-based fighter fleet without impairing its normal short-range strike capabilities.

• Pan American World Airways has a $259 million order for 707s and DC-8s. As of June 30, 1955, its total assets comprised $253.9 million supported by a net worth of $117.2 million and long term debt of $46.2 million. The company has an extensive line of credit yet unused but this is believed intended to finance the balance of DC-7s previously ordered.

Of course, four years from now the continuing depreciation cash throw-offs will transform the existing debt picture so that renewed borrowings will be readily available. No doubt, the anticipation of this projection will figure prominently in the financing plans that may soon evolve for Pan American.

American's order for Electra's entailing a capital commitment of some $65 million is unlikely to create any financing problem. However, should the company decide to move to jet transports, it is likely it may want to anticipate this requirement through long term financing.

• Capital Airlines, despite a present net worth position of $16.2 million is well on its way in acquiring 60 Viscounts costing some $67.5 million without any compulsion to arrange any financing. Paying for these planes as they are delivered over a 60-month period, the company can refund its obligations to the British in the American market when it finds it convenient to do so.

• Eastern, after ordering $125 million in Super Gs and DC-7s, made a commitment for forty Lockheed Electras entailing an expenditure of $100 million. This latest order, plus one to come for unidentified 20 jets of $125 million, will entail some new financing, including long-term funds.

• National has indicated an $85-million equipment expansion program including an order for six DC-8s and eight DC-7Bs. The company has stated that it will finance this entire program plus $10 million in other facilities through earnings, sale of some of the existing planes, depreciation charges and bank loans of some $25 million. This projected program is the most definite of any of the airlines acquiring jets and is further distinguished by the absence of any contemplated extensive long-term financing.

• United Airlines has publicly indicated that it will pay for its new equipment through a financing program "now being arranged." The company prepared the way for such financing by calling its preferred recently (American Aviation, Sept. 12, 1955, P. 24). It is probable that long-term loans, short-term bank credits and another convertible preferred may enter into the financing here.

It is important to note that the bulk of the financial requirements for the airlines ordering jets will not come until four years or so from now. This gives them time to work out financing programs. By the same token, until they do, the aircraft builders will shoulder major responsibilities. Progress payments from their customers may ease the builder's strain, but his outlay and risk will be substantial until deliveries and collections are completed.

In anticipation of this requirement, Lockheed sold $30 million in debentures earlier this year. Part of these proceeds was earmarked for the Electra program. It is reported that Douglas may soon enter the capital markets to bolster its resources to undertake its commitments, now aggregating some $785 million in civilian orders. In viewing the jet transport orders and their consequences, the builders have more than their prestige involved. ◆◆◆

MINUTES OF THE BOARD OF DIRECTORS MEETING

TRANS WORLD AIRLINES, INC.

June 21, 1961

The regular meeting of the Board of Directors of Trans World Airlines, Inc., was held on Wednesday, June 21, 1961 at 9:30 a.m., at the offices of the Corporation, 380 Madison Avenue, New York, New York.

Directors present were: Messrs. Ernest R. Breech
George R. Brown
E. O. Cocke
F. D. Hall
Clifford F. Hood
Barry T. Leithead
Albert V. Leslie
Sidney Maestre
Hughston M. McBain
Warren Lee Pierson
Ben-Fleming Sessel
Thomas A. Slack
Charles C. Tillinghast, Jr.

constituting a quorum.

Directors absent were: Messrs. Raymond M. Holliday
John A. McCone

Mr. Carl S. Rowe, of Counsel, was present by invitation.

Mr. Ernest R. Breech, Chairman, called the meeting to order and thereafter presided.

Mr. Ronald Duckworth, Secretary, acted as secretary of the meeting.

APPROVAL OF MINUTES

The minutes of the Board of Directors meeting of May 17, 1961 and of the Executive Committee meetings of May 18, 19, 24 (two), 25 and 31, 1961 were approved.

FINANCIAL REVIEW

Mr. Albert V. Leslie, Senior Vice President - Finance and Treasurer, presented the June financial review including an analysis and forecast of the market position of the Corporation for 1961.

Mr. Leslie also reported on the sale of Debentures in the amount of $100,000,000 during June and advised that a total of $19,037,900 had been subscribed for by shareholders generally and $80,962,100 were purchased by the Hughes Tool Company at the closing on June 13, 1961.

Mr. Leslie advised that negotiations with respect to the 1961 financing were proceeding in accordance with the plan outlined to the May meeting of the Board; that the Prudential Insurance Company of America will not be included as a lender; that the total of $147 million to be borrowed will be provided by the lending banks to a total of $40 million and $53.5 million each will be made available by The Equitable Life Assurance Society and the Metropolitan Life Insurance Company and that the closing of the financing was planned for the third week of July.

He advised that the contract progress payment of approximately $13 million due to Boeing Airplane Company on the additional jet aircraft had been postponed from July first to August 1, 1961, subject to the payment to Boeing of five per cent interest on such amount.

OPERATIONS REVIEW

Mr. E. O. Cocke, Senior Vice President and System General Manager, reported on system operations and described the steps being taken to improve passenger sales including introduction of Royal Ambassador Service in the International Division and increased advertising in both divisions. There was a lengthy discussion of the extreme competition on North Atlantic routes. He reported that since the inauguration of Convair 880 aircraft schedules in the New York/Chicago market, the TWA share of the market had increased from eleven per cent to twenty per cent. Mr. Cocke also advised that an intensive sales campaign was under way in all major TWA markets.

RELATIONS WITH HUGHES TOOL COMPANY

Mr. Tillinghast stated that following the meeting of the Executive Committee on May 31, 1961, at which it had been decided that no adequate reasons had been shown to justify a change in the Corporation's Boeing purchase program, a meeting was held with representatives of Hughes Tool Company to permit Hughes Tool Company to present to the Corporation technical information asserted to be available to Hughes Tool Company

relating to the question of whether or not the Corporation should acquire four additional Convair 880 jet aircraft and thirteen Convair 990 jet aircraft rather than the Boeing aircraft presently on order by the Corporation. He stated that such a meeting was held on June 2, 1961, and that Mr. Chester Davis, counsel for Hughes Tool Company, made a presentation on this subject to the Flight Equipment Committee and others, as the directors had previously been advised that no one with a technical background had assisted Mr. Davis at the meeting, that little of technical significance was developed at the meeting, and that the transcript of such meeting was available to any director. He further stated that subsequently, Mr. Rummel, who was present at the meeting, analysed the various points raised by Mr. Davis and submitted a report on the subject. This report was considered by members of the Flight Equipment Committee on June 8 and 9, 1961, and by the Management Policy Committee on June 13, 1961. The members of both Committees concurred in Mr. Rummel's conclusion that nothing of importance had been presented by Hughes Tool Company that had not previously been considered by the Flight Equipment Committee and that the previous recommendation that the Corporation should acquire Boeing rather than additional Convair 880 and Convair 990 aircraft should be confirmed.

Mr. Tillinghast then referred to the letter dated June 10, 1961 from Mr. Raymond Holliday to the Corporation and others, to which was attached a letter dated June 9, 1961 from Mr. Holliday to the Corporation. He stated that a copy of both of these letters had previously been forwarded to each director. He further stated that he had received that morning a telegram from Mr. Chester Davis advising that the ten-day period within which the three proposals contained in the letter of June 10, 1961 could be accepted by TWA was extended to June 22, 1961.

Mr. Tillinghast also referred to a letter dated June 16, 1961, which he had sent to Mr. Raymond Holliday commenting on the three proposals contained in the letter of June 10, 1961, and requesting certain additional supplemental information relating to such proposals. He stated that a copy of this letter had also been sent to each director.

Mr. Tillinghast pointed out that in connection with proposal number one of the letter of June 10, 1961, relating to a proposed increase in the equity capital of the Corporation, an extremely important fact was the effect that the acceptance of such proposal, including the condition that the present Voting Trust be terminated, would have on the ability of the Corporation to obtain additional needed financing, particularly additional debt financing. He said that he had asked Mr. Albert V. Leslie, Senior Vice President - Finance and Treasurer, whether or not the Corporation could arrange additional needed debt financing if the Voting Trust were terminated as proposed in the letter of June 10, 1961, and that Mr. Leslie had reported that in his opinion this would not be possible under the circumstances. Mr. Tillinghast also stated that letters had been addressed to the financial institutions presently holding the Corporation's outstanding notes asking whether they would be willing to terminate the Voting Trust on the conditions outlined in the letter of June 10, 1961, and whether, if the Voting Trust were

terminated these financial institutions would be interested in participating in the current financing program involving additional debt of $147 million. All but one of these financial institutions had responded formally or informally that they would not be willing to agree to the termination of the Voting Trust and would not be interested in participating in additional financing if the Voting Trust were terminated. He said that the Corporation had also requested the advice of its financial advisors Dillon, Read & Co., Lazard Freres & Co., and Lehman Brothers, as to whether or not, if the Voting Trust were terminated it would be possible to obtain other financial institutions to provide necessary debt financing and that he had received a letter from Dillon, Read, that was also concurred in by Lazard Freres and Lehman Brothers, to the effect that this would not be possible.

The meeting then proceeded to discuss the other two proposals contained in the letter of June 10, 1961.

The meeting was advised that Mr. Chester Davis, counsel for the Hughes Tool Company, would like to address the meeting. After discussion the directors concluded that in view of Mr. Davis' numerous and lengthy prior communications to the Board and the management, no purpose would be served by granting Mr. Davis' request, However, Mr. Rowe was requested to talk to Mr. Davis to determine whether he had any specific additional information or proposals that he wished to submit to the Board. Mr. Rowe then left the meeting. Upon his return he reported that Mr. Davis stated that he had nothing in writing to submit but would be glad to answer questions that any of the directors had and that he would like to discuss the proposals contained in the June 10, 1961 letter with the directors. Mr. Rowe stated that upon being requested to advise him of anything Mr. Davis wished to transmit to the Board, Mr. Davis declined to do so, but indicated that he would put what he had to say in writing and submit it in that form.

After discussion, upon motions duly made, seconded and unanimously carried, it was the stated sense of the meeting:

1. That the Corporation could not at this time accept Proposal Number One in the letter of June 10, 1961 from Hughes Tool Company, but that Hughes Tool Company should be advised that any reasonable program which would increase the Corporation's equity and make adequate provision for necessary additional financing for the Corporation, including the refunding of its existing debt and the financing needed for the aircraft now on order by it, would receive full and sympathetic consideration by the Board;

2. That the Corporation should not accept Proposal Number Two in the letter of June 10, 1961 from Hughes Tool Company, involving the offer by Hughes Tool Company to purchase an additional $11,235,900 principal amount of Subordinated Debentures with warrants attached on the condition that TWA commit itself to acquire thirteen Model 990 Convair jet aircraft previously ordered by Hughes Tool Company from General Dynamics Corporation; and

3. That with respect to Proposal Number Three of the letter of June 10, 1961, involving the offer that Hughes Tool Company assign to the Corporation its rights to acquire from General Dynamics Corporation thirteen Model 990 Convair jet aircraft and four Model 880 Convair jet aircraft, no facts had to date been presented to the Corporation that should change the prior decision of the Board to follow the recommendations of the Flight Equipment Committee on this matter, or that would indicate that the acquisition by the Corporation of four additional Convair 880 and thirteen Convair 990 aircraft rather than the additional Boeing aircraft ordered by the Corporation, would be in the best interests of the Corporation.

ACQUISITION OF BOEING FLIGHT SIMULATOR AND ADDITIONAL FUNDS FOR CONSTRUCTION AND EQUIPING OF FOOD UNIT AT KANSAS CITY

(3)

After discussion, upon motion duly made, seconded and carried, the following appropriations were approved:

Acquisition of Boeing Flight Simulator required to support training program related to acquirement of twenty-six additional Boeing Model 707 aircraft, and to provide annual recurrent training for Boeing flight crews	$1,386,100
Construction and equiping of food unit at Kansas City ($473,655 previously approved for this project)	$68,328

Upon motion duly made, seconded and carried, it was

RESOLVED, that the President or the Senior Vice President - Finance and Treasurer, or the Senior Vice President and System General Manager, or anyone authorized by any one of them in writing, be, and each hereby is, authorized in the name and

fwp

After considerable effort we--I say "we"; Convair, really, with my working with them--wound up with the Model 18. Contracts were developed, specifications were written. A lot of this work was done by me pretty much alone in the technical phases, although I did bring in some TWA experts on a secret and quiet basis because of wanting to hold this close because of a competitive thing, did bring in people from time to time. The further along the project went, the more people I brought in, along with the concurrence of Mr. Hughes.

I had lots of contacts with Mr. Hughes during this period.

The Model 18, for a number of reasons, was not--we didn't move forward with it. However, while we were developing it we also were working on the jet stream, we were working with AVRO Canada on the development of a very high-speed airplane, we were keeping negotiations alive at Boeing and when the Model 18 ceased to be a reasonable--reasonably practical possibility, Convair undertook the development of the Model 19, in a very preliminary way, to evaluate it, and that was followed with the Model 20, which got to the General Dynamic's board level, as I understand it, and was so advised at the time, and that's where it stopped, and some time later Convair came forward with the Model 880, and approache

Q Now can we proceed with Vickers?

A Certainly, surely.

Q Please do.

A Well, Vickers became of interest with the dev ment of a smallish four-engine turboprop airplane tha called the Viscount. I had followed the Viscount deve ment out of interest. It was originally developed through a joint effort involving BEA, Vickers and Ro Royce, and included as part of the development progr the installation of two Rolls-Royce turboprop engine and at least one, and maybe two, Dakotas. Dakota was English designation of the C-47 type. These were flown in passenger service, and all this was of tec interest. When the Viscount itself emerged I flew the experimental model, which, as I recall it, was called the model 630. I am not absolutely sure, but I think that was it.

The Viscount was reviewed by myself and my s Vickers were anxious to penetrate the world market, particularly the American market. This was a very important thing as far as they and I think most manu turers were concerned, so they made lots of data ava able for review.

We were frankly skeptical about the operatin

cost characteristics of the airplane, and I recommended on two different occasions to Mr. Hughes that we not move forward with the Viscount program.

The Viscount was also discussed within TWA, and, as I recall it, this view had the support of the knowledge able people within TWA. That is, the view that we not proceed.

In the meantime, the Viscount became a well established airplane in Europe, and a very popular airplane. Capitol Airlines purchased a sizable quantity. I am not certain of the sequence. I think they ordered 45, and then that order, I believe, was increased to 60, if I recall correctly, and then it was increased to 75 units.

Christopher Clarkson, who is the U. S. [illegible] representative for Vickers, did telephone me while I was at home in Kansas City, and advised that Capitol was forced to cancel, and was in the act of cancelling, these last 15 airplanes, and in view of our earlier discussions on the Viscount, and TWA's general equipment situation which he viewed to be that which represented generally a lack of equipment, would we be interested, and would I take this up with Mr. Hughes.

I said "Well, given the opportunity, I will be

A We both were, I think. I had the impression that he was. I was.

Mr. Hughes also requested that I see whether or not or let's say determine whether or not, if I could, TCA would be willing to give up a delivery position on the Viscounts that were then being produced for TCA at Weybridge, Weybridge being the Vickers factory in England. My understanding was that the delivery position, if TCA could make it available, would be for Mr. Hughes and not for TWA. I was glad to do this. I called Gordon McGregor a number of times, and in the end he agreed, after talking to Sir George Edwards, and getting his concurrence, to make one of TCA's positions available to Mr. Hughes.

This was all being done at a time that we were seriously considering the Viscount for TWA's use. By "we" I mean Hughes and myself, and then the people that we had doing these things.

The negotiation became extended.

Q Became what?

A Extended. That is, it covered a fairly extensive period of time. This was during the time that Carter Burgess was president of TWA. I don't recall if this started just before Mr. Burgess became president, or just afterward, but he was there during, I think, the larger part

of those negotiations.

It was clear that the Viscount could be improved with respect to payload range, for example, and that it should be, and part of the negotiation consisted in trying to sell Vickers on items of this type, although the Capitol airplanes had been committed for some time, and the whole configuration of the airplane in detail was circumscribed and limited by the construction progress that had been made and was continuing to be made on these particular 15 airplanes. But nonetheless, Vickers did agree to do some of these things and make these improvements. These were reported to Mr. Hughes from time to time.

The contract development--I might say Mr. Hughes asked that I coorindate and handle, be responsible for the development of the Vickers deal. I reported this to TWA. I arranged for our attorney to go to England to deal with Vickers house and Vickers, and upon request from Carter Burgess, arranged for Mr. Leslie to go over and work on the financial side of the deal, which he did.

Q Who was the attorney who went to England?

A Beg your pardon?

Q Who was the attorney that was sent to England to work on this?

A Mr. Harry L. West.

Q Of the Chadbourne firm?

A Yes, sir. During this time I had discussions by telephone with Sir George Edwards, and met with a number of his representatives over here, both on contract and technical matters. The nature of the deal was complicated, because it involved considerable use of foreign money rather than U. S. sources.

However, Mr. Hughes wanted to know one day what I thought about the deal, should we proceed or shouldn't we proceed, and I remember telling him that I didn't feel that with the recent change in TWA management that I would be--that I was confident in expressing the view of TWA. Mr. Burgess was relatively new, and that if he wanted an opinion from TWA that I could produce this more ably if I discussed it with him. He said "Well, by all means, do that."

Q "With him" meaning with Burgess?

A With Burgess. Well, "with him," with TWA management, certainly including Burgess.

Q Yes.

A The meeting was held in New York, with Burgess and others, and George Spater called me relating the results of the meeting. I wasn't able to be at the meeting, although I had Mr. Rourke there.

"DX 43, page 392
(Excerpts from Deposition of Robert W. Rummel)"

As I recall it, there were a number of stipulations which TWA management felt should be met prior to any commitment, but that if these were met then a commitment would be in order. This was passed on by me to Mr. Hughes.

Q Can you describe generally what those conditions were that the TWA management felt should be obtained prior to a commitment?

A Well, one that I remember is an increase in payload range that I mentioned earlier, one was financing of all except 20 per cent--

Q Of the total purchase price? 20 per cent of what?

A It was a package deal, Mr. Davis. It included more than the airplanes. It included airplanes, spares, and some other things, if we wanted them. We hadn't fully completed that part of it. Spare engines were included, for example. I don't want to mislead you. It wasn't a package deal all from Vickers, but several deals, all of which were wrapped up in a final package, we will say, simultaneously. At least, we were working toward that.

THE SPECIAL MASTER: The question is about the 20 per cent, what is the 20 per cent.

A The 20 per cent, I am a little vague on that. I think it's 20 per cent of the airplane and spares, to the extent that we committed for spares, to go with the airplane

from Vickers. I am not clear at the moment as to whether or not the 20 per cent applied to the engines, or if that was a hundred per cent, or what it was. I simply don't recall now. I am not clear as to the extent of spares we actually had in it at that time. I seem to recall the spares were, to some extent, an elective, that we either could or could not have them included.

Q I interrupted you when you were about to say that you reported to Mr. Hughes the conditions which the TWA management felt should be obtained prior to a commitment. Will you pick up from there?

A I mentioned two of them.

I am not certain on the others. I seem to recall there was one relating to price from TWA management, but I don't remember if this is really so or not. And there could have been possibly one more.

The result of reporting this to Hughes was that--

Q Before you give us the result of the reporting, can you tell me what happened when you reported?

A Well, that was what I was going--

Q I am sorry. I thought you were going to give me an end result as a result of reporting without telling me what happened when you reported to Mr. Hughes.

A I don't remember exactly what happened, except I

reported by phone, and the net result of that was that we set out to deal on the Viscounts, but in a way to comply with the stipulations from management.

Q Did Mr. Hughes encourage the management to try to get the Viscounts? That is what I am trying to get at.

A He had appointed me the coordinator on this project, that is, the development of the specifications and the contract, and kept, you might say, from time to time, tried to get this be expedited. I mentioned it had taken a little longer than I thought, and it sure did. So his directive or result of the conversation was that I should continue to work with Vickers, and bring them around to complying with these various items, although at the same time Mr. Hughes did or said he did, and I am sure he must have, to Sir George Edwards himself, and I don't know whether this was as a result of Sir George calling him or Mr. Hughes calling Sir George. I don't recall now.

I think another condition, if I can revert to that, was that the specifications be satisfactory to TWA.

Q To which?

A To TWA.

MR. WILLIAMS: That the specifications be satisfactory to TWA.

A This had been our intent, Hughes' and I. This had

been the understanding and intent in that respect.

At some point Hughes committed to Sir George Edwards for the procurement of these 15 airplanes, and Vickers had begun to prepare for the installation of some of the changes and modifications that we had required as a result of our specification negotiation. I don't have the impression at the moment that they had gone too far in the actual installation in aircraft, but I can't be certain now just how far they did go.

As I recall it now, and I have to give you this as my best recollection, Vickers met the 20 per cent criteria, they met the specifications criteria substantially--no one ever bats a hundred per cent, but we felt the specs were agreeable--and they did meet, as I mentioned earlier, the payload range aspects.

It was very, very late in this negotiation that it was discovered that the man in Vickers with whom we were dealing thought that he had an agreement on the airplane price when he in fact did not.

As a result of this, we undertook a price negotiation which became tedious and somewhat prolonged. It included discussions with a number of Vickers people who came over for the purpose, and included such things as escalation or let's say the establishment of the

reasonableness of asking price compared to what they had obtained or contracted for with other airlines, but considering things like labor inflation, parts cost rise and the like during the intervening period. It really became involved.

We were unable to come to agreement on price because we were unable--by "we" I mean I and the people that were helping me--I was unable to get Vickers to agree on to meet the objectives in price that I understood that Mr. Hughes desired.

This finally got to the point where Vickers said "Look, you make us an offer. We don't care what it is. Make any offer. We might take it."

I [illegible] this to Carter Burgess. Carter did not answer, but referred me to Mr. Leslie.

Mr. Leslie advised that I had no authority to make any offer of any sort, that in fact no offer could be made. This was the first I had heard of this.

MR. BARR: Could I have that last?

THE WITNESS: This was the first I had heard of this turn of events.

A I was in New York in the next few days and discussed it personally with both Mr. Burgess and Mr. Leslie, and they had the view that there wasn't, as I understood it,

that there wasn't any deal that could be made that TWA could enter into. However, unfortunately, by the time all this occurred, Mr. Hughes had already committed to Sir George Edwards to take at least 15 airplanes.

Vickers representatives were also in New York at the time, and told me that, look, they could understand that there might be problems. I might interject this, to say that TWA, in this particular period, had suffered a downturn in business, and this effected our ability to proceed. It wasn't a whimsical thing at all, I am sure. And that, referring to the Vickers representatives commen now, if there was anything that we desired, a different interest rate, maybe different terms, a different percenta of financing, just to say so. They weren't sure they cou do it, but they would be happy to try.

I reported this to Mr. Burgess and Mr. Leslie, and it was clear that we would be unable to proceed.

This was reported to Mr. Hughes, who seemed rathe upset to be so advised, although I had indicated earlier t it appeared TWA was cooling off some. I discerned nothing as definitive as I have described, but a sort of lack of enthusiasm let's say.

Mr. Hughes, I recall, said that he had committed t Sir George, that he would not change that commitment, that

it was worth more to him and his reputation in Europe to stick with his word than to back out, and that was that.

To complete the story, it must have been a year later, I don't know when it was exactly, but Mr. Hughes called me, and the only thing he said was that he just talked to Sir George Edwards, Sir George was satisfied that he had discharged all his responsibilities, and he wanted me to know that he had fulfilled all his obligations, and that things were now on even keel again with respect to our relations with Vickers.

Q And in fact TWA did not take any Viscounts?

A No, TWA did not take Viscounts. Indeed, Vickers didn't build them for us, because by the time it was determined that we couldn't get together on price and on [illegible] and other matters, Vickers simply stopped work and attempted to find other customers for the airplane.

One interesting aspect--it might be an interesting aspect--perhaps I should report here is that at no time, to my knowledge, did Vickers really understand, at least, the first number of months, whether this would be a Hughes Tool deal or a Howard Hughes deal or a TWA deal. I am sure they understood the airplanes would be used for TWA, and I was led to believe that the deal would ultimately in fact be a TWA deal, and not a Hughes deal, though it was

"DX 43, page 398A
(Excerpts from Deposition of Robert W. Rummel)"

Hughes and I that were negotiating it for TWA.

Q Would this be a convenient place--go ahead.

A Well, sure. Why not.

Q I don't want to break into your train of thought.

A This is a good place to stop.

THE SPECIAL MASTER: We will take a short recess.

(Whereupon, a short recess was taken.)

(Continued on page 399.)

BY MR. DAVIS:

Q Before continuing where we interrupted, Mr. Rummel, you might clarify for me one possibly two points.

At one time you referred to an effort which was made for obtaining a Viscount out of the delivery schedule for TCA, a Viscount for Mr. Hughes or the Hughes Tool Company?

A Yes, sir.

Q Was that for just one Viscount?

A As I recall it, it was one airplane.

Q Do you know what--

A I do not--I would not say at this time, because I don't recall, whether there might have been a request for more than one. We wound up with one, and as nearly as I can recall, that was a request that I made.

Q You did receive one then?

A No.

Q You made a request for one?

A As I testified, I worked with Mr. McGregor, so to speak, I discussed the situation with him--

Q Who is McGregor?

A He is the president of TCA.

(Continuing)--at Mr. Hughes' request. The request that I can recall is for one airplane, but I am not total

confident that I might not have backed off from a request for two or three and backed off to one. That is quite possible.

Q I understand. My question now is whether or not in fact one was received.

A To my best knowledge, none were received by anyone.

Q Do you recall what the purpose was or the reason for making a request for one or which came down to one?

A I am quite certain, I can't be positive, but I am quite certain that Mr. Hughes expressed the view that he wanted the one airplane for some sort of flight test purposes. It was definitely an airplane for Mr. Hughes and not for TWA, as far as I ever knew.

Q I am not sure that I am entirely clear as to the time period involved, as to when these discussions with Vickers or this flight that you had on an experimental model took place.

Can you identify approximately when it was that this--

A If you are referring to what I recall as being the old 630, that was at the time of the first Anglo-American technical conference at Brighton, which would put a fix on the time. I can only guess the time now, but--

Q Subject to correction, can you give me an idea

A 1952 or 1953.

Q It started as early as that?

A On the 630. The discussions on the procurement that I described in such a lengthy manner was considerably after that.

Q I see. That is the other thing I am trying to establish, because it seemed to me that there were two different periods involved that you were describing, and I am trying to separate them now before you continue.

Let me see if I understand you correctly, that approximately in 1952 or 1953 you developed this interest a Viscount and took a flight on an experimental model 630, is that correct?

A Put it in this perspective. We were following Viscount developments, as we tried to do many developments, to see whether or not we should have interest. I mentioned previously that we had analyzed and looked at the Viscount twice. This covers quite a period of time, and on two occasions I recommended to Mr. Hughes that we not move forward with a procurement program.

Q That is the other area I was trying to straighten out.

A We did not move forward with a procurement program. I think I mentioned in the testimony previously

just a few minutes ago that when I expressed this view to Hughes I did it with the confidence that I was also reflecting knowledgeable people in TWA.

Q I remember you testifying to that effect. I am trying to get you to give me an approximate time when that event occurred.

A I would be hard put to pin that down.

Q Was it still during the Myron regime?

A Yes, I think so.

Q What was Mr. Hughes' reaction to that report? I gather--

A It wasn't quite that formal. This was in the nature of a series of phone conversations, as I recall it, and the net result was that neither TWA nor Hughes procured the airplane.

Q You mean that airplane of the model 630 type?

A No, no. The 630 was not the production type airplane at all. The 630 was the prototype, and the production airplane was a larger and fairly substantially different model.

Q Now I am trying to get you to identify the model as to which you advised Mr. Hughes you would not recommend and which you felt reflected the views of TWA and as a result of which you did not move forward with

procurement negotiations, as distinguished from the type of aircraft as to which you did have these lenghty negotiations. That is what is confused in my mind from your prior testimony.

A Well, I don't recall the model number, Mr. Davis, of these airplanes. It was the kind that Vickers had slated for production for the delivery period that we were considering at the time.

Q Can you identify it, then, by the period, by the time period?

A Well, let me say I have the impression now that had TWA moved forward with Hughes in the first instance we would have far and away been the first to have Viscount in the States. We were, if not the first, among the first U. S. airlines to express interest in the Viscount.

Q I gather from your testimony that there was a model or type of Viscount being offered by Vickers which you felt was not suitable or desirable from TWA's point of view, and that at some later period, and that is what I am trying to identify, one period against the other, you did become interested in a Viscount, if certain specificational requirements were met, and--

A Maybe this will help, Mr. Davis. I may have confused the issue by talking about the 630 at all.

The 630 was a prototype, the first Viscount produced. It was the only such airplane produced. The airplane was re-engineered, the fusilage was lengthened, the fuel capacity changed somewhat, as I recall, and other changes made. Then it was placed in that subsequent configuration in production. That became the first production Viscount, the first group of which went to BEA.

From that time on Viscount remained in production as essentially the same basic airplane. There were changes, however, introduced at various times along the production line. The engine was uprated in power, other changes were made. I can't recall at the moment whether there was a still longer fusilage version or not. There might have been. Continental might have gotten a longer fusilage, for example.

So there was no splitting of the line or two distinctly dissimilar models. It was an evolution of the first type that was then produced in series, so to speak, in this one production line. I hate to take the time to elaborate on all these points, but in the interest of accuracy, when I say one production line, I am speaking figuratively, because the airplane was produced on more than one production line in England.

THE SPECIAL MASTER: Mr. Davis, I am not

clear about this airplane that they did recommend having a contract about, whether it was because it was an improved airplane or because it might be more attractive since Capitol was not able to take it.

Will you try to clarify that?

MR. DAVIS: I will, but my recollection of the testimony is that--and I am trying at the moment to do it by a time basis--my recollection of the testimony is that there came a time when TWA thought they might be interested in a Viscount if certain changes, features, were met, and that they had discussions along those lines, and Vickers agreed to do it, and that triggered off the negotiations.

[illegible]

Q What I wish you would do, Mr. Rummel, is to describe as well as you can what apparently were two periods, if not two types of aircraft; namely, the initial offering or approach that was made by Vickers, which resulted in your decision not to recommend the aircraft, and the event or events which occurred which developed into a new interest by TWA, and which resulted in the negotiations that you have described.

Do you follow what I am trying to get at, and what the Special Master is interested in developing?

A The trigger for a renewed look at the Viscount was the advice from Christopher Clarkson, which I then handed on to Mr. Hughes, that the 15 airplanes would be available.

Q That 15 airplanes would be available?

A Yes, as a result of the Capitol cancellation that Clarkson at this time seemed perfectly assured of.

Q Can you give me the approximate date when that event occurred? The date is always subject to correction. If you can associate it with an event--

A I can't be really specific. As I said before--

Q About the time Mr. Burgess came in?

A About the time he came in, or shortly before. I am not certain exactly which. It could have been shortly after he came in. It was a fairly unexpected development, I think, although many of us were surprised when Capitol ordered that many airplanes in the first place.

Q Then, if I understood you correctly, as a result of your reporting that to Mr. Hughes Mr. Hughes showed interest, and suggested or requested that you--

A I am not certain what additional testimony you are seeking at this point.

Q I am merely trying to develop all of the facts relative to what happened in connection with these efforts to negotiate and obtain or procure this Vickers product.

A Well, I indicated earlier that the result of the conversation with Hughes was a request that I explore the matter further with Vickers.

Q That was a response you received from Mr. Hughes when Mr. Clarkson of Vickers indicated that there were 15 Viscounts available as a result of the Capitol cancellation? Do I have it correctly now?

A Just as I testified previously, Mr. Davis.

THE SPECIAL MASTER: Mr. Rummel, to clarify what I was getting at, it seemed to me you made it clear that you would not recommend this airplane, and then later you came along with a recommendation.

I didn't get clear in my mind why you would, at a later date, recommend an airplane that you strongly recommended against. There must have been some factors there that you haven't made clear to me, anyway.

THE WITNESS: Well, there was quite an interval of time between the earlier recommendation and and the final recommendation. A number of things

had occurred. One was that the airplane became a better airplane, and the recommendation from TWA to move forward was conditioned upon the airplane being still better; that is, having more payload and more range.

The other situation which I think was slightly different was that the recommendation given to Mr. Hughes in the last case reflected results of a management meeting in New York, at which time certain conditions were arrived at, and while I discussed it slightly with Mr. Spater, I accepted that as the directive, and simply handed it on to Mr. Hughes, passed it on by phone to Mr. Hughes.

Q Then you also confirmed, if I recall, to a team visiting various airlines which had those Viscount in operation for the purpose of getting more statistical data and the report that TCA was cooperative. I am trying to place that timewise in relationship--

A That was part of the investigation of the Viscount that followed--

Q Clarkson's--

A (Continuing)--Clarkson's call and my conversation with Hughes. In fact, I discussed this approach with Mr. Hughes, as I recall it.

I must say that the general results of that investigation, as I recall it, led us to be somewhat more encouraged than we thought we would be when we undertook the investigation.

Particularly, as I recall it, TCA was quite content, and showed good--reasonably good operating cost factors.

MR. DAVIS: Does that clarify the record sufficiently?

THE SPECIAL MASTER: Yes.

Q I think, Mr. Rummel, that perhaps it would be appropriate for you now to complete your description of relations with Vickers when we took the recess.

A Vickers undertook the development of a fairly large four-engine jet in a preliminary way, and advised TWA of this, and I recall discussing this to some extent with Sir George Edwards and Derek Lambert at Weybridge during a visit there.

This particular project was subsequently dropped by Vickers.

Q Do you recall the time, approximately?

A No, I don't. I would have to reconstruct it now. I don't recall it.

After that Vickers undertook development of an

airplane model called the VC-10, and kept us reasonably well advised of what it was and what they intended to do. They finally developed--I guess that's the wrong tense--they finally decided to develop two models, the VC-10 and what was called the Super VC-10, both of which were ordered by BOAC.

Q Is that a jet?

A This is a large intercontinental four-engine jet. And even though commitments had been made for Boeings and Convairs, Vickers would, when it was convenient for them to do so, drop in and advise us of the progress and the general status of their program, but not with any serious efforts that could be discerned to sell us on the airplane.

Q Approximately when did that take place?

A Oh, the best I can recall, Mr. Davis, frankly, I don't remember, Vickers finally decided to go ahead full steam, but it was probably on the order of 1958, or thereabouts. None of the VC-10s are in service yet.

(Continued on page 411)

Q And you or TWA did not make any particular study or evaluation--

A Oh, yes, we certainly did. We calculated or estimated the operating cost, route characteristics, gave it a look see to the point where we were satisfied as to how it would compare with the Boeings and derivative models of the Boeings

Q What was the result of those studies, what conclusion did you or TWA arrive at?

A The final action was to buy additional Boeings.

Q What decision are you referring to referring to acquiring additional Boeings?

A The one made during 1961.

Q Did you have any conversations or communications with Mr. Hughes or the Hughes Tool Company or any of its representatives with respect to this Vickers VC-10 versus additional Boeings?

A Well, I don't recall discussing the VC-10 in this way, no.

Q Do you recall any discussion of any kind with either Mr. Hughes or the Hughes Tool Company or any of its representatives with respect to the decision to be made by TWA?

MR. WILLIAMS: You mean going back to 1958?

MR. DAVIS: I am referring to the offer or offering by Vickers of VC-10s and the evaluation made by TWA and

the decision, as I understand it, to acquire additional Boeings rather than acquiring Vickers VC-10s.

A I don't think I have been clear, Mr. Davis. I would like to try to clarify one point.

Q Please do.

A It was not really a contest between the Vickers and the Boeing. It was already clear to us that these airplanes, in our view, were of a different order, the better airplane by far, considering all factors, was the Boeing. It was not a contest between the two.

What I was trying to indicate was that the final result in terms of procurement action was that we didn't buy the VC-10, we finally bought Boeings.

Q And now I am trying to determine whether or not that final action or in connection with that final action there was any communication of any kind with either Mr. Hughes or the Hughes Tool Company or any of its representatives.

MR. WILLIAMS: Is this in 1961?

MR. DAVIS: No, relating to the action not to acquire VC-10s and acquire additional Boeings.

A Well, I had no discussion with Mr. Hughes in 1961 at all.

Q Prior thereto. My question still is as broad as I intended it to be, Mr. Rummel.

A The difficulty I have is tying it into the procurement of the Boeings.

Earlier in a phone conversation I am sure that I apprised Mr. Hughes to some extent of what the VC-10 was, and that it was being developed, but I do not recall any prolonged discussions with him on it. It was certainly not discussed in relation to the procurement of the 331Bs.

Q Now I am interested in what took place or what reaction you got from Mr. Hughes or anyone else representing the Hughes Tool Company.

A Well, I don't recall Mr. Hughes' reaction. I might say the 331B didn't even exist then, as I recall it. I don't recall any specific reaction to this.

Q Does this complete the Vickers story, if I may refer to it that way?

A That's all the salient points I can recall. I am sure that much more went on. I may have oversimplified some items, or I may have unintentionally omitted some others, but that is all that comes to mind at the moment.

MR. DAVIS: Mr. Special Master, we are at 4:25, and rather than open up the next subject, I would like to bring up the schedule for next week.

I know that I want to continue with Mr. Rummel next week.

were of lesser interest than some of the others.

Q Do you recall during what period of time it was that Handley Page was in the market of making offerings to United States airlines?

A I don't really know the extent to which they dealt with other airlines. I would only assume that since they were talking to us they were talking to other airlines.

Q I am trying to identify the period as well as you can do it, and always subject to correction, Mr. Rummel.

A Well, I can't be sure, but I think it falls in the period, oh, possibly 1956 or '57 on. I am not certain of that date, Mr. Davis.

Q During the jet age period?

A Essentially during the jet age, maybe with minor overtures just before that.

Q The next one that you identified was Bristol of England. Will you give us the same information with respect to that manufacturer of aircraft that you have with respect to the others?

A The first work with Bristol, as I recall it, predated the Anglo-American conference at Brighton that I mentioned a few days ago. I can't recall the exact time now, but Bristol put forward information which was

descriptive of the Britannia in an interest to--in an effort to interest us in it.

I visited the Bristol factory I believe twice on trips to England, and inspected the Britannias that were in production, and I think was kept generally apprised of the progress that Bristol was making in developing and selling the airplane.

The airplane was ordered by BOAC and a number of other airlines, and I believe was also ordered, and I don't recall if this was initially or later on, by British military services as a transport.

The airplane was a large four-engine turboprop that I believe I described heretofore.

Q Having identified it as a large turboprop, perhaps at this point it might be helpful if you would identify the other type of aircraft that might be considered as competitive with the Britannia, or with which the Britannia was competing for whatever market.

A When the Britannia was first discussed, Bristol anticipated delivering it much sooner than they finally did, and at that time, had it been produced when Bristol expected, it would have been competitive to contemporary U. S. piston airplanes, and later on with the Electra, and still later on with the jets.

It in fact wasn't produced when Bristol first thought it would be, so the competition that it found itself up against varied through the years.

Q The only other U. S. manufacturer of a turboprop was the Lockheed Electra, is that correct?

A Of a large turboprop, yes.

Q The one that would be competitive with the Britannia, the Viscount, or--

A The Britannia had much more range than the Electra. The Electra could have competed on some segments, but not on the extremely long-range segments.

Q You say that the original plans of Bristol, if they had been able to deliver as soon as they originally anticipated, the aircraft would have competed with the U. S. piston engine. Which U. S. piston engine aircraft would it have been competing with?

A The late Constellation series and the DC-7 series. It in fact did compete in international service with these airplanes. Again, the DC-7s and Connies were still in service when the Britannia finally appeared.

Q When I refer to the competition between types of aircraft I am--perhaps I should learn to use a different expression, Mr. Rummel--I am trying to determine the other types of aircraft which were available to airlines for

procurement for the purpose of determining to what extent airlines had a choice between procuring Britannias or Electras or Viscounts or Vanguards or whatever other types of aircraft, jets or piston engines, so far as that goes, for the purpose of determining what competition Bristol was facing as a manufacturer and would-be seller of aircraft, what kind of competition it was facing from other manufacturers of aircraft.

Have I made myself clear to you?

A In addition to those I have mentioned, I believe the Comet would have been construed by Bristol as being a competitor.

Q For clarity, would you mind now identifying, listing for me, so I can understand, the various types of aircraft which were in competition with the Bristol Britannia in the sense that I have just tried to explain to you?

A Well, this would be my personal opinion, but as I understood, you are asking what Bristol considered their competition to be at that time.

Q That's right, but from your point of view, as a person interested in choosing or deciding which type of aircraft to procure for the benefit or use of TWA, I am interested in your opinion and judgment as to which aircraft were competitively available to you. I do not mind

your giving me also, if you care to do so, your understanding as to what Bristol might have considered its competition, but I would appreciate it if you could do it separately.

A I will try, Mr. Davis. As I recall it, my distinct evaluation of Bristol at the time was that they could not reasonably be expected to produce the Britannia when they said they--when they were planning to produce it, so I tended personally to place the airplane in a bracket of time somewhat later than Bristol did.

Even so, in the beginning the Britannia would compete or did compete on the market with the later series of Constellations, the DC-7 and the Comet.

Later on the Britannia, once it was in production and fully certificated, and in service, it competed with jets from the standpoint of procurement, at least, Bristol made an effort in this direction.

As I recall it, Bristol claimed there was always a place for the Britannia, and that there was a place for jets as well, but obviously, to the extent that Britannias would be procured, it would, to some extent, displace the jet market.

It also competed, in this period, in this country, certainly, with the Lockheed Electra, but not in overseas service, because the Electra was not that kind of an airplane.

Q Perhaps I can approach what I am driving at a little differently, Mr. Rummel.

I understand your testimony to be that Bristol approached TWA or approached you some time before this conference at Brighton. You don't know the exact date.

Can you give me any idea of the year which you think that was?

A Well, it might have been around 1952, but I am not certain.

Q Around 1952. All right.

Apparently you gave some thought, made some studies, evaluated the possible use of the Bristol product, the Britannia, the possible use of that product by TWA, is that right?

A Yes, sir.

Q At the time that you were giving that consideration to this product what other aircraft from other manufacturers were also available to you or were being offered to the domestic airline industry which warranted consideration as an alternative to the Britannia? Can you describe or identify that situation for me?

A Well, I may have misunderstood, Mr. Davis. I thought that's what I did.

Q I think you did too, but in your answer I was getting

a little confused when you began to describe the fact that the aircraft was competing on the routes with another aircraft. It may be that the answer is still the same.

Let me put it this way: At that time, assuming it was approximately around 1952, was that the period of time when there was also being offered to TWA a choice of late model Constellations, Douglas DC-7s, Lockheed Electras, the Comet, Viscounts, was all this in the same period?

A I think I see what you mean. No. 1952 is the best date I can recall. It's around that period that I first visited the Bristol factory in England.

Q And you gave consideration to Bristol for what period of time following 1952, four or five years, two years, six months?

A I hadn't finished the thought I was trying to express.

Q I am sorry.

A I was going to add that at that time the Britannia was in the early stages of production. One may have flown or it may not have. I am not certain now. But it certainly was not available in the sense that airplanes could immediately be delivered.

Q That I understand, but a decision had to be made as to whether or not you were going to commit yourself for the

product, is that right?

A Well, I wouldn't say so, no. I think the explorations at Bristol and with Bristol were aimed toward resolving whether or not we should be interested in procuring an airplane, and if we should be interested, then when we could, and how to go about it, that sort of thing.

I think we looked on the Britannia as an extremely interesting airplane, one that should be watched closely, particularly with respect to what the competitor internationally might do with it, we were interested in the extent of interest on the part of other U.S. airlines in the possible procurement of it, but I think after examining the airplane we were quite content not to move in the direction of the Britannia, at least [illegible] remain of the true economic usefulness of the machine.

In other words, we, as I recall it, were content to see what happened and when it happened before we would have ranked it, for example, in the same competitive light, in terms of real interest, as we would have the late Constellation or the DC-7 series.

Nonetheless, the Britannia was given consideration, not only by TWA, but there were numbers of conversations with Mr. Hughes during which the airplane was described, performance aspects were discussed, power plant

4c

configuration was discussed, and that sort of thing.

Q With Mr. Hughes?

A Yes, between Mr. Hughes and myself, but I recall this, that there were a series of conversations. I couldn't begin to pinpoint the date, or precisely what was said in each one of them, but I do recall discussing the Britannia.

Q Can you give me an idea of the period of time during which it would be fair to say that TWA or you were giving active consideration to the possibility of procuring Britannias?

A Yes. Very active consideration was given to procuring Britannias during Mr. Burgess' regime as president.

Q So it began in 1952, during Mr. Damon's regime, 1952 or thereabouts, and continued until very active interest was shown by TWA during Mr. Burgess' regime, through 1958?

A I wouldn't say, Mr. Davis, throughout that period we would call it very active interest. There were periods when we did very little more than keep abreast of what was going on, be apprised by Bristol of what was going on.

The period of real active interest, where serious consideration was given to procurement of the airplane, was during the Carter Burgess regime.

Q At that time what other type of aircraft were you considering in lieu of the Britannia? What I am trying to

get at is--

MR. WILLIAMS: You mean during the Burgess regime?

MR. DAVIS: During the period when he was giving serious consideration to the Britannia, and I understand the Burgess regime was one of those times.

MR. WILLIAMS: He said procurement as contrasted with just looking at it, I gather, Mr.

My problem with your question, Mr. Davis, is that they were looking at it from 1952, and I understand the witness to say that serious consideration to procuring it was during the Burgess regime, and I want to make sure that the competitive factors that you are calling for are during that period.

Q Was it only during the Burgess regime that you gave serious consideration to the possibility of procuring the Britannia, or had you given consideration as to the possibility of procuring the Britannia prior to the Burgess regime?

A I would put it this way, Mr. Davis: During the Burgess regime procurement of the Britannia was a red hot issue. We had considered the Britannia prior to that time, but more with respect to determining, to the extent we could, whether or not we should be interested in it.

6c

My own personal view of the airplane, as I recall it now, was that we should wait and see.

During the Burgess regime, to answer your question as I understood it, the airplane wasn't directly competing at the time with anything, except to the extent that it was competing for available dollars, because by then the jetstreams had been procured--I am reconstructing this now from memory--we had done considerable work, I think in fact had ordered Convairs, and had ordered 131 and 331 Boeings--well, I will modify this to this extent: It probably did compete with the Electras and Lockheed efforts on the Electras, except we did not understand that the Electra was a coast to coast non-stop airplane, though as I recall it at the time Lockheed seemed to think it was, so we didn't put it in the same category as the Britannia, which clearly could fly coast to coast non-stop with no great difficulty.

The idea that seemed to be the main idea here behind interest in the Britannia stemmed from conversations with Mr. Hughes. It went along this line, that if we could procure a reasonable number of Britannias, which we at that time thought was probably quite a comfortable airplane to ride in, both with respect to noise and lack of vibration, and if we would put it in coast to coast one-stop or non-stop service, and if we could do it quickly, we would have

a very real advantage over the competition who at that time would still be flying piston aircraft.

Not only would it be more comfortable, the Britannia should have been considerably faster. We felt that if we could get a limited number of these airplanes, confine them, say, to New York-Los Angeles, New York-San Francisco, possibly a stop in Chicago, that we would, so to speak, have a leg up on American and United.

Now, we thought that we might be able to do this on a practical basis with a relatively few number of airplanes if we could make the right deal with Bristol and others so as to minimize the investment in tooling, spares and other support activities.

Various of plans were considered, including using Britannias in international service, but what I am saying is that it sort of finally boiled down, as I recall it, to the most serious interest finally being in a limited number of airplanes in this domestic service.

Bristol was quite anxious to make a deal, to the point where it was quite willing to re-arrange delivery schedules to the extent that it could in order to accommodate Mr. Hughes and TWA.

During this period I think that I was negotiating with Bristol on behalf of Mr. Hughes, but not having it

8c

clearly understood whether the airplanes would finally be ordered by Hughes or by TWA, although I believe the intent in this instance was to have them finally ordered by TWA.

The general Bristol situation at the time was somewhat confused, because for a number of reasons a number of airlines that had ordered the airplane were, as I recall it, seeking to change their orders for the airplane with Bristol.

One airline I think wanted to delay delivery. As I recall it now, I think that was Northeast.

Q Who?

A I believe Northeast.

Q Wanted to delay delivery of Britannias?

A Delay the delivery for a while. I don't recall the particulars, Mr. Davis, and I probably can't state it as a fact, but that is my recollection of the situation. Just why, I don't know at the moment.

Some of the smaller airlines not in this country had also approached Bristol in this respect, as I recall it, but as the negotiation continued Bristol approached numbers of them and others toward making airplanes available to--for TWA's use, believing, and I think they were certainly quite correct in this belief, that if they sold TWA they would have a strong wedge in the American

market, and if the airplane was anywheres nearly as good as they claimed, they would be able to sell others simply because we had it for competitive production.

I don't recall the range or number of airplanes that we discussed, but it varied from five to some substantially higher numbers, the higher numbers depending upon what could be made available by Bristol.

While negotiation was carried to the point of preliminary review of specifications, Bristol--the tender by Bristol of letters offering the airplane.

I made a trip to Montreal at Mr. Hughes' request to inspect a Britannia which was at Montreal at the time. It was my understanding that Mr. Hughes was in Montreal, and while I talked to him while I was there, I did not see him.

I did meet with men from Bristol. They indicated the airplane was available for Mr. Hughes to fly, and had been available for a number of days or weeks for that purpose.

I looked the airplane over and discussed a number of design features with the Bristol people, Bristol having opened the airplane up for that purpose.

By opening up, I mean opening inspection, the cowling and the like, things they could do without

dismantling the airplane.

This airplane was also examined during flight tests for air purity. In fact, we did it on the Britannia before we, as I recall it, did this relative to the Viscount that I mentioned earlier that TCA had made available.

Air samples were taken from various places in the cabin and in the cockpit. I discussed the test with Mr. Hughes in some detail before it was undertaken. He was quite particular on how he wanted some parts of the test run. The test, in the first place, was done at his suggestion, but I considered that it was a good thing to do. I was frankly concerned with this part of it.

The test results, once they were made available by the laboratory that assisted, were reviewed in some detail with Mr. Hughes.

Now, a corollary--corollary effort to these tests was to check into some of technical aspects of related items.

For example, at what temperature does the or would the fumes from various kinds of oil become toxic, if at all.

Now, this included petrolium based lubricants as well as synthetics. I recall being somewhat dismayed

"DX 43, page 458
(Excerpts from Deposition of Robert W. Rummel)"

so find that not a great deal of information appeared to be available, particularly with respect to synthetics, that is, synthetic lubricants.

This part of it was done by my power plant specialist operating out of Kansas City, who then made this information available to me for review and for purposes of discussing this along with the flight test results with Mr. Hughes.

The net results of these particular tests was that we found no evidence of toxicity in the airplane, or any danger from toxicity.

THE SPECIAL AGENT: I think this is a good place for a recess.

(Whereupon, a short recess was taken)

MR. DAVIS: Will you read to the witness the last portion of his answer to refresh his recollection as to where he was in his narrative?

(The answer was read.)

MR. WILLIAMS: Had you finished the answer, or do you want to add to it?

A I would like to add this, that, by way of explanation, the reason the tests were undertaken in the Britannia was because in this particular airplane the air that was pumped into the cabin and the cockpit for breathing during pressurized operations all flowed through the power plants themselves, where heretofore, generally, airplanes had the air that was breathed pumped in by separate pumps or superchargers, disassociated, except for the power drive, from the engines.

The question was whether or not the air passing through the engine could somehow become toxic, and this was the reason why it was felt appropriate to conduct the tests.

The Viscount was a different installation from the Britannia, but nonetheless we thought it appropriate in that case too.

Q Have you now fairly described the nature or scope of the investigation that was made by TWA relating to the desirability of procuring Britannias?

A No, I can elaborate somewhat.

While I was at Montreal Mr. Hughes requested that I contact Carter Burgess and invite Mr. Burgess and a number of his immediate staff to Montreal to fly in the Britannia.

My understanding of this exercise was that this would give Mr. Burgess and his staff an opportunity to evaluate the riding qualities of the airplane and perhaps with that perspective better visualize the kind of service that we were discussing.

I contacted Mr. Burgess, and he and a number of top people showed up at the Montreal Airport, where they were met by myself and a Bristol representative, taken to the Britannia, and then flown in it. It was a fairly short flight, as I recall it. I think it was possibly an hour and a half, or thereabouts.

On landing we returned to the airport, flew back to New York, had dinner there fairly late in the evening, and went our respective ways.

During this same period consideration was being given to procurement of 1049Hs, which is a Constellation type that had a fairly flexible interior. It was also during this period that Viscounts were being considered. I remember a meeting called by Mr. Burgess in his New York

office which was aimed at coming to a uniform position, so to speak, within TWA as to what TWA wanted presumably so that this information could be handed on to Mr. Hughes.

The results of the meeting were summarized and copies of the summary, as I recall it, given to myself, Mr. Burgess, possibly Mr. Leslie, so that we would have a uniform position, and if I recall correctly, considering the various equipment alternates that were available for consideration, it was recommended that we not move forward with the Britannia.

Q Can you tell me, while you are on that subject, who attended that meeting for the purpose of arriving at this uniform position within TWA?

A Well, the only people I recall are Mr. Burgess, Mr. Leslie and myself, although it is possible others were there.

Q Was there a difference of opinion within TWA as to which type of aircraft was best suited to TWA's needs?

A I think there were differences of view as to the relative desirability of various courses or combination of courses that we could undertake. I do not remember any sharp cleavage or arguments.

Q Do I understand you correctly that as a result of this meeting the decision of this group was not to go ahead

with the Britannia, is that correct?

A No, the decision was that we should recommend to Mr. Hughes, as I recall it, that we not move forward with the Britannia.

Q Was that done, was that recommendation transmitted to Mr. Hughes, do you know?

A I am sure it must have been, Mr. Davis. I don't recall specifically here, as to just how or who did it.

Q Was it after that meeting that negotiations with Bristol were terminated, or can you explain to me what then happened?

A I don't remember an act of terminating negotiations. The impression I have now of what happened then is simply that our interest waned, time went by, and it just ceased gradually to become an active negotiation.

Certainly Bristol continued for a while to make efforts to sell the airplanes.

Q Do you recall what views, if any, Mr. Hughes had with respect to the Britannia, as to its desirability from TWA's point of view?

A Well, the impression I had at the time, Mr. Davis, was that Mr. Hughes was very seriously interested in exploring all possibilities to determine feasibility of moving forward with the Britannia procurement program.

I would certainly view this as a serious, earnest effort. As to what was really in his mind in summary fashion at any one point, I don't think I could say. I had the impression that he was quite interested in going that way. He certainly knew how to ask a good many perceiving and detailed questions on the airplane, the general situation.

Q Can you tell me approximately when it was that this decision was made by this TWA personnel you had identified not to move forward with the Britannia?

A As I recall it, the decision not to recommend the Britannia was fairly late in 1957, but I really can't be sure of the exact time.

Q Did any domestic airline in the United States in fact procure Britannias?

A I don't believe any were delivered to any domestic airlines, but I think at least one and possibly more had at one time ordered Britannias. I think Northeast was one of these. This would bear some checking. It is possible that there is one other one, but I can't be that definite now.

Q Do you know what happened to those orders?

A Cubana did, but I do not consider them a U. S. airline.

Beg your pardon?

Q Do you know what happened to these orders that were

placed by other airlines?

A Not except to the extent that I indicated earlier.

Q You say that those Britannias became a red hot issue during Mr. Burgess' regime, but that prior thereto they also had been considered.

Can you identify a prior period when they had been seriously considered and abandoned?

MR. WILLIAMS: Seriously considered?

MR. DAVIS: Yes.

A Well, by "red hot issue" I meant it was an earnest and serious negotiation that called for final decision one way or the other. I don't recall any of the earlier reviews or investigations having gotten to that point.

(Continued on page 465.)

hn-1

Q In other words, is it fair to say, then, that from approximately 1952 the possibility of acquiring the Britannias was being explored more or less continuously with varying degrees of interest in their product until it reached a point that you have described in greater detail during the Burgess regime--

A No, I don't think it was explored more or less continuously. I think we had the fact that the Britannia would probably exist and then later did exist in mind through this period, and at times, when something new came up, new documents were received, new information became available, then we would give that some additional consideration.

Indeed certainly could have [illegible] specific effort that I don't at the moment recall from time to time.

Q What was your personal recommendation in this meeting with Mr. Burgess and others?

A Well, I can't be absolutely sure at the moment. I remember being concerned about the difficulty that I felt TWA would probably encounter in introducing or planning for the introduction of too many new types of airplanes simultaneously. If we procured Viscounts, and also procured Britannias, at the same time were preparing, which we were, to some extent, at least, for the intro-

duction of jets, it seemed to me that we were probably going to extend our organization beyond the reasonable point that it should be extended, and that we might not do all jobs as good as they should be done, whereas if we undertook a less ambitious program than trying to do all things, we would be far better off.

In a moment it may come to me, but I don't recall specifically where I put the Viscounts in relation to the Caravelle and the Us and other things that were being kicked around at the time.

Additionally, I remember at one point, when we were considering the forecasted maintenance and overhaul costs, I recommended, as a result of inspecting the airplane at Montreal, that for planning purposes we should double those costs. I recall not being favorably impressed with many mechanical aspects of the airplane from the standpoint of cost of maintenance.

Q Without trying to recall what your personal recommendations were, can you describe or identify what the reasons were for the conclusion which was reached at that meeting?

A Well, my difficulty is in specifically recalling all of the conclusions reached at the meeting, which I seem to be unable to do, Mr. Davis. Some of them were,

by nature, contingent on other conclusions.

As I recall it, the nature of it, and I don't recall the specific, was, well, if Viscounts are in fact procured, then Britannias should not be. It was more this kind of thing rather than simply that under no circumstances, as I recall it, should the Britannias be procured. But I don't recall exactly what came out of it in detail. The gist of it was that we felt it was better to forego the Britannias, as I recall it, as a broad assessment of one of the broad results of the meeting. I just don't recall the specifics.

Q And then proceed more actively with respect to the Viscount, or was it a decision to abandon all of them?

A Well, as I recall it now, the Viscount program was still active, and it was expected that would continue to be active.

Q Is Bristol still making offerings of a type of aircraft to the domestic airline industry?

A Yes, they are. They are building a twin-engine air bridge type airplane. I don't know of any airlines over here, though, that have procured it. It is in use in Channel services, and I believe a few other areas.

Q Have you completed your description of both the relations of TWA to Bristol and the scope or nature of

U. S. airlines?

A Well, I can't say I have stated every particular, but I have tried to give you the evolution, if you like, of our relations with Bristol.

Just for example, I recall that Bristol did report having had discussions with certain members of government, I think therefore some committee in Congress that was involved, with respect to [illegible] that would be imposed on Bristol by its other commitments. Bristol had suggested that a joint meeting be held with the government to help sell this plan, but we chose not to take that step at the time it was suggested.

In fact, we didn't take the step at all.

[illegible] airplane strictly from TWA's point of view, we looked at it in terms of its--in terms of what it would probably do for others, and then what that would do to us.

As I mentioned earlier, part of the objective of the negotiation with Bristol was to find a way to proceed without requiring much cash.

As I recall it, although I do not recall the particularity, part of the reason Bristol had for contacting the government was to make funds available for the program, and that Bristol felt to better do this it

would like to have some tangible evidence of interest, either a personal appearance, a letter, or something, and to my best recollection, it got no such tangible evidence.

Q You referred to production problems at Bristol. Those were production problems in relationship to available financing?

A Well, at one time part of the airplanes that Bristol were talking about making available to Hughes and TWA were airplanes on order by Scottish Clan. While I can't be certain at this time, I think Bristol felt the need for mending fences, if you like, ahead of time, with respect to releasing airplanes for this purpose.

I am sure they had discussions with Scottish Clan, and the exact degree to which this may have gotten into discussions at a government level, I can't be certain now, but I have the impression that it probably did.

Q Can you identify the Scottish Clan to which you were referring?

A Not except that it was an interest that had ordered a fairly small number of Britannias.

Q Were the financial resources of TWA at that time a factor in the decision or conclusion which was reached?

A Well, this would have been primarily a question that I would not have answered to from a management

"DX 43, page 469A
(Excerpts from Deposition of Robert W. Rummel)"

point of view. This would be a question Mr. Leslie would have, I suppose, been expected to take a position on with Mr. Burgess.

I have never knowna case yet, when ordering equipment, when finances weren't an important consideration.

(Continued on page 470)

fwp

Q What I am trying to determine is whether or not, to your knowledge, the financial resources available to TWA at that time were a major factor or consideration which was discussed at this meeting attended by Mr. Burgess, Mr. Leslie, yourself, and others.

A Well, I can't answer it, Mr. Davis, because I don't know what was made available or what would be made available either through TWA or through Hughes to TWA or what. This is an area that I didn't directly work with.

Q What I am trying to establish is whether or not this decision which was made at this meeting which you have previously identified, whether it is your understanding that the decision was predicated upon factors other than the availability of financing to TWA from whatever source.

A Well, I am quite certain that there were factors considered besides financing.

Q I understand that. I am trying to determine to what extent available financing or the willingness of the Tool Company to provide the financing or to commit its credit was a subject of discussion at this meeting or meetings at which the decision that you have described was made.

A I don't recall specifically.

Q I am interested in [illegible] involving Brie

Mr. Rummel.

You testified at one time that Bristol originally anticipated a delivery schedule which you felt they might not be able to keep.

Can you describe what the facts were in that regard, what was it that Bristol originally anticipated being able to do, and what in fact developed?

A I don't recall the schedules now, Mr. Davis. I recall, in going through the Bristol factory, having this in mind, and it was a sort of a personal evaluation, if you like, that as a result of what I saw, and as a result of the discussions I then had with them, they could not reasonably be expected to meet the delivery schedule that they were talking about and planning on. And by "delivery schedule," I am speaking now of the production of airplanes to their customers.

Q That is what I am talking about.

A Later on the delivery prospects were, again upset because the Britannia caught, so to speak, some backwash from the Comet program. As a result of the investigations that followed the Comet disasters, the British Government, acting, to a fair degree, I believe, in consert with industry, laid down some criteria which required extensive re-evaluation and retesting of not only the Comet, but

also the Britannia. Now, this in turn caused additional delay in producing Britannias.

Q Can you identify or describe the nature of that delay; was it a delay of months, a year?

A Well, I can certainly give you my recollection. I would be hard put to prove it at the moment. But I would say--I have the impression that the Britannia was delayed an additional year or possibly a year and a quarter, or thereabouts, as a result of the additional testing and re-evaluation, re-engineering and modifications that came out of the investigation of the Comet and the reinvestigation of the Britannia.

Q By reason of some mishap which had occurred?

A Because of the Comet disasters. I am not aware of any mishaps on the Britannia that called for this.

Q Now do you think you have adequately described the nature of the offerings made by Bristol and the relations of TWA to Bristol?

A Well, as I said, I am quite sure Bristol approached TWA after that sequence, but I seem to draw a blank right now as to what it was.

Q Have you fully and adequately described the participation of Mr. Hughes or the Hughes Tool Company or any representative of the Hughes Tool Company in that relation

ship?

A Well, to the extent that I presently recall it, we did not lose sight of the Britannia, it became a competitive factor in the Atlantic.

Q I am referring to the part played, if any, or the extent to which a part was played, either by Mr. Hughes or the Hughes Tool Company or any representative of the Hughes Tool Company.

A Well, that is all I recall at the moment, Mr. Davis. I am quite sure that we discussed the technical features of the airplane from time to time in the perspective of jet developments, what could be learned from it to be reapplied, and that sort of thing, but I don't remember any specifics.

Q The next manufacturer that I have listed is Short-Harlan.

A Yes. It has proposed primarily, as I recall it, cargo aircraft in various sizes from time to time.

Short-Harlan used to be Short Brothers, I believe. It is currently promoting, if you like, the use of a fairly sizeable freighter that it has under development.

This was not a particularly active relationship, and still isn't, although we did receive information from from time to time and would talk to them as they passed

DX 43
476

AFTERNOON SESSION

2:00 P.M.

ROBERT WILAND RUMMEL, resumed the stand and testified further as follows:

EXAMINATION (Cont'd) BY MR. DAVIS:

Q During the luncheon recess, Mr. Rummel, has anything else occurred to you that you haven't already identified or described?

MR. WILLIAMS: In connection with Short-Harlan?

MR. DAVIS: In connection with the manufacturers who from time to time may have made offerings to the airline industry. Is there anything you would like to add or change to your testimony to date?

A No, nothing occurred to me during luncheon, Mr. Davis.

Q Was there anything which has occurred to you since you began testifying here which you would like to modify or change?

A No.

Q The next manufacturer which I have on my list is Sud Aviation, or Aviation Sud--whichever you prefer.

A I visited the Sud people in Paris and the Sud factory at Toulouse sometime before the first Caravelle flew.

Q When was that?

A Probably in 1952 or 1953. I am not positive. I w

taken on a tour through the facility, and had somewhat tedious but interesting but technical discussions with their engineers--tedious because of the language problem.

Generally I became familiar with what they were doing, and the status of the project, and also the Sud facility, as well as their plans for producing the Caravelle.

Sud from time to time would send specifications and other descriptive data pertaining to the Caravelle project to my Kansas City office. I might say this was a particularly intriguing airplane design because of the engine location.

Part of the purpose of the visit was to try to establish as best I could whether or not Sud appeared to have the capability of developing and producing an airplane in this category, and in direct competition with others with whom we had been dealing.

The Caravelle was ordered by Air France who received the initial production lot, but additionally was sold to Air Algiers and a number of other European airlines.

Sometime later a Caravelle was flown across the Atlantic and flown on demonstration tour pretty much throughout the United States, and if memory serves correctly, touched a certain number of countries of South America.

This tour was a highly organized tour on the part

of Sud, involving demonstrating the airplane to most of the major airlines, but additionally in promoting the general cause of good U. S.-French relations. I recall being told at the time that the cost of the project was being shared by Sud and the French Government, although Sud is in fact primarily owned, I believe, by the French Government.

In making arrangements for the demonstration in Kansas City, Sud had been in touch with my office. I arranged for the handling of the demonstration with our operations department, and also arranged for our publicity people to work with the local Chamber of Commerce and with Sud towards setting up various meetings with town people that Sud wanted to meet with. This was a number of months in advance of the actual demonstration, as I recall it. I had the impression that this had been done elsewhere by Sud.

The airplane arrived at Kansas City, and was demonstrated to two or three plane loads of TWA personnel in combination with town officials and other prominent citizens that Sud had invited and who had accepted. I went on one of the flights and was tremendously favorably impressed with the comfort of the airplane from the passenger's point of view.

Sud advised that only two non-Sud pilots had be

cleared by Sud management to fly in the airplane. One was Charlie Lindbergh, and one was Mr. Hughes. They advised they wanted to demonstrate if at all possible the airplane to Mr. Hughes.

I got in touch with Mr. Hughes. I don't recall whether I left word at the Hughes' office or whether it was in the course of another call, but I recall advising him of this, and indicating my belief that the airplane had strong passenger appeal, although I recall indicating I wasn't then sufficiently familiar with the mechanical detail of the airplane to comment on the practicality of the system's structure, and whatnot.

It was either then or in a subsequent call which would have been approximately at that same time, Mr. Hughes requested that the airplane be flown to the Hughes Aircraft airport at Culver City so that he might inspect it and fly in it. I approached Sud with this in mind, and was able to report back to Mr. Hughes in due course, again in a fairly brief interval of time, that Sud was willing to fly the airplane to Los Angeles, and that in order to make it available, it was willing to readjust and rearrange its demonstration schedule to the extent that might be desired, although they hoped it would not require much. I think they planned to have the airplane available one day or a

(Excerpts from Deposition of Robert W.

day and a half, and sandwich it in, so to speak, with a minimum of modification to the Sud demonstration schedule.

There were numbers of conversations with Mr. Hughes, with me sort of being a middle man between Hughes and the Sud flight crew, during which recommendations were given to the flight crew as to how to route the airplane to the coast. Mr. Hughes seemed to be concerned with a tornado activity and possibilities of hurrand from some recent atomic tests, and was anxious that the plane be flown along certain routes to the west coast.

I did not accompany the airplane to the coast. However, General Tessier who is the U. S. representative for Sud, and others in the Sud party did. I recall he was joined there by Sud's treasurer. After arrival, the airplane was inspected by people from the aircraft division of the Hughes Tool Company--Ray Hopper's outfit. I don't recall at the moment how long the airplane was in Los Angeles, but I believe it to be in the order of a week to ten days, or thereabouts. Sud reported that Hughes did not fly the airplane. That he was indisposed at the time. That their contacts had been with Mr. Hopper primarily. Before leaving, however, either Tessier or the treasurer did talk by phone with Hughes.

As I recall it, Sud was finally forced to put the

airplane back into demonstration, and flew it from that area.

Sud had offered the Caravelle and it had outlined certain delivery positions for some quantity of aircraft. It became my lot to try to improve these delivery positions through negotiation with Sud. As I recall it now, Sud had plans to expand its Toulouse assembly facility, and at that time [illegible] manufacturing components in a number of French facilities.

After review, Sud gave us what appeared to be the best deliveries that it could offer. These still didn't seem to be quite good enough. As a result of a conversation with Hughes, we undertook on an exploratory basis an investigation of whether or not airplanes could be delivered sooner if they were manufactured by TWA or Hughes, rather than if they were manufactured by Sud.

To understand this, it is perhaps well to recall that Sud had commitments for some time in the future at this time, which tied up their deliveries for a while. The specific plan that was explored was, might be characterized as a backward or reverse approach to production. Instead of starting by manufacturing detailed parts, combining these into sub-assemblies, and then assemblies and then finally into an airplane, the idea was to start as nearly

as possible with the major components, possibly first joining a wing with a fuselage, to a landing gear, to nacelles, these all being imported in the beginning, and described in the thought that we were pursuing.

Then on the possible basis that perhaps Sud to supply certain components in the beginning, where they might not be able to provide completed airplanes because of facility limitations, the production line over here would gradually be expanded in depth to assemble more and more separate components, and finally if the quantities of airplanes justified, to back into the manufacturing business.

The discussion was sufficiently serious for Mr. Hughes to request that I ask Carter Burgess not to dispose of an overhaul facility that we were moving out of in Kansas City at the time that we were going to release it back to Kansas City, Kansas, the thought being this might be the initial site for the assembling of airplanes in the event all this worked out to some advantage.

(Continued on page 483.)

The reason, as I discussed it with Mr. Hughes, for the upper inspection of the airplane was that I felt the need for people somewhat more currently familiar with some of the manufacturing details than I was to take an independent look at it, and either support or disagree with the tentative conclusions that I had arrived at on this point.

There were numbers of discussions. The end point of it all was that we had to conclude that considering the time necessary to establish a manufacturing organization, whether it came partly from TWA or whenever it came from, whether it was a division of TWA or whatever it might be, would take time--more time than we probably had--and additionally, Sud, on exploring to greater depth than they had at that time the ability to manufacture components in these various factories throughout France, came to the conclusion that it could not, even though it wanted very much to establish a facility in the U. S.--came to the conclusion that at that time it could not expand its production of components sufficiently rapidly to accommodate a second production line in the States, at least to the point that it would accelerate production of the Caravelle.

This particular approach was abandonded after what I would view would be a very thorough exploration, such

as I have described briefly.

Our relations with Sud were always good. Sud kept in touch from time to time concerning delivery positions, orders to others, and so on.

Many of these contacts were through General Tessier, although occasionally others would be involved.

Considerably later on the Douglas Company and Sud became associated with respect to the Caravelle. During, I think it was 1959--I am not sure--United Airlines purchsed a fleet of 20 Caravelles of a somewhat later model than we had looked at earlier. These were delivered, I believe, during 1961.

The Caravelle, during this intervening period, became established as a very popular airplane in Europe. It was a comfortable airplane that the passengers seemed to enjoy. The Caravelle was and is a smaller jet with limited range characteristics, and appeared to be of a size that could nicely complement TWA's fleet of 880s and Boeings.

During 1961 both Douglas and Sud were in touch with TWA, and I understood to see what sort of a deal might be worked out with Sud for airplanes, all with full knowledge and concurrence of my superior, Mr. Tillinghast. The objective here was to come up with a deal, if possible,

that would require a minimum cash outlay, or if possible, would permit generating what cash might be required from the airline.

All in all Sud was cooperative. The deal went through a number of gyrations, and so did the airplane configuration, at least in some particularity. It wound up with General Electric power plants, for example, instead of Rolls-Royce. It was a slightly longer fuselage than, I think, United had. It had some aerodynamic refinements.

This airplane was slated for production commencing in January of 1963.

While the contract was signed for the procurement of 20 aircraft, it was allowed to expire.

Additionally, Sud have talked about supersonic transports, particularly recently. I have had occasion to review some of these plans with Satre and outside of Sud having discussed now and then whether or not it should continue the Caravelle as it was, or build a bigger caravelle, or smaller Caravelle, and outside of discussions of that character, I think this would be my nutshell recollection at the moment.

Q Why was the contract for Caravelles allowed to expire in 1961?

A I may have misled you. I don't know that it

technically expired in 1961. It has since expired. I think it was in 1962 when it technically expired.

Q I meant the arrangement that had been negotiated in 1961.

A As I understand it, the primary contingency that wasn't me-related to financing.

Q Financing available to TWA?

A Yes.

Q Have you fully described the participation of Mr. Hughes or of the Hughes Tool Company or any of its representatives in connection with the dealings with Sud?

A As nearly as I can recall it, I might say Mr. Hughes evidenced very keen interest in this exploratory process I described of seeing what could be done to accelerate production, and then also once TWA's requirements were reasonably satisfied, there may be a combination with that to possibly offer the airplane to others.

That is all I recall at the moment, Mr. Davis.

Q As I understand your testimony, Sud first approached TWA or you in around 1952 or 1953, is that correct?

A Yes. As I said, I am not entirely sure of that timing, but it was about that time. While visiting some of the factories in England, I extended the trip and

dropped in first at Paris for an afternoon's discussion, and then went on down to Toulouse, and returned to Paris for a half hour's discussion, and then left back for the States.

Q At that time Sud was offering a Caravelle?

A Well, it may be putting it a little strong. I think at that time they intended to offer and declared their intentions of wanting to sell the airplane.

As I recall it, they were most eager to try to penetrate the American market with this airplane, and at that time--I didn't know it when I went down there, but I soon learned we were the first airline to visit the Sud facility from the U. S.

Q What was the type or category of aircraft that Sud indicated it contemplated offering to the U. S. airlines?

A Pretty much like it is right now.

Q A jet?

A Oh, yes. I thought I described it the other day. It is a twin-engine.

Q I wasn't sure at that time in 1952 and 1953 they were planning and offering or intending to offer that kind of aircraft.

A Yes, sir. It is the same Caravelle. A Caravelle has always been the Caravelle. It is essentially the

same. There have been increases in the power of the power plant. There have been changes in fuel capacity and other refinements in the airplane, but essentially, if you were to look at two airplanes on the field, one made then and one made now you would immediately identify both as Caravelles.

MR. WILLIAMS: What was the passenger load of the Caravelle?

MR. DAVIS: I was going to ask my question a little more broadly. I was going to ask him to identify, if he would, the type or category of aircraft with which the Caravelle would be competitive.

A It would have been competitive with the Lockheed Electra.

Q Electra?

A Yes, and airplanes contemporary with that.

Q You identified it as a short-range aircraft?

A Short to medium, yes.

Q Can you identify the category of short to medium-range aircraft that would have been jet aircraft, which from TWA's point of view at least, were competitive for consideration with what was contemplated by Sud?

A As I recall it, the Caravelle had somewhat more range than the Viscount, but there were a number of route

segments where certainly both could serve and both were contemporary. The Viscount preceded it, but they could have appeared at that time.

Q In the category of jets, can you identify the types of jet aircraft which are or were contemplated to be competitive with the Caravelle?

A Because of economics the airlines tend to want to fly jets on as long trip lengths as they can. However, due to route necessity or availability of jets, or various reasons, a number of them fly, even bigger jets, on fairly short hauls. To the extent these aircraft would have been flown on the hauls for which--the length of hauls for which the Caravelle was suitable, to that extent they would have been competitive.

Q Competitive with what?

A With Convairs.

Q Convair 880s?

A Boeing.

Q Which one--the 131?

A I would say 131, or if you look at the Caravelle, say an airplane good for seven or ten years useage--let us say ten years--had we procured it, it would just be coming in and would be good for a long time.

I would include all these airplanes which would

fall route-wise into the category the Caravelle would fly, and that would include the 727, for example.

(Continued on page 490)

Q What I am interested in knowing is what was being offered in the sense of interest to manufacturers and manufacturing jet aircraft in 1952 or 1953, or at the time Caravelle first approached you--what choice, if any, did TWA have for a comparable type of jet aircraft?

A There were none available in 1952 or 1953. At that time, as I said, the first airplane was just being built in the factory. It was at an appreciable period that it flew and still later period that it was placed in production.

So there wasn't any availability then, and it would have been premature for any airline, other than a state airline to have entered into heavy commitments. It would have been a first-class gamble, and then some.

Q What I am trying to understand is this: Were there other manufacturers, domestic or foreign, which at that time, namely, when Caravelle was discussing with you its proposed program--what other aircraft manufacturers were offering or indicating an interest in offering a comparable jet aircraft. By comparable, meaning one that would have performed substantially the same service for TWA that the Caravelle might have.

A As I said, I am not real certain of the 1952 or 1953, I suppose it might have been 1953 or 1954. As I

recall it, the Caravelle emerged somewhat after the initial Comets were produced. The Comet was a long-haul airplane. It was also represented as a good medium-haul plane.

I suppose in a certain sense it could be considered competitive to the Caravelle, although I think we looked at the Caravelle more as a short-haul airplane.

Q As a short-haul jet aircraft, what I am trying to find out, Mr. Rummel, is whether at that time, whether it be 1952 or 1953 or even 1954--at the time the Caravelle was trying to interest or evoke an interest in TWA for its product, what other manufacturers were offering or programming or planning for a similar short-range jet aircraft.

A I don't recall any at that time except to the extent the Comet was short haul. As I said the other day, AVRO Canada did produce a small four-engine jet which was not too far removed from the Caravelle in terms of size, but that was quite awhile before this.

Q At that time were there any U. S. manufacturers, that is, Convair or Boeing, or Lockheed or anyone else, who were approaching the airlines with a program of manufacturing a comparable or competitive aircraft which might be competitive to what Sud was offering?

A. We had numbers of discussions from approximately 1946 on, and I think some clear back in 1945, with a number of U. S. manufacturers on the possibility of their producing jet airplanes.

Back in 1945 I had laid down and run a preliminary performance analysis on a small four-engine jet. I discussed this with Jack Franklin. We discussed it with Frye, and as the next step we discussed it with Douglas, and we found that coincidentally Douglas had laid down an airplane that was certainly not identical, but very similar to that.

I think in retrospect now both of them represented ing about the same state of the art at the time--performance figures were comparable, and so on.

Mr. Franklin indicated that both Mr. Hughes and Mr. Frye were interested in pursuing this further. We did have discussions with Douglas, but finally concluded that the state of engine development was just premature to move on into jets at that time.

Martin approached us at the time Mr. Franklin was still there with drawings of various jet possibilities. They had preview drawings of various sized machines. So did Convair. Both Martin and Convair at that time had a development contract with the military, and were

developing experimental jet bombers.

Mr. Franklin and I made one trip to San Diego during which we looked at the bomber at the shops while being constructed. We considered technical aspects and looked further at some of Convair's drawings.

I would say that both Martin and Convair at this particular time were exploring possibilities, rather than coming in with contracts and dripping pens.

We also gave consideration to other possibilities of having jets developed. One was a commercial version of the YB-60, which was a large eight-engine jet variant of the B-32 built by Convair.

By way of identification, I recall it as the machine that competed with the initial B-52 plane. I remember being asked by Mr. Hughes to discuss this possibility, or rather say to explore the plane that Convair had with respect to feasibility, which I did by visiting Fort Worth, and talking to their structural and performance engineers. I later was asked to visit Mr. Odlum at his ranch and discuss this with him, and I believe Mr. W. C. Rockefeller was there at the time, if I recall. He was there at several such meetings.

Q Was this at the time when Mr. Odlum was chairman of the board of Convair?

Q Now will you describe what was contemplated or offered by Douglas at that same time, or during that same period of time we are talking about, namely, from 1952 to 1954, or the time that Caravelle was being offered by Sud?

A I don't think the model 80 goes back as far as 1952. I am just not certain of the date. It would probably be more towards 1953 or 1954 possibly.

As I recall it, Douglas was still pretty well occupied with the DC-6B and DC-7 production, particularly during the latter part of that period. I don't recall exactly when the DC-7 appeared. I don't recall activity to any great extent along this line from Douglas, although they may have occasionally dropped in with some thoughts on jets.

Lockheed did look at jets fairly extensively, as time went on, from that time.

Q Is it fair to say that at that time Douglas had not developed any particular program of looking towards an offering of jet commercial transports to domestic airlines?

A I am a little vague on that point. I know later on they were giving active consideration to building and actually offering airplanes, and I did practically nothing with them, as I mentioned the other day. During this particular period we gave consideration to some piston air-

planes they were offering.

Q Which kind of airplanes?

A Piston. My recollection is that they were pretty well taken up with the piston airplanes, and that they were not anxious to move into jets.

Q They weren't interested in pioneering a jet commercial transport?

A My recollection is that they had the piston market, certainly not to themselves, but they had a big piece of it. The airplane was still being ordered. It was in heavy production, and they saw it continuing for some time. As I recall it, not too much was going on, as I knew it, at least, as I recall it, from Douglas with respect to jets.

Before then they looked particularly to the smaller jets that I mentioned earlier, although I would not want to go on record and say that they didn't show us previews a time or two. I don't recall the specific instance when they did.

Q How about Lockheed? What were they doing looking towards jet aircraft?

A The first Lockheed jet transport that I was at all familiar with that I can recall was during the time Lou Koepnick was in charge of staff engineering

That was a four-engine jet. As I recall it, the

to date?

A Yes, there is, Mr. Davis.

On further reflecting on the Caravelle situation, and recalling what was said yesterday, it seems to me that there might be some confusion as to the timing of the Caravelle demonstration here in the States.

You may recall I mentioned that we held on to a facility in Kansas City and that at Mr. Hughes' request I contacted Mr. Burgess.--I also contacted some others in this regard--But this was during the Burgess regime, obviously, which was in 1957. As I recall it, you kept interrogating me about a competitive situation that existed more toward the beginning of the Caravelle exercise, 1952 to 1954, and then 1955, and I said I wasn't exactly sure when this trip was, but I thought it was late in that period, and I just want to be clear, on further recollection I can establish that the Caravelle tour was in 1957. I think it was the first half of the year, but I am not sure of the exact dates even now.

Q So that in 1957, and after orders had been placed with Boeing and Convair for jet equipment--

A This is correct.

Q (Continuing)--TWA was still giving active consideration to the possibility of the Caravelle program, is that

be expedited, and I attempted to achieve this also in some of the conversations with Mr. Hughes and in talking to the Hughes office, because my talks with Hughes were of an intermittent nature.

I was cleared finally to go to San Diego, and asked to go there, which I did, but I was asked to please stand by until I heard further from Mr. Hughes, and not to talk to Convair.

During this period there were some conversations with Convair through Bew's office.

I did not personally meet with Convair, although I did meet some of the Convair people socially during the time I was there. I was there a number of weeks. At no time was I cleared to talk to Convair.

In the meantime, our overhaul base personnel plus some of my own working from Kansas City kept pushing Convair for the hydraulic system corrections, and Convair did come through with a crash program to make these improvements, and they were installed in the airplanes, including the airplane that we had in pilot training. This was a plan that followed these considerations. I am not saying that it all was completed while I was there, but it was jelled and became a plan then.

DX43

lation to this memorandum.

Q Why don't you give us your recollection, then, of the kind of discussions or assumptions you were asked to make by Mr. Tillinghast or others during that period, namely, in the summer of 1961, and describe and identify the various studies that you did in fact make, and the various assumptions that you made in connection with those studies?

A One study during that general period, and I do not recall if it was July, but it probably would have been around that period of time, was a--finally a very brief report, I think called the Tri-Fleet Program, or some such title as that, or Tri-Plane Fleet Program, and I think it showed the estimated cash or capital requirements for the acquisition of a certain number of 990s, 880-Ms, and I believe in addition 20 Caravelles, as I recall it now.

I don't recall the particularity of it, but I think such a study was made, and I think in that instance, as I recall it now, the assumption as to numbers of airplanes came from Mr. Tillinghast.

Q What was the conclusion of that study, before you leave it?

A I am not sure the study itself presented a conclusion. I would have to look at it.

As I recall it, it presented the capital require-

ments, it may have presented estimates of revenue generation, but I am not certain.

Q Can you tell us generally whether or not the result of that study was that it was desirable to have a tri-plane type fleet or that it was undesirable or that it was economical or uneconomical?

A Well, as I recall it, it was a piece of our overall equipment considerations at the time, and as such was related to studies of other fleets of equipment, and as I recall it, the relative value of that particular possibility measured against some of the others that were looked at was such that the others appeared to be better for TWA. But I don't recall that conclusion being in this study which was a plan which was being considered amongst other plans, you see.

Q I am not trying to get you to limit your recollection to a particular piece of paper or a particular plan. I am trying to get you to give us a birds-eye-view, if you please, of what you were considering, and, generally speaking, your conclusions, and those of management, your recommendations, the extent to which you were in accord or disaccord with what was taking place.

Before you start giving me that, let me clarify the record in one respect. You referred to a tri-plane type

fleet.

A I wasn't certain that was the exact title, Mr. Davis.

Q I am not talking about the title. I am talking about what you were describing.

Will you identify the three types of planes in the fleet that you were talking about so I understand what you mean by type? Boeing was one?

A No. As I indicated, as I recall it now, it was the 990s, the 880-Ms, and I think 20 Caravelles. I don't recall the numbers of the 880-Ms or 990s, but this is my recollection.

Q You considered the 990 type of aircraft so different from the 880-M?

The 880-M, by the way, is just an 880 with some modifications to it? What is the difference between the 880-M and the 880?

A There were several 880s. There was a group of 880-Ms initially manufactured to Capitol Airlines specifications, as I recall. Additionally, at one point we received a proposal from Convair for the manufacture of new 880-Ms, built substantially in compliance with the TWA 880 specifications, or Hughes Tool 880 specifications, if you like.

The salient or, I would say, significant differences that I recall between the 880-M and the 880 as types, setting aside for the moment detail differences that would come out of a direct comparison of specifications, but looking at only those items that are the same, the 880-Ms had leading edge devices on the wing which were slots and slats to improve the airflow during takeoff primarily and to some extent the smooth airflow during some of the approach conditions. As I recall it now, Convair had an airflow problem at one point, and they thought this might help it.

The 880-M I believe was offered with more fuel capacity and a somewhat higher rated engine in terms of power output, but I don't recall that difference being other than a transient one. That is, the 880 would finally catch up with it through engine modifications.

Essentially, but broadly speaking, the 880-M was closer as a type by far to the 880 than the 990 was.

Q Were those differences that you have described sufficient to require a classification of that aircraft as a different type of aircraft for fleet operations? In other words, from the point of view of TWA, and the problems of operating an air fleet, are those differences which you have described such that you would categorize an 880-M as a different type of aircraft than an 880?

MR. WILLIAMS: He didn't do so.

MR. DAVIS: Please. Yes, he has, in effect, because earlier I asked him to identify the three types of aircraft in the fleet, and he said 'What we were talking about was the 990, the 880-M and the Caravelle,' and I am asking him now to explain what the difference is between the 880-M and the 880, which they already had in their fleet.

MR. WILLIAMS: All right.

MR. DAVIS: You will have an opportunity to cross examine him.

MR. WILLIAMS: I only want the question to be clear. I have to understand it too.

Q Will you try to answer my question, Mr. Rummel, so that I can understand the nature of the problem of an air-carrier when procuring additional aircraft and intergrating additional aircraft into an existing fleet?

A When we considered the 880-Ms that had been procured for Capitol we had to recognize the differences in configuration between that airplane and the 880s that we were receiving, and by configuration I mean in this case the differences in systems, in cockpits, the items that I discussed heretofore. We tried to estimate the cost of standardizing those things which it made sense to standardize economically.

As I recall it, we looked at the estimate of the added cost of training pilots on the basis that we would not standardize the airplanes to see how that would come out. We looked at the costs of standardization and the cost of pilot training if the airplanes were standardized, and we compared the two. We took the added training costs over whatever it was, probably a five year period, and so on.

In other words, we tried to determine by analysis and estimating techniques the cost of adding this additional group of airplanes.

Now, I use the word "type" loosely, I guess, Mr. Davis. I think an 880-M is a different type because this designated a different type, and in this case it in fact was quite different from the 880s that we had.

The figure that comes to mind, and I can't be certain of this, was that the total estimated cost for mods, and it was a loose estimate in some respects, I think was a little less than $200,000 an airplane, but I am not completely sure of that. But this would indicate to some extent the differences, but in arriving at that we didn't totally standardize. We tried to standardize things which had economic or cost significance, or safety implications, so to speak.

Since the 880-Ms were different from what we had, and since they were being considered as to advisability of

THE WITNESS: Well, I think it was during 1954, the first meeting could have been in late 1963, I am not certain now--

MR. WILLIAMS: '53.

THE WITNESS: (Continuing)--1953, but in any event, through 1954 a series of highly secretive meetings were held from time to time with Convair people in order to determine what kind of an airplan could be developed or let's say if one could be developed that would be economical if used on TWA's routes and what it could be.

Now, this consisted of meetings sometimes participated in by Mr. Hughes and sometimes with me. As I recall it, Mr. Rourke attended one such meeting in the Beverly Hills Hotel, but I could be confused on that point.

I mentioned these earlier in the testimony. I mention them now to try to put them in perspective. That was the beginning, in a way, of talking to Convair about jets, at least in the period that would more or less directly lead up to the 880.

It was by no means the first time we talked to Convair about jets. I also mentioned earlier, to try to put this in perspective now, I will mention

it again, that we had looked at the commercial version of the YV-60 at Mr. Hughes' direct request. I say "we." I should have said I did, and then reported to Mr. Hughes my findings on it.

Q At that time what was the status of your dealings, if any, with Boeing? I am referring now to the time of these secret meetings with the Convair people in 1954 or late 1953.

MR. WILLIAMS: Excuse me. I object. I don't think that we should have questions interrupting his answer.

MR. DAVIS: It is for clarification, that is all.

MR. WILLIAMS: All right, if it is limited to that, Mr. Davis, I don't mind. But I would prefer to have a consecutive statement in his answer of what you called for.

THE SPECIAL MASTER: Let's have a consecutive answer to the question, unless there is some problem of clarification.

MR. WILLIAMS: Yes.

A (Continuing) Also I might say before this time we had considered whether or not the flying needle would offer any reasonable possibilities for use in mail or express

service, and whether or not a commercial varient of it would be practical. This was an exercise with Mr. Franklin, as I recall it.

I recall additionally, still to try to get all this in perspective, we had looked at turboprop versions of the twin-engine Convair, but I think that--I am not certain, but I believe most of these proposals came later.

In any event, they would not have been in direct competition with the big jets. But they were a jet type. That is why I mention it.

I don't know how many different airplanes and designs we looked at during this period. There were numbers of sizes and types. I tried to influence the development of these designs to the maximum extent I could to make them as practical as possible.

In this particular period of time there was grave doubt that the state of the art had advanced sufficiently to develop a practical and economical jet transport. In a way, this was an effort to try to push the state some, and to explore with Convair what might be done.

I recall that I was trying to determine whether or not one airplane type could be built to satisfactorily serve both international and domestic operations. If this

was feasible technically and economically, I felt there would be economy in this course of action, and I felt it would be better for the manufacturer because his market would be broadened and he would probably be more apt to proceed.

During the latter part of this period of time I became aware of, I believe initially through Convair, of the development of advanced engines which were rather quickly recognized as a potential difference between succe... and failure economically of jets.

When this occurred it became clear that rather than talk about turboprops and jets we had a chance of developing pure jets that would be suitable for international service, whereas up to this time there was doubts as to the range of the jets with jet engines now rather than turboprops.

Convair then proceeded to lay out various designs with myself participating.

On occasion, I would discuss design ramifications or possibilities with some of my associates in TWA, but generally it was a very closely held development. Sometimes it was discussed without specific reference to Convair or what it was doing. Sometimes I requested studies which I thought would produce information and might be of

the Lockheed negotiation going, and to undertake negotiation with Convair for the model 18.

I might say, the model 18 was not the model 880. It was a larger predecessor generally similar to what Boeing finally built, but at that time believed to be somewhat better than either Boeing or Douglas' offering, and to explain that I perhaps should say that my recollection is that at that time Boeing and Douglas were both offering domestic jets, and had not taken the step to international jets, where we were seeking, Hughes and I, to get an airplane that could serve both areas. I think I viewed all these efforts as representing TWA's best interest, and I certainly wasn't aware of any conflicts of interest.

The model 18 development spanned quite a period of time, during which specifications and contracts were developed. I reported to Hughes from time to time. I was cautioned not to discuss this with TWA management on numbers of occasions.

Mr. Hughes, however, knew and understood that I was bringing in TWA experts from time to time to aid and assist in specific areas.

Now, I am not saying that each and every person was cleared. I think he had that confidence in me.

He simply knew that I was doing this because I would ask if this would be quite all right, and he said on a limited basis, certainly, but keep the group small, as I recall it.

Hughes had numbers of discussions with Convair or let me say Convair reported he had had such discussions and while I can't be specific, I am quite sure that Mr. Hughes mentioned it a time or two.

The model 18 was tailored as much as I could make it to satisfy TWA's route needs and its requirements. We tried to make an economical airplane, and one that was advanced over what we understood Boeing and Douglas were offering, but in this period we were not doing any work with Douglas. This is one of the periods I mentioned earlier, where we weren't working with them.

The numbers of airplanes I am a little vague on. I remember some of the early drafts had as many as 30, but I don't recall the numbers ever having been really set with Convair. We were talking about getting the program under way, and I don't remember coming to any final numbers on the model 18, but this could have happened.

I think it was in--a little after mid 1955 that Convair came to the conclusion that there wasn't sufficient

difference between the model 18 and the airplane that Boeing and Douglas then proposed to justify the risk. During the period that preceded this, as I recall it, both Douglas and Boeing had announced international versions, and had also changed their fuselage around, as I remember, both enlarged the fuselage, and when they got through with these things, their improved airplanes, while different, were not spectacularly different from the one I had been working and Mr. Hughes had been working with Convair on.

Now, as far as I knew, during this particular period while there were some review meetings prior to the detail negotiation with Convair concerning the configuration of design, I don't recall meeting with Hughes particularly during that period we were working directly on the project. I think he was relying primarily on me to have the airplane configured to reflect TWA's requirements.

There were a number, however, of technical discussions between myself and Hughes on a good many features. Hughes was most keenly interested in almost myriads of technical aspects, and to the extent that I could, why, these would be discussed.

I was advised later that there were meetings during this period between Convair and Hughes that I

We also looked at additional four-engine airplanes which were arranged a little differently than the model 18. One of the bigger airplanes was an attractive appearing double-deck airplane, and laying it out, for example, we had gone through some structural analysis, an effort to determine whether it was more efficient to build a double-deck airplane or a large single diameter airplane, and we came to the conclusion, which Convair concurred in, that the double-deck was better.

Some of these ships I laid out to illustrate what I had in mind, and in order to interest Convair in exploring these possibilities further, because their frame of mind at the time was, as I recall it, was generally that they did not want to build large jets, but seemed to be bending toward building smaller jets.

Mr. Hughes showed fairly keen interest over the phone, as I recall it, in the double-deck airplane. I at the moment do not recall Mr. Hughes seeing the actual layout, but there could have been a meeting along this line.

This got to the point where Convair did become interested, and the project, as far as I was able to determine, had the support of the San Diego management, at least it had that support to the extent that it presented the plan for building this airplane to the General

Dynamics board, or at least it was so reported to me.

The board, as I indicated earlier, turned it down. The only explanation that I recall is that it was simply too much to undertake, and also that to undertake a big jet at that time, with Boeing and Douglas moving forward, and having already captured orders, did not make too much sense, because while all this was going on at San Diego, the delivery positions toward the end of this operation were in fact being snapped up by our competition at Boeing and Douglas.

Now, it was during part of this that we--I say "we"; it was a discussion with Hughes now that I am referring to--gave consideration to the need for TWA having jet aircraft, at least contemporaneously with our competition, and preferably before. We had not been unmindful of the time it would take to develop airplanes, but the emphasis was on developing these newer airplanes, and it became very clear that serious consideration should be given to procuring Boeings or Douglases.

Now, Boeing had a distinct advantage, in my view, in two areas. One was the background of experience in building big jets, and the other was that they had a significant lead over Douglas in initial production.

Negotiations were undertaken with respect to

DX 43

proposal by Convair. He asked that I review it. He described it briefly. He advised that Convair would be getting in touch with me.

The thing that sticks in my mind here that recalls this is that I had another commitment which prevented my seeing the Convair people right at that time, but it turned out that I saw them anyway, but under conditions somewhat different than had been planned. They chased me from Kansas City to Seattle, and we met at Seattle, and I believe this is the first time that the 880 was reviewed by myself or Rourke.

It was considerably smaller than the airplanes we had been working on. This was in the winter, I think, between 1955 and 1956, but I don't recall what month. I think fairly late in 1955.

We, as I recall it, were not particularly favorably impressed with the 880, and tended to favor, from TWA's point of view, placing a larger Boeing order. However, we continued to work with Convair.

Now, during this ensuing period, which I am not certain of the time precisely, but I think in early 1956, or maybe late 1955, Mr. West was requested to do some preliminary contract work at Convair with respect to the 880, and it's my impression that he worked quite closely with Mr.

Hughes during this period of time. He was out there quite a while. I also had a few discussions with Mr. Hughes on the 880, and Mr. West would occasionally discuss some phases of the contract.

I remember discussions as to the nature of the specifications which should be attached. At this point Mr. Hughes did not want my or TWA's active participation as he had had it before on the model 18 in the model 880.

In the meantime, we were proceeding with Boeing negotiations. I recall one meeting in San Francisco where Mr. West came up from San Diego to meet with me. I was attending a NASA--I think it was then NACA--committee meeting.

I reviewed the papers with Mr. West, and saw the need for contacting Mr. Hughes with respect to the specifications, and the way Convair apparently wanted to handle that part of the deal, and I placed a call and got him immediately in that case, discussed my views and the strategy I had in mind.

I had already discussed it with Mr. West, and he had agreed this would be a good thing if Mr. Hughes would agree, and he did agree, and as I recall it, that basic strategy was followed pretty much throughout the 880 deal on our part.

AVRO, and the project Greenland were still active.

Now, the project Greenland may have become active after this. This was the project that I had referred to earlier, perhaps not by the code word, but as, to identify it, as the one that involved the filing in Washington with respect to--that is, before the CAB, as I recall it--with respect to Hughes obtaining permission to build airplanes for TWA.

What I am trying to pin down, though, in mind, and I guess I am doing a poor job here, is whether at the time the order for the eighteen airplanes was signed we might have abandoned the AVRO, but I don't think so. The reason I don't think so is that the order for the 300 engines bore a relationship to either the AVRO or an AVRO-like project.

As I recall it, the order for the engines was placed before we went firm on the 880. At the moment I can't recall whether it was after we placed the order for the--well, no, I guess--well, I am not certain of my recollection, but it probably was after the order was placed for the 331s, but it might not have been.

I realize I may be being a bit confusing. I am trying to recall out loud probably what I ought to think through before I speak. Let me give you a reference that

would pin this down more, and that is this, that the thing that initially brought about the placing of the order for engines with Pratt & Whitney was the fact that Pratt & Whitney had announced a price rise--as I recall it, it was 5 per cent--in engine price to the industry. This had been announced a number of months before it was effective.

The down payment required to be made for Pratt to accept the order was also, as I recall it, 5 per cent, or thereabouts.

Since engines were generally in short supply, at least during the initial period, or it was thought they would be, because everybody, Douglas, Lockheed--excuse me--Douglas and Boeing, was clammoring for engines, and engine availability, as I recall it, was pacing the availability of the airplanes, since they were in short supply, it occurred to me that it would be a good move to order our spares and save the 5 per cent, because if we didn't order we would lose 5 per cent, but the worst that could happen, if we ordered and then something occurred so we didn't fulfill the obligation, would be to lose the 5 per cent down payment.

On the other hand, they were in short supply, and it seemed to me that it wasn't a bad investment.

The date would help bring this in focus. This is

a date which I am sure could be found somewhere, the price rise, the effective date of the price rise.

Now, I went to Hughes and saw him personally at this time. As I recall it, I had mentioned this engine problem, the proposition, on the phone earlier. I had occasion to see him--I think it was in the Beverly Hills Hotel--along with a chap from AVRO, and I took the opportunity to point out that we had a deadline on the engines, that if we were going to move, and he wanted to save this 5 per cent, and I thought he should, that we--he should be moving, and he at that point authorized me to negotiate with Bill Gwinn.

As I recall it, the instructions weren't specifically limited to talking to Bill, but dealing with the top people at Pratt & Whitney. But the idea was to obtain assurances of delivery positions, as I recall it, without actually ordering, and to obtain premium delivery positions.

Now, at this same time we were--well, this would help fix the date--as I recall it, we were still jockeying for delivery positions to some extent with Boeing, and certainly it was a factor in the AVRO consideration, so that we--in any event, let me say, Hughes wanted the earliest possible positions that he could get.

I undertook a telephone negotiation with Gwinn,

asking that, in effect, that positions be preserved, but that we put off the day of formal commitment.

(Continued on page 964)

fwp

In the end, and it was some time later, a substantial order for spare engines was placed for the JT4, far in excess of the 60 that represented our estimate for the number that would be required to go with a fleet of eighteen, and for I believe 40, if I recall correctly, JT3s.

I might say the reasonableness of these numbers against the size of the fleet went like this, that if TWA obtained all of the airplanes, then it would need these engines. If another airline with somewhat comparable routes obtained the airplanes--I am not suggesting that this was a specific plan; I am just saying this was the reasonableness of it--that in that event, then it would probably require the same number of engines.

Now, if the fleet somehow became split between airlines, and were operated as two groups, or three or four, then reasonably the number of spare engines that would be required, I must say all things are not equal, but as a reasonable thing the total number of spares in that event that would be required would be greater than that which would be required for one airline and one fleet. But in any event the orders were finally placed.

Perhaps while I am on engines I ought to wind up this particular phase and then get back more directly to

what I think you asked.

As I recall it, we wound up with an exchange of wires with Pratt & Whitney that was based on--well, I think it was around 150 engines. I don't recall the precise number.

Mr. Cook was involved quite directly in this exchange of wires, I was, Mr. West was, and in the end, Mr. Gay was, as I recall it.

I had been unable to obtain the delivery positions that Mr. Hughes desired. I must say that the delivery positions that we asked of Pratt was based on an assumption of need that went like this:

First we had TWA's need for engines, which was related to the delivery schedule for the airplanes, all on the assumption that the airplanes were coming to TWA.

Then, additionally, I assumed, as had been discussed with Hughes, that assuming a minimum lead time requirement for the development of a new airplane such as the AVRO, in other words, assume that everything went their way with respect to moving forward with the project, completing it in the quickest time, and so on, what would the earliest need dates be for additional engines to do two things, be installed in the airplanes, and secondly, to provide spares for an assumed airline operation.

This was done, and this was the thing which I used as a basis for negotiating the specific requirements with Pratt, and I think at the time I had been instructed to not discuss the derivation of these need dates with anyone, and as I recall it, I did not discuss it with anyone, including Ray Cook and the others.

I remember when we got to the--an impasse, that is, when we did not succeed, when I did not succeed, in prevailing upon Pratt to produce the delivery positions that Hughes wanted, as I recall it, Ray Cook was in touch with Hughes, and at least I was advised the following day that the Hughes solution to the delivery problem was to double the order, and at that point the order was increased from 150,nominally--as I say, I don't remember the exact number--to about 300 engines, and wires went forward either that evening or thereabouts placing the order.

As I recall it, at that point Mr. West and I were at my home in Kansas City. I have the impression now that Ray Cook was in Houston and Bill Gay was in Los Angeles.

I was not talking directly to Hughes on this at that particular time, but there were many phone conversations back and forth that evening. I think we wound up around 1 or 2 o'clock with the papers finally being kicked out of Houston.

I should say I believe wires were sent out of Houston along with some money which made it a firm deal.

I am sure the people in TWA knew about the fact that we were negotiating for eighteen rather than some other number of 331s. I do not recall either being asked to clear that internally by Hughes or being a party to any such clearance, so I would have to assume at this point that it didn't happen.

Numbers of our equipment programs, though it was not unusual to obtain last minute expressions from TWA, I don't recall it in this case. I do not recall handling the papers in the end, that is, handling them on to Hughes Tool for signature or being asked to, although I did have numbers of discussions with Hughes during the development of the contract and the specifications or various points that he would inquire into or that I would bring up thinking he had an interest in it.

The papers were in fact signed by Hughes Tool. I think they probably went to Houston and the signatures were placed on them there, but I am not totally clear on exactly what happened at that point.

I mentioned earlier that TWA had handled provisioning for the Lockheed 1649As in the name of the Hughes Tool Company by its authority up until the time

that the contract for those airplanes was assigned to TWA, at which time TWA continued, except then it did it for itself.

The provisioning on the Boeings was handled in a similar way. There was an exchange of letters between Hughes Tool and TWA that set TWA up within certain monetary limits to provision the 131 fleet and the 331 fleet.

I might say that it was perfectly obvious then, as it is now, that a fleet of airplanes without provisioning is a pretty useless thing. Spare parts are needed to make the fleet productive, and normally provisioning goes hand in hand with airplane delivery, and to some extent actually precedes it, and the same rationale that I mentioned on spare engines applied to provisioning.

I estimated along with the collaboration of Mr. Shaunty, Mr. Reynard, the amount of money that could reasonably be required to provision the airplanes on the basis that these ships would be used by TWA.

I remember one meeting included Ray Dunn, at which time we thrashed over what appeared to be fairly high estimates in an effort to reduce the amount of provisioning money.

At this particular time the jets were new, they

have been told numbers of times that Hughes was interested in the DC-4E development. Here again, it was before my time with the company.

This development was a little unfortunate, because each airline apparently, as the story goes, wanted everything in the airplane, including a kitchen sink, and it became apparent that the airplane would not be finally the airplane that was envisioned when it was ordered.

As I understand it, Mr. Hughes followed this progress quite closely. I don't know whether it was through Frye, or directly or what. I might say the principal source I had for the story was through Mr. Ellinger who was close to things of this type that was going on in TWA.

Mr. Hughes set out to have a better airplane developed quicker. This finally resulted in the development of the Boeing Stratoliner, which turned out to be the first pressurized airplane in domestic--I think in service anywhere--that is, in commercial service anywhere. There had been pressurized ships before.

This was produced a considerable period before the DC-4, as distinguished now from the DC-4E, or the C-54 series finally emerged.

The DC-4E was cancelled, and when Hughes, or Hughes in combination with TWA worked a deal with Boeing,

then our participation in the Douglas deal for the DC-4E was dropped. It wasn't long after that, as the story goes, that the DC-4E folded as a project, but as I recall it, a prototype was developed and did fly, but it was not placed in production. It just didn't turn out as people thought it should.

Later on the DC-4 was developed, as far as I know, by Douglas, for the military. I should have said the C-54--which was what we had in the International or Intercontinental Division under contract with the government. As I recall it we received the first lot of those from the Douglas factory.

I might say the old Boeing Stratoliner, five of which were procured for TWA, and delivered after appreciable developmental delay, did wind up initially in the Intercontinental Division operation, and were later supplanted by the DC-4s.

Q Earlier in your testimony you said that "We looked some years ago at a Boeing Stratocruiser 307." Can you identify what you were referring to?

A The ship I was just referring to was called the Boeing Stratoliner. The number, as I recall, was the model 307. The Stratocruiser was entirely different--a later airplane that Boeing developed. So my earlier

testimony, if I said it was the 307 I was probably wrong, but now I can't think of the model number.

Q We will pick it up in sequence. Can you describe what information you have with respect to the acquisition or interest of TWA in the Boeing Stratoliner 307--the way it occurred, and what part, if any, Mr. Hughes or the Hughes Tool Company had in that regard?

A Here again this is long before I was with the company, Mr. Davis, and I can only relate hearsay and that sort of thing.

Q I would like to have your understanding of what took place.

A One of the activities, as I recall it, that occurred prior to the Stratoliner development, but which was finally related to it or influenced it, was the very high--what was then very high altitude flights by Tommy Tomilson in a Northrup Gamma, and I recall being advised by Tommy and others that Hughes had an extremely keen interest in the results of these high altitude flights.

I must say that I had the impression that he was instrumental, that is, he was having the flights undertaken. I can't state that as the fact. This is the story as I recall it.

In these flights TWA definitely showed leadership,

with respect to supercharger developments, which made the flights possible, and in high altitude navigation. I think it was with this background that Hughes and TWA went to Boeing.

I should say too that the 307 Stratoliners had, I believe, essentially the same wing configuration, and the same power plant arrangement, but not the mechanical configuration as the early B-17s, and that the big pressurized fuselage, and the airplanes developed for Hughes and TWA were an adaptation of B-17 techniques, were re-applied in an advanced way with pressurization and other things that the 307 had.

(Continued on page 1145)

I don't know whether this was initiated by Boeing or Hughes, but I understand the switch was made from Douglas to it.

After TWA received the five, they were placed in commercial service, and the five were later signed over to the military as were many of the DC-3s. That may have been what happened to some of the DC-3s. I am not sure now--at the start of hostilities.

After the war those five airplanes were taken back, completely renovated. Some new design features were put in, and then they were flown for a number of years in TWA commercial domestic service.

They finally retired them because of economic obsolescence.

Q That brings us to the period in which you were active.

A No, sir, I didn't quite make that clear. I was with the company at the time that the Stratoliners came back and were then operated.

Q Then, as I recall, you earlier referred to the development of the Lockheed aircraft--the fleet acquisition by TWA. I would like you to describe now what you know about that development, and what took place at TWA, and the part, if any, played by the Hughes Tool Company or

DX D

fwp

A The next program finally resulted in the purchase of a fleet of 749As as I recall it. The 749A was competitiv with the DC-6B. At least, both were competing for Hughes' and TWA's business.

The discussions surrounding this acquisition involv Hughes personally, but also a great many people in TWA; Mr. Damon was involved, Mr. Leslie, Mr. Cocke, Mr. Collings, myself, and others.

There were numbers of conversations by phone with Mr. Hughes wherein performance figures were discussed on the airplanes, the direct operating costs were discussed, and so on, and I believe that it was during this negotiatio that the meeting at Douglas occurred that I referred to earlier.

As I recall it, at one point we ran a study showing the effect of--the economic effect of staying with a basic type that we already had, the Constellation, as compared to going to a new fleet.

Mr. Leslie participated in this, along with one or two of his people, along with Mr. Rourke and myself.

This information was done--this study was made at specific request of Mr. Hughes, as I recall it, and the results given to him as well as to Mr. Collings and M

I must say that I could be confusing this particular sequence with the 1049G negotiation, but I think it occurred at this time. I am not positive.

As I recall it, I favored the DC-6B, I believe that Mr. Collings favored the DC-6B, as I recall it, Mr. Hughes favored the DC-6B, although I must say that it wasn't always easy to know what Mr. Hughes favored and he didn't favor.

I couldn't always tell whether he was negotiating with me or what his position really was. Not that he had any purpose in negotiating with me, but sometimes he would seek out additional facts and take a position maybe to do this. I just didn't know. But I had that impression.

Mr. Damon was opposed to the DC-6B, or I had the impression he was opposed to dealing with Douglas at this time.

The result, as I recall it, of this state of affairs was that some additional studies were made, additional time went by, and finally Hughes agreed to go the Lockheed rather than Douglas.

Now, I might say that during this time things were somewhat in a state of limbo, so to speak. Negotiations continued with both parties, and both airplanes seemed to

am certain that this must have been done. And to Mr. Damon.

Whether there were any meetings after that or not, I don't recall.

Q I was referring to meetings at which representatives of competing manufacturers were invited to present these points favoring their respective products.

A Well, the time that I referred to when Lockheed and Douglas representatives came to Kansas City to come to agreement on performance claims, this was done I believe at the suggestion or request from Mr. Hughes.

It seemed to me to be a fairly delicate situation, as I recall it, and if I recall correctly, I approached the manufacturers myself suggesting that this be done, and that they have people available to do it. So I think it is safe to say that insofar as the contacts with manufacturers were concerned, that was arranged through me.

Now, whether Hughes had talked to them on that same point or not, I couldn't say at this time.

Q Who would attend on behalf of TWA, or who would attend--

A This particular meeting I am talking about, Mr. Davis, was purely a technical meeting to try to iron out who was right with respect to estimated performance, TWA, Lockheed or Douglas.

that. I had that impression too.

MR. DAVIS: Maybe I am wrong then.

THE SPECIAL MASTER: Mr. Rummel, if you will, clarify the difference between a turbojet and a turboprop, as we have been using the terms.

THE WITNESS: Mr. Zeller is correct, Mr. Special Master. A turbo-propeller, or turboprop, as it is called, is a turbine engine that drives a propeller. A turbojet is a turbo engine that has no propeller.

BY MR. DAVIS:

Q In 7, when you refer to a high speed turbine powered aircraft, you were referring to a pure jet?

A Well, not necessarily.

Q I didn't think so.

A Not necessarily. Item 6 and 7 are two different items.

Q In my question I was combining them to get you to, first of all, identify what happened--did the industry do something or did it not, was TWA a leader--and again I am trying to refresh your recollection as to what took place subsequent to or at or about 1951 rather than prior to 1951.

THE SPECIAL MASTER: The objection was made that the time should be fixed, and I take it the question

10, 1949. On April 18, 1950 that airplane was the first jet to fly mail in U. S. history. It flew between Toronto and New York.

I am merely now placing the time of the development of that particular vehicle.

The Comet first flew July 27, 1949, and the first Comet was delivered to BOAC on December 1, 1951. The first Comet IV was redelivered to BOAC on September 30, 1958. This was after major mods that were put in in the course of construction of that airplane which followed the grounding.

As I recall it, it was the Comet IV that Hughes was particularly interested in, that I testified to, which involved the Chicago meeting. The Comet IV first flew April 27, 1958.

The Electra development was undertaken in earnest by Lockheed, and by that I mean it became a full-fledged project, during the summer of 1955. The first delivery of the Electra was to Eastern Airlines on October 20, 1958.

The Britannia prototype first flew during August of 1952. The first production airplane first flew September of 1954 out of the Bristol factory in England.

Now, the Canadian variant of the Britannia was undertaken during April of 1954. The Canadian Britannia

there was some sort of a discussion with George that bore on that, or it wouldn't be in this letter.

Q That is what I am interested in.

A Well, I don't recall that specifically.

Q You don't recall what you were discussing with Mr. Spater at that time which produced this closing sentence?

A Well, it may have been--I am not sure of the timing--it may have been during this period that we were involved in Project Greenland, but I am really not sure about that.

That was the project I mentioned before, to recall it to you, that involved Hughes manufacturing his own airplanes.

But I am not--I can't be sure whether we got into that one at this time or later, but I think that may well have been in this particular period of time.

Q Do you recall discussing with Mr. Spater Project Greenland?

A Oh, yes. But not in relation specifically to this. That's my problem.

Q When we resume after lunch I would like to have you describe to me the nature and scope of your discussions with Mr. Spater with respect to Project Greenland.

A All right.

"DX 43, page 1766A
(Excerpts from Deposition of Robert W. Rummel)"

THE SPECIAL MASTER: We will recess until 2:00 o'clock.

(Whereupon, at 1:45 p.m., a luncheon recess was taken)

"DX 43, page 1767
(Excerpts from Deposition of Robert W. Rummel)"

AFTERNOON SESSION

2:00 p.m.

ROBERT WILAND RUMMEL, resumed the stand and testified further as follows:

EXAMINTION (cont'd) BY MR. DAVIS:

Q Mr. Rummel, do you have any better recollection now of the conversation that you had with Mr. Spater at or about the time of this letter marked as Defendants' Exhibit 174?

A I don't remember the conversation, Mr. Davis, but on mulling it over during the lunch hour, I am quite sure that it could not have been on Project Greenland, because trying to slot these things out in time, I am quite certain that Project Greenland occurred while we were still negotiating the Convair 880, which would have put it back some time in 1956, rather than at this time, so I think it is safe to say that it wasn't on that. I wasn't certain before lunch as to the timing.

Q Do you recall discussing the Project Greenland with Mr. Spater at some other time?

A Yes.

Q Let me have your recollection with respect to those discussions.

A All right.

Q Identifying the time, those present, if you recall,

how the subject came up, what the purpose of it was, related pertinent portions of the actual discussion which took place.

A All right. As I say, I don't think it had any relationship to this. I think this appeared very much later on. There was a meeting in Mr. Spater's office here in New York on Project Greenland attended by Raymond Cook, myself and Ray Hopper.

As I recall the discussion, it was primarily related to determining what reasonable substance an application could have to further Hughes' interest or apparent interest, at least, in manufacturing airplanes. This related to the development of an application that was later filed before the CAB along this same line.

I don't recall the exact length of the meeting, but it was several hours at least.

Q Do you recall approximately when that was?

A Well, not precisely, but it was, I am quite sure, during either spring or summer of 1956. It may have been the spring.

Q Can you recall or can identify the airplane which was being considered?

A No. One of the problems was that we couldn't identify the airplane.

Q Do you know what happened to Project Greenland, how long it was under consideration?

A Let me say the application was filed.

Q With the CAB?

A Yes.

Q Then what happened to it?

A Well, I don't recall precisely. I think the CAB set a hearing date. If I recall it correctly, the hearing date was put off at least once, and I do not know if the application was withdrawn or what happened, but I am quite sure it was never acted upon by the CAB.

Q Had you had some conversations with Mr. Hughes relating to the nature or scope of this project?

A There had been--there was at least one discussion, and possibly more, that dealt primarily with generalities. As I recall it, he did not want to definitize the airplane or limit it to a specific airplane project. He wanted it made clear that he intended to have the right to produce airplanes which were markedly superior to those that were then being offered, and a few generalities of that type.

I don't remember all the specifics. There was a meeting with some general whose name escapes me at the moment out in--well, in the Beverly Hills area.

One evening Ray Hopper and I and the general chatted about this project. I believe the general was Hughes' Washington representative, but I am not sure now. I should know the name, but I don't recall it.

Q Have you now given us everything that you can recall with respect, first, to the meeting in Mr. Spater's office attended by Mr. Cook and Mr. Hopper and yourself? Have you now fully described all that you recall with respect to that meeting or discussion?

A No, I don't think so.

Q Would you please do so then?

A I would be glad to. Ray Hopper, as I recall it, ventured the opinion that Hughes was primarily interested in building cargo airplanes, that he saw a tremendous market for cargo airplanes.

It developed, though, that Ray had not discussed this with Mr. Hughes, and as I recall it, at the time had not even been in touch with him for quite a long time. We had difficulty in handling the question of how to obtain CAB clearance on what appeared to be the desire, that is, broad authority, to manufacture airplanes for TWA, and I don't think it was limited to TWA, without being specific, other than talking about superior or better types.

As I recall it, the question addressed to Spater was one of obtaining his professional opinion with respect to handling matters at the CAB. I think, as I recall it, Mr. Cook was attempting to have the papers constructed in a way that reflected Mr. Hughes' desires, and I was attempting to handle those parts of it that had to do with defining and still not defining what the airplane might be, because I didn't know what it was going to be, as I recall it. But that's about all I recall now.

Q Do you have any further information with respect to the circumstances which developed relative to either a withdrawal of the application or what happened to it?

A Well, I have the impression that it was put off because Hughes was out of town. In other words, I have the impression that the hearing was postponed because specific instructions couldn't be obtained from Hughes.

I am not entirely sure, but this is what I recall Ray Cook telling me. I do not recall any of the circumstances relating to either its withdrawal or whether it ran out on some limitations factor. I just don't know.

I am quite sure, though, that it didn't--there was not a hearing on it.

Q Did the Hughes Tool Company ever take any steps to actually commence or prepare for the commencement of the manufacture of any aircraft that you know of?

A I don't know. The papers that came from the CAB asking for further and more specific data were distributed, I received a set of them, and these were discussed with Ray Cook, and, as I recall it, Ray advised not to go into any detail, simply to be cognizant of the papers, until I heard further. I might say too there was a preliminary meeting in Kansas City, or at least a discussion in Kansas City, prior to the meeting with Spater in New York, at which time Ray and I discussed--

Q At which what?

A At which time Ray and I discussed some of the facets of the proposal, including definition of airplanes.

Q Will you give us also your complete and total recollection of that meeting?

A Well, I am not clear, Mr. Davis, on exactly what happened. I have the impression now that the main topic of discussion was to broaden the language. It may well be that Ray had a draft at that time. I am not certain now, so I can't be specific.

Q Basically, it related to the application to be filed with the CAB, is that correct?

A Yes. It was my understanding Hughes had made the decision to build airplanes, and I think most of us assumed this was to be in Florida, and this application was filed to permit one heavily engaged in air transportation to also build airplanes.

Q Apart from the discussions, whatever took place in connection with the application to the CAB, and the request of the CAB for further information, do you know what, if anything else, was done by the Tool Company in preparation for or implementation of this decision which you have identified by Mr. Hughes to build airplanes? Do you know of anything else that the Tool Company did?

A I don't really know. I recall Ray indicating that Mr. Hughes had options on a great deal of land in Florida, and that he assumed that's where the factory would be built. But as to what they in fact did or didn't do, no, I don't know.

Q Apart from the possibility or whatever Mr. Cook told you as to options on land in Florida, is there anything else that you know that the Tool Company did?

A I don't recall anything at the moment, Mr. Davis.

Q Do you know of anybody else at TWA or associated with TWA who knows any more than you do about Project Greenland?

A No. I might say that the term "Greenland," as I recall it, was applied to the project by Ray Cook. This is a code word.

Q I understand that.

A No, as far as I know, this was one of those items that at the time was secret, and as I recall it, Hughes did not want anyone at TWA to know about it.

Now, whether anyone in fact did, let me say if they did, I don't recall having known about it.

Q Will you give me your full and total recollection of all conversations you may have had with Mr. Hughes relating to Project Greenland or related projects? By that I mean any plans, decisions, program, relative to the manufacture of aircraft or related equipment by Hughes Tool Company or Mr. Hughes.

A Well, that was pretty broad.

Q I meant it to be broad.

A I have already mentioned--

Q Without repeating what you have already testified. I want to have whatever else you may know.

MR. ZELLER: You don't want him to go over the testimony he gave about the Caravelles and the AVRO jetliners?

MR. DAVIS: That does not relate to any

manufacturing by Mr. Hughes or the Hughes Tool Company. However, I do not expect the witness to repeat any testimony that he has already given. I want this witness to tell me whether or not he has identified and fully described and given us his full and complete and total recollection of any conversation he had with Mr. Hughes relative to any decision on plans or programs for the manufacture of aircraft or related equipment either by Mr. Hughes or the Tool Company which he has not already given, if any.

A Let me say first--

MR. ZELLER: I don't agree with you about what his prior testimony--

MR. DAVIS: I understand. We will argue in court as to the effect of the testimony we have listened to. Let's get the facts now.

A I don't recall Hughes ever being specific as to what he planned to manufacture if he obtained CAB clearance.in .

Q That is not my question, Mr. Rummel. I want to know whether or not you have now given us your full, total and complete recollection of any conversation that you had with Mr. Hughes on the subject I have described.

A That's all I seem to recall now. I will be glad to offer more if I think of it.

Q Now my question to you is do you know of anyone else at TWA or associated with TWA who you believe has any information on the same subject matter which you have not fully or completely disclosed.

A Well, I just don't know.

Q You don't know of anyone else?

A As far as I know, I have disclosed it all. There were times when Rourke knew of certain phases of some projects.

Q Which projects are you referring to?

A Well, the advanced AVRO jet. I don't recall Russ being involved in the Project Greenland. I think the timing of the AVRO project was about--was somewhat coincident with the timing of this application, but I do not recall that ever being tied in together during Hughes' conversation to me. I would have to say as far as I know others in TWA did not know the Project Greenland, or let me say, if they did, I don't believe they got it from me.

Q It is correct, then, that you don't know of anyone else who has any information whatever with respect to this Project Greenland or any other intentions or efforts of Mr. Hughes or the Tool Company to manufacture aircraft

MR. ZELLER: Your question relates to people in TWA, I take it, as the preceding question did?

MR. DAVIS: That is what it was, people in TWA or associated with TWA.

A No, as far as I know, I have named those I can recall that were involved in the part of it that I was involved in.

Q Other than the people whom you have already identified, do you know of anyone outside of TWA who has, so far as you know, any knowledge or information with respect to the same subject matter?

A You mean other than Mr. Hughes and Mr. Cook and the general I mentioned and Mr. Hopper?

Q That's correct. The general that you have mentioned as a General. You can't identify him any better than that, can you?

MR. ZELLER: He did. I think he identified him as the Washington representative.

THE WITNESS: Well, now, I think he was. This meeting was at his home. He lived out there. I just simply have a lapse of memory at the moment on the man's name.

Q Apart from the people that you have mentioned, do you know of anyone outside of TWA?

A Are you speaking of prior to the filing?

Q No, Mr. Rummel, I am not referring to any filing now. The subject I am referring to is any plan or program or implementation of any plan or program relating to the manufacture of aircraft or related equipment by the Hughes Tool Company or Mr. Hughes.

A Well, yes, certainly. The reason I asked about filing, as I recall it, it was shortly after the filing that the Los Angeles newspapers carried tremendous headlines announcing Hughes' intention to build advanced jet transports in Florida.

Convair was quite shaken when they read this. We either had just signed or were about to sign the preliminary agreement for the 880.

Now, that would have put this in the spring.

Q Anything else?

A At that point there was no secret about it whatsoever. Boeing commented to me on it. I don't remember what they said, but they were not pleased with the prospects of another competitor.

Q Good. Anything else?

A Well, let me say that I don't remember anything specific, but it was a subject of dinner table discussions, I am sure, for some time, and would come up from time to

time. I might be asked was Mr. Hughes serious, because people knew I was working with him.

I don't remember any specific cases, but I know that once it was in the press it wasn't forgotten for a while.

Q What did you tell those people when they inquired as to whether Mr. Hughes was serious? Did you tell them any more than you have told us so far?

A No. I don't think I knew any more, Mr. Davis.

Q You say that Convair appeared to be shaken when this news item appeared relating to Mr. Hughes' intention. Will you describe to me how this came to your attention, who mentioned it to you, what was said, how did they appear to be shaken?

MR. ZELLER: Answer any one of them.

Q I am asking you to describe how Convair manifested to you either their knowledge with respect to Mr. Hughes' plans or their reaction to it. You can answer any one of my prior questions in addition. I want your counsel to be satisfied that you have told us everything you know, Mr. Rummel.

A I will tell you everything I presently recall.

Q I can't ask you to say something you don't recall.

MR. ZELLER: Doubtless you will.

A I am not sure I can be specific, Mr. Davis. The impression I recall now is that Jack Zevely and others indicated surprise, concern, disappointment, over the announcement.

I think they were concerned as to whether Hughes would move forward with the 880 or they wouldn't, or he wouldn't. They were not, as I recall it, a bit backwards about discussing this.

It apparently was a complete surprise to them when they read it in the newspapers.

Q At that time discussions had progressed to some extent relative to price, terms and what not? Can you give me an idea as to how far negotiations had progressed with Convair with respect to a possible 880 program?

A Yes. Well, as I recall it, this was shortly after or shortly before, I think, the letter of intent type of contract was written, and we intentionally left as many things open as we could, as I believe I explained earlier, particularly in specifications, the maximum extent we could on price.

We, as I recall it, negotiated to a much greater extent after that on rebate provisions, and other factors. We had a fairly skimpy skeleton of a form of contract, as I recall it, at the time that this announcement was made.

Q Does that reflect now your total recollection as to what transpired insofar as Convair was concerned relative to this announcement?

A Substantially so. The trouble now is to be specific as to names and incidents that long ago. I am sure it wasn't confined just to Zevely. I am sure others had comments, including probably the technical people.

But I can't say at this point exactly what was said by who when.

Q Now will you give me your total recollection as to the reaction or what was said by Boeing or any of its representatives?

A As I recall it, Boeings reaction was a little different from Convairs. It was more in the nature of being incredulous.

Q Incredulous?

A Yes. I think I got this from talking to George Sandborn, and possibly others.

Q What did they say to you that made you feel that they were incredulous?

A Gee, I am giving you what I recall is my impression now, Mr. Davis. I don't think I can say exactly what they said that led me to believe that, but I recall having that impression, that they were somewhat shocked,

(Excerpts from Deposition of Robert W. Rummel)

they found it difficult to believe, they hoped it wasn't so, and I don't think they thought that he would be building much better airplanes. At least, this is the general impression that I got, that it was an incredulous situation.

MR. ZELLER: Off the record.

(Discussion off the record.)

Q Can you tell me what was the state of negotiations with Boeing at or about the time this news was announced?

A Well, as I recall it, we had--rather, Hughes had purchased or agreed to buy the 131s, but I can't remember whether the 331 deal had been closed or not. It was about that time, as I recall it.

I think Boeing pretty much felt they had it in the bag. That's what I am saying now. I am not sure that is what I might have said then. But I believe they must have at that time.

Q You don't recall their saying something to the effect, my goodness, not another competitor in the manufacture of aircraft?

MR. ZELLER: In words or substance.

A Well, not exactly, no.

Q Now do we have a fairly complete identification of what took place in connection with that subject matter?

A I think so, Mr. Davis. That is all I can seem to

DX 44, page 1
(Letter of Damon, Dec. 6, 1955)

TRANS [illegible] AIRLINES, INC.

December 6, 1955

To the Directors

Gentlemen:

In 1955, TWA was granted the right to serve four new domestic routes involving new east-west service to five major U. S. cities as follows:

1. New York to Cleveland
2. New York to Detroit to Chicago
3. Chicago to Denver to Los Angeles and/or San Francisco
4. New York to Washington to Tulsa to Oklahoma City to Los Angeles and San Francisco

These new routes reflect not only excellent preparation by the TWA staff and excellent presentation by TWA counsel before the Civil Aeronautics Board, but they also reflect the opinion of the Civil Aeronautics Board that with most domestic trunk airlines now out of the subsidy classification, another case of added competition will be good for the domestic trunk airline industry.

This philosophy on the part of the Civil Aeronautics Board has applied not only to TWA but also to many of the other airlines, with the net result that TWA is faced with further substantial competition on routes and in cities where its competition previously has been limited or nonexistent.

For example, American Airlines has been put into direct competition now with TWA between Chicago and San Francisco on a non-stop basis, where the only previous competition was United Airlines. American Airlines has also been put into competition with us between Pittsburgh and New York where previously our only competition was Capital Airlines. American Airlines can now serve Dayton to New York, where we had no competition before, and also Columbus to New York where we had no competition before.

United Airlines will now be direct competition with TWA from Los Angeles to Kansas City, where we have never had any scheduled competition before, and with no obligation to serve any intermediate communities between these points, which obligation we still retain. United Airlines will also be competition between Kansas City and some point east of Chicago, so that they will become competition both east and west in Kansas City.

Continental Airlines will become direct competition with ourselves between Kansas City and Chicago where only Braniff existed as competition before.

It is possible, even probable, under the present philosophy of the Board, that in current cases Eastern Airlines and/or American Airlines will be given non-stop privileges from St. Louis to New York, where we now have no competition. There are other examples in the route cases already adjudicated and also in route cases now pending where, if the present philosophy of the Board continues (and I expect it will for a while), substantial additional competition in the present domestic trunk airline route structure will be established, so that the domestic trunk airline business will be much more competitive in the future than in the past. This will be a good thing for the able competitors and a bad thing for the less able competitors.

In the past seven years, TWA has earned and retained after taxes approximately $50,000,000 and has altered its equity-to-debt ratio from approximately one-sixth to double. But during this same period, TWA has not kept pace with the total growth of the domestic business, nor with the growth of its leading domestic competitors, American Airlines and United Airlines.

BIG-3 TRANSCONTINENTAL AIRLINES (TWA DOMESTIC ONLY)

OPERATING REVENUES

	1948 %	1953 %	1955 %
AAL	37.7	40.6	40.1
UAL	34.9	32.6	35.5
TWA	27.4	26.8	24.4
Total	100.0%	100.0%	100.0%

EX XX H 202

Admittedly our financial and other dilemmas prior to 1949 left us in a weakened position to accept properly all the opportunities in the period of dynamic growth during the past seven years. However, with the philosophy trend toward increased competition, and starting from here, the future should be a source of serious concern to us in order that we do not drift backwards through the field of airlines to a mediocre position among the also-rans.

The problem is further complicated at this time with the advent of substantial orders for very expensive high-performance jet airplanes already on order by our two leading competitors, American Airlines and United Airlines, and others, which will begin to face us competitively perhaps in 1959 and surely by 1960 and 1961. At the present time, jet airplanes have been ordered by American Airlines, United Airlines, National Airlines and Braniff Airways.

In a recent conversation with Captain Rickenbacker, he indicated that Eastern Airlines would be ordering theirs probably this month, which will leave TWA in a position of splendid isolation unless we make a similar move rather promptly.

The same condition applies to the shorter haul somewhat smaller and slower turbo-prop airplanes on which the present outstanding orders are 60 by American Airlines and 40 by Eastern Airlines, with minor quantities on order or in active negotiation by other airlines.

I do not think that the manufacturers' promised delivery dates currently quoted for licensed Boeing 707's to begin delivery in December 1958; or for licensed Douglas DC-8's to begin delivery in the summer of 1959; or for Lockheed Electras to begin delivery in 1958 will be met. After 19 years' experience building airplanes and 18 years' operating airplanes on airlines, I have found that unforeseen conditions of one nature or another generally delay expected deliveries and operations, particularly when such delivery

dates are given years in advance. Nevertheless, I do think that TWA may well face serious competition from the Lockheed Electras in 1959 and from both Boeing 707's and Douglas DC-8's in 1960.

At that time every airplane which TWA now owns or has on order or option will be either totally obsolete or heavily outclassed in speed, comfort, passenger acceptability, and economics on competitive routes. And by 1961, unless we have acquired practically complete replacement of our fleet and acquired for our domestic operation something on the order of 30 long-range jets and 50 Lockheed Electras or equivalent, we shall find that we have drifted backwards in the field from a position of fourth place as today to sixth, seventh or eighth place.

I realize the financial requirements of a fleet of this sort will run into money on the order of $250,000,000, and that our earnings in the intervening period plus our depreciation for the same period on our domestic routes will, in the next six years, probably provide only about 60 per cent of that amount even with reasonable good continuing business conditions. I expect that the other hundred million can be financed in accordance with our present manner by mortgages or other means.

INTERNATIONAL

On our international routes the problem is also important but fortunately not as pressing because other governments do not currently share the enthusiasm of our Civil Aeronautics Board for added competition at this time. But, if we are to maintain our position on the main trans-Atlantic lifeline into the important gateway points of London, Frankfurt, Paris and Rome, we must recognize the fact that by 1960, we will be facing heavy competition from Pan American with fast long-range jets. This challenge has already been

accepted by Scandinavian Airlines and by KLM, both of whom have ordered fast, long-range American-built jets, and by others, including the British who will probably follow.

Whether by 1960 the international airline business will have developed to a point where, for competitive or traffic reasons, we must supply long-range jet equipment beyond the gateway points I have mentioned above, I do not know. But, to provide truly competitive service and keep our place in the sun at the important gateway enumerated will require a minimum of 10 additional long-range jets at a total expenditure which I would estimate to be $60,000,000, of which, barring world-unsettling conditions, I would estimate profits and depreciation in the meantime would provide some $35,000,000 of cash, with the remainder necessary to be financed by debt or otherwise.

In our international routes picture, the acquisition of modern equipment is particularly important because all our international routes are on a temporary basis expiring in 1959 except our routes from stateside points to Paris and Rome. Hearings to extend the temporary routes will probably begin in 1958 and extend through the early part of 1959 by which time the full blast of the jet plane propaganda of our competitors will be sweeping the country and will be an important psychological factor in the decision of the Civil Aeronautics Board as to our "fitness, willingness and ability" as defined in the Civil Aeronautics Act, to compete in international routes. Not only do we have no chance of extending our international routes around the world but we may even be denied further operation of many points we now serve under temporary certificates, including London and Frankfurt, unless our plans are competitive equipmentwise at the time of the hearing and Civil Aeronautics Board decision.

to keep TWA in its present place in the field is slightly over $300,000,000, with approximately $125,000,000 of that amount to be financed in the next five to six years.

OTHER CONSIDERATIONS

The introduction of the jets is not merely a problem of supplying more new expensive airplanes. It is probable that between now and the time of introduction, many of the runways on most of the airports will have to be strengthened to take the gross weights involved. Some of the runways will have to be lengthened, and municipalities have shown an increasing reluctance to vote bond issues or taxes for this purpose. It is even possible that the airlines themselves will be required to do some of the financing, perhaps on a prepaid rent basis.

Perhaps even more important, the public relations of the airlines in the vicinity of airports particularly in big cities where the jet airplanes will first be used, have deteriorated heavily in the past few years both from a noise nuisance factor (which the jets will make substantially worse) and from a potential accident hazard to surrounding communities on the ground.

While I think it is inconceivable that airplanes will be outlawed from any existing airports or that ultimately jet airplanes will not be allowed on some from which they are currently barred (Idlewild as an example), the previous glamour of airports in communities is already somewhat tarnished and currently becoming more so.

There are many other problems in connection with the use of jet airplanes, such as airway traffic patterns, airport holding stacks, high altitude operation and upper air meteorology.

The jet airplanes also, because of their inherently larger size, will

require a longer terminal time for loading and unloading, and the current delayed baggage delivery nuisance on arrival will not be simplified.

In other words, the larger size of equipment necessary for economic success makes for terminal time losses whereby passengers have to check in earlier and take more time claiming their baggage after arrival.

Not all the airports currently served by TWA will accommodate either the long-range jets or the Lockheed Electra type turbo-props. We will therefore probably have to keep a residual number of our current Martin airplanes for service at airports such as Albany, Binghamton, Wilkes-Barre, Williamsport, Allentown-Bethlehem-Easton, Reading, Harrisburg, Wheeling, Toledo, Fort Wayne, South Bend, Terre Haute, Peoria and Santa Fe. This is a large array of minor cities but we are fortunate that in the past few years we have been able to omit service (generally transferred to feeder airlines) at approximately a dozen or more "headachy" points.

One other thought in this connection concerns the relative earning power of airplanes. In the nine months ended September 30th, on an evenly allocated overhead basis, only our domestic and international Constellation exclusively tourist flights had actually shown any net income. And in the nine months those 45 airplanes earned over $20,000,000 net operating income despite the fact that the company itself earned only $10,830,000 net operating income in the same period.

There are many reasons for the loss of revenue after full allocated overhead on the other types of equipment. For example, our 50 Martin airplanes showed a loss of $2,300,000 due to the type of short-haul service which we are required to perform and in which service we place them. Our twice-a-week Ambassador flights to London and Paris respectively lost half a million, and have always been accepted by us as loss leaders. Our DC-4 cargo flights

lost nearly $600,000 based only upon the revenue which they carry and with no charge to ourselves for all the non-revenue company equipment which they haul, etc., etc.

Even our first class Constellations lost money in this period, partly due to the type of intermediate city domestic service in which we place them; and our Super Constellations lost money because they are so heavily outclassed in speed and passenger preference in the competitive services we fly against American and United. In the case of the Super-G's, I think the loss figure will be eliminated as we step up the utilization per plane per day now that the airplanes are shaken down and now that the forward compartment is being used for tourist service on all flights.

Two Important facts remain:

1. Currently only our domestic and international Constellation tourist service makes us money.

2. Any airline which does not have competitive long-range jets (similar to the Boeing 707 or Douglas DC-8) and shorter range modern turbo-props (similar to the Lockheed Electra) by 1960 or 1961 will be practically out of business soon thereafter.

RECOMMENDATION

I recommend that the proper officers of this company be authorized to bring to the Board a specific recommendation for equipment and financing at the January 1956 or earliest possible Directors' Meeting thereafter; or, if the Directors prefer, that we revive the Equipment and Finance Committee of the Directors to accomplish the same purpose.

R. S. Damon

A V LESLIE
VICE PRESIDENT FINANCE
AND COMPTROLLER

December 19, 1955

Dear Noah:

You have requested my views as to what TWA's near-term financial abilities may be, having regard to the options which it intends to execute taking over airplanes now under firm order by the Hughes Tool Company and against which the latter has made interim payments required by the manufacturer.

You have also requested my comment on TWA's abilities to contract for equipment of more advanced characteristics such as have been ordered by other major air lines with which we compete.

Existing equipment commitments which we propose to take over from the Hughes Tool Company are, in round figures, as follows:

	(Millions)
3 1049G Constellations	$15.2
Company Furnished Equipment	1.0
(Delivery dates June - September 1956)	$16.2
25 1649 Constellations	$58.0
Equipment Spares	11.0
Company Furnished Equipment	3.0
(Delivery dates April - September 1957)	$72.0
Grand Total	$88.2

There may be escalation involved and it is possible, and for planning purposes should be assumed, that the total program aggregates $90 million.

1. On April 1, 1956 (the beginning of our next budget period), working cash will be $12.0
2. Debt on that date will be 40.0
3. Net worth will be 73.0
4. Net Income in terms of Gross Revenues will aggregate the level presently projected for the 12 months ended September 30, 1956 2.50%
5. That equipment requirements can be funded as to 60% by secured notes running off in 5 years (a pattern for which we have precedence in the past).
6. That at any given time TWA requires working cash equal to three weeks cash operating expenses.

(Millions)

	3/1/56	1/1/57	1/1/58
Beginning Cash	$12.0	$ 9.2	$ 3.5
Increase Factors			
Net Income	*$ 8.0 (9 mo.)	$ 7.0	$ 7.8
Depreciation	18.7 (9 mo.)	36.0	35.0
Borrowings - 60% of A/C CFE and Spares	9.7	43.2	
	$ 36.4	$86.2	$42.8
Cash Requirements			
Property & Equipment ex A/C	$23.0	$13.0	$13.0
Flight Equipment	16.2	72.0	
Debt Repayment Equitable		5.0	5.0
8 1049G's		1.9	1.9
25 1649's			8.6
	$39.2	$91.9	$28.5
Cash Gain	($ 2.8)	($ 5.7)	$14.3
	12/31/56	12/31/57	12/31/58
Ending Cash	$ 9.2	$ 3.5	$17.8
Working Cash Deficiency	1.5	13.2	0.6 excess

*Assumed $3.0 net loss 1st quarter

Review of the preceding table indicates that the cash building ability of the company is such that it will be unable to carry the presently committed program with normal borrowings. This is so since, during a full two-year period, it will be deficient in its working cash balance to a maximum sum of $13.2 million under minimum requirements, this occurring about the end of 1957.

It is evident that TWA can handle the purchase of the eight 1049G's without difficulty, given 60% funding of the purchase price.

As to the 1649's, the Tool Company has made a payment to the manufacturer of 25% of the roundly $58 million cost of the 25 planes (ex spares and company furnished equipment), a sum of approximately $17 million.

Should the Tool Company be willing to continue to finance this purchase by TWA to the extent of this payment on a subordinated basis, it appears that TWA could finance the remaining portion through 60% funding plus cash generation. I would expect that arrangements could be made with the loaning agency which would allow us to pay the Tool Company against this receivable during the life of the borrowing to the extent that general fund cash exceeded reasonable working requirements. A forecast of cash on the foregoing basis is shown:

(Millions)	3/1/56	1/1/57	1/1/58
Beginning Cash	$12.0	$ 9.2	$10.3
Increase Factors			
Net Income	*$ 8.0(9 mo.)	$ 7.0	$ 7.8
Depreciation	18.7(9 mo.)	36.0	35.0
Borrowings 60% of A/C CFE &spares	9.7	33.0	
HTCo subordinate note		17.0	
	$36.4	$93.0	$42.8
Cash Requirements			
Property & equipment ex A/C	$23.0	$13.0	$13.0
Flight Equipment	16.2	72.0	
Debt Repayment Equitable		5.0	5.0
8 1049G's		1.9	1.9
25 1649's			6.6
	$39.2	$91.9	$26.5
Cash Gain	($ 2.8)	$ 1.1	$16.3
	12/31/56	12/31/57	12/31/58
Ending Cash	$ 9.2	$10.3	$26.6
Deficiency in Cash	1.5	6.4	9.4 excess

Mr. Noah Dietrich Page 4 December 19, 1955 nj

I believe the cash position indicated by the table would allow us to deal successfully with a financing agency for the amounts indicated and further give us hope that payment in some measure might be made to the Tool Company although this would be dependent upon a continuously profitable operation through 1958.

To your final question, the ability to finance additional equipment, we know that the manufacturer would require a down payment in the order of 25% and progress payments totaling at least another 25% during the succeeding 18 months from the signing of the contract.

However modest TWA's views might be the figures indicate it could not, even with Tool Company assistance to the extent indicated in preceding paragraphs, generate any excess cash until 1959 if we assume payment of the Tool Company note during 1958 (which is optimistic). Without laboring the point, I can only say, if TWA is to have additional aircraft requiring near-term cash, the Tool Company must accept the burden for a period extending at least beyond 1958.

Kindest personal regards,

A. V. Leslie

HOLLYWOOD 38, CALIF.

Mr. Fred W. Ayers
Senior Vice President
Hughes Tool Company
P.O. Box 2539
Houston 1, Texas

Dear Fred:

Re: Equipment Program TWA

For several years it has been assumed in the air transport industry that jet aircraft would play a prominent role when their design reached the stage of development as to be commercially feasible. Early this year TWA engineers and representatives of the Tool Company concluded that the time was ripe to commence negotiations for the design and manufacture of jet airplanes which would suit the peculiar requirements of TWA. Because of the tremendous cost of newly designed jet aircraft it was a foregone conclusion that the Tool Company would have to lend substantial financial assistance to TWA. The exact form and extent of such support being left open, pending final determination as to the requirements and the existing financial capabilities of TWA itself.

Under such approach early this year representatives of the Tool Company surveyed the various potential manufacturers and then opened extensive negotiations with Convair for the design and manufacture of 30 turbo-jet transports of a design which would compete with both the Boeing 707 or Douglas DC-8.

These negotiations with Convair proceeded to the point of a detailed contract with accompanying specifications. The total purchase price in round figures for the 30 planes was $150,000,000. Recently, however, before the final draft of the contract could be presented to the Tool Company Board for approval Convair terminated the negotiations (presumably because of uncertainties as to performances and conflicting military commitments). If Convair is now able to obtain contracts for certain military aircraft, however, it will reopen negotiations and a final decision on such military contracts will be reached by February 1, 1956.

In the meanwhile our competitors, and many non-competing airlines, have placed large orders for jets with the other leading aircraft manufacturers. This is shown by Bob Rummel's memorandum to Collings, dated December 9, 1955, a copy of which you have previously been furnished. These manufacturers have few favorable delivery positions left. As insurance against the possibility that the contract with Convair will fail to materialize, representatives of the Company are presently discussing possible agreements with one

large and two smaller aircraft manufacturers.

The large scale purchases by other airlines undoubtedly prompted Ralph Damon's report, dated December 6, 1955, which he submitted to the TWA directors at their meeting on December 13, 1955. You will recall Damon's emphatic conclusion that "any airline which does not have competitive long-range jets (similar to the Boeing 707 or Douglas DC-8) and shorter range modern turbo-prop (similar to the Lockheed Electra) by 1960 or 1961 will be practically out of business soon thereafter".

It was his specific recommendation that TWA acquire for its domestic operation alone "something on the order of 30 long-range jets and 50 Lockheed Electras or equivalent". He estimated the financial requirements of a fleet of this sort as being on the order of $250,000,000. For international use he suggested the acquisition of a minimum of 10 additional long-range jets at a total expenditure of approximately $60,000,000. Damon's report dealt primarily with equipment requirements and did not undertake a detailed analysis of TWA's financial capabilities to meet such requirements. Feeling that such an analysis was vitally necessary I requested Vic Loslie to furnish me with his own views on the matter; and a copy of his report is enclosed herewith.

From Vic Loslie's report I would draw the following conclusions:

a. From independent lending sources TWA can finance the entire purchase under LD-147 of the eight 1049G airplanes presently contracted for, including the repayment to Hughes Tool Company of its down payment in the amount of $3,800,000.

b. From independent lending sources TWA can also finance the purchase under LD-138 of the twenty-five 1649 airplanes presently contracted for, but only provided that it not be required in 1957 to reimburse Hughes Tool Company for its down payment in the amount of approximately $17,000,000 (paid in December 1954).

c. Under the financial arrangements discussed in (a) and (b) above TWA will have a working cash deficiency until 1958.

d. TWA cannot finance, either from its own cash or from independent lending sources, any down payments or progress payments for additional equipment commitments in 1956, 1957 or 1958.

e. In no event can TWA, on its own, undertake the large scale jet program now under negotiation.

Because of the speculative course of jet airplane design and production,

substantial progress payments, in addition to the customary down payment, will have to be made if favorable deliveries are to be obtained from any manufacturer. Negotiations with the other manufacturers have suggested that for planning purposes we must assume a down payment of approximately $37,500,000 with a progress payment within 12 months of an additional $37,500,000. Those calculations assume a total jet commitment, exclusive of G.F.E. and spares, of $150,000,000. In order to obtain a favorable contract, however, it may be necessary to make an initial purchase in even a larger amount, possibly $175,000,000 or $200,000,000, in which event the down payment and progress payments would be proportionately increased.

The increasing magnitude of TWA's jet requirements, the known inability of TWA to finance them alone and the recent industry developments which demand an early commitment indicate to me that the Board should now formally approve a program of financial assistance to TWA which contemplates direct commitment by the Tool Company to contract for the jet aircraft required by TWA and payment by Tool Company of the down payment and progress payments called for by such contract. It is also suggested that the Board take such action as will enable the appropriate Company officers to postpone payment by TWA of the $17,000,000 due Tool Company in 1957. Board action relating to reimbursement of the payments to be made by the Company under the jet contract and to financing of the balance of the contract price can be taken at such time as the Board considers the formal contract negotiated by the Company's representatives.

The Company's representatives have also commenced negotiations for the purchase of turbo-jet equipment but the Board need not take any action until a definite contract has been proposed.

Yours very truly,

Vladeck Dietrich

DX 47, page 1
(Boeing-Toolco Purchase Agreement - 8 B-131s, 1/10/56)

January 6, 1956

Hughes Tool Company
2200 Gulf Building
Houston, Texas

Gentlemen:

We hereby offer to sell to you eight jet transport aircraft known as the Boeing Model 707-120 and described in Boeing Detail Specification D-16787 dated October 21, 1955 and revised November 9, 1955, on the following terms and conditions:

(a) Deliveries of such eight Model 707-120 aircraft will be made in accordance with the following schedule:

Month	Quantity
April 1959	1
May 1959	2
June 1959	2
July 1959	2
August 1959	1

and we agree that prior to the month in which the first of such aircraft is delivered to you we will not have delivered to other commercial customers, more than 12 Model 707 type aircraft.

(b) The basic price for each of such eight Model 707-120 aircraft fully equipped in accordance with such Detail Specification and for which an airworthiness certificate is to be in effect upon delivery, shall be $4,200,000, which shall be subject to an increase of $40,000 per aircraft to cover the cost of JT3C-4 engines in lieu of JT3B-2 engines and of either $14,000, in the case of first class arrangement, or $17,000 in the case of a combined first class and tourist arrangement, per aircraft to cover the cost of special customer interior features. Such price also shall be subject to adjustment for changes in the Detail Specification, including any changes you select from the list set forth in Exhibit A attached to this letter agreement which are included in the Detail Specification but have not been included in such basic price and to escalation as to

the cost to us of the auto pilot included in such price at $27,500 but without escalation as to the cost of any other item. We represent that the basic price of $4,200,000 and the other price elements set out in the foregoing two sentences are as favorable to you as the basis on which we have entered into contracts with any other customer and that our upward and downward basic price adjustments on account of specification changes you may desire will be no less favorable to you than to other customers.

(c) Payment for such eight aircraft shall be made as follows:

Due Date of Payment	Percentage of Aggregate Basic Aircraft Price
10 days after date of this agreement	5%
July 1, 1956	2%
October 1, 1956	2%
January 1, 1957	3%
April 1, 1957	3%
July 1, 1957	3%
October 1, 1957	3%
January 1, 1958	3%
April 1, 1958	3%
July 1, 1958	3%
October 1, 1958	3%

The balance of the payment in respect to each aircraft shall be made upon delivery.

All such payments shall be made in lawful money of the United States, to be unconditionally deposited to our account in a bank in the United States to be designated by us.

(d) Each of the parties hereto agrees to proceed immediately to determine the final Detail Specification for such eight Model 707-120 aircraft, and upon completion of such Detail Specification to enter into a definitive Purchase Agreement in a form substantially similar to the form of Purchase Agreement which we have previously furnished you marked "Proof of December 7, 1955." It is understood and agreed that neither the Boeing Detail Specification referred to in the first paragraph of this letter agreement nor the form of the purchase agreement marked "Proof of December 7, 1955" is completed or perfected, and the parties mutually desire and consider necessary that they be completed and perfected as soon as possible. We agree to make such

reasonable changes in the Specification prior to and during the manufacture of the aircraft as you desire with such price increase or decrease and effect upon weight and performance and time of delivery as may reasonably be incidental thereto, to give due and proper consideration to your desires for changes in the form of purchase agreement, and to offer to you alternate purchase agreement provisions which we offer generally to other customers. Such Purchase Agreement will incorporate by reference such Detail Specification, and it will contain the above mentioned matters together with such other terms and conditions not inconsistent therewith as the parties may agree upon.

It is understood that the definitive Purchase Agreement will involve implementation of this letter agreement in such manner as to leave either party free to request changes in the basic price for each of the type aircraft mentioned herein based on terms and conditions to be incorporated in such Purchase Agreement which are new or different from any terms and conditions expressly agreed to herein.

This letter agreement is understood to be subject to the conditions subsequent (a) that you shall have until 5 p.m. PST February 10, 1956, or such later date as may be mutually agreed upon, to negotiate with United Aircraft Corporation warranty provisions and a service policy satisfactory to you to be applicable to the engines to be installed on the aircraft and (b) that a definitive purchase agreement superseding this letter agreement will be executed by the parties hereto on or before 5 p.m. PST February 15, 1956 or such later date as may be mutually agreed upon. In the event (1) you are unable to negotiate such warranty provisions and service policy by 5 p.m. PST February 10, 1956 or an agreed extended date and you elect for that reason alone to cancel this letter agreement and give us written notice of such cancellation on or before 5 p.m. PST February 10, 1956, or an agreed extended date, or (2) such definitive purchase agreement is not so executed by 5 p.m. PST February 15, 1956, or an agreed extended date, then all obligations of both of the parties hereto shall cease and terminate as of the applicable date or extended date, except that payments hereunder will be forthwith refunded.

It is further understood and agreed that the rights of the Hughes Tool Company under this letter agreement or any definitive Purchase Agreement which may be entered into by the parties hereto superseding such letter agreement may be assigned to Trans World Airlines, Inc.

If the foregoing is satisfactory to you and you sign the carbon copy of

this letter enclosed for that purpose on or before 5 p.m. PST January 14, 1956 and return such copy to us, this letter will constitute a binding agreement between us.

Very truly yours,

BOEING AIRPLANE COMPANY

(Boeing-Toolco Purchase Agreement - 8 B-131s, 1/10/56)

EXHIBIT A

The following Master Changes have been incorporated in the Model 707-120 Specification, D-16787, and the sales prices noted are not included in the basic price ($4,200,000) of the airplane:

Master Change No.	Description	Price/airplane
1	Addition of 3 Bladder Cells in Wing Center Section (1,970 Gallons)	$ 8,454
9	Addition of Totalizing Fuel Quantity Indicating System	2,480
15	Installation of Solcal	905
18	Increased Escape Slide (non-inflatable type) Stowage Provisions	746
30	Revision of Cabin Water Systems to Provide Both Hot and Cold Water Service	1,670
40	Installation of Drip Sticks in Tank Doors	3,007
41	Installation of Sundstrand Constant Speed Drive Unit Disconnect Clutch (3-Drive System)	2,820
65	Installation of De-icing System Manual Control	2,480
121A	Relocation and Revision of Radio Rack Without Access Hatch	1,500
263	4 Point Underwing Refueling System	3,598
	TOTAL	$27,660

BOEING AIRPLANE COMPANY
SEATTLE 14, WASHINGTON
January 6, 1956

TELEPHONE, MOHAWK 3333
IN REPLY REFER TO

Hughes Tool Company
2200 Gulf Building
Houston, Texas

Gentlemen:

Consistent with our discussions, we have furnished you copies of our detail specification and other technical data concerning the Model 707-320 with a view toward your possible purchase of such aircraft. In furtherance of this goal, we are pleased to offer to sell such number of these aircraft between 22 and 30 as you may wish to purchase, on the following basis:

1. Basic specification: Boeing Detail Specification D17434 dated November 15, 1955, revised December 6, 1955.

2. Basic Price: $5,150,000 per aircraft, subject to adjustment for changes in detail specification and to escalation as to our cost of the auto pilot which has been included in the price at $27,500, but not subject to escalation as to the cost of any other item. The above price is also subject to reduction of $51,000 per aircraft, in the event you elect to furnish passenger seats.

3. Delivery Schedule: As set out in Attachment A.

4. Payment and other contractual provisions: Substantially similar to those contemplated with respect to the 8 Boeing Model 707-120 aircraft covered by letter agreement of even date.

If you should desire to order additional Model 707-120 aircraft we can furnish them at the price and terms and conditions set forth in letter agreement of even date for delivery as follows: One each month November 1959 through April 1960 provided you do not order any Model 707-320 aircraft for delivery in that month and one each month May and June 1960 and two each month thereafter even though you order Model 707-320 aircraft for delivery in those months in accordance with the schedule in Attachment A.

This offer is open for acceptance until 5 p.m. PST January 20, 1956.

Very truly yours,

BOEING AIRPLANE COMPANY

. . .

Connelly: . . . schedules involved here depends on whether we hit a target schedule or contract schedule. Ah, American will receive its first airplane (blank) --- dated airplane within a period of not less than sixty days prior to the month in which the next domestic customer receives aircraft.

Rummel: In other words they would deliver -- they would receive and you've agreed to deliver one NC airplane sixty days prior to

Connelly: No, no. I'm mentioning certificated airplanes.

Rummel: One NC airplane.

Connelly: No. They get an NC airplane earlier than that, Bob. Just the same as you do.

Rummel: Wait a minute. They get an NX earlier.

Connelly: Well, then, all right. It's an uncertificated airplane.

Rummel: Yeh. But your -- your arrangement relates to certificated rather than uncertificated aircraft.

Connelly: That's right.

Rummel: Is that what you're saying?

Connelly: That's right.

Rummel: Well, that what I say so if I understand what you're saying, you're saying that you have an agreement with American which requires you to deliver one NC -- that's the licensed airplane -- sixty days prior to delivering the first NC airplane to other domestic operators. Is that right?

Connelly: No. I don't you -- you have to go back to the wording I gave you.

Rummel: Well, would you give it to me again.

Connelly: Yeah. I say we have represented to American that we will deliver six certificated airplanes -- let's forget the uncertificated airplanes -- that we will deliver six certificated airplanes within a period of not less than sixty days prior to the month in which the next customer receives certificated airplanes.

Rummel: Well, how do you interpret that then? Does that mean that you'd meet the obligation if you deliver an American one airplane sixty days before our first?

Connelly: No.

Rummel: Well, you're not saying you have to deliver six airplanes

Connelly: We have to deliver six certificated airplanes to them prior to the month in which we deliver any airplanes to any other domestic customer.

Rummel: Well, that was certainly never explained to me. In fact I never heard the sixty days until now that I can remember.

Connelly: Well, it's not unreasonable to expect the first customer in, Bob, to -- all Howard wanted was the first thirty-three airplanes. So I think this is a very reasonable insistence on the part of American -- far less drastic than Howard was attempting to establish when he was first up at bat.

Rummel: Well, it's probably far less drastic than American would have established too.

Connelly: Well, ah

Rummel: But that's neither here nor there. The fact is that

Connelly: I mean -- ah -- let's look at it this way, Bob. We never made any representations on the 120 airplane and it was known at that time that both Pan American and American had signed up -- that there would be any possibility of TWA equalizing the situation with American. It just wasn't in the cards. We had to give them some preference by reason of having made the program firm, and, as I say, to be perfectly honest it's a very reasonable position for them as it stands now and certainly no more than we would agree to, Bob, when you compare it with what Howard was asking for when he was first up at bat. He said he'll take the first thirty-three airplanes or nothing, which would have put us out of business -- bing! I mean I just give you that as a

Rummel: Well, did you offer Howard a two-months lead over American?

Connelly: Well, I think he made the proposal himself and of course at that time, as you well know, there was considerable dickering with Convair.

Rummel: Well, I know there was.

Connelly: The point is

Rummel: Well, we hadn't purchased Convair at that time

Connelly: What?

Rummel: We didn't buy from Convair at that time. We didn't buy from Convair until long after we had purchased both models at Boeing.

Connelly: Well, all I can say is

Rummel: If you remember that — in fact I came to Boeing and wanted a -- the small airplane developed. Maybe you don't remember that but I sure did, and the one you came up with wasn't very good at that time -- that was

Connelly: We — we were in contact with Howard at -- well, during the course of negotiations with Pan American and offered delivery schedules and at that time he made the proposal that he'd buy the first thirty-three airplanes, period. Subsequently, ah -- well you appreciate the fact it's not easy to make contact there -- and ah — well the situation pretty well died out until the big airplane came into being, Bob.

Rummel: Well, Howard says that he has this understanding on the situation. I think what we ought to do — what I'd like to do is to sit down and become real clear -- probably you're right — we can't do it fully by telephone.

Connelly: No. I'm afraid this is an unsatisfactory way to do it, Bob, but I think we can convince you, Bob, that what we have offered and what we are prepared to offer is a very reasonable arrangement.

Rummel: Yeh. Well, I don't — I just don't understand even now -- ah, this will be a great shock to Howard to know that — (?) understand you had this prior agreement with them, but I don't understand how you can be led into the position that if you offer -- well, let me go back. When I was up there sometime ago I said we would like to have some more early positions -- at least I think we'd like to have them -- what can you offer so we can really give it serious consideration. And we wanted to offer — the objective was to, as I explained it, was to be able to more nearly start service at the time American Airlines were starting or to start with them simul -- start at the same time. And I was told well you didn't have positions available that early, but you'd see what you had available, which you then did and you made them available on the basis that we would -- if we took one early position, then to make it attractive to you, we'd take one later position, or a one for one ratio.

Connelly: Yeh.

Rummel: And, so what you're saying is that in order to give us early positions, we have to buy a later position, but then I was told last week that if we take the six positions you offered that naturally American would find themselves with three more airplanes before we got into those, and I don't understand that at all.

Connelly: Well

Rummel: Why the hell — In one hand -- dealing with us you say well we'll give you -- to get an early position you have to buy a late position but if you do that then you say to American, "Well, look TWA has bought airplanes. Now you can have some more earlier -- same ones -- you don't have to buy any more. We'll just move your deliveries up." What kind of a deal is that?

Connelly: Well, as [illegible] for any other [illegible] standpoint of [illegible] for thirty airplanes, [illegible]

Rummel: Well, do you have any agreements on international customers that involve American?

Connelly: Well, I think this is something, Bob, we ought to sit down and review on the table here. I have to check the contract on the big airplane. You, as I recall it, there's the provision in there that the position on the 33[illegible] that we quoted you, exclusive of the contracts we had already entered into prior to the date of that contract, and it lists the various contracts in there, making an exception of Lufthansa, who did not have a firm contract, that those were the next available [illegible] Now that isn't the exact wording but you could take a look at the [illegible] So that contract specifically accepts the contract that we're already entered into. And, obviously, Pan American being the first one in [illegible] a slight edge over TWA. But that was known at the time.

Rummel: Yeh. I think so.

Connelly: Yeh.

Rummel: But, in fact I think we have somewhat greater, more satisfactory leverage on the 331 than the 131

Connelly: Well, perhaps

Rummel: But you must remember, Bruce, that we have tried repeatedly to find the things we're talking about now, that is, exactly what was -- what is the early deliveries that you're proposing and what we got at our turn -- and I've heard this myself many, many times -- was statement that the position -- the relative position that existed at the time we bought the eight airplanes would be maintained -- not that it was a variable depending on what we ordered subsequently but that the relative positions would be maintained. As the whole program moved forward, those relative positions would be maintained.

Connelly: Well

Rummel: And after I look at the -- that was exactly it, and I have asked all their understanding and they have the same understanding. And --

Connelly: (Couple of words missed) Mr.

Rummel: When I look at the target schedules -- well, it is -- that's what it is. It's exactly what it was and there's no doubt about it.

Connelly: We can show you that this matter of relativity has been maintained.

Rummel: Well, it wasn't done last week.

Connelly: The eh -- you originally placed an order for eight airplanes, [illegible] at that time that you needed more small

Rummel:

Connelly: [illegible] we [illegible] to American [illegible] nature [illegible] of time that American [illegible] but [illegible] that we can otherwise

Rummel: It's the first deliveries that we're worried about.

Connelly: Well, Bob, a sixty-day look is a pretty nominal thing.

Rummel: Not in this business.

Connelly: Ah, when you've got to consider the bargaining position you're in with your first domestic customs for a large quantity of airplanes.

Rummel: Yeh.

Connelly: He has a right to expect some benefit by being first and you -- I mean that's evidenced by the position I am certain you would have taken had you been first.

Rummel: Well, we had -- that's right. And we had -- I can recall an agreement with Damon way back before -- practically before it existed -- Hollywood Reall and see whoelse was it -- myself -- were you there? I don't believe you were.

Connelly: No

Rummel: To the effect that you would not close with anyone else without first giving us the opportunity for a -- on an equal basis.

Connelly: Well, it's my understanding that that offer was made.

Rummel: Oh, I don't think so. Where was it made to?

Connelly: Well, there have been several telephone

Rummel: I don't think so. The first thing I knew that American had bought was when I read it in the newspapers. It sure wasn't made to me.

Connelly: Bob, I'll have to back off a little bit on that except that in talking to Ed Wells and Hollywood

(Dictaphone changed at this point.)

Rummel: Well! [illegible] the [illegible] time [illegible] San Fran is [illegible] printing out [illegible] I am sure Howe [illegible] Lemon.

Connelly: Yeh.

Rummel: Although I think he'd probably been apprised of it, but I don't understand — I know we pressed throughout the field for information on relative positions in detail and all that Hoeing would speak of was vague generalities. But with assurance

Connelly: Bob, I can't agree with that. Ah

Rummel: Well

Connelly: I'm sorry

Rummel: Why, why — look, Bruce. Why do you think we had to continue to pursue the argument which was never won on — by us at least — on sequence. Why did Ray Cook have to come up and pursue it further with you later - it's because we didn't have the information. We didn't know what to expect.

Connelly: (Couple of words missed.) had not given that information to anyone.

Rummel: Well, all right, but that's what I'm talking about. We did not have it

Connelly: Ah

Rummel: Well, look, Bruce. Why don't we — how do you want to proceed then? Do you want me to

Connelly: Any way that would be convenient for you, Bob.

Rummel: Well, I'd like to straighten it out if we can and at least know what we're going to fight about more clearly

Connelly: Yeh

Rummel: If we're going to.

Connelly: Well, no. I certainly think this is a time, Bob, when we ought to sit down and review this thing across the board and

Rummel: Well, I certainly do, too. I think it's long overdue.

Connelly: (Couple of words missed.) If you look at it in a broad light, it — w we have offered up to this time and what we are prepared to offer is certainly reasonable in light of the sequence of the commitments that were made.

Well, we have to look at it in the light of the -- what has been

Connelly: Yeh. as I think [illegible] we're wrong, I'd be glad [illegible] it.

Rummel: I'm sure you would, Bruce, and there isn't — I think that this whole thing probably arises -- I mean I have no thought but what Boeing thinks they have acted as they should, but it is not consistent with Mr. Hughes' understanding and certainly I had no understanding concerning constantly moving American forward as we buy additional airplanes. That just didn't even come into it. But we thought we were bettering our relative position when we went from the eight to the fifteen airplanes.

Connelly: No, as a matter of fact, you have, Bob.

Rummel: Well, not in the beginning -- not -- look, Bruce, not according to the target schedules

Connelly: (Cannot understand several words — both talking at the same time.)

Rummel: You've advanced -- on the target schedules you've advanced American and you have cut our rate down.

Connelly: No. No.

Rummel: Well, you certainly have.

Connelly: No

Rummel: But I'm speaking on the relative basis.

Connelly: Yeh. Well, your position has been improved, and this is something that could be clearly demonstrated.

Rummel: Well, it sure

Connelly: I'm talking now of an over-all fleet. Ah

Rummel: Well, I'm speaking of the relative — TWA's relative position to American Airlines. Well, look, I doubt if we can do this before Christmas now, Bruce, but I'll see how my trip to the Coast comes out.

Connelly: Well, why don't you do this, Bob. When you see your plans a little more clearly, give me a ring, and you can count on us being available at any time that is convenient for you.

Rummel: Well, I'd like to move right into it. I imagine Seattle is the better place to do it, don't you with all of your records up there?

Connelly: (Couple of words missed.)

Rummel: All right.

Connelly: Ah, the reason for it is that — a lot of this, as you know, is the -- a matter of telephone conversations between Howard and Bill, and I think it would be worthwhile if there becomes any misunderstanding on certain points to go over and have a talk with Bill on it.

Rummel: Well, [illegible].

Connelly: because [illegible] conversations, obviously, and I don't presume you have either [illegible].

Rummel: No, no. Not in [illegible] unless this was [illegible], naturally.

Connelly: So that's the [illegible] we were [illegible] the root of this thing better if it would be [illegible] for you to come up here because we have all of the facilities available that participated in this thing and I'm afraid if we [illegible] something would come up that we would need something from Bill or something from Hallwood or something from Bob Wells.

Rummel: Uhmm. Well, OK. I'll -- why don't we shoot for right after Christmas and I'll confirm it to it.

Connelly: You shoot me a wire.

Rummel: Unless I'm up next week, and in that event I'll give you a buzz, too.

Connelly: Fine, Bob.

Rummel: All right. Thank you, Mr. [illegible].

Connelly: Well, I hope you whip this flu bug now.

Rummel: Oh, it's one of those thing. I had the forerunner of it apparently in Seattle and I couldn't shake it and I didn't have sense enough to take a day or two off when it would have done some good.

Connelly: Yeh.

Rummel: One of those things, you know. But it's nothing serious. Thanks, Bruce. Have a happy Christmas season if I don't see you.

Connelly: Merry Christmas to you, Bob. (Considerable background noise) And we have the airplane taxiing out here right now.

Rummel: Oh, have you?

Connelly: Yeh. It's going to take off about noon, I think.

Rummel: Oh, are you? Hey, that's great.

Connelly: We're waiting for a little break in the weather.

Rummel: Well, I -- that's great. I'm glad to hear it. How's the second one coming?

Connelly: The second and third are in final assembly right now and coming along very well.

Rummel: Not out on the field yet?

Connelly: Not on the field yet.

(Transcript of Telephone Conversation-Rummel & Connelly-12/20/57)

Connelly: First one [illegible] of Fe'r a[illegible].

Rummel: Yeh. [illegible].

Connelly: Yeh.

Rummel: I thought it was due out before then. Well, that's fine, Bruce. I hope she -- I hope it comes out all right. I'm sure it will.

Connelly: Fine and dandy.

Rummel: OK.

Connelly: OK, Bob.

Rummel: Good-bye.

Connelly: Good-bye.

The regular meeting of the Board of Directors of Trans World Airlines, Inc. was held on Friday, June 26, 1959, at 9:30 a.m., at the offices of the Corporation, 380 Madison Avenue, New York, New York.

Directors present were: Messrs. Fred W. Ayers
E. O. Cocke
Raymond A. Cook
A. V. Leslie
Sidney Maestre
Warren Lee Pierson
C. H. Price
Ben-Fleming Sessel
A. D. Simpson
T. A. Slack
Charles S. Thomas
Milton H. West, Jr.

constituting a quorum.

Deft E 329 cd
12/7/62 A.S.

RECEIVED OCT 22 1962 CHESTER C. DAVIS

Directors absent were: Messrs. Palmer Bradley
John A. Collings
Oscar Holcombe
M. E. Montrose
H. E. Rogers
Loyd Wright (entered meeting later)

Mr. Carl S. Rowe of Counsel was present by invitation.

Mr. Warren Lee Pierson, Chairman of the Board, called the meeting to order and thereafter presided.

The Secretary of the Corporation, Mr. Ronald Duckworth, acted as Secretary of the meeting.

APPROVAL OF MINUTES

Minutes of the Board of Directors meeting of May 27, 1959, and of the Executive Committee meeting of June 4, 1959, were approved.

At this point, Mr. Loyd Wright entered the meeting.

REPORT OF THE CHAIRMAN OF THE BOARD

The Chairman of the Board reported on proceedings at the IATA E[illegible]

next meeting of the Committee would be held just prior to the Annual General Meeting in Tokyo, Japan, in October 1959.

He commented on the satisfactory financial results in 1958 of Ethiopian Airlines which is managed by this Corporation and on the benefits derived by both parties from this association.

REPORT OF THE SENIOR VICE PRESIDENT - FINANCE & TREASURER

The Senior Vice President - Finance & Treasurer, Mr. A. V. Leslie, reviewed financial statements for May 1959 and presented a financial forecast for June. He presented and discussed a series of charts comparing the current operations of the Corporation with those of American Airlines and United Air Lines and reviewed an analysis of the Corporation's employment and productivity statistics.

REPORT OF THE SENIOR VICE PRESIDENT & SYSTEM GENERAL MANAGER

The Senior Vice President & System General Manager, Mr. E. O. Cocke, presented a report on current operating performance and described in detail the operating problems encountered with the Boeing 707 jet aircraft.

REPORT OF THE PRESIDENT

The President, Mr. Charles S. Thomas, reported that the Corporation was operating at a profit in the current year compared with the loss of over $12 millio at the same date in 1958.

He advised that this improvement had resulted from several factors within the control of management -- including the recent organization plan, improved employee morale, and increased cost consciousness on the part of management.

He advised that with the completion of the basic organization plan for the Corporation, he would now devote his attention to the problems of the International Division which was currently operating at a substantial loss and, following an inspection of the route, would give a report to the Board of Directors at the August meeting.

He advised that the Corporation was studying the submission of bids for MATS' charter operations for the year beginning October 1, 1959, and stated that strong competition was expected for this business from all bidders.

AUTHORITY TO LEASE THREE ADDITIONAL BOEING MODEL 707-131 AIRCRAFT FROM HUGHES TOOL COMPANY

The President referred to the action of the Board at its meetings of January 30, February 27, and March 31, 1959, with respect to the leasing of Boeing Model 707-131 jet aircraft from Hughes Tool Company. He stated that he considered

it would be desirable if authority were given under which the Corporation might lease from Hughes Tool Company three Boeing Model 707-131 jet aircraft in addition to those for which authority had previously been given, making a total of fifteen such aircraft which could be leased from Hughes Tool Company on a day-to-day basis. It pointed out that all but one of the leases already executed provided that they would terminate in any event on June 30, 1959, and that it was proposed to extend this date to September 30, 1959.

The President further stated that pursuant to authorization of the Board at its meeting of March 31, 1959, the Corporation had purchased approximately $3,500,000 of spare parts and provisioning from Hughes Tool Company for use in connection with the operation of such jet aircraft. He advised that Hughes Tool Company owned or had on order additional 707-131 spare parts and provisioning, that Hughes Tool Company was willing to sell the balance of such spare parts and provisioning to the Corporation at Hughes Tool Company's cost when and if requested by this Corporation and that it would be desirable if authority were given under which the Corporation might purchase such spare parts and provisioning.

After discussion, upon motion duly made and seconded, the following resolutions were unanimously adopted (Messrs. Ayers, Price and Slack not voting):

RESOLVED, that the Chairman of the Board, or the President, or any Vice President of this Corporation be, and each hereby is, authorized to execute and deliver an agreement or agreements covering the leasing by this Corporation of up to a total of fifteen Boeing Model 707-131 jet aircraft (including the twelve such aircraft with respect to which authority had previously been given) from Hughes Tool Company on a day-to-day basis at a rental of $2,500 per aircraft per day, and on substantially the same terms and conditions as the Boeing Model 707-131 jet aircraft heretofore leased from Hughes Tool Company, such leases to be subject to the approval of the Civil Aeronautics Board and any necessary consents under applicable indentures of this Corporation.

RESOLVED, that the Chairman of the Board, or the President, or any Vice President of this Corporation be, and each hereby is, authorized to execute and deliver an agreement or agreements covering the purchase by this Corporation from Hughes Tool Company, at Hughes Tool Company's cost, of such additional 707-131 spare parts and provisioning as are owned by Hughes or are on order by Hughes Tool Company and are available for use in connection with the

operation by this Corporation of a total of fifteen Boeing Model 707-131 jet aircraft when leased to this Corporation by Hughes Tool Company, such agreement to be subject to approval of the Civil Aeronautics Board.

RECEIVED OCT 22 CHESTER C. DAVIS

AUTHORITY TO LEASE BOEING MODEL 707 AIRCRAFT TO NORTHEAST AIRLINES, INC.

The Senior Vice President & System General Manager advised the meeting that it was anticipated that during certain months and at off-peak travel hours, this Corporation would have Boeing Model 707 aircraft available for profitable lease to another carrier. He further advised that negotiations had been conducted with Northeast Airlines, Inc. relating to lease of Boeing 707-131 aircraft by this Corporation to Northeast to the extent necessary to enable Northeast to provide daily round-trip service between New York and Miami between late evening and morning hours. The lease would provide for use, during the first six months, of this Corporation's crews and maintenance. The base rental would be $3.10 per revenue plane mile, and Northeast would also pay to this Corporation 50% of the gross passenger revenue in excess of $4.50 per revenue plane mile during any month up to $5.30 per revenue plane mile, and 25% of such gross passenger revenue in excess of $5.30 per revenue plane mile.

There was presented to the meeting a letter of intent, not constituting a contract, between this Corporation and Northeast Airlines, Inc., dated June 17, 1959, contemplating such a lease commencing September 1, 1959, and continuing for nine months, terminable by either party on sixty days' notice. The letter of intent contemplates that Northeast crews would operate the flight after February 29, 1960, the rent being adjusted accordingly. It also contemplates that Boeing 707-331 aircraft sufficient to provide an additional daily round trip would be leased on similar terms when this Corporation has placed three such aircraft in operation, and at a later date sufficient 707-331 aircraft time for a third daily round trip would be arranged on similar terms. The proposed lease of Boeing 707-131 aircraft would be conditioned on this Corporation's being the operator of at least twelve such aircraft and on the terms of, and any necessary approvals under, indentures or financing agreements, approvals of persons having an interest in the airplanes or engines, and any necessary approval of the Civil Aeronautics Board. The letter of intent between this Corporation and Northeast Airlines, Inc., dated June 17, 1959, was ordered marked and filed with the Minutes of the meeting.

After discussion, upon motion duly made, seconded and carried, it was

RESOLVED, that the proper officers of this Corporation be, and they hereby are, authorized to negotiate, execute and deliver on behalf of this Corporation leases and agreements providing for lease by this Corporation of Boeing 707-131 and Boeing 707-331 aircraft to Northeast

Airlines, Inc. as outlined in the letter of intent dated June 17, 1959, with such modifications and other terms and conditions as the officer executing the same may deem to be in the best interests of this Corporation.

ELECTION OF MESSRS. W. L. TRIMBLE, S. L. HIGGINBOTTOM, AND JOHN P. MEAD AS OFFICERS

The President, Mr. Charles S. Thomas, referred to the action of the Board at its meeting of May 27, 1959, and to the action of the Executive Committee at its meeting of June 4, 1959, electing additional Officers and changing titles of other Officers to implement the Corporation's new organization plan.

He advised the meeting that in order to further activate the plan, it was desirable to elect Mr. W. L. Trimble as Regional Vice President - Transportation, Mr. S. L. Higginbottom as Assistant Vice President - Engineering, Flight Test and Inspection, and Mr. John P. Mead as Assistant Vice President - Industrial Relations.

After discussion, upon motion duly made and seconded, the following resolutions were adopted:

RESOLVED, that Mr. W. L. Trimble be, and he hereby is, elected Regional Vice President - Transportation of this Corporation at an annual salary effective June 26, 1959, of $25,500, to hold office in accordance with the By-Laws.

RESOLVED, that Mr. S. L. Higginbottom be, and he hereby is, elected Assistant Vice President - Engineering, Flight Test and Inspection of this Corporation at an annual salary effective June 26, 1959, of $20,000, to hold office in accordance with the By-Laws.

RESOLVED, that Mr. John P. Mead be, and he hereby is, elected Assistant Vice President - Industrial Relations of this Corporation at an annual salary effective June 26, 1959, of $22,000, to hold office in accordance with the By-Laws.

ADJUSTMENT IN SALARY OF MR. JOHN T. LOGAN

The Senior Vice President and System General Manager referred to the action of the Board at its meeting of April 23, 1959, electing Mr. John T. Logan as Assistant Vice President - Scheduling, and to the action of the Board at its meeting of May 27, 1959, increasing Mr. Logan's annual salary from $14,760 to $16,900.

He advised the meeting that in order to place Mr. Logan's position in proper relat ship with other corporate positions and to maintain a proper salary differential wi the Schedule Committee representatives reporting to Mr. Logan, it was deemed n essary that Mr. Logan's annual salary be increased to $18,000 effective April 23, 1959.

After discussion, upon motion duly made, seconded and carried, it wa

RESOLVED, that effective as of April 23, 1959, the salary of Mr. John T. Logan, Assistant Vice President - Scheduling, shall be at the annual rate of $18,000.

AUTHORITY TO ARBITRATE QUESTION OF PAYMENT TO AMERICAN AIRLINES UNDER MUTUAL ASSISTANCE AGREEMENT

The Chairman of the Board advised the meeting that there was a questi under the Mutual Assistance Agreement dated October 20, 1958, between this Corporation and five other airlines, as to whether or not payments were due by this Corporation and other airlines to American Airlines, based upon the strike of American pilots which commenced on December 19, 1958, and that as a result, it had been proposed that the question of whether or not such payments were due American be decided by an arbitrator and that the decision of the arbitrator on this question be binding on the parties. The meeting was further advised that the officers of the Corporation proposed to enter into an agreement with American Airlines, Capital Airlines, Eastern Air Lines, Pan American World Airways, and United Air Lines providing for such arbitration.

After discussion, upon motion duly made and seconded, the following resolution was unanimously adopted:

RESOLVED, that the proper officers of this Corporation be, and they hereby are, authorized to enter into an arbitration agreement between this Corporation and American Airlines, Inc., Capital Airlines, Inc., Eastern Air Lines, Inc., Pan American World Airways, Inc., and United Air Lines, Inc., providing for final determination by an arbitrator of whether or not, as a result of the strike of American Airlines' pilots commencing December 19, 1958, the Corporation and other airlines are obligated to make payments to American Airlines under the agreement dated October 20, 1958, between this Corporation and Americ Air Lines, Inc., Capital Airlines, Inc., Eastern

Jet Items	$ 787,400
Non-Jet Items	273,446
Reserve Budget	50,000
	$1,110,846

RECEIVED OCT 22 CHESTER C. DAVIS

It was pointed out that the net capital outlay under the above budget w be $801,846, because the budget included the amount of $309,000 for jet fuel-stora facilities at Boston, Kansas City and New York (La Guardia) which would be financ by fuel vendors without interest except for the amount of $13,000 on which interest 4-1/2% would be charged.

CHANGE IN DATE OF REGULAR MEETINGS OF BOARD OF DIRECTORS

It was suggested to the meeting that the date of the regular meetings Board of Directors be changed from the last Friday of each month to the last Thur of each month.

After discussion, upon motion duly made, seconded and carried, it

RESOLVED, that hereafter the regular meetings of the Board of Directors of this Corporation shall be held on the last Thursday of each month at such time and place as shall be designated in the notice of such meetings.

CONSENT TO SALE OF SIX BOEING MODEL 707 AIRCRAFT BY HUGHES TOOL COMPANY

The President referred to the eighteen Boeing Model 707-331 aircra on order by Hughes Tool Company under contracts assignable to the Corporation advised the meeting that he had been informed by Hughes Tool Company of its pr to assign its rights to six of such aircraft to Pan American World Airways, subje the approval of Boeing Airplane Company. The President stated that he had advi Hughes Tool Company that the Corporation had no objection to and consented to s assignment.

After discussion, upon motion duly made and seconded, the followi resolution was unanimously adopted (Messrs. Ayers, Price and Slack not voting

RESOLVED, that the action of the President in consenting to the assignment by Hughes Tool Company of its rights to six of the eighteen Boeing Model 707-331 aircraft on order by Hughes Tool Company under contracts assignable to this Corporation be, and it hereby is, ratified, confirmed and approved.

(TWA Board Minutes-June 26, 1959)

ATE AND PLACE OF NEXT BOARD MEETING

It was the consensus of the meeting that the regular meeting of the Board f Directors scheduled to be held on July 30, 1959, should be cancelled and that the egular meeting scheduled to be held on August 27, 1959, should be held at 9:30 a. m. t the offices of the Corporation, 380 Madison Avenue, New York, New York.

DJOURNMENT

There being no further business to come before the meeting, it was adurned at 11:55 a. m.

1. INTRODUCTION

1. a. Background.

By agreement dated May 14, 1960, Hughes Tool Company and Atlas Corporation agreed to submit a proposed form of merger agreement to the Boards of Directors of the two airlines with their recommendations that it be approved.

On the same date, Hughes Tool Company (Toolco) and Northeast Airlines, Inc. (Northeast) entered into a loan agreement whereby Toolco agreed to make loans to Northeast aggregating $9,500,000. The stated purpose of the loan is to provide Northeast with additional funds for working capital and for use in connection with a program to commence operations with six Convair 880 aircraft, which will be made available to Northeast from the number of such aircraft ordered by Toolco. The agreement provides that the first loan shall be in the amount of $5,500,000 and shall be made by June 29, 1960. It also provides that if a merger is approved, the amount outstanding shall be converted, prior to the effective date of the merger, into stock of Northeast on the basis of one share of stock for each $5.25 of indebtedness. The loan is not dependent on the merger.

By letter dated May 17, 1960, the Chairman of the Board of Directors of Northeast advised the President of TWA that its Board of Directors had considered a form of proposed merger agreement between Northeast and TWA, and voted to recommend to its stockholders a merger with TWA in accordance therewith. Also, as stated in the letter, the

Board voted to authorize the members thereof to execute the merger agreement at any time on or before July 31, 1960, upon advice that the TWA Board of Directors has approved the terms of the Merger Agreement, and is prepared to execute the same subject to such changes as may be requested by TWA and approved by Northeast. A copy of the transmittal letter and the proposed form of Merger Agreement are attached hereto as Appendices 1-A and 1-B.

1. B. The Proposed Merger Agreement

Northeast shall be merged into TWA, which shall continue in existence as the Surviving Corporation, and thereafter the individual existence of Northeast shall cease.

The merger will be effected through conversion of the shares of Northeast into shares of the Surviving Corporation on the basis of one share of Common Stock of Northeast for one-third of one share of Common Stock of TWA, the Surviving Corporation.

TWA, as the Surviving Corporation, will acquire all of Northeast's property and assets, and will assume all of Northeast's liabilities and obligations, as provided in the Merger Agreement.

The Merger Agreement must be approved by a two-thirds vote of the stockholders of TWA and Northeast, as provided by law. In addition, in accordance with the terms of the Merger Agreement, it must be approved by a majority of the stockholders of TWA, other than Toolco, voting at the meeting.

The Merger Agreement may be terminated prior to the effective date (whether before or after submission to the stockholders of either

THE TWO AIRLINES, AND, AFTER JULY 31, 1962, AT THE ELECTION OF EITHER BOARD IF THE AGREEMENT HAS NOT BY THAT DATE RECEIVED THE NECESSARY APPROVAL OF THE CIVIL AERONAUTICS BOARD OR THE SECURITIES AND EXCHANGE COMMISSION OR CERTAIN OTHER EVENTS HAVE NOT OCCURRED AS SET FORTH IN ARTICLE EIGHTH OF THE PROPOSED MERGER AGREEMENT. IN ADDITION, IT MAY BE TERMINATED AT THE ELECTION OF EITHER BOARD IN THE EVENT THAT A SUBSTANTIAL ADVERSE CHANGE IN THE NATURE, CONDITION OR SCOPE OF THE PRESENT BUSINESS OF THE OTHER CORPORATION SHALL OCCUR SUBSEQUENT TO THE DATE OF THE AGREEMENT.

NORTHEAST AIRLINES, INC.

May 17, 1960

ATTENTION MR. CHARLES S. THOMAS, *President*

TRANS WORLD AIRLINES, INC.,
380 Madison Avenue,
New York, N. Y.

Dear Sirs:

We wish to inform you that the proposed Agreement of Merger annexed hereto (herein called the "Merger Agreement") has been submitted to and considered by the Board of Directors of this Corporation and that the Board of Directors has voted to recommend to the stockholders of this Corporation a merger of this Corporation with and into Trans World Airlines, Inc. (herein called "TWA") upon substantially the terms and conditions therein set forth and to instruct the Chairman of the Board of Directors to present the Merger Agreement forthwith to TWA for consideration by its Board of Directors. The Board of Directors of this Corporation has further voted to authorize the directors members thereof to execute the Merger Agreement as submitted, or with such changes therein as may be mutually agreed upon, at any time on or before July 31, 1960, upon approval of the Merger Agreement (with such changes, if any) by a majority of the directors of TWA.

In accordance with the action taken by the Board of Directors of this Corporation, the proposed Merger Agreement is submitted to you herewith for presentation to the Board of Directors of TWA. A majority of the directors of this Corporation are prepared to execute at any time on or before July 31, 1960 the Merger Agreement as so submitted, or with such changes therein requested by you as they may approve, forthwith upon receipt from you during such period of advice that the Merger Agreement (in the form in which it is proposed to be executed) has been approved by the Board of Directors of TWA and that a majority of the directors members thereof are similarly prepared to execute the same.

Very truly yours,

NORTHEAST AIRLINES, INC.

By .....
Chairman of the Board

3. ADVANTAGES OF MERGER TO TWA

3. A. INCREASED UTILIZATION OF EQUIPMENT.

THE PRESENT ROUTE STRUCTURE OF TWA HAS BUILT IN A WIDE VARIATION IN SEASONAL TRAFFIC LEVEL, TO THE DETRIMENT OF ITS EARNINGS ABILITY.

DOMESTICALLY, TWA'S ROUTES HAVE A WIDE RANGE IN TRAFFIC VOLUME BETWEEN THE SUMMER PEAK AND WINTER LOW OF SOME 50%. THE INTERNATIONAL DIVISION HAS EVEN GREATER VARIATION SINCE BETTER THAN 80% OF TRAFFIC ACROSS THE ATLANTIC IS CARRIED DURING THE FIVE MONTHS MAY-SEPTEMBER. A TABULATION OF TWA'S PASSENGER MILES AND PASSENGER REVENUE, BY MONTH, FOR 1959 AND THE FIRST QUARTER OF 1960 IS SET FORTH IN APPENDICES 3-A-1 AND 3-A-2. EXAMINATION OF THESE DATA SHOWS THAT TWA'S SYSTEM PASSENGER MILES IN 1959 TOTALED 1.03 BILLION FOR THE FIRST QUARTER AND 1.62 BILLION FOR THE THIRD QUARTER. THUS, THE THIRD QUARTER TRAFFIC WAS 155% OF THE FIRST QUARTER'S.

RELIEF OF THIS SITUATION WOULD BE THE ACQUISITION OF ROUTES WHERE THE HEAVIEST BALANCE OF VOLUME FALLS DURING TWA'S LOW PERIOD. COULD THIS BE DONE, HIGHER ANNUAL UTILIZATION OF EQUIPMENT WOULD RESULT WITH ATTENDANT ECONOMY IN THE NEED FOR CAPITAL INVESTMENT IN AIRCRAFT AND OVERHAUL FACILITIES AND INCREASED OPERATING EFFICIENCY.

A MERGER WITH NORTHEAST WHICH WOULD AFFORD TWA ACCESS TO THE NEW YORK-FLORIDA MARKET (WITH ITS HIGH WINTER TRAFFIC PEAK CORRESPONDING TO TWA'S LOW TRAFFIC SEASON) WOULD CONTRIBUTE TO

145

THE ALLEVIATION OF TWA'S EXISTING SEASONAL TRAFFIC IMBALANCE. THE COMPLEMENTARY NATURE OF FLORIDA'S AND TWA'S SEASONAL TRAFFIC VARIATIONS IS SHOWN IN CHART FORM IN APPENDIX 3-A-3 TO THIS REPORT. MIAMI'S DOMESTIC PASSENGER TRAFFIC IN THE FIRST QUARTER IS 137% OF THE THIRD QUARTER IN CONTRAST TO TWA'S VOLUME WHERE THE THIRD QUARTER SUBSTANTIALLY EXCEEDS THE FIRST.

1959	Miami Domestic Passengers
1st Quarter	996,535
3rd Quarter	726,410
Percent 1st Quarter of 3rd Quarter	137 %

DX 57, page 43
(The Huntington Report-1960)

3. INCREASED REVENUES FROM MERGER.

THE MERGED COMPANY WILL REALIZE INCREASED REVENUES FROM TWO SOURCES, (1) INCREASED PARTICIPATION IN FLORIDA TRAFFIC BY WAY OF GREATER UTILIZATION OF EQUIPMENT AND (2) INCREASED TRAFFIC ON TWA'S SYSTEM FROM NEW ONE-CARRIER SERVICE FOR NORTHEAST CITIES.

NO ESTIMATE HAS BEEN MADE AS TO THE EXACT AMOUNT OF THESE POTENTIAL INCREASES IN REVENUES. IT IS OBVIOUS, HOWEVER, THAT ADDITIONAL FREQUENCIES PROVIDED WITH AVAILABLE AND OTHERWISE UNUSABLE TIME COULD BE PROVIDED AT MINIMUM COST, AND THAT ADDITIONAL TRAFFIC ATTRACTED TO EXISTING SERVICES WOULD INCUR ONLY NOMINAL EXPENSE. IT DOES APPEAR, THEREFORE, THAT THE INCREASED REVENUES WILL BE SIGNIFICANT FROM THE PROFIT AND LOSS POINT OF VIEW.

'197

3. c. ECONOMIES RESULTING FROM THE MERGER.

ECONOMIES WILL BE REALIZED FROM TWO SOURCES: (1) INCREASED OPERATING EFFICIENCY AND PRODUCTIVITY OF PLANT, FACILITIES AND PERSONNEL DUE TO THE LEVELING OF TWA'S PRESENT SEASONAL IMBALANCE, AND (2) REDUCTION IN OPERATING EXPENSES FROM CONSOLIDATION OF PLANT, FACILITIES, ETC.

TWA'S STAFF HAS ESTIMATED THAT SAVINGS IN UNIT COSTS OF THE TWO AIRLINES ON A MERGED BASIS WOULD REPRESENT A REDUCTION OF ABOUT 1% FROM THE TOTAL OPERATING EXPENSES OF THE TWO AIRLINES UNMERGED. IF THERE WERE NO INCREASE IN VOLUME, THIS THEN WOULD MEAN SAVINGS OF ABOUT $4,000,000 FOR THE YEAR ENDING DECEMBER 31, 1961. AS MORE PROBABLY WILL BE THE CASE, VOLUME INCREASES FOR THE MERGED AIRLINE RESULTING FROM THE INCREASED UTILIZATION DESCRIBED IN SECTIONS 3-A AND 3-B WILL BE OF SUCH MAGNITUDE THAT THEY WILL (AS A MINIMUM) ABSORB THE PERSONNEL WHO OTHERWISE WOULD BE RELEASED AND WHOSE RELEASE WOULD PROVIDE A PORTION OF THE 1% SAVING.

4. c. TERMS OF EXCHANGE.

THE MERGER AGREEMENT CALLS FOR AN EXCHANGE OF TWA STOCK FOR NORTHEAST ON A 1 FOR 3 BASIS, OR ONE-THIRD OF ONE SHARE OF TWA COMMON STOCK FOR EACH SHARE OF COMMON STOCK OF NORTHEAST. THE EXCHANGE REPRESENTS THE APPROXIMATE RELATION OF THE MARKET PRICES OF THE TWO STOCKS DURING RECENT MONTHS. THE FOLLOWING TABLE SHOWS THE MARKET QUOTATIONS FOR THE TWO STOCKS ON MAY 13, 1960, THE DAY BEFORE THE PRELIMINARY AGREEMENT BETWEEN TOOLCO AND ATLAS:

	SALES	OPEN	HIGH	LOW	CLOSE°
NORTHEAST	900	4 3/4	5	4 3/4	5
TWA	1,100	13 5/8	14 1/8	13 5/8	14 1/8

° RATIO: 1-2.8

PAGE 1 OF APPENDIX 4-C-1 IS A CHART SHOWING THE AVERAGE PRICE OF THE TWO STOCKS FOR THE PAST TWO YEARS BY QUARTERS. PAGE 2 CONTAINS A LISTING OF THE HIGH, LOW AND AVERAGE PRICES OF THE TWO STOCKS BY QUARTERS FOR THE PERIOD 1957-1960 (1ST QUARTER).

PART V

EQUIPMENT AVAILABILITY

CURRENT AVAILABILITY OF U. S. AIRCRAFT FOR LEASE AND/OR PURCHASE IS DISCUSSED AND ILLUSTRATED IN PART V OF THIS REPORT. FOREIGN BUILT AIRCRAFT, EXCEPT FOR THE DOUGLAS-CARAVELLE, ARE NOT DISCUSSED SINCE INVESTIGATIONS SHOW THEY CANNOT SATISFY AIRPLANE STANDARDIZATION AND SUPPORT REQUIREMENTS WITH PARTICULAR REFERENCE TO PROVIDING A SOLUTION TO TWA'S EQUIPMENT PROBLEM ON A NEAR TERM BASIS.

PART V POINTS OUT THAT LEAD TIME REQUIRED FOR DELIVERY OF AIRCRAFT CALLS FOR EARLY COMMITMENTS TO THE MANUFACTURER IN ORDER TO MINIMIZE TWA'S LOSS OF REVENUE GENERATION IN RELATION TO ITS MARKET POTENTIAL. THE REPORT ALSO POINTS OUT THAT ANY DELAY IN CONSUMMATING EQUIPMENT COMMITMENTS WILL BE REFLECTED IN NEARLY COMMENSURATE DELAY IN PROVIDING EQUIPMENT FOR TWA'S USE.

PART V IS DIVIDED INTO THE FOLLOWING SECTIONS:

- MANUFACTURING LEAD TIME
- SIGNIFICANT AIRPLANE CHARACTERISTICS
- SHORT TERM VS. LONG TERM SOLUTIONS
- AIRPLANE DESCRIPTIONS
- LEASE POSSIBILITIES
- PURCHASE POSSIBILITIES
- CAPABILITY OF VARIOUS NEW FLEETS TO GENERATE REVENUE

EQUIPMENT AVAILABILITY

CURRENT AVAILABILITY OF U. S. AIRCRAFT FOR LEASE AND/OR PURCHASE IS DISCUSSED AND ILLUSTRATED IN PART V OF THIS REPORT. FOREIGN BUILT AIRCRAFT, EXCEPT FOR THE DOUGLAS-CARAVELLE, ARE NOT DISCUSSED SINCE INVESTIGATIONS SHOW THEY CANNOT SATISFY AIRPLANE STANDARDIZATION AND SUPPORT REQUIREMENTS WITH PARTICULAR REFERENCE TO PROVIDING A SOLUTION TO TWA'S EQUIPMENT PROBLEM ON A NEAR TERM BASIS.

PART V POINTS OUT THAT LEAD TIME REQUIRED FOR DELIVERY OF AIRCRAFT CALLS FOR EARLY COMMITMENTS TO THE MANUFACTURER IN ORDER TO MINIMIZE TWA'S LOSS OF REVENUE GENERATION IN RELATION TO ITS MARKET POTENTIAL. THE REPORT ALSO POINTS OUT THAT ANY DELAY IN CONSUMMATING EQUIPMENT COMMITMENTS WILL BE REFLECTED IN NEARLY COMMENSURATE DELAY IN PROVIDING EQUIPMENT FOR TWA'S USE.

PART V IS DIVIDED INTO THE FOLLOWING SECTIONS:

- MANUFACTURING LEAD TIME
- SIGNIFICANT AIRPLANE CHARACTERISTICS
- SHORT TERM VS. LONG TERM SOLUTIONS
- AIRPLANE DESCRIPTIONS
- LEASE POSSIBILITIES
- PURCHASE POSSIBILITIES
- CAPABILITY OF VARIOUS NEW FLEETS TO GENERATE REVENUE

V EQUIPMENT AVAILABILITY

MANUFACTURING LEAD TIME

PART IV OF THIS REPORT SHOWS THAT TWA'S REQUIREMENT FOR ADDITIONAL AIRCRAFT CALLS FOR EARLY SOLUTION IN ORDER TO RECAPTURE ITS LOST SHARE OF THE MARKET AND TO MORE FULLY SERVE ITS EXPANDING POTENTIAL MARKETS, BOTH DOMESTIC AND INTERNATIONAL.

NORMAL LEAD TIME FOR CONSTRUCTION OF A JET AIRLINER OF A TYPE ALREADY IN SUBSTANTIAL PRODUCTION IS ONE TO ONE AND ONE-HALF YEARS. LEAD TIME FOR NEW TYPE JET AIRCRAFT NOT IN PRODUCTION VARIES FROM THREE TO FOUR YEARS. THESE SIZABLE LEAD TIMES CALL FOR EARLY EQUIPMENT COMMITMENTS. FURTHER, IT SEEMS OBVIOUS THAT THE MOST ECONOMICAL AND QUICKEST WAY FOR TWA TO EXPAND ITS FLEET AND TO SATISFY ITS SHORT TERM MARKET REQUIREMENTS IS TO ACQUIRE ADDITIONAL AIRCRAFT OF SUBSTANTIALLY THE SAME TYPE IT NOW SUCCESSFULLY OPERATES AND WHICH TYPES ARE IN PRODUCTION. THIS COULD BE DONE EITHER BY LEASE OR PURCHASE OR A COMBINATION OF BOTH, DEPENDING ON FINANCING AND OTHER CONSIDERATIONS.

SIGNIFICANT AIRPLANE CHARACTERISTICS

A SUBSEQUENT PART OF THIS REPORT COMPARES AND ANALYZES THE ECONOMICAL AND OPERATIONAL ADVANTAGES AND DISADVANTAGES OF EACH TYPE OF AIRPLANE BEING CONSIDERED. HENCE, THIS SUBJECT WILL NOT BE CONSIDERED IN DETAIL HERE. HOWEVER, IT IS PERHAPS WELL TO POINT OUT AT THE OUTSET THAT DERIVATIVE AIRPLANE DESIGNS (I.E., THOSE DERIVED FROM THE ORIGINAL TYPES) NOW BEING PRODUCED SUCH AS THE SECOND GENERATION, FAN-POWERED BOEINGS, CONVAIRS AND DOUGLAS', WILL ALL OPERATE SO CLOSE TO THE SPEED OF SOUND THAT VIRTUALLY NO SPEED ADVANTAGES OF ONE TYPE COMPARED TO THE OTHER WILL EXIST BETWEEN AIRLINES HAVING THE TURBO-FAN POWERED JETS. THIS SITUATION WILL EXIST FOR SEVERAL YEARS AT LEAST.

CONSEQUENTLY, WHEN THE AIRLINES ARE EQUIPPED WITH FAN EQUIPMENT, DIFFERENCES IN SCHEDULES BETWEEN AIRLINES WILL REFLECT VARIATIONS IN AIRLINE ROUTES, OPERATIONAL PRACTICES AND SCHEDULE DECISIONS RATHER THAN AIRPLANE PERFORMANCE. FOR COMPARABLE FLIGHT SEGMENTS, SCHEDULED TIMES COULD BE VIRTUALLY THE SAME FOR ALL AIRLINES HAVING MODERN TURBO-FAN EQUIPMENT. THEREFORE, THE CHARACTERISTICS OF LATE MODEL TURBO-FAN EQUIPMENT OF GREATEST SIGNIFICANCE TO THE AIRLINE ARE:

1. AIRPLANE OPERATING COST CHARACTERISTICS IN RELATION TO THE MARKET TO BE SERVED. RELATIONSHIP OF PER MILE VS. SEAT MILE COST TO THE RELATIVE GROWTH OF THE FIRST CLASS AND SKY COACH MARKETS.

2. AIRPLANE AIRPORT PERFORMANCE CHARACTERISTICS. WILL THE AIRCRAFT PERFORMANCE CHARACTERISTICS MATCH AIRPORT CHARACTERISTICS IN THE MARKETS INTENDED TO BE SERVED?

3. PUBLIC ACCEPTANCE OF THE AIRPLANE. IS THE AIRPLANE COMFORTABLE AND ATTRACTIVE TO THE CUSTOMER? DOES IT HAVE RANGE AND OTHER CHARACTERISTICS REQUIRED TO FLY THE ROUTES THE CUSTOMER DESIRES? DOES THE AIRPLANE AND THE MANUFACTURER HAVE A GOOD REPUTATION?

4. AIRCRAFT SUPPORT PROGRAM. AVAILABILITY AND COST OF SPARE PARTS, GROUND SUPPORT EQUIPMENT, AND CORRECTIVE (MAINTENANCE) ENGINEERING.

5. SALES APPEAL. ADVERTISING IMPACT OF THE AIRCRAFT ON THE PUBLIC AND THE SERVICE OFFERED BY THE AIRCRAFT.

6. ECONOMIC AND MECHANICAL OBSOLESCENCE FACTORS.

7. AIRPLANE SIZE. IS THE AIRPLANE SIZE CORRECT IN RELATION TO THE MARKET TO BE SERVED?

IN ANY EVENT, HISTORY PROVES THAT COMPETITIVE SPEEDS CANNOT BE SACRIFICED TO ANY SIGNIFICANT EXTENT FOR ANY SIGNIFICANT PERIOD OF TIME WITHOUT ECONOMIC PENALTY TO THE AIRLINE. WHILE BEYOND THE SCOPE OF THIS REPORT, PERHAPS IT IS ADMISSABLE TO OBSERVE, THAT WITH SCHEDULE SPEED EQUALITY A VIRTUAL CERTAINTY IF TWA PROCURES MODERN TURBO-FAN JETS, TWA ADVERTISING CAN BEST BE DIRECTED TO OTHER AREAS OF INTEREST TO THE PASSENGER THAN SPEED - SCHEDULE CONVENIENCE, IN-FLIGHT PASSENGER SERVICE, COMFORT OF THE FLIGHTS. GROUND FACILITIES. INSTANT RESERVATIONS, ETC. THIS SUGGESTS TWA SHOULD BUILD TOWARD A PUBLIC IMAGE OF UNEXCELLED SERVICE AND CONVENIENCE RATHER THAN ALMOST WHOLLY CONCENTRATING ON BEING "SPEED MERCHANTS".

SHORT TERM VS. LONG TERM SOLUTIONS

WHILE TWA HAS URGENT NEED FOR ACQUIRING ADDITIONAL JET AIRCRAFT QUICKLY, IT MUST EXERCISE PRUDENCE LEST IT SOLVE ITS SHORT TERM PROBLEM AT THE EXPENSE OF ITS LONG TERM PROFIT OBJECTIVES. FOR EXAMPLE, TWA MIGHT ACQUIRE A SMALL FLEET OF NONSTANDARD AIRCRAFT WHICH WOULD BE MORE EXPENSIVE TO OPERATE THAN IF IT PROCURED STANDARD OR NEAR STANDARD TYPE AIRCRAFT BUT WHICH WOULD STILL BE PROFITABLE FOR THE NEXT YEAR OR SO. HOWEVER, CONTINUING EXTRA COSTS FROM AN UNNECESSARILY DIVERSE FLEET EXTENDED THROUGH THE YEARS COULD FAR OUTWEIGH THE INITIAL ADVANTAGE OF EARLY FLEET DELIVERY.

SIMILARLY, TWA MUST BE CAREFUL TO PROCURE OR LEASE AIRCRAFT WHICH CAN BE SMOOTHLY, EFFICIENTLY AND ECONOMICALLY INTEGRATED INTO TWA OPERATIONS. IN THIS RESPECT, AIRCRAFT BASIC TYPE STANDARDIZATION IS SIGNIFICANT AND IMPORTANT. LEASING RATHER THAN PURCHASING MAY AID THE SHORT TERM SOLUTION INSOFAR AS USE OF A NONSTANDARD TYPE AIRPLANE IS CONCERNED. THIS COURSE COULD OFFER ADVANTAGES FOR SHORT TERM FLEET USE IF ADEQUATE LEASE TERMINATION RIGHTS WERE OBTAINED. ON THE OTHER HAND, FOR LONG TERM USE IT WOULD PAY TO PURCHASE RATHER THAN LEASE AIRCRAFT OF A REASONABLY COMPATIBLE TYPE IF AT ALL POSSIBLE TO DO SO.

UNFORTUNATELY, SOME OF THE AIRPLANES WHICH MIGHT BE AVAILABLE THE QUICKEST ARE NOT CONFIGURED TO TWA STANDARDS.

REASONABLE ECONOMIC BALANCE BETWEEN SHORT TERM AND LONG TERM SOLUTIONS TO TWA'S EQUIPMENT PROBLEM IS ESSENTIAL. THIS IS RECOGNIZED AND THIS ASPECT IS TREATED MORE FULLY IN A LATER PORTION OF THIS REPORT.

AIRPLANE DESCRIPTIONS

CONVAIR 880 TWA

THE CONVAIR 880 "SUPERJET" IS PRESENTLY BEING INTRODUCED OVER TWA ROUTES. WHEN DELIVERIES ARE COMPLETED, THE FLEET WILL COMPRISE TWENTY AIRPLANES. THE AIRPLANE IS DESIGNED FOR OPERATION AT MEDIUM RANGE SUCH AS ONE OR TWO STOP TRANSCONTINENTAL OPERATION. FOUR ABREAST FIRST CLASS AND FIVE ABREAST TOURIST SEATING IS PROVIDED. ALL FIRST CLASS PASSENGER CAPACITY IS 84 PASSENGERS AND ALL TOURIST CAPACITY IS 105 PASSENGERS. THIS TYPE IS CURRENTLY BEING ADVERTISED AS THE "WORLD'S FASTEST".

CONVAIR 880M CAPITAL

THIS AIRPLANE IS A DERIVATIVE OF THE BASIC 880 AIRPLANE. WITH THE ADDITION OF MORE CENTER WING FUEL TANKS (NOT PRESENTLY INCLUDED) GREATER RANGE IS POSSIBLE. THE AIRPLANE HAS WING LEADING EDGE DEVICES DESIGNED TO PROVIDE IMPROVED TAKEOFF AND LANDING PERFORMANCE. THE ENGINE IS A NON-FAN DERIVATIVE OF THE GENERAL ELECTRIC CJ805 ENGINE NOW INSTALLED ON THE 880 AIRPLANE. THE COCKPIT INSTRUMENTATION IS CONFIGURED TO CAPITAL AIRLINES' REQUIREMENTS AND IS NOT STANDARD WITH THE TWA 880 COCKPIT. THE PASSENGER INTERIOR IS DIFFERENT IN COLOR SCHEME AND IN CONCEPT WHEN COMPARED TO THE TWA 880 ALTHOUGH IT HAS THE SAME SEATING CAPACITY. OTHER SYSTEM DIFFERENCES EXIST. THE 880M IS THE SAME SIZE BUT HEAVIER THAN THE 880.

CONVAIR 990 AMERICAN

THE CONVAIR 990 DESIGN IS DERIVED DIRECTLY FROM THE CONVAIR 880. THE AIRPLANE IS DESIGNED TO ACHIEVE A HIGHER MAXIMUM SPEED THAN THE 880, TO PROVIDE IMPROVED AIRPORT CAPABILITIES AND TO HAVE TRUE TRANSCONTINENTAL NONSTOP HIGH SPEED CAPABILITIES. TO ACCOMPLISH THESE OBJECTIVES, THE AIRPLANE UTILIZES THE GENERAL ELECTRIC TURBOFAN ENGINE, WING LEADING EDGE DEVICES, AND ANTI SHOCK BODIES ON THE WING. THE COCKPIT INSTRUMENTATION IS DESIGNED TO MEET AMERICAN'S REQUIREMENTS AND IS NOT STANDARD WITH THE TWA 880 COCKPIT. IN ADDITION, MAJOR SYSTEM DIFFERENCES EXIST BETWEEN IT AND THE 880 SUCH AS A DIFFERENT AUTOMATIC FLIGHT CONTROL SYSTEM. THE FUSELAGE IS THREE SEAT ROWS LONGER THAN THE 880 GIVING A TWELVE TO FIFTEEN PASSENGER GREATER SEATING CAPABILITY THAN THE 880 OR THE 880M.

CONVAIR 990 TWA

THIS AIRPLANE WOULD BE EQUIVALENT OF THE AMERICAN AIRLINES VERSION EXCEPT THAT THE COCKPIT CONFIGURATION, THE AUTOMATIC FLIGHT CONTROL AND OTHER SYSTEMS WOULD BE IDENTICAL OR NEARLY IDENTICAL TO THE 880 AIRPLANE. IN ADDITION, THE INTERIOR CONFIGURATION WOULD BE LAID OUT TO MEET CURRENT TWA REQUIREMENTS.

BOEING 720B

THIS AIRPLANE IS A DERIVATIVE MODEL OF THE BASIC BOEING JET SERIES. IT DIFFERS FROM THE BASIC TWA MODEL 131 IN THAT IT HAS A THREE SEAT ROW SHORTER FUSELAGE, P & W TURBOFAN ENGINES AND FULL SPAN WING LEADING EDGE DEVICES AND LEADING EDGE GLOVES. IT IS DESIGNED TO OPERATE AT MEDIUM RANGES FROM MEDIUM SIZED AIRPORTS, ALTHOUGH IT ALSO HAS THE ABILITY TO OPERATE AT NON-STOP TRANSCONTINENTAL RANGES IF ADDITIONAL FUEL TANKS ARE INSTALLED. THE SHORTER FUSELAGE LIMITS PASSENGER CAPACITY TO 12 TO 18 LESS PASSENGERS THAN TWA'S 707-131 AIRCRAFT. THIS, LIKE ALL THE BOEING JETS, PROVIDES SPACE FOR SIX WIDE TOURIST SEAT ROWS.

BOEING 131B

THIS AIRPLANE IS A DERIVATIVE OF TWA'S PRESENT BOEING DOMESTIC SUPERJET. MAJOR DIFFERENCES RESULT FROM THE ADDITION OF P & W TURBOFAN ENGINES AND MODIFICATION OF THE WING INCLUDING FULL SPAN LEADING EDGE DEVICES AND A LEADING EDGE "GLOVE". THESE CHANGES MAKE THE 131B A VERY VERSATILE AIRPLANE HAVING THE CAPABILITY OF TRANSATLANTIC NON-STOP OPERATION AS WELL AS HIGH SPEED DOMESTIC NON-STOP TRANSCONTINENTAL OPERATION. THIS AIRPLANE IS THE SAME SIZE AS THE BOEING 131'S TWA OPERATES IN TRANSCONTINENTAL SERVICE, BUT WOULD HAVE SOMEWHAT HIGHER GROSS WEIGHT.

BOEING 331A-9

THIS AIRPLANE IS ESSENTIALLY IDENTICAL TO THE TWA BOEING INTERCONTINENTAL MODEL 331 SUPERJET. THE SIGNIFICANT CHANGES ARE NEW LANDING GEAR AND BRAKES TO PROVIDE FOR INCREASED MAXIMUM GROSS WEIGHT. TWA'S 331'S CAN BE MODIFIED TO THIS CONFIGURATION.

BOEING 331A-11

THIS AIRPLANE IS ESSENTIALLY THE SAME AS THAT DESCRIBED ABOVE (A-9) EXCEPT THAT THE A-11 ENGINE HAS A HIGHER THRUST RATING PERMITTING IMPROVED AIRPORT PERFORMANCE AND IMPROVED HIGH ALTITUDE HIGH SPEED CAPABILITIES.

BOEING 331B

THIS AIRPLANE IS A DERIVATIVE OF THE TWA BOEING INTERCONTINENTAL SUPERJET. THIS MODEL IS CAPABLE OF VERY LONG RANGE OPERATION SUCH AS LOS ANGELES TO LONDON OR PARIS OR SAN FRANCISCO TO LONDON OR PARIS VIA THE POLAR ROUTE OR ROME-NEW YORK NON-STOP. THE AIRPLANE IS POWERED BY AN ADVANCED VERSION OF THE P & W TURBOFAN ENGINE. STRUCTURAL IMPROVEMENTS PROVIDE HIGHER MAXIMUM TAKEOFF WEIGHTS. THE HIGHER ALLOWABLE GROSS WEIGHT COMBINED WITH THE MORE ECONOMIC OPERATION OF THE TURBOFAN ENGINE PROVIDE THE EXTREME LONG RANGE CAPABILITY. ADDED POWER IMPROVES TAKEOFF PERFORMANCE FROM MARGINAL AIRPORTS SUCH AS LONDON, ENGLAND. THE FUSELAGE IS THE SAME SIZE AS THE MODEL 331 JETS TWA PRESENTLY FLYS IN INTERNATIONAL SERVICE.

BOEING 727

THIS AIRPLANE IS BOEING'S ENTRY IN THE SHORT TO MEDIUM HAUL MARKET. THIS ENTIRELY NEW AIRPLANE HAS BEEN ORDERED IN QUANTITY BY UNITED AND EASTERN AIRLINES. IT IS A TRIMOTOR PLANE WITH ALL THREE ENGINES MOUNTED ON THE REAR OF THE FUSELAGE. THE AIRPLANE UTILIZES HIGH LIFT DEVICES ON THE WING TO PERMIT UNLIMITED OPERATION FROM AIRPORTS SUCH AS LAGUARDIA AND MIDWAY. ITS FUSELAGE DIAMETER IS THE SAME AS THE 707, THUS PERMITTING SIX ABREAST SEATING IN TOURIST CONFIGURATION. ALL FIRST CLASS PASSENGER CAPACITY IS 70 AND ALL TOURIST CAPACITY IS 113.

DOUGLAS CARAVELLE VII

THIS IS A SHORT TO MEDIUM RANGE AIRPLANE DESIGNED BY SUD EST IN FRANCE AND MARKETED BY DOUGLAS IN THE UNITED STATES. IT IS POWERED BY TWO ENGINES MOUNTED IN THE REAR OF THE FUSELAGE. THIS AIRPLANE IS SIMILAR TO THE VERSION OF THE CARAVELLE PRESENTLY FLYING IN EUROPE EXCEPT THAT THE ENGINES ARE GENERAL ELECTRIC TURBOFANS GIVING THE AIRCRAFT IMPROVED AIRPORT AND FLIGHT PERFORMANCE. IT IS CONSIDERABLY SMALLER THAN THE BOEING OR CONVAIR COMMERCIAL JET SERIES SEATING 68 PASSENGERS IN ALL FIRST CLASS SERVICE AND 90 PASSENGERS IN ALL TOURIST CONFIGURATION.

THREE VIEW DRAWINGS, AS WELL AS DETAIL DIMENSIONAL, WEIGHT, CAPACITY AND PERFORMANCE DATA FOR THE AIRCRAFT DISCUSSED ABOVE ARE PROVIDED FOR REFERENCE PURPOSES IN APPENDIX D.

LEASE POSSIBILITIES

IT WOULD PECULIARLY HELP TWA'S SHORT TERM EQUIPMENT DILEMMA IF TWA COULD QUICKLY LEASE FLIGHT EQUIPMENT OF ESSENTIALLY THE SAME TYPE IT NOW OPERATES FOR EARLY USE. POSSIBILITIES FOR LEASING FLIGHT EQUIPMENT ARE EXTREMELY LIMITED:

1. LEASE A NUMBER OF NORTHEAST AIRLINES CONVAIR 880'S DURING THE SUMMER AND FALL SEASON. SINCE NEA HAS ONLY SIX CONVAIR 880'S, AND IN LIGHT OF JET COMPETITION FROM NATIONAL AIRLINES AND EASTERN AIRLINES, IT IS UNLIKELY THAT NEA MANAGEMENT WILL BE ABLE TO JUSTIFY LEASE OF JETS TO TWA. EVEN IF THE PENDING MERGER SHOULD BE CONSUMMATED SOON, IT IS NOT CLEAR THAT AIRCRAFT COULD BE DIVERTED FROM THE NEA FLORIDA ROUTES THIS SUMMER. HOWEVER, THE MERGER HAS NOT BEEN CONSUMMATED AND EQUIPMENT LEASE DISCUSSIONS ARE UNDERWAY.

2. LEASE UP TO FOUR CONVAIR 880'S FROM THE HUGHES TOOL COMPANY OR FROM CONVAIR, THE SOURCE DEPENDING ON OWNERSHIP. THESE AIRCRAFT, PART OF THE INITIAL 30 ORDERED BY THE HUGHES TOOL COMPANY FROM CONVAIR COULD BE MADE AVAILABLE FROM A MANUFACTURING POINT OF VIEW BY JUNE 30, 1961. THESE AIRCRAFT ARE BEING MANUFACTURED TO TWA'S STANDARD CONFIGURATIONS AND WOULD BE PRODUCTIVE ALMOST UPON DELIVERY. HOWEVER, WHETHER OR NOT A LEASE FROM EITHER PARTY COULD BE CONSUMMATED IS CURRENTLY HIGHLY PROBLEMATICAL OR EVEN DOUBTFUL. POSSIBILITIES FOR PURCHASING THESE AIRCRAFT IS DISCUSSED ELSEWHERE.

3. LEASE CONVAIR 880M'S. CONVAIR RECENTLY ADVISED THE HUGHES TOOL COMPANY THAT IT, CONVAIR, RESCINDED THE CONTRACT FOR THE CONSTRUCTION OF SEVEN CONVAIR 880M'S BECAUSE OF ALLEGED COMPLETE LACK OF PERFORMANCE ON THE PART OF THE HUGHES TOOL COMPANY. IT IS UNDERSTOOD THAT THE HUGHES TOOL COMPANY HAS NOT ACCEPTED CONVAIR'S ACT OF CONTRACT RESCISION AS FINAL. WHETHER CONVAIR WOULD BE WILLING TO LEASE 880M'S FOR TWA'S USE IS NOT KNOWN AT THIS WRITING. IT IS SUSPECTED THAT SINCE CONVAIR BELIEVES IT CAN SELL THESE AIRCRAFT SEVERAL TIMES OVER, THAT IT WOULD HAVE NO SUCH INTEREST UNLESS TWA AGREED TO PURCHASE ADDITIONAL AIRCRAFT. THESE AIRCRAFT ARE STILL INCOMPLETE BUT COULD BE MADE AVAILABLE DURING THE JUNE-DECEMBER 1961 PERIOD.

SEVERAL FACTORS MILITATE AGAINST LEASE OF 880M'S:

A. INHERENT RISK OF DEALING WITH CONVAIR UNDER EXISTING COMPLICATED TERMS OF REFERENCE.

B. THE 880M'S WERE CONTRACTED TO BE BUILT TO CAPITAL AIRLINES' SPECIFICATIONS. CASH COSTS FOR CONVERSION OF SEVEN AIRCRAFT TO TWA SPECIFICATIONS ARE ESTIMATED TO BE $1,400,000 AND WOULD DELAY USE APPROXIMATELY TWO MONTHS PER AIRPLANE.

IF THE AIRCRAFT SHOULD NOT BE STANDARDIZED, THE COST FOR ADDITIONAL TRAINING FOR FLIGHT CREWS AND NECESSARY SEGREGATION OF FLIGHT CREWS ARE ESTIMATED TO BE $600,000 THE FIRST YEAR AND APPROXIMATELY $470,000 PER RECURRING YEAR. THIS ITEM ALONE TOTALS $2,480,000 OVER FIVE YEARS. COSTS FOR NON-COMMON SPARES FOR

INITIAL PROVISIONING WOULD BE APPROXIMATELY $800,000. SPECIAL COSTS FOR PREPARING THESE AIRCRAFT FOR OPERATION IF NOT CONVERTED TO TWA STANDARD CONFIGURATIONS WOULD BE APPROXIMATELY $240,000.

c. DELIVERY UNCERTAINTY.

POSSIBILITIES OF PURCHASING THESE AIRCRAFT ARE DISCUSSED ELSEWHERE.

4. LEASE OF SIX BOEING 720B'S BUILT TO NORTHWEST AIRLINES SPECIFICATIONS.

WHILE BOEING WOULD PREFER TO SELL, IT WOULD PROBABLY BE WILLING TO LEASE THESE AIRCRAFT IF TWA PURCHASED A MINIMUM OF TEN NEW JETS FOR DELIVERY DURING 1962. THESE AIRCRAFT ARE NOT YET FULLY MANUFACTURED AND COULD BE MADE AVAILABLE TO TWA BEGINNING IN AUGUST, PROVIDED TWA CLOSES A DEAL WITH BOEING QUICKLY. TWO CAN BE MADE AVAILABLE IN AUGUST, TWO IN SEPTEMBER AND TWO IN OCTOBER. THESE WOULD BE TURBOFAN AIRCRAFT AND FULLY MODERN AND COMPETITIVE IN EVERY RESPECT. HOWEVER, SPECIAL COSTS TO OPERATE IN THE NWA CONFIGURATION WOULD BE APPROXIMATELY $1,600,000 FOR PROVISIONING, $510,000 FOR SPECIAL FLIGHT TRAINING THE FIRST YEAR AND $400,000 FOR RECURRING YEARS.

5. LEASE OF JET EQUIPMENT FROM OTHER U. S. OR FOREIGN AIRLINES. NO POSSIBILITY IS KNOWN TO EXIST SINCE ALL AIRLINES BELIEVE THEY ARE SHORT OF JET EQUIPMENT EVEN FOR THEIR OFF PEAK SEASONS.

NO SIMPLE LEASE AGREEMENT FOR JET AIRCRAFT IS KNOWN TO BE AVAILABLE. HOWEVER, THE MOST LIKELY PROSPECTS FOR EARLY CONSUMMATION OF AIRCRAFT LEASE AGREEMENTS WOULD BE FROM THE BOEING AEROPLANE COMPANY, BUT ONLY IF TWA AGREED TO PURCHASE ADDITIONAL BOEING JET AIRCRAFT FOR DELIVERY DURING 1962. (TEN IS BELIEVED TO BE THE MINIMUM NUMBER BOEING WOULD ENTERTAIN).

PURCHASE POSSIBILITIES

General Discussion

PURCHASE POSSIBILITIES CAN BEST BE REFLECTED BY SHOWING DELIVERY DATES FOR AIRCRAFT AVAILABLE FOR PURCHASE. ONLY MANUFACTURERS THAT CAN PRODUCE AIRCRAFT OF A TYPE SUITABLE FOR BOTH SHORT AND LONG TERM CORRECTIVE ACTION ARE CONSIDERED. SUCH MANUFACTURERS ARE:

1. THE BOEING AIRPLANE COMPANY
2. CONVAIR, A DIVISION OF GENERAL DYNAMICS
3. DOUGLAS AIRCRAFT COMPANY (SUD EST OF FRANCE)

THE FOLLOWING FOUR TABLES SHOW AIRPLANE AVAILABILITY BY: MANUFACTURER, AIRPLANE MODEL NUMBER, AIRPLANE CUSTOMER CONFIGURATION, REQUIRED COMMITMENT DATES, AND AIRPLANE DELIVERIES PER MONTH AND CUMULATIVELY.

IF AIRCRAFT ARE NOT PLACED ON FIRM ORDER BY THE COMMITMENT DATES SHOWN, DELIVERY DATES SHOWN CANNOT BE CONSIDERED VALID. UNUSUALLY SHORT LEAD TIMES ARE SHOWN FOR BOTH BOEING AND CONVAIR AIRCRAFT. THIS REFLECTS THE FACT THAT SOME OF THE AIRCRAFT ARE ALREADY UNDER CONSTRUCTION SUCH AS THE CONVAIR 880, 880M, AND 990 TYPES AND THE BOEING 720B TYPE BEING BUILT TO NWA SPECIFICATIONS. SHORT LEAD TIME ALSO REFLECTS THE MANUFACTURERS' INTEREST IN PROVIDING EARLY RELIEF TO TWA'S EQUIPMENT SHORTAGE PROBLEM. THIS APPEARS PARTICULARLY TRUE OF BOEING WHICH SEEMS MOST ANXIOUS TO CAPTURE TWA'S BUSINESS. BOEING IS OFFERING THE SHORTEST LEAD TIME IT HAS EVER OFFERED ANY COMMERCIAL CUSTOMER; HOWEVER, THERE IS LITTLE DOUBT CONCERNING BOEING'S ABILITY TO PRODUCE ON TIME.

IT CANNOT BE ASSUMED THAT ALL AIRCRAFT SHOWN CAN, IN FACT, BE MADE AVAILABLE TO TWA. THIS IS PARTICULARLY TRUE OF CONVAIR SINCE A NUMBER OF THE AIRCRAFT ARE PRESENTLY ON ORDER BY THE HUGHES TOOL COMPANY. FURTHER, THE SIX BOEING 720B'S BEING BUILT TO NWA'S SPECIFICATIONS ARE SPECIFICALLY AVAILABLE SUBJECT TO PRIOR SALE TO CONTINENTAL AIR LINES.

SIMILARLY, ALL UNCOMMITTED AIRPLANE DELIVERY POSITIONS ARE SUBJECT TO PRIOR SALE, ALTHOUGH IT IS EXPECTED BOEING WOULD GIVE TWA THE RIGHT OF FIRST REFUSAL ON ALL EXCEPT THE SIX 720B'S MENTIONED ABOVE.

SIMILARLY, IT CANNOT BE ASSUMED THAT ALL MODELS OF AIRCRAFT CAN BE AVAILABLE SIMULTANEOUSLY ON THE SPECIFIC DELIVERY DATES SHOWN. EACH FLEET CAN BE INDIVIDUALLY, BUT NOT ALL FLEETS, COMBINED. IN THIS RESPECT, THE BOEING AIRPLANE COMPANY IS IN A BETTER POSITION TO DELIVER AIRCRAFT AT A HIGHER MONTHLY RATE THAN EITHER CONVAIR OR DOUGLAS, ALTHOUGH CONVAIR COULD DELIVER EARLIER PROVIDED COMPLICATED INTER-CORPORATE (CONVAIR-HUGHES TOOL CO.-TWA) CONTRACTURAL ASPECTS COULD BE WORKED OUT FAVORABLY.

CONVAIR

CONVAIR'S ABILITY TO DELIVER ON THE DATES SHOWN IS BELIEVED LESS RELIABLE THAN BOEING'S ABILITY TO DELIVER ON THE DATES SHOWN. THIS VIEW IS HELD FOR SEVERAL REASONS:

1. TECHNICAL DESIGN DIFFICULTIES WITH THE MODELS 880M AND 990 THAT REQUIRE REDESIGN AND REDEVELOPMENT. SOLUTIONS TO THESE PROBLEMS ARE NOT CURRENTLY FULLY KNOWN. ON THE OTHER HAND, THE BOEING AIRCRAFT, EXCEPT FOR THE 331B TYPE, ARE ALREADY ENGAGED IN SUCCESSFUL AIRLINE OPERATIONS.

2. CONVAIR'S PRODUCTION PLANNING AND CONTROL ACTIVITIES ARE INADEQUATE AS EVIDENCED BY ITS FAILURE TO MEET MODEL 880 DELIVERY PROMISES TO TWA. IN CONTRAST TO THIS, BOEING HAS PRODUCED 720B'S AND 320'S AT MUCH HIGHER RATES AND ON TIME.

3. CONVAIR'S COMMERCIAL PRODUCTION LINE RESEMBLES A JOB SHOP RATHER THAN PRODUCTION LINE TYPE ACTIVITY. BOEING'S FACTORY IS CLEAN, ORDERLY AND EFFICIENT.

1/ THESE AIRCRAFT ARE ON FIRM ORDER BY THE H.T. CO. AND ARE PART OF THE 30 880'S INITIALLY ORDERED FROM CONVAIR. DELIVERY TO TWA BY DATES SHOWN CONTINGENT ON EARLY GO-AHEAD.

2/ THESE SHIPS PARTIALLY CONSTRUCTED BUT ARE NOT NOW IN ACTIVE WORK. PRIMARY STRUCTURAL COMPONENTS HAVE BEEN MANUFACTURED AND STORED. THESE AIRCRAFT ARE NOT SOLD. IF BUILT TO TWA'S, RATHER THAN CAP'S, STANDARDS, INITIAL AIRCRAFT DELIVERY WOULD SLIP TO APPROXIMATELY OCTOBER. CONVAIR DOES NOT WISH TO COMPLETE THESE AIRCRAFT TO CAP STANDARDS. DELIVERIES SHOWN BASED ON IMMEDIATE GO-AHEAD.

3/ NINE OF THE THIRTEEN AIRCRAFT SHOWN ARE BELIEVED TO BE ON FIRM ORDER. THE REMAINING SEVEN ARE REPORTEDLY BEING BUILT BY CONVAIR UNDER AN ARRANGEMENT WITH THE H.T. CO. WHICH PERMITS CONVAIR TO RECOVER ITS COSTS IN THE EVENT THESE AIRCRAFT ARE NOT PLACED ON FIRM ORDER.

4/ THESE DELIVERY POSITIONS ASSUME THAT ALL THIRTEEN 990 AIRCRAFT DISCUSSED IN NOTE 3 WILL BE DELIVERED.

5/ ALL DELIVERIES BY MONTH END.

FINANCIAL FORECAST FOR YEARS 1959 - 1961

Basic Forecast Assumptions

I EQUIPMENT

A. Jet Aircraft - All jet aircraft to be in mixed service. 15 B-707-131's assigned to Domestic; 10 B-707-331's of which two are assigned to Domestic and eight to International; 20 CV-880's assigned to Domestic.

B. Piston Aircraft - This forecast reflects the retirement of the DC-4's, the 1049A's, the 749/A's, the Martin's and 21 of the 1649A's. Eight 1649A's will be retained in International mixed service; 28 1049G's will be retained in Domestic mixed service; 32 049's will be retained in Domestic first class service; the four TWA owned 1049H's will be retained in all cargo service.

C. Leased Aircraft - The five L-1049H leased aircraft will be operated in commercial and MATS charter service for the duration of the current lease agreement. It has been assumed the leases will not be renewed past their termination dates.

II ROUTES

A. Domestic - It has been assumed there will be no changes in TWA's or its major competitors route structures other than American Airlines will be granted non-stop rights NYC-SFO.

B. International - It has been assumed there will be no changes in TWA's or its major competitors route structures. Service to Manila, currently suspended, will not be resumed during the forecast period.

III INCOME STATEMENTS

A. Revenues - It has been assumed there will be no change in domestic fare levels presently in effect. For international, it has been assumed that the present jet surcharges will expire March 31, 1960 and will not be renewed. All other fares will be maintained at present level, however, there will be no berth or sleeper seat service on jet aircraft.

B. Operating Expenses

1. Direct Flying Expenses - In general, expense rates for projecting costs for piston engine aircraft now in service were based on most recent historical experience with the exception of items commented on below. Jet aircraft operating data, on which cost projections were based, was supplied by TWA's Staff Engineering and Maintenance Departments and is the result of their analysis and interpretation of manufacturers estimates for operating jet aircraft on TWA's routes and under TWA's planned operating policies and procedures. In addition, experience of limited commercial operations to date has been taken into account.

a. Salaries & Wages - Flight crew salary expense was based on rates stipulated in current flight crew contracts plus a percentage increase for contracts now open. (Pilot rates increased 12% for contract expired August 1, 1958.) A contract with the flight engineers was signed July 29, 1958 which extends through 1960 and covers pay rates for operating jet aircraft. All flight crew rates were increased an additional 5% for the year 1961.

Pilots pay for operating jet aircraft was based on a gross pay over that now paid for 1649A operations plus the 12% increase to cover a new contract. The increase for captains was placed at 22% above this adjusted 1649A scale and for co-pilots at 36% above this scale. Furthermore, this higher gross pay is for 75 scheduled hours per month as compared with the present 85 hours per month. In addition a third pilot has been added to Domestic service as well as to International service. The gross salary of the third pilot has been estimated at one third of the combined salaries for the captain and co-pilot on jet aircraft.

Navigators in International service have been retained through 1961. Their contract expires August 31, 1959 and pay scales beyond this period, for both jet and piston equipment, have been assumed at the third pilot rate since historically the navigator's rate has been comparable to that of the junior pilot.

b. Personnel Expenses - This includes flight crew travel and incidental expenses while on duty away from their domicile. The expense projection was based on actual experience and current contract provisions and no increase in these provisions is anticipated from current negotiations.

c. Aircraft Rentals - Represents the lease of five L-1049H aircraft at an annual expense of approximately 2.3 million. Leases terminate in the first quarter 1961 and it has been assumed, both in the revenue forecast and for expense purposes, that the leases will not be renewed.

d. Aircraft Fuel & Oil - Aviation gas and oil expense was based on current prices and experienced fuel consumption by type of aircraft. For 1960 - 1961, the cost per gallon for gasoline was increased approximately 5% to reflect a changed fueling pattern for piston equipment resulting from the introduction of jets into medium haul markets and the downgrading of piston equipment schedules. The average price per gallon for kerosene used in jet aircraft was based on actual bids received by TWA. Jet aircraft fuel consumption, which was based on engineering estimates, is now supported by limited commercial operations.

For the years 1960 and 1961 the average cost per gallon includes an allowance of 3¢ per gallon tax on kerosene consumed in the U.S. (presently not taxed) and an additional 1¢ per gallon tax on gasoline.

e. Aircraft Hull Insurance - Aircraft hull insurance for each year 1959 - 1961 has been included at the maximum estimated cost to TWA. The years 1960 and 1961 were based on TWA's actual insurance program for 1959 which includes jet aircraft. Non-operating aircraft are insured at reduced values.

f. Direct Maintenance - Flight Equipment - Direct maintenance expense for piston engine equipment was projected on actual experience hourly cost rates adjusted for certain known and expected changes. The major adjustment was to increase direct labor rates to reflect the full effect of the IAM contract settlement in the latter part of 1958. An additional 5% increase in labor rates has been added for the year 1961.

Direct maintenance expense for jet aircraft and engines was based on cost data worked out with TWA's Maintenance and Engineering Departments. This forecast assumes TWA will not construct a jet engine overhaul base and, instead, will phase in jet engine overhauls at present facilities as piston engine retirements permit. Consequently, a substantial portion of TWA's jet engine overhaul requirements for the forecast period will, necessarily, be contracted out and, the costing of this expense has been computed on this basis.

g. In-Flight Passenger Service - Hostess and purser salary and travel expense was projected on current experienced cost rates per block hour by type of aircraft. The compliment for jet aircraft was increased to four hostesses and/or pursers for both Domestic and International flights.

Passenger food and supplies expense was based on current actual rates per passenger mile depending on the type of aircraft and service proposed.

(Letter to Thomas, dated 5/6/59)

(The below appears in someone's handwriting)

Copy of this letter in
report file FF 591

May 6, 1959

Mr. Charles S. Thomas, President
Trans World Airlines, Inc.
380 Madison Avenue
New York, N. Y.

Dear Mr. Thomas:

In accordance with your instructions we have been studying TWA's plan of operation for the year 1961, which year is expected to be the Airline's first full year of operation with its proposed new jet aircraft fleet. This fleet will consist of

15 Boeing 707-131 aircraft
10 Boeing 707-331 aircraft
20 Convair 880 aircraft

We have studied TWA's plans for use of these aircraft including detailed schedules, and we have analyzed the preliminary estimates of revenues and expenses for the year 1961 based on the use of the jet fleet listed above, plus a number of piston aircraft required to supplement the jet fleet; the result of these studies indicates a prospect of good financial accomplishment for that year.

In accordance with the findings of our studies to date, we are of opinion that the proposed jet fleet listed above, which is to be delivered to TWA by the end of 1960, provides a fleet of aircraft in types and numbers adequate for a sound, economic operation.

Respectfully submitted,

Consulting Engineers

Mr. Charles S. Thomas, President
Pan World Airlines, Inc.
200 Madison Avenue
New York, N. Y.

Dear Mr. Thomas:

In accordance with your instructions we have been studying PAA's plan of operation for the year 1961, which year is expected to be the Line's first full year of operation with its proposed new jet aircraft fleet. This fleet will consist of

15 Boeing 707-320 aircraft
10 Boeing 707-320 aircraft
20 Convair 990 aircraft

We have studied PAA's plans for use of these aircraft including detailed schedules, and we have analyzed the preliminary estimates of revenues and expenses for the year 1961 based on the use of the jet fleet listed above, plus a number of piston aircraft required to supplement the jet fleet; the results of these studies indicates a prospect of good direct operating accomplishments for that year.

In accordance with the findings of our studies to date, we are of opinion that the proposed jet fleet listed above, which is to be delivered in full by the end of 1960, provides a fleet of aircraft in types and numbers adequate for a sound, economic operation.

Respectfully submitted,

Consulting Engineers

I
PURPOSE

The purpose of this report is to evaluate the segment performance and economic potential of the Boeing 707-120, 020, Convair Model 22 and Lockheed Electra in domestic medium range service.

II
RECOMMENDATIONS

1. Based on sufficient traffic potential being available for economic load factors, TWA should procure additional 707-120's for internal medium range domestic service.

2. The 707-120's should, however, be procured with C-5 engines to cater to hot day airport performance.

3. Providing traffic is not available for an airplane the size of the Boeing, TWA should procure Convair Model 22.

4. The Electra should be considered only in limited numbers for minimum cost service. If Convair's are procured, the need for Electras is lessened.

TRANS WORLD AIRLINES, INC.
Staff Engineering

RECEIVED
NOV. 8 1962
CHESTER C. DAVIS

III
CONCLUSIONS

1. The Electra airplane cannot compete speedwise with jet transports and would not have as much passenger appeal.

2. The Convair Model 22 has a seat mile cost near enough to the Electra to make it attractive for an airline to acquire the Convair for short haul service in lieu of the Electra. This is particularly true when using more realistic drag estimates for the Convair.

3. The Boeing 120 and 320 have the lowest seat mile cost in short haul service, but their capacity and plane mile cost may be greater than traffic conditions will justify in this type of service.

4. The Boeing 020 is very marginal range and payloadwise as presently configured and not particularly attractive from an economic standpoint.

5. The Convair Model 22 is more flexible in short haul service than the Boeing 120 since it can provide frequency at relatively low cost per trip.

6. From short fields and under hot day conditions, the Convair has better range and payload capability for its operating cost than the Boeing 120 with C-4 wet engines.

7. To make the Boeing 120 usable in internal service, C-5 wet engines will have to be installed. (Such conversion cannot likely be undertaken until late 1960.)

8. The GE-CJ 805 turbojet engine in the Convair M-22 could be operationally more flexible. It is proposed with some deratement thereby suffering less from temperature accountability and it avoids the complexity of water injection.

9. Since TWA has purchased nine B-707 120's, an additional order would permit greater utilization for the entire Boeing fleet, savings in pilot training and maintenance costs.

10. For an equal number of trips between city pairs and considering limited traffic volume, the Electra and then the Convair will produce the revenue with the least cost.

PURCHASE AGREEMENT

Relating to

BOEING 707-120 SERIES AIRCRAFT

MODEL 707-131

THIS AGREEMENT entered into this 2nd day of March, 1956, by and between BOEING AIRPLANE COMPANY, a Delaware corporation, with its principal office in the City of Seattle, State of Washington (hereinafter called Boeing), and HUGHES TOOL COMPANY, a Delaware corporation, with its principal office in the City of Houston, State of Texas (hereinafter called Buyer):

W I T N E S S E T H :

WHEREAS, Buyer desires to obtain by purchase aircraft of the type hereinafter described for the transportation of passengers, mail, express and cargo, and Boeing desires to manufacture and sell the same to Buyer;

NOW, THEREFORE, in consideration of the mutual covenants hereinafter contained, the parties hereto agree as follows:

ARTICLE 1. Subject Matter of Sale.

Boeing shall manufacture, sell and deliver to Buyer, and Buyer shall purchase from Boeing, the following:

(a) Eight (8) Boeing Model 707-131 Aircraft (hereinafter called

Aircraft) to be manufactured by Boeing in accordance with the terms of this Agreement and the detail specification (hereinafter called Detail Specification) set forth in Exhibit A attached hereto and made a part hereof;

(b) Spare parts for the Aircraft, as more particularly set forth in Article 13 hereof.

ARTICLE 2. Delivery of Aircraft.

(a) Each Aircraft shall be delivered to Buyer assembled and completed ready for flight, and the Buyer shall accept delivery of such Aircraft at a suitable airport in the vicinity of Kansas City, Missouri, or at such other place outside the State of Washington as may be mutually agreed upon by a change order providing for delivery at such other place and for the payment to Boeing by Buyer of Boeing's increased costs, or the payment to Buyer by Boeing of Boeing's decreased costs, if any, occasioned thereby. The Aircraft shall be delivered during or before the months set forth in the following schedule:

Month of Delivery	Quantity of Aircraft
April 1959	1
May 1959	2
June 1959	2
July 1959	2
August 1959	1

(b) In the event Boeing gives Buyer at least seven (7) days' notice that it is ready to deliver any Aircraft hereunder, and at

the fault or upon the responsibility of Buyer delivery thereof is delayed, Buyer shall promptly reimburse Boeing for all cost or expense, including without limitation reasonable amounts for storage, insurance, preservation and protection, sustained by Boeing resulting from any such delay in excess of one (1) week.

(c) It is recognized that Boeing does not have maintenance, service and repair facilities and personnel at any airport in the vicinity of Kansas City, Missouri, and is not in a position to perform any maintenance, service or repair work at any such airport. Accordingly, provided the Aircraft is, when dispatched from Seattle, Washington, in condition meeting the requirements of the Detail Specification and this Agreement and in good operating condition, it is agreed that upon the undamaged arrival of an Aircraft at the airport agreed upon for delivery in the vicinity of Kansas City, Missouri, or at any other airport outside the State of Washington which may be agreed upon as the point of delivery, the Aircraft shall be deemed delivered to and accepted by Buyer, and Boeing's sole obligations thereafter as to any repair or correction of defects shall be in accordance with paragraphs (c) through (h) of Article 6 hereof. For the purpose of this paragraph, the term "arrival" shall be deemed to mean the point at which the Aircraft has come to a complete stop and the engines have been turned off.

ARTICLE 3. Price of Aircraft.

(a) The basic price of each Aircraft shall be Four Million Five Hundred Four Thousand Eight Hundred Twenty-six Dollars

($4,504,826), increased or decreased on account of price changes specified in Change Orders executed in accordance with Article 10 hereof. No charge for extras will be made unless set forth in a Change Order.

(b) The purchase price of each Aircraft shall be the basic price adjusted as follows:

(i) It shall be increased or decreased by the amount by which the cost to Boeing of the Automatic Pilot included in such Aircraft exceeds or is less than Twenty-Seven Thousand Five Hundred Dollars ($27,500.00), which Boeing represents was used by Boeing as the cost of such item in arriving at the basic price of the Aircraft. Boeing shall use its best efforts to obtain such item at a price which is reasonable under the circumstances and shall notify Buyer as to the firm price for such item as soon as possible but in any event before March 31, 1956; provided, that in the event such firm price is not available upon the above date, Boeing shall advise Buyer as soon as such price is available.

(ii) It shall be decreased by the amount by which Four Million Five Hundred Four Thousand Eight Hundred Twenty-six Dollars ($4,504,826) exceeds the lowest basic price for which Boeing, at any time before July 1, 1956, may have sold or contracted to sell any complete Boeing passenger model 707-120 series aircraft powered by Pratt & Whitney model JT3 engines (or any other aircraft of a type conforming to the basic engineering design of the Model 707-120 series aircraft except for body length) to any

other purchaser except the United States Government or any agency thereof, after appropriate adjustment for differences between the specification applicable to said aircraft and the Detail Specification applicable to the Aircraft sold hereunder.

(c) At least ten (10) days prior to the delivery date of each Aircraft, Boeing shall give to Buyer a written notice stating the increase or decrease in the basic price of such Aircraft by reason of the operation of the provisions contained in paragraph (b) above, and a summary in such reasonable detail as the Buyer may require of the factors occasioning such increase or decrease.

ARTICLE 4. Taxes.

(a) In addition to the purchase price of the Aircraft and Spare Parts, Buyer shall pay to Boeing, upon demand, any sales or use taxes or the amount of any new or increased gross receipts or excise taxes required to be paid by Boeing as a result of any sale, use (by Buyer after valid tender of delivery), delivery, storage (after valid tender of delivery), or transfer under this Agreement of any of the Aircraft, Spare Parts, services, instructions and data furnished or delivered hereunder.

(b) If claim is made against Boeing for any such tax, Boeing shall promptly notify Buyer. If seasonably requested by Buyer in writing, Boeing shall, at Buyer's expense, take such action as Buyer may reasonably direct with respect to such asserted liabil-

and shall not pay such tax except under protest, if protest is necessary. If payment be made, Boeing shall, at Buyer's expense, take such action as Buyer may reasonably direct to recover such payment and shall, if requested, permit Buyer in Boeing's name to file claim or commence an action to recover such payment.

ARTICLE 5. Payment.

(a) Advance Payments for Aircraft. Buyer has heretofore paid to Boeing as an advance payment on the Aircraft to be sold and delivered hereunder the sum of One Million Six Hundred Eighty Thousand Dollars ($1,680,000.00), receipt of which is hereby acknowledged by Boeing, which sum represents five per cent (5%) of the aggregate basic price of Four Million Two Hundred Thousand Dollars ($4,200,000.00) per Aircraft for eight (8) Boeing Model 707-120 type aircraft. Within ten (10) days after the date of execution of this Purchase Agreement, Buyer shall also pay to Boeing five per cent (5%) of the amount by which the aggregate basic price, computed from the basic price per Aircraft set forth in Article 3(a), exceeds Thirty-three Million Six Hundred Thousand Dollars ($33,600,000.00). Buyer shall also pay to Boeing as advance payments on the Aircraft to be purchased hereunder, in accordance with the following schedule (each percentage represents an amount equal to that percentage of the aggregate basic price of the Aircraft):

DOI

Due Date of Payment	Amount
July 1, 1956	2%
October 1, 1956	2%
January 1, 1957	3%
April 1, 1957	3%
July 1, 1957	3%
October 1, 1957	3%
January 1, 1958	3%
April 1, 1958	3%
July 1, 1958	3%
October 1, 1958	3%

amounting to a total, including the payments made under the first and second sentences above, of 33% of the aggregate basic price of the Aircraft.

(b) Payment for Aircraft. Upon the delivery of each Aircraft to Buyer hereunder, Buyer shall pay the purchase price thereof as follows: There shall be credited against such purchase price an amount determined by dividing the aggregate of the amounts advanced by Buyer to Boeing under paragraph (a) above less the aggregate amount of such advance payments previously credited against the purchase price of Aircraft delivered hereunder, by the number of Aircraft remaining to be delivered (including the one being delivered), and Buyer shall pay to Boeing the difference between the amount of such credit and the basic price of such Aircraft adjusted pursuant to Article 3(b) hereof

to the date of delivery of such Aircraft.

(c) Payment in U. S. Funds. All payments hereunder shall be made in lawful money of the United States, to be unconditionally deposited to the account of the party to receive payment in a bank in the United States to be designated by such party, or by such other method as may be mutually agreed upon by Boeing and Buyer.

(d) Repayment of Advance Payments. In any of the following events:

(i) delivery by Boeing to Buyer in accordance with the provisions of this Agreement of all of the Aircraft to be purchased hereunder;

(ii) termination of this Agreement by Buyer under Article 9(b) hereof and the payment to Boeing of all sums determined to be due to Boeing from Buyer pursuant to the provisions of said Article 9(b);

(iii) termination of this Agreement by Boeing under Article 9(b) or 9(c) hereof, or termination of this Agreement by Buyer under Article 9(c) hereof; or

(iv) termination of this Agreement by Buyer under Article 20 hereof as to all Aircraft and Spare Parts then undelivered hereunder;

then, in any such event, Boeing shall forthwith repay to Buyer the entire amount of the advance payments, if any, received by Boeing hereunder, less the aggregate amount of such advance pay-

DH-103

ments previously credited against the purchase price of Aircraft theretofore delivered to Buyer hereunder. In the event an Aircraft manufactured by Boeing for sale and delivery under this Purchase Agreement is lost or destroyed or damaged beyond repair and this Agreement is terminated or deemed terminated pursuant to the provisions of Article 22, Boeing shall forthwith repay to Buyer that portion of the advance payments, if any, received by Boeing hereunder which is equal to the ratio that one Aircraft bears to the total Aircraft to be sold and delivered hereunder.

(e) Additional Advance Payments. In addition to the advance payments to be paid under paragraph (a) above and subject to Boeing having a need to borrow funds for use in its operations, Buyer may also, on such terms and conditions as Buyer and Boeing may mutually agree upon, make additional payments to Boeing in advance of the delivery of all or any of the Aircraft to be delivered hereunder, and in such event Boeing shall pay Buyer interest on such additional advance payments from date of payment to date of liquidation at such rate as Buyer and Boeing may mutually agree upon.

ARTICLE 6. Warranty.

(a) Boeing agrees, represents and warrants that the Boeing Model 707 type aircraft will be certificated by the Civil Aeronautics Administration with a Type Certificate and that each Aircraft, prior to and at the time of delivery thereof, will be certificated by the Civil Aeronautics Administration with an

39775 IDENTIFIED

not terminated.

(e) In the event that Boeing should exercise any right granted by paragraph (b) above to terminate this Agreement and thereafter Boeing completes the manufacture of the Aircraft scheduled to be manufactured for and delivered to Buyer, Boeing agrees that it will not sell such Aircraft to any other customer without first offering for a period of thirty (30) days to sell such Aircraft to Buyer at a price and on terms and conditions not less favorable to Buyer than those on which Boeing is offering to sell Model 707-120 series aircraft to others at that time.

(f) Boeing agrees that it will, to the extent and at the time that it becomes reasonably certain that there will be any material delay in the delivery of Aircraft or the performance of other obligations of Boeing hereunder, give Buyer written notice of the estimated delay.

ARTICLE 10. Changes.

(a) The Detail Specification and other terms and conditions of this Agreement may be amended from time to time by Change Orders in writing, which shall set forth in detail the particular specifications, terms or conditions involved, the changes to be made therein, and the effect, if any, of such changes on design, performance, weight, balance, time of delivery and basic price of the Aircraft or Spare Parts. Change Orders shall not be binding on either party until signed by persons respectively duly authorized in writing by Boeing and Buyer, but upon being so

signed shall constitute amendments to this Agreement.

(b) The Detail Specification also may be revised by Boeing without Change Order or Buyer's consent, to incorporate development changes where such changes do not adversely affect price, delivery, guaranteed weight or guaranteed performance of the Aircraft or interchangeability or replaceability of Spare Parts. Development changes are those changes of a minor nature deemed necessary to correct defects, improve the Aircraft, prevent delay, or insure compliance with this Agreement but which have no materially adverse effect on the design, weight, balance or functional characteristics of the Aircraft; provided, however, no change shall be made pursuant to this paragraph (b) to any of the equipment listed in Appendix 1 of the Detail Specification. Boeing shall notify Buyer of all changes made in the Detail Specification pursuant to this paragraph (b) by furnishing to Buyer revision insert pages for the Detail Specification.

ARTICLE 11. Mandatory Modifications.

Notwithstanding anything contained in this Agreement, if any law or governmental regulation or interpretation thereof by a governmental agency, the date of promulgation of which is subsequent to the date of this Agreement, shall require any change, addition or modification to the Aircraft prior to delivery thereof in order to obtain certification by the Civil Aeronautics Administration as provided herein, the parties hereto agree that such change, addition or modification shall be made in the Aircraft and Spare Parts affected, and agree to execute a Change

C-Hou

tioning of the Aircraft and equipment as corrected.

ARTICLE 17. Title to Property and Risks.

(a) Title to and risk of loss of or damage to each Aircraft and Spare Part shall pass from Boeing to Buyer upon delivery thereof but not prior thereto.

(b) Upon the delivery of and the payment for each Aircraft, Boeing shall deliver to Buyer a bill of sale duly vesting in Buyer good title to such Aircraft free and clear of all liens, claims, charges and encumbrances of every kind whatsoever, and such other appropriate documents of title with respect thereto as Buyer may reasonably require.

ARTICLE 18. Resale or Lease.

(a) Buyer may not, prior to delivery to Buyer hereunder, without first obtaining Boeing's written consent, resell, lease, or transfer any Aircraft, or contract so to do, except that:

(i) Buyer may resell or lease any such Aircraft to any of Buyer's subsidiaries or affiliates, or to the United States Government or any agency thereof;

(ii) Buyer may, and at Buyer's request Boeing shall, take any action reasonably required for the purpose of causing any Aircraft to be subjected to an equipment trust, conditional sale, lien or other arrangement for the financing by Buyer of the purchase of any such Aircraft; provided, however, that no such action shall subject Boeing to any liability which it would not otherwise be subject to hereunder or modify in any respect Boeing's contract rights

HTL-OH-C

hereunder or require Boeing to divest itself of title to or possession of any such Aircraft until delivery thereof and payment therefor as provided in this Agreement; and

(iii) Buyer may resell or lease any such Aircraft to Trans World Airlines, Inc.

(b) In the event of the resale or lease of any Aircraft as permitted under this Agreement during a period of twenty-four (24) months after delivery thereof, all rights and benefits conferred under this Agreement upon Buyer with respect to such Aircraft shall inure to the benefit of such purchaser or lessee, as the case may be; provided, however, that Buyer shall obtain from such purchaser or lessee an express agreement, in writing, to be bound by and comply with all applicable terms and conditions set forth in Articles 6, 7, 14, 15 and 18 hereof, and Buyer shall promptly furnish to Boeing a true copy of such agreement.

(c) Upon the resale or transfer by Buyer of any of the Aircraft as permitted under this Agreement subsequent to the expiration of twenty-four (24) months after delivery thereof, Buyer shall include in the agreement of sale or transfer express provisions subjecting such purchaser or transferee to all the covenants and conditions and granting the same rights and privileges, subject to the same limitations, as are contained in Article 14.

ARTICLE 19. Plant Representatives of Buyer.

Boeing's construction of Aircraft pursuant to this Agreement, and all materials and parts obtained by Boeing therefor, including

Boeing's testing thereof, shall at all reasonable times during business hours be open to inspection by any duly authorized representative or representatives of Buyer, except that if access to any portion of Boeing's plant where construction is in progress or materials or parts are stored is restricted by the United States Government or any agency thereof, Boeing shall be allowed a reasonable time to make the items available for inspection elsewhere than in the restricted portion of the plant. Commencing with the effective date of this Agreement and until the delivery of the last Aircraft, Boeing shall furnish, without additional charge, suitable office space and equiment in, or conveniently located with respect to, its plant for the accommodation of up to but not exceeding fifteen (15) personnel of Buyer. Such office space and equipment need not exceed space and equipment for four desks and a secretary's desk at the administrative office and one desk in the factory. All inspections and examinations by Buyer and its representatives shall be performed in such manner as not unduly to delay or hinder the manufacture, construction or performance by Boeing.

ARTICLE 20. Termination for Insolvency.

Either Boeing or Buyer at its option may terminate this Agreement with respect to any or all of the Aircraft, Spare Parts, services, data and items to be furnished hereunder which are undelivered or not furnished on the effective date of such termination, by giving the other party written notice as hereinafter provided at any time after the other files a voluntary petition in bank-

ruptcy, or proceedings in bankruptcy are instituted against the other and it is thereafter adjudicated bankrupt pursuant to such proceedings, or a court takes and retains for a period of at least sixty (60) days jurisdiction of the other and its assets pursuant to proceedings under the provisions of any Federal reorganization act, or the other is adjudged insolvent, or a receiver of the other's assets is appointed on account of insolvency and is not discharged within a period of sixty (60) days thereafter, or the other is otherwise divested of its assets for a period of at least sixty (60) days, or the other makes a general assignment for the benefit of its creditors. Such notice of termination shall be given thirty (30) days prior to the effective date of termination, except that in the case of filing of a voluntary petition in bankruptcy or a voluntary general assignment for the benefit of creditors, such notice need not precede the effective date of termination.

ARTICLE 21. Assignment.

This Agreement shall inure to the benefit of and be binding upon each of the parties hereto and their respective successors and assigns, but it may not be voluntarily assigned, in whole or in part, by either party without the prior written consent of the other party, except that (1) either party's interest shall be assignable through merger, consolidation or reorganization, or voluntary sale or transfer of substantially all of its assets, (2) Boeing may assign any of its fixed or contingent rights to

STC—HOU

receive money hereunder, (3) Buyer may assign any of its rights hereunder to the extent expressly permitted in Article 18, and (4) Buyer may assign all its rights hereunder to Trans World Airlines, Inc.

ARTICLE 22. Loss or Damage of Aircraft.

In the event that prior to delivery thereof to Buyer an Aircraft being manufactured by Boeing for sale and delivery under this Purchase Agreement is lost, destroyed or damaged beyond repair, or damaged to the extent that it cannot be repaired by parts replacement to new condition and delivered in accordance with the delivery schedule set forth in Article 2, the time reasonably required by Boeing to furnish a replacement for such Aircraft or to accomplish such repair thereof shall be deemed an excusable delay under Article 9, provided Boeing promptly gives notice to Buyer of the estimated delay in delivery of the replacement or repaired Aircraft; provided, however, that in the event such Aircraft is lost, destroyed or damaged beyond repair, this Purchase Agreement shall be deemed terminated as to such one Aircraft unless Buyer gives Boeing written notice within thirty (30) days after the date of notification by Boeing of such loss, destruction or damage beyond repair that Buyer desires Boeing to manufacture and deliver to Buyer a replacement for such Aircraft, in which case Boeing shall manufacture and deliver to Buyer at Boeing's earliest uncommitted delivery date one Aircraft to replace the Aircraft so lost, destroyed or damaged beyond repair, and the

SUPPLEMENTAL AGREEMENT NO. 1

TO

PURCHASE AGREEMENT NO. 7 DATED MARCH 2, 1956

BETWEEN

BOEING AIRPLANE COMPANY

AND

HUGHES TOOL COMPANY

RELATING TO BOEING 707-120 SERIES AIRCRAFT

MODEL 707-131

THIS SUPPLEMENTAL AGREEMENT entered into this 19th day of March, 1956, by and between BOEING AIRPLANE COMPANY, a Delaware corporation (hereinafter called Boeing), and HUGHES TOOL COMPANY, a Delaware corporation (hereinafter called Buyer):

W I T N E S S E T H :

WHEREAS, the parties hereto have entered into the agreement described above, which is hereinafter called "the Purchase Agreement"; and

WHEREAS, the parties desire to amend the Purchase Agreement as hereinafter provided,

NOW, THEREFORE, in consideration of the mutual covenants herein contained, the parties hereby agree that the Purchase Agreement is hereby amended as follows:

1. In paragraph (a) of Article 1, substitute the words and figures "nine (9)" for the words and figures "eight (8)".

2. In paragraph (a) of Article 2, the schedule for delivery of the aircraft is hereby revised in its entirety to read as follows:

"Month of Delivery	Quantity of Aircraft
April 1959	2
May 1959	2
June 1959	2
July 1959	2
August 1959	1 "

3. Within ten (10) days after the date of this Supplemental Agreement, Buyer shall pay to Boeing as an advance payment on the additional Aircraft to be sold and delivered under the Purchase Agreement as a result of the execution by the parties of this Supplemental Agreement, the sum of Two Hundred Twenty-Five Thousand Two Hundred Forty-one and 30/100 Dollars ($225,241.30); provided, however, that any payment made by Buyer to Boeing relating to one Model 707-131 Aircraft pursuant to an exchange of telegrams dated March 16, 1956 from Buyer and March 19, 1956 from Boeing, shall be deemed to be a payment made by Buyer under this paragraph.

4. It is understood and agreed between the parties hereto that the term "Boeing passenger Model 707-120 series aircraft powered by Pratt & Whitney Model JT3 engines (or any other aircraft of a type conforming to the basic engineering design of the Model 707-120 series aircraft except for body length)" as used in subparagraph (ii) of paragraph (b) of Article 3 of the Purchase Agree shall not be construed to include the Boeing 707 reduced gross weight aircraft designated the "Boeing Model 707-020" series aircraft.

EXECUTED IN DUPLICATE as of the day and year first above written.

SUPPLEMENTAL AGREEMENT NO. 2

TO

PURCHASE AGREEMENT NO. 7 DATED MARCH 2, 1956

BETWEEN

BOEING AIRPLANE COMPANY

AND

HUGHES TOOL COMPANY

RELATING TO BOEING 707-120 SERIES AIRCRAFT

MODEL 707-131

THIS SUPPLEMENTAL AGREEMENT entered into as of this 28th day of September, 1956, by and between BOEING AIRPLANE COMPANY, a Delaware corporation (hereinafter called Boeing), and HUGHES TOOL COMPANY, a Delaware corporation (hereinafter called Buyer):

W I T N E S S E T H :

WHEREAS, the parties hereto have entered into the agreement described above, which is hereinafter called "the Purchase Agreement"; and

WHEREAS, the parties desire to amend the Purchase Agreement as hereinafter provided,

NOW, THEREFORE, in consideration of the mutual covenants herein contained, the parties hereby agree that the Purchase Agreement is hereby amended as follows:

1. Paragraph (a) of Article 1. is hereby revised in its entirety to read as follows:

"(a) Twelve (12) Boeing Model 707-131 Aircraft (hereinafter called Aircraft) to be manufactured in accordance with the terms of this Agreement and

the detail specification (hereinafter called Detail Specification) set forth in Exhibit A attached hereto and made a part hereof, provided that Buyer shall have the right, by written notice to Boeing delivered prior to twelve (12) midnight Pacific Standard Time, October 29, 1956, to terminate without charge its obligation to purchase one (1) of such Aircraft scheduled to be delivered in August, 1959, as provided in paragraph (a) of Article 2 hereof;"

2. In paragraph (a) of Article 2, the schedule for delivery of the Aircraft is hereby revised in its entirety to read as follows:

"Month of delivery	Quantity of aircraft
April 1959	2
May 1959	2
June 1959	3
July 1959	3
August 1959	2"

3. A new paragrapn (d) is added to Article 2, Delivery of Aircraft, as follows:

"(d) Boeing shall deliver, and Buyer shall accept delivery of, one (1) of the Aircraft in December, 1958, notwithstanding that an appropriate Civil Aeronautics Administration type certificate has not then been issued for the Aircraft, for use by Buyer for flight and maintenance training, instruction and related purposes. At the time of such delivery such Aircraft otherwise shall comply with the provisions of Article 6 (b) except for some cabin interior features which may be incomplete. It is intended that such Aircraft shall be one of the Aircraft scheduled for delivery during the month of July 1959, as provided in paragraph (a) of this Article but in any event the delivery schedule set forth in said paragraph (a) shall be retained with respect to the delivery of certificated Aircraft. Boeing further agrees that consistent with its understandings

with other customers as to delivery schedules entered into prior to the signing of this Purchase Agreement it will use its best efforts to accelerate the redelivery of such Aircraft as a certificated Aircraft. Within seven (7) days after delivery to Buyer under this Purchase Agreement of the first certificated Aircraft or the expiration of nine (9) months after delivery of the uncertificated Aircraft under this paragraph whichever first occurs, the uncertificated Aircraft shall be returned to Boeing at a suitable location in the State of Washington designated by Boeing, and Boeing shall promptly incorporate in said Aircraft all of the changes or alterations required to cause said Aircraft at the time of redelivery to Buyer as hereinafter provided to conform to the Detail Specifications and to comply with the requirements of Article 6 (a), all at no cost to Buyer except that (i) the cost of changes required to be made in accordance with the provisions of Article 11 subsequent to delivery of the first certificated Aircraft shall be borne by Buyer and Boeing as therein provided and (ii) Boeing shall have no obligation to make changes or alterations necessitated by wear and tear resulting from Buyer's use; provided however that if such uncertificated Aircraft is returned to Boeing at the expiration of nine (9) months after delivery to Buyer under this paragraph (d), Boeing shall promptly upon such return, provided such Aircraft is then in as good condition as when delivered to Buyer except for reasonable wear and tear resulting from Buyer's use thereof in accordance with the provisions of this paragraph, refund to Buyer that portion of the purchase price paid by Buyer at the time of delivery to Buyer under this paragraph (d) and title to such aircraft shall thereupon revest in Boeing. Upon completion of the work by Boeing as required by the fifth

sentence of this paragraph, Boeing shall promptly redeliver such Aircraft to Buyer at a suitable airport in the State of Washington selected by Boeing and if a portion of the purchase price has been refunded to Buyer under the next preceding sentence, Buyer shall pay to Boeing upon such delivery the balance of the purchase price of such Aircraft then remaining unpaid. Notwithstanding the foregoing provisions of this paragraph (d) in the event Buyer does not desire to return said Aircraft to Boeing for incorporation therein of such changes or alterations, and if Boeing agrees thereto, Boeing will promptly after receipt of Buyer's Purchase Orders therefor, sell and deliver to Buyer without charge to Buyer, all necessary kits of parts to accomplish such changes or alterations to such Aircraft, and will pay to Buyer all reasonable charges for incorporation of such kits of parts in such Aircraft, and in such event said Aircraft shall be deemed for the purposes of this Purchase Agreement to have been delivered in accordance with paragraph (a), hereof, provided that the provisions of this sentence shall not relieve Boeing of its obligation to obtain an Air Worthiness Certificate for said Aircraft as provided in this Purchase Agreement. For the purposes of Article 9 of the Purchase Agreement, the phrase 'calendar month in which delivery is otherwise required hereunder' shall be deemed to be July 1959 with reference to the uncertificated Aircraft to be delivered under this paragraph (d)."

4. The basic price of each aircraft, as set forth in paragraph (a) of Article 3, is changed to Four Million Five Hundred Three Thousand Eight Hundred Seventy Dollars ($4,503,870).

5. The first two lines of paragraph (b) of Article 5 preceding the colon are amended to read as follows:

"Upon the delivery of each Aircraft to Buyer hereunder (including the

Aircraft to be delivered under paragraph (d) of Article 2 hereof) Buyer shall pay the purchase price thereof as follows."

6. Within ten (10) days after the date of execution of this Supplemental Agreement Buyer shall pay to Boeing as an advance payment on the first two additional Aircraft to be sold and delivered under the Purchase Agreement as a result of the execution by the parties of this Supplemental Agreement, the sum of Eight Hundred Nine Thousand Nine Hundred Twenty-three and 23/100 Dollars ($809,923.23). In the event that Buyer elects not to exercise its right to terminate its obligation to purchase the third of said additional Aircraft, as provided in paragraph (a) of Article 1, Buyer shall pay to Boeing on October 29, 1956, as an advance payment on said third additional Aircraft the sum of Four Hundred Five Thousand Three Hundred Forty-eight and 39/100 Dollars ($405,348.39). Such advance payment or payments shall constitute an advance payment or payments pursuant to Article 5 (a) of the Purchase Agreement, and shall be in lieu of any advance payment otherwise due with respect to the additional Aircraft covered by this Supplemental Agreement prior to January 1, 1957.

7. Notwithstanding the provisions of paragraph (f) of Article 15 as heretofore amended relating to the dates of delivery of technical data, Boeing will deliver at the earliest practicable time, but in no event later than the date of delivery of the Aircraft called for under paragraph (d) of Article 2, the technical data called for under paragraph (f) of Article 15 (some of which may be in preliminary form) in quantities reasonably required by Buyer in connection wi Buyer's use of said Aircraft for the purposes set forth in paragraph (d) of Article 2, provided, however, that the Airplane Flight Manual called for under subparagraph (1) thereof need not have been approved by the Civil Aeronautics Administration at such time.

39220 TW

8. The last sentence or Article 11 is revised to read as follows:

"The cost of making any such change, addition or modification to undelivered Aircraft occasioned by such law, governmental regulation or interpretation thereof, the date of promulgation of which is subsequent to the date of delivery to Buyer of the first Certificated Aircraft, shall be borne equally by Boeing and Buyer."

The parties hereto further agree that by reason of the changes herein made to the Purchase Agreement, paragraph numbered 1. of that certain letter agreement dated March 2, 1956 between Boeing and Buyer, subject: "additional Agreements Relating to Purchase Agreement No. 7" is hereby amended to read as follows:

"1. Delivery. Boeing agrees that prior to the month in which the first certificated Aircraft is delivered to Buyer, Boeing will not have delivered to other commercial customers more than twelve (12) Model 707 type aircraft."

EXECUTED IN DUPLICATE as of the day and year first above written.

BETWEEN

BOEING AIRPLANE COMPANY

AND

HUGHES TOOL COMPANY

RELATING TO BOEING 707-120 SERIES AIRCRAFT

MODEL 707-131

THIS SUPPLEMENTAL AGREEMENT entered into as of this 10th day of January 1957, by and between BOEING AIRPLANE COMPANY, a Delaware corporation (hereinafter called Boeing), and HUGHES TOOL COMPANY, a Delaware corporation (hereinafter called Buyer):

W I T N E S S E T H :

WHEREAS, the parties hereto have entered into the agreement described above, which is hereinafter called "the Purchase Agreement"; and

WHEREAS, the parties desire to amend the Purchase Agreement as hereinafter provided,

NOW, THEREFORE, in consideration of the mutual covenants herein contained, the parties hereby agree that the Purchase Agreement as heretofore amended, is, hereby further amended as follows:

1. Paragraph (a) of Article 1, is hereby revised in its entirety to read as follows:

"(a) Fifteen (15) Boeing Model 707-131 Aircraft (hereinafter called Aircraft) to be manufactured in accordance with the terms of this

Agreement and the detail specification (hereinafter called Detail Specification) set forth in Exhibit A attached hereto and made a part hereof."

2. In paragraph (a) of Article 2, the schedule for delivery of the Aircraft is hereby revised in its entirety to read as follows:

"Month of Delivery		Quantity of Aircraft
April	1959	3
May	1959	4
June	1959	3
July	1959	4
August	1959	1"

3. The basic price of each aircraft, as set forth in paragraph (a) of Article 3. is changed to Four Million Five Hundred Three Thousand Four Hundred Eighty-nine Dollars ($4,503,489).

4. Within ten (10) days after the date of execution of this Supplemental Agreement Buyer shall pay to Boeing as an advance payment on the additional Aircraft to be sold and delivered under the Purchase Agreement as a result of the execution by the parties of this Supplemental Agreement, the sum of Two Million One Hundred Sixty-one Thousand One Hundred Seventy and 81/100 Dollars ($2,161,170.81). Such advance payment shall constitute an advance payment pursuant to Article 5 (a) of the Purchase Agreement, and shall be in lieu of any advance payment otherwise due with respect to the additional Aircraft covered by this Supplemental Agreement prior to April 1, 1957.

EXECUTED IN DUPLICATE as of the day and year first above written.

RENTON, WASHINGTON

January 10, 1957

TELEPHONE: OLIVE 3414
IN REPLY REFER TO
6-1100-20-169

Hughes Tool Company
2200 Gulf Building
Houston, Texas

Attention: Mr. C. H. Price, Vice President

Through: Mr. Edwin Zak, Resident Representative

Subject: Supplemental Agreement No. 3 to
Purchase Agreement No. 7

Gentlemen:

In accordance with the understanding between Mr. Hughes and Mr. Allen in a telephone conversation on January 9, 1957, we have prepared and enclose herewith original, two reproducible copies and twenty-seven [illegible] copies of Supplemental Agreement No. 3 to Purchase Agreement No. 7, the purpose of which is to increase the number of aircraft to be manufactured and sold thereunder from eleven (11) to fifteen (15).

Paragraph 3. of Supplemental Agreement No. 3 changes the basic price of each aircraft as set forth in paragraph (a) of Article 3 of the Purchase Agreement to $4,503,489. This amounts to a reduction of $381 from the basic price as established by Supplemental Agreement No. 2, and is the result of a re-computation of the per-aircraft price of certain additional technical data required by Hughes Tool Company, to reflect the increased number of aircraft. This revised basic price does not, of course, take into account the effect upon price resulting from any Supplemental Agreement or Change Order other than Supplemental Agreements No. 2 and No. 3 and Change Order No. 1. Price changes which may have been made heretofore, or may be made hereafter from time to time, by Change Orders other than Change Order No. 1 will, according to the usual procedure, be taken into account in determining the final purchase price of the aircraft.

You will note that Supplemental Agreement No. 3 calls for payment of an additional advance payment of $2,161,170.81 within ten (10) days after execution of the Agreement. We have arrived at this figure by multiplying the aggregate basic price for the fifteen (15) aircraft by twelve percent (12%) and deducting advance payments heretofore paid under this Purchase Agreement.

PURCHASE AGREEMENT

Relating to

BOEING 707-320 SERIES AIRCRAFT

MODEL 707-331

THIS AGREEMENT entered into as of the 19th day of March, 1956, by and between BOEING AIRPLANE COMPANY, a Delaware corporation, with its principal office in the City of Seattle, State of Washington (hereinafter called Boeing), and HUGHES TOOL COMPANY, a Delaware corporation, with its principal office in the City of Houston, State of Texas (hereinafter called Buyer):

W I T N E S S E T H :

WHEREAS, Buyer desires to obtain by purchase aircraft of the type hereinafter described for the transportation of passengers, mail, express and cargo, and Boeing desires to manufacture and sell the same to Buyer;

NOW, THEREFORE, in consideration of the mutual covenants hereinafter contained, the parties hereto agree as follows:

ARTICLE 1. Subject Matter of Sale.

Boeing shall manufacture, sell and deliver to Buyer, and Buyer shall purchase from Boeing, the following:

(a) Eighteen (18) Boeing Model 707-331 Aircraft (hereinafter

called Aircraft) to be manufactured by Boeing in accordance with the terms of this Agreement and the detail specification (hereinafter called Detail Specification) set forth in Exhibit A attached hereto and made a part hereof;

(b) Spare parts for the Aircraft, as more particularly set forth in Article 13 hereof.

ARTICLE 2. Delivery of Aircraft.

(a) Each Aircraft shall be delivered to Buyer assembled and completed ready for flight, and the Buyer shall accept delivery of such Aircraft at a suitable airport in the vicinity of Kansas City, Missouri, or at such other place outside the State of Washington as may be mutually agreed upon by a change order providing for delivery at such other place and for the payment to Boeing by Buyer of Boeing's increased costs, or the payment to Buyer by Boeing of Boeing's decreased costs, if any, occasioned thereby. The Aircraft shall be delivered during or before the months set forth in the following schedule:

Month of Delivery	Quantity of Aircraft
November 1959	1
December 1959	2 /
January 1960	1
February 1960	2 /
March 1960	2 /
April 1960	3 /
May 1960	3 /
June 1960	4 /

55190 [illegible]

(b) In the event Boeing gives Buyer at least seven (7) days' notice that it is ready to deliver any Aircraft hereunder, and at the fault or upon the responsibility of Buyer delivery thereof is delayed, Buyer shall promptly reimburse Boeing for all cost or expense, including without limitation reasonable amounts for storage, insurance, preservation and protection, sustained by Boeing resulting from any such delay in excess of one (1) week.

(c) It is recognized that Boeing does not have maintenance, service and repair facilities and personnel at any airport in the vicinity of Kansas City, Missouri, and is not in a position to perform any maintenance, service or repair work at any such airport. Accordingly, provided the Aircraft is, when dispatched from Seattle, Washington, in condition meeting the requirements of the Detail Specification and this Agreement and in good operating condition, it is agreed that upon the undamaged arrival of an Aircraft at the airport agreed upon for delivery in the vicinity of Kansas City, Missouri, or at any other airport outside the State of Washington which may be agreed upon as the point of delivery, the Aircraft shall be deemed delivered to and accepted by Buyer, and Boeing's sole obligations thereafter as to any repair or correction of defects shall be in accordance with paragraphs (c) through (h) of Article 6 hereof. For the purpose of this paragraph, the term "arrival" shall be deemed to mean the point at which the Aircraft has come to a complete stop and the engines have been turned off.

ARTICLE 3. Price of Aircraft.

(a) The basic price of each Aircraft shall be Five Million, Thre

Hundred Fifteen Thousand, Eight Hundred and Forty-Six Dollars ($5,315,846), increased or decreased on account of price changes specified in Change Orders executed in accordance with Article 10 hereof. No charge for extras will be made unless set forth in a Change Order.

(b) The purchase price of each Aircraft shall be the basic price adjusted as follows:

(i) It shall be increased or decreased by the amount by which the cost to Boeing of the automatic pilot included in such Aircraft exceeds or is less than Twenty-seven Thousand Five Hundred Dollars ($27,500), which Boeing represents was used by Boeing as the cost of such item in arriving at the basic price of the Aircraft. Boeing shall use its best efforts to obtain such item at a price which is reasonable under the circumstances and shall notify Buyer as to the firm price for such item as soon as possible.

(ii) It shall be decreased by the amount by which Five Three Hundred Fifteen Thousand,Eight Hundred and Forty-Six Dol Dollars ($5,315,846) exceeds the lowest basic price for which Boeing, at any time before July 1, 1956, may have sold or contracted to sell any complete Boeing passenger model 707-320 series aircraft powered by Pratt & Whitney model JT4 engines (or any other aircraft of a type conforming to the basic engineering design of the Model 707-320 series aircraft except for body length powered by such engines) to any other pur-

chaser, except the United States Government or any agency thereof, after appropriate adjustment for differences between the specification applicable to said aircraft and the Detail Specification applicable to the Aircraft sold hereunder.

(c) At least ten (10) days prior to the delivery date of each Aircraft, Boeing shall give to Buyer a written notice stating the increase or decrease in the basic price of such Aircraft by reason of the operation of the provisions contained in paragraph (b) above, and a summary in such reasonable detail as the Buyer may require of the factors occasioning such increase or decrease.

ARTICLE 4. Taxes.

(a) In addition to the purchase price of the Aircraft and Spare Parts, Buyer shall pay to Boeing, upon demand, any sales or use taxes or the amount of any new or increased gross receipts or excise taxes required to be paid by Boeing as a result of any sale, use (by Buyer after valid tender of delivery), delivery, storage (after valid tender of delivery), or transfer under this Agreement of any of the Aircraft, Spare Parts, services, instructions and data furnished or delivered hereunder.

(b) If claim is made against Boeing for any such tax, Boeing shall promptly notify Buyer. If seasonably requested by Buyer in writing, Boeing shall, at Buyer's expense, take such action as Buyer may reasonably direct with respect to such asserted liability

and shall not pay such tax except under protest, if protest is necessary. If payment be made, Boeing shall, at Buyer's expense, take such action as Buyer may reasonably direct to recover such payment and shall, if requested, permit Buyer in Boeing's name to file claim or commence an action to recover such payment.

ARTICLE 5. Payment.

(a) Advance Payments for Aircraft. Buyer has heretofore paid to Boeing as an advance payment on the Aircraft to be sold and delivered hereunder the sum of Four Million Six Hundred Thirty-five Thousand Dollars ($4,635,000), receipt of which is hereby acknowledged by Boeing, which sum represents five percent (5%) of an assumed aggregate basic price of Ninety-two Million Seven Hundred Thousand Dollars ($92,700,000) for eighteen (18) Boeing Model 707-320 type aircraft. Within ten (10) days after the date of the signing of this Purchase Agreement, Buyer shall also pay to Boeing five percent (5%) of the amount by which the aggregate basic price, computed from the basic price per Aircraft set forth in Article 3(a), exceeds Ninety-two Million Seven Hundred Thousand Dollars ($92,700,000). Buyer shall also pay to Boeing as advance payments on the Aircraft to be purchased hereunder, in accordance with the following schedule (each percentage represents an amount equal to that percentage of the aggregate basic price of the Aircraft):

Due Date of Payment	Amount
July 1, 1956	2%
October 1, 1956	2%
January 1, 1957	3%
April 1, 1957	3%
July 1, 1957	3%
October 1, 1957	3%
January 1, 1958	3%
April 1, 1958	3%
July 1, 1958	3%
October 1, 1958	3%

amounting to a total, including the payments made under the first and second sentences above, of 33% of the aggregate basic price of the Aircraft.

(b) Payment for Aircraft. Upon the delivery of each Aircraft to Buyer hereunder, Buyer shall pay the purchase price thereof as follows: There shall be credited against such purchase price an amount determined by dividing the aggregate of the amounts advanced by Buyer to Boeing under paragraph (a) above less the aggregate amount of such advance payments previously credited against the purchase price of Aircraft delivered hereunder, by the number of Aircraft remaining to be delivered (including the one being delivered), and Buyer shall pay to Boeing the difference between the amount of such credit and the basic price of such Aircraft adjusted pursuant to Article 3(b) hereof

to the date of delivery of such Aircraft.

(c) Payment in U. S. Funds. All payments hereunder shall be made in lawful money of the United States, to be unconditionally deposited to the account of the party to receive payment in a bank in the United States to be designated by such party, or by such other method as may be mutually agreed upon by Boeing and Buyer.

(d) Repayment of Advance Payments. In any of the following events:

(i) delivery by Boeing to Buyer in accordance with the provisions of this Agreement of all of the Aircraft to be purchased hereunder;

(ii) termination of this Agreement by Buyer under Article 9(b) hereof and the payment to Boeing of all sums determined to be due to Boeing from Buyer pursuant to the provisions of said Article 9(b);

(iii) termination of this Agreement by Boeing under Article 9(b) or 9(c) hereof, or termination of this Agreement by Buyer under Article 9(c) hereof; or

(iv) termination of this Agreement by Buyer under Article 20 hereof as to all Aircraft and Spare Parts then undelivered hereunder;

then, in any such event, Boeing shall forthwith repay to Buyer the entire amount of the advance payments, if any, received by Boeing hereunder, less the aggregate amount of such advance pay-

ments previously credited against the purchase price of Aircraft theretofore delivered to Buyer hereunder. In the event an Aircraft manufactured by Boeing for sale and delivery under this Purchase Agreement is lost or destroyed or damaged beyond repair and this Agreement is terminated or deemed terminated pursuant to the provisions of Article 22, Boeing shall forthwith repay to Buyer that portion of the advance payments, if any, received by Boeing hereunder which is equal to the ratio that one Aircraft bears to the total Aircraft to be sold and delivered hereunder.

(e) Additional Advance Payments. In addition to the advance payments to be paid under paragraph (a) above and subject to Boeing having a need to borrow funds for use in its operations, Buyer may also, on such terms and conditions as Buyer and Boeing may mutually agree upon, make additional payments to Boeing in advance of the delivery of all or any of the Aircraft to be delivered hereunder, and in such event Boeing shall pay Buyer interest on such additional advance payments from date of payment to date of liquidation at such rate as Buyer and Boeing may mutually agree upon.

ARTICLE 6. Warranty.

(a) Boeing agrees, represents and warrants that the Boeing Model 707 type aircraft will be certificated by the Civil Aeronautics Administration with a Type Certificate and that each Aircraft, prior to and at the time of delivery thereof, will be certificated by the Civil Aeronautics Administration with an

not terminated.

(e) In the event that Boeing should exercise any right granted by paragraph (b) above to terminate this Agreement and thereafter Boeing completes the manufacture of the Aircraft scheduled to be manufactured for and delivered to Buyer, Boeing agrees that it will not sell such Aircraft to any other customer without first offering for a period of thirty (30) days to sell such Aircraft to Buyer at a price and on terms and conditions not less favorable to Buyer than those on which Boeing is offering to sell Model 707-320 series aircraft to others at that time.

(f) Boeing agrees that it will, to the extent and at the time that it becomes reasonably certain that there will be any material delay in the delivery of Aircraft or the performance of other obligations of Boeing hereunder, give Buyer written notice of the estimated delay.

ARTICLE 10. Changes.

(a) The Detail Specification and other terms and conditions of this Agreement may be amended from time to time by Change Orders in writing, which shall set forth in detail the particular specifications, terms or conditions involved, the changes to be made therein, and the effect, if any, of such changes on design, performance, weight, balance, time of delivery and basic price of the Aircraft or Spare Parts. Change Orders shall not be binding on either party until signed by persons respectively duly authorized in writing by Boeing and Buyer, but upon being so

signed shall constitute amendments to this Agreement.

(b) The Detail Specification also may be revised by Boeing without Change Order or Buyer's consent to incorporate development changes where such changes do not adversely affect price, delivery, guaranteed weight or guaranteed performance of the Aircraft or interchangeability or replaceability of Spare Parts. Development changes are those changes of a minor nature deemed necessary to correct defects, improve the Aircraft, prevent delay, or insure compliance with this Agreement but which have no materially adverse effect on the design, weight, balance or functional characteristics of the Aircraft; provided, however, no change shall be made pursuant to this paragraph (b) to any of the equipment listed in Appendix 1 of the Detail Specification. Boeing shall notify Buyer of all changes made in the Detail Specification pursuant to this paragraph (b) by furnishing to Buyer revision insert pages for the Detail Specification.

ARTICLE 11. Mandatory Modifications.

Notwithstanding anything contained in this Agreement, if any law or governmental regulation or interpretation thereof by a governmental agency, the date of promulgation of which is subsequent to the date of this Agreement, shall require any change, addition or modification to the Aircraft prior to delivery thereof in order to obtain certification by the Civil Aeronautics Administration as provided herein, the parties hereto agree that such change, addition or modification shall be made in the Air-

lities, damages, losses and judgments which may be suffered by, accrue against, be charged to or recoverable from Buyer and/or any of Buyer's observers, by reason of loss of or damage to property, or by reason of injury to or death of any person other than an officer, agent or employee of Buyer, arising out of or in connection with the operation of the Aircraft during all tests and flights thereof conducted under either Article 15 or Article 16 prior to delivery. Buyer shall fully protect and indemnify Boeing against all liability arising from injury to or death of Buyer's observers during each such flight; provided, however, the foregoing indemnity shall be applicable only to the extent of any liability not covered by or in excess of such valid and collectible insurance as Boeing may have in effect at the time such liability arises.

(e) If during any flight test herein required any Aircraft fails to comply with the Detail Specification and the performance guarantees therein set forth, or if during any flight test any Aircraft or any accessory, equipment or part thereof fails to function properly, Boeing promptly and without charge to Buyer shall correct or cause the correction of any such defects and deficiencies involved and shall conduct such supplemental flight testing as may be necessary to demonstrate the satisfactory functioning of the Aircraft and equipment as corrected.

ARTICLE 17. Title to Property and Risks.

(a) Title to and risk of loss of or damage to each Aircraft

and Spare Part shall pass from Boeing to Buyer upon delivery thereof but not prior thereto.

(b) Upon the delivery of and the payment for each Aircraft, Boeing shall deliver to Buyer a bill of sale duly vesting in Buyer good title to such Aircraft free and clear of all liens, claims, charges and encumbrances of every kind whatsoever, and such other appropriate documents of title with respect thereto as Buyer may reasonably require.

ARTICLE 18. Resale or Lease.

(a) Buyer may not, prior to delivery to Buyer hereunder, without first obtaining Boeing's written consent, resell, lease or transfer any Aircraft, or contract so to do, except that:

(i) Buyer may resell or lease any such Aircraft to any of Buyer's subsidiaries or affiliates, or to the United States Government or any agency thereof;

(ii) Buyer may, and at Buyer's request Boeing shall, take any action reasonably required for the purpose of causing any Aircraft to be subjected to an equipment trust, conditional sale, lien or other arrangement for the financing by Buyer of the purchase of any such Aircraft; provided, however, that no such action shall subject Boeing to any liability which it would not otherwise be subject to hereunder or modify in any respect Boeing's contract rights hereunder or require Boeing to divest itself of title to or possession of any such Aircraft until delivery thereof

and payment therefor as provided in this Agreement; and

(iii) Buyer may resell or lease any such Aircraft to Trans World Airlines, Inc.

(b) In the event of the resale or lease of any Aircraft as permitted under this Agreement during a period of twenty-four (24) months after delivery thereof, all rights and benefits conferred under this Agreement upon Buyer with respect to such Aircraft shall inure to the benefit of such purchaser or lessee, as the case may be; provided, however, that Buyer shall obtain from such purchaser or lessee an express agreement, in writing, to be bound by and comply with all applicable terms and conditions set forth in Articles 6, 7, 14, 15 and 18 hereof, and Buyer shall promptly furnish to Boeing a true copy of such agreement.

(c) Upon the resale or transfer by Buyer of any of the Aircraft as permitted under this Agreement subsequent to the expiration of twenty-four (24) months after delivery thereof, Buyer shall include in the agreement of sale or transfer express provisions subjecting such purchaser or transferee to all the covenants and conditions and granting the same rights and privileges, subject to the same limitations, as are contained in Article 14.

ARTICLE 19. Plant Representatives of Buyer.

Boeing's construction of Aircraft pursuant to this Agreement, and all materials and parts obtained by Boeing therefor, including Boeing's testing thereof, shall at all reasonable times during business hours be open to inspection by any duly authorized rep-

resentative or representatives of Buyer, except that if access to any portion of Boeing's plant where construction is in progress or materials or parts are stored is restricted by the United States Government or any agency thereof, Boeing shall be allowed a reasonable time to make the items available for inspection elsewhere than in the restricted portion of the plant. Commencing with the effective date of this Agreement and until the delivery of the last Aircraft, Boeing shall furnish, without additional charge, suitable office space and equipment in, or conveniently located with respect to, its plant for the accommodation of up to but not exceeding twenty (20) personnel of Buyer, including personnel of Buyer referred to in Article 19 of Purchase Agreement No. 7. Such office space and equipment need not exceed space and equipment for four desks and a secretary's desk at the administrative office and one desk in the factory. All inspections and examinations by Buyer and its representatives shall be performed in such manner as not unduly to delay or hinder the manufacture, construction or performance by Boeing. The office space and equipment to be furnished by Boeing hereunder may be the same office space and equipment furnished by Boeing under Purchase Agreement No. 7 and need not be in addition to the office space and equipment furnished under that agreement.

ARTICLE 20. Termination for Insolvency.

Either Boeing or Buyer at its option may terminate this Agreement with respect to any or all of the Aircraft, Spare Parts, services, data and items to be furnished hereunder which are undeli-

vered or not furnished on the effective date of such termination, by giving the other party written notice as hereinafter provided at any time after the other files a voluntary petition in bankruptcy, or proceedings in bankruptcy are instituted against the other and it is thereafter adjudicated bankrupt pursuant to such proceedings, or a court takes and retains for a period of at least sixty (60) days jurisdiction of the other and its assets pursuant to proceedings under the provisions of any Federal reorganization act, or the other is adjudged insolvent, or a receiver of the other's assets is appointed on account of insolvency and is not discharged within a period of sixty (60) days thereafter, or the other is otherwise divested of its assets for a period of at least sixty (60) days, or the other makes a general assignment for the benefit of its creditors. Such notice of termination shall be given thirty (30) days prior to the effective date of termination, except that in the case of filing of a voluntary petition in bankruptcy or a voluntary general assignment for the benefit of creditors, such notice need not precede the effective date of termination.

ARTICLE 21. Assignment.

This Agreement shall inure to the benefit of and be binding upon each of the parties hereto and their respective successors and assigns, but it may not be voluntarily assigned, in whole or in part, by either party without the prior written consent of the other party, except that (i) either party's interest shall be

55140(

assignable through merger, consolidation or reorganization, or voluntary sale or transfer of substantially all of its assets, (2) Boeing may assign any of its fixed or contingent rights to receive money hereunder, (3) Buyer may assign any of its rights hereunder to the extent expressly permitted in Article 18, and (4) Buyer may assign all its rights hereunder to Trans World Airlines, Inc.

ARTICLE 22. Loss or Damage of Aircraft.

In the event that prior to delivery thereof to Buyer an Aircraft being manufactured by Boeing for sale and delivery under this Purchase Agreement is lost, destroyed or damaged beyond repair, or damaged to the extent that it cannot be repaired by parts replacement to new condition and delivered in accordance with the delivery schedule set forth in Article 2, the time reasonably required by Boeing to furnish a replacement for such Aircraft or to accomplish such repair thereof shall be deemed an excusable delay under Article 9, provided Boeing promptly gives notice to Buyer of the estimated delay in delivery of the replacement or repaired Aircraft; provided, however, that in the event such Aircraft is lost, destroyed or damaged beyond repair, this Purchase Agreement shall be deemed terminated as to such one Aircraft unless Buyer gives Boeing written notice within thirty (30) days after the date of notification by Boeing of such loss, destruction or damage beyond repair that Buyer desires Boeing to manufacture and deliver to Buyer a replacement for such Aircraft, in

SUPPLEMENTAL AGREEMENT NO. 5

TO

PURCHASE AGREEMENT NO. 9 DATED MARCH 19, 1956

BETWEEN

BOEING AIRPLANE COMPANY

AND

HUGHES TOOL COMPANY

RELATING TO BOEING MODEL 707-331 AIRCRAFT

THIS SUPPLEMENTAL AGREEMENT entered into as of this 3rd day of September, 1959 by and between BOEING AIRPLANE COMPANY, a Delaware corporation (hereinafter called Boeing), and HUGHES TOOL COMPANY, a Delaware corporation (hereinafter called Buyer):

W I T N E S S E T H:

WHEREAS, the parties hereto have entered into an agreement dated March 19, 1956, providing for the manufacture and sale by Boeing to Buyer of eighteen (18) Model 707-331 aircraft (which agreement as heretofore supplemented and amended is hereinafter called the "Purchase Agreement"); and

WHEREAS, on June 25, 1959, Buyer assigned, subject to Boeing's consent, six (6) of such aircraft to PAN AMERICAN WORLD AIRWAYS, INC., a New York corporation; and

WHEREAS, on July 22, 1959, Boeing granted its consent to said assignment and released Buyer from all of Buyer's obligations under the Purchase Agreement with respect to the six (6) aircraft so assigned; and

WHEREAS, the parties now desire to amend the Purchase Agreement to provide for the reduction of the number of aircraft subject to such agreement from eighteen (18) to twelve (12), and desire to further amend the Purchase Agreement as hereinafter provided;

NOW, THEREFORE, in consideration of the mutual covenants herein contained, the parties agree as follows:

1. Paragraph (a) of Article 1 of the Purchase Agreement is hereby revised in its entirety to read as follows:

"(a) Twelve (12) Boeing Model 707-331 aircraft (hereinafter called Aircraft) to be manufactured by Boeing in accordance with the terms of this Agreement and the detail specification (hereinafter called Detail Specification) set forth in Exhibit A attached hereto and made a part hereof;"

2. The delivery schedule set forth in paragraph (a) of Article 2 of the Purchase Agreement is hereby revised to read as follows:

"Month of Delivery	Quantity of Aircraft
November 1959	1
December 1959	1
January 1960	1
February 1960	1
March 1960	1
April 1960	2
May 1960	2
June 1960	3"

3. Paragraph (c) of Article 15 of the Purchase Agreement is amended by changing the number of hours referred to therein from twenty (20) to thirteen (13).

4. Paragraph (c) of Article 16 of the Purchase Agreement is amended by changing the number of Aircraft referred to therein from two (2) to one (1), and by changing the number of hours referred to therein from twenty (20) to thirteen (13).

EXECUTED IN DUPLICATE as of the day and year first above written.

PURCHASE AGREEMENT

THIS PURCHASE AGREEMENT (hereinafter called the "Agreement") entered into of this 10th day of September, 1956, by and between GENERAL DYNAMICS CORPORATION, Delaware corporation, having an office (Convair Division) at San Diego, alifornia (hereinafter called "CONVAIR"), and HUGHES TOOL COMPANY with its offices Houston, Texas (hereinafter called "Buyer"):

W I T N E S S E T H:

WHEREAS, Buyer desires to purchase aircraft of the type hereinafter described r the transportation of passengers, mail, express and cargo, and CONVAIR desires manufacture and sell the same to Buyer:

NOW, THEREFORE, in consideration of the mutual covenants herein contained, parties hereto agree as follows:

ARTICLE 1

Subject Matter of Sale

CONVAIR shall manufacture (including the assembly of subcontracted and rchased parts) at its San Diego plant and sell and deliver to Buyer, and Buyer ll purchase and accept delivery of from CONVAIR the following:

(a) Thirty (30) Convair Model 880 (hereinafter called "Aircraft") to be nufactured by CONVAIR in accordance with the terms of this Agreement and NAIR's Detail Specification Report No. ZD-22-002 dated 6-1-56, revised 9-7-56, reinafter called "Detail Specification") set forth in Exhibit A attached vto and made a part hereof, as the same may be modified pursuant to Article 5 reof.

(b) Spare parts for said Aircraft, all as more particularly set forth in icle 4 hereof.

ARTICLE 2

Delivery of Aircraft

(a) Delivery Schedule

(1) The Aircraft shall be delivered to Buyer subject to (b) below, ready for flight not later than the dates set forth in the following schedule:

Month of Delivery	Number of Aircraft
January, 1960	1
February, 1960	1
March, 1960	1
April, 1960	2
May, 1960	2
June, 1960	2
July, 1960	3
August, 1960	4
September, 1960	5
October, 1960	5
November, 1960	4

The Aircraft covered by this Agreement shall be, in the order of priority of manufacture and delivery by CONVAIR of any Aircraft of the same basic model, as follows: The first through third, the fifth, the sixth, the eighth through the eleventh, the fifteenth through the twenty-first, the twenty-fourth through the thirty-third, and the thirty-seventh through the fortieth.

(2) CONVAIR recognizes the importance to Buyer of early deliveries of the Aircraft hereunder and shall endeavor continuously to better the above delivery schedule.

(3) The point of delivery shall be such point in the United States as may be designated by Buyer and at which the Aircraft can be landed. All expenses of, and in connection with, fly-away from San Diego, California, shall be borne by Buyer.

(4) Upon delivery to Buyer of each Aircraft in accordance with the terms hereof, title to and all risks in connection with such Aircraft shall pass from CONVAIR to Buyer.

(5) In the event any Aircraft is ready for delivery and CONVAIR so notifies Buyer of this fact but delivery of any such Aircraft is delayed by Buyer (whether or not such delay is out of Buyer's control) Buyer shall promptly reimburse CONVAIR for all cost and expense, including, but not limited to, reasonable compensation for storage, insurance and all taxes of every nature whatsoever, incurred by CONVAIR during, or paid or incurred as a result of any such delay in excess of one (1) week. The provisions of this paragraph (a) (5) shall not apply to delays in delivery, if any, referred to in paragraph (b) of this Article, occurring prior to final certification.

(6) In the event any Aircraft is destroyed or damaged beyond repair prior to delivery, CONVAIR shall be obligated to deliver, as a replacement, the first available unsold aircraft of the same basic model; provided, however, that Buyer shall make written request therefor within thirty (30) days after receiving notice from CONVAIR of such destruction or damage, otherwise the number of Aircraft to be delivered hereunder shall be reduced by the Aircraft so damaged or destroyed and CONVAIR shall forthwith repay to Buyer all payments theretofore made by Buyer with respect to that Aircraft.

(b) Certification

(1) The schedule of CONVAIR's performance hereunder provides for completion of all ground and flight tests required by the Civil Aeronautics Administration to obtain final airworthiness and type

certificates by July 1, 1960. Because of the importance to Buyer of early issuance of the airworthiness and type certificate, CONVAIR agrees to use its best efforts to better the above date.

(2) Prior to receipt of final certificates as defined in sub-paragraph (1) above, CONVAIR will have completed some of the Aircraft ready for delivery in all respects except for such final certificates, and CONVAIR will tender delivery to Buyer of all such Aircraft and Buyer will accept delivery from CONVAIR of such completed Aircraft to the extent that they can be used by Buyer for pilot training and/or other purposes, but conditioned upon and subject to CONVAIR's obtaining final certificates at a later date. CONVAIR shall not be considered to be in default of delivery as to any Aircraft not so accepted by Buyer. CONVAIR may require return of such delivered Aircraft for purposes of obtaining such final certificates and Buyer agrees to make them available for this purpose, upon reasonable notice, in such manner as CONVAIR may direct, but with due regard to reducing to a minimum the time out of service. Subject to the provisions of sub-paragraph (e) of Article 5 hereof, all costs, if any, in connection with obtaining such final certificates shall be borne by CONVAIR.

ARTICLE 3

Price of and Payment for Aircraft

(a) Price. The total Base Price of the Aircraft purchased hereunder shall be $112,500,000, computed on a Unit Base Price of $3,750,000 per unit delivered in accordance with Article 2 hereof.

(b) Payments. The total Base Price of the Aircraft purchased hereunder shall be paid as follows:

(1) $26,250,000 upon execution hereof, representing $875,000 per Aircraft for each of the thirty (30) Aircraft, and

(2) The balance of the Unit Base Price upon delivery of each of the Aircraft.

ARTICLE 5

Changes

(a) The Detail Specification may be amended at the instance of either party from time to time by Change Orders in writing, which shall set forth in detail the particular specification involved, the changes to be made therein, and the effect, if any, of such change on price, design, performance, weight, balance and time of delivery. Neither Buyer nor CONVAIR shall refuse unreasonably to execute any Change Order proposed by the other. CONVAIR shall offer to Buyer with reasonable promptness for consideration as a change under this paragraph (a) any improvement developed by CONVAIR for incorporation in Model 880 aircraft after the date of this Agreement and prior to delivery of all the Aircraft.

(b) The Detail Specification may also be amended by a change in any item of material, parts, accessories or equipment, specified therein by kind, type or source upon the written consent of Buyer's Factory Representative specifying the Aircraft affected. CONVAIR's substitution of items pursuant to such consent of Buyer's Factory Representative may thus be effected without Change Orders; but in no instance shall any such substitution increase the price of any Aircraft or affect CONVAIR's obligations under this Agreement or under the Detail Specification.

(c) All Change Orders shall show the Aircraft affected and the recurring and non-recurring charges or credits to Buyer occasioned thereby. The non-recurring charges or credits shall be reflected on the invoice covering the first Aircraft to which the change is applicable, and the recurring charges or credits shall be reflected on invoices covering each Aircraft to which the change is applicable. CONVAIR will, at the time of delivery of the last Aircraft hereunder, compute the effect of amortization of the non-recurring charges applicable to such changes over the total sales of aircraft at that time incorporating such changes, and shall reflect the credit, if any, due Buyer as a result of such further amortization in a Change Order hereto.

(d) Change Orders shall not be binding on either party and shall not be carried out unless and until mutually executed by persons respectively duly authorized in writing by CONVAIR and Buyer. No charges for extras shall be allowed or be collectible from Buyer unless authorized by a Change Order executed as aforesaid, except as otherwise provided herein.

(e) If any law, directive, order, proclamation, regulation or ruling of the United States Government or any agency thereof becomes effective after the date of this Agreement which requires any change, addition or modification to any undelivered Aircraft in order to obtain an Airworthiness Certificate in the transport category from the United States Civil Aeronautics Administration, such change, addition or modification shall be made and evidenced by a Change Order specifying the effect, if any, of such change on design, performance, weight, balance and time of delivery. The cost of making any such change, addition or modification shall be borne equally by CONVAIR and Buyer.

(f) CONVAIR may, without Change Order or Buyer's consent, make minor changes and corrections in the Detail Specification in order to correct defects or improve the Aircraft; provided, that such changes and corrections shall not adversely affect price, time of delivery, functional character or performance of any Aircraft to be purchased hereunder or the interchangeability or replaceability of parts therefor, nor appreciably affect the design, maintenance and service characteristics, weight or balance of any such Aircraft; and provided, further, that CONVAIR promptly shall give written notice to Buyer or Buyer's Factory Representative detailing such change and corrections and other effect, if any, upon any and all of the matters enumerated in this subparagraph (f).

ARTICLE 12

Buyer's Representatives and Inspection

(a) Commencing with the date of this Agreement and until the delivery of the last Aircraft, CONVAIR shall, without additional charge, furnish office space conveniently located with respect to its plant for the accommodation of not more than five (5) personnel of Buyer. Subject to CONVAIR's general rules and regulations, CONVAIR's construction of Aircraft pursuant to this Agreement, and all materials and parts obtained by CONVAIR therefor, and tests related thereto made at CONVAIR's plant at San Diego, California, shall at all reasonable times during business hours be open to inspection by any duly authorized representative or representatives of Buyer (one of whom shall be designated as the "Factory Representative"), except that if access to any portion of CONVAIR's plant where construction is in progress or material or parts are stored is restricted by the United States Government or any agency thereof, CONVAIR shall be allowed a reasonable time to make the items available for inspection to the extent practicable elsewhere than in a restricted portion of the plant. Buyer shall obtain for such personnel of Buyer proper United States Government military security clearance for access to CONVAIR's plant at San Diego, California. CONVAIR shall use its best efforts to obtain correspondingly adequate and reasonable inspection rights for Buyer's representatives with respect to work in process at the plants of CONVAIR's subcontractors.

(b) Any inspection accomplished by Buyer shall be performed so as not to unduly delay or hinder the manufacture, construction or performance by CONVAIR under this Agreement. CONVAIR shall not be obligated to remove parts already installed, remove lining and cover materials or open areas previously closed because of any failure of Buyer to have inspection representatives available at CONVAIR's plant, provided that CONVAIR shall advise Buyer in writing at least [illegible] of the scheduled date of arrival of the first

Aircraft to be delivered hereunder into the primary assembly stage.

ARTICLE 14

Title to Property and Risks

(a) Risk of loss of, or damage to, each Aircraft and Spare Part shall pass from CONVAIR to Buyer upon, but not prior to, delivery thereof in accordance with the terms of this Agreement.

(b) Upon the delivery of each Aircraft and final payment of the Base Price of such Aircraft, adjusted for changes in accordance with Article 5 hereof, CONVAIR shall deliver to Buyer or such of the persons, firms, or corporations referred to in Article 16 as Buyer may designate in writing at least five (5) days before delivery, a bill of sale duly vesting in Buyer, or such other persons, firm or corporation as Buyer may designate, good title to such Aircraft free and clear of all liens, claims, charges and encumbrances of every kind whatsoever, and such other appropriate documents of title with respect thereto as Buyer may reasonably require.

ARTICLE 16

Assignments

(a) This Agreement shall inure to the benefit of and be binding upon each of the parties hereto and their respective successors and assigns, but it may not be voluntarily assigned, in whole or in part, by either party without the prior written consent of the other party, except that either party's interest shall be assignable through merger, consolidation or reorganization which includes voluntary sale or transfer of substantially all of its assets; provided, however, that CONVAIR may assign any of its fixed or contingent rights to receive money hereunder, and Buyer may assign any of its contingent rights to the Aircraft or any of them for the purpose of securing any obligation for the repayment of monies loaned or advanced by any financial institution to finance in whole or in part the purchase of the Aircraft. Notwithstanding the foregoing, Buyer shall have the privilege to assign this Agreement in whole or in part without such consent, to TRANS WORLD AIRLINES, INC., and upon such assignment and full notice thereof to CONVAIR, TRANS WORLD AIRLINES, INC. shall succeed to such of the rights, privileges, liabilities and obligations of the Buyer hereunder as are so assigned and the Buyer shall cease to have or be subject to such rights, privileges, liabilities or obligations so assigned; provided, that Buyer shall, in the event of assignment to TRANS WORLD AIRLINES, INC., involving payment obligations under this Agreement, guarantee the due and punctual payment of such obligations by said assignee.

(b) Buyer and its successors and assigns may not, without first obtaining CONVAIR's written consent (which shall not be unreasonably withheld) resell or lease any Aircraft, or agree to do so, until the expiration of two (2) years after delivery of the first Aircraft hereunder. This limitation shall be

expressly included in any assignment made by the Buyer under this Article, and be expressly agreed to by the assignee. CONVAIR's permission is hereby granted, however, for lease of the Aircraft to any company for use incidental to equipment interchange or seasonal lease agreement; Buyer may, and at Buyer's request CONVAIR shall, take any action reasonably required for the purpose of causing any Aircraft to be subjected to an equipment trust, conditional sale, lien or other arrangement for the financing by Buyer of the purchase of any such Aircraft; provided, however, that no such action shall subject CONVAIR to any liability which it would not otherwise be subject to hereunder or modify in any respect CONVAIR's contract rights hereunder or require CONVAIR to divest itself of title to or possession of any such Aircraft until delivery thereof and payment therefor as provided in this Agreement; and Buyer may resell or lease any such Aircraft to TRANS WORLD AIRLINES, INC.

ARTICLE 18

Contracts with Other Purchasers

If subsequent to the date of this Agreement, CONVAIR shall contract to sell to any other commercial purchaser any of the first one thousand (1,000) aircraft of the same basic model at a Unit Base Price less than (i) $3,500,000.00 each or (ii) the then applicable Unit Base Price of the Aircraft hereunder, whichever is lower, plus or minus appropriate adjustments for labor and material escalation and for variations in specifications and equipment, or on other terms and conditions materially more favorable than those incorporated in this Agreement, except in respect to time and amount of down payments or progress payments set forth in Article 3(b) hereof, the purchase price of all Aircraft to be delivered hereunder shall be reduced to the lowest price to be paid by any such other purchaser and such other more favorable terms and conditions shall by appropriate amendment be offered to Buyer.

AMENDMENT NO. 4

TO

PURCHASE AGREEMENT BY AND BETWEEN

GENERAL DYNAMICS CORPORATION
(Convair Division)

AND

HUGHES TOOL COMPANY

Dated March 2, 1960

THIS AGREEMENT (hereinafter called "Amendment No. 4") entered into as of this 2nd day of March 1960, by and between GENERAL DYNAMICS CORPORATION, a Delaware Corporation, having an office (Convair Division) in San Diego, California, (hereinafter called "CONVAIR"), and HUGHES TOOL COMPANY, with its general offices at Houston, Texas (hereinafter called "Buyer"):

W I T N E S S E T H:

WHEREAS, Buyer and CONVAIR have entered into a Purchase Agreement dated 10 September 1956, relating to the purchase and sale of thirty (30) Model 880 Convair aircraft (hereinafter referred to as the "AGREEMENT"); and

WHEREAS, Buyer and CONVAIR now desire to amend said AGREEMENT as more specifically hereinafter set forth;

NOW, THEREFORE, in consideration of the mutual covenants herein contained, the parties hereto agree to amend the AGREEMENT as follows:

1. By deleting Article 2(a) (1) and telegraphic revision thereto from General McNarney to Mr. Price, dated September 17, 1956, and inserting in lieu thereof the following:

"(a) Delivery Schedule

(1) The Aircraft shall be delivered to Buyer, subject to (b) below ready for flight, not later, with respect to each of the Aircraft as hereinafter identified, than

the respective dates set forth in the following schedule:

Aircraft as Identified by Manufacturing No. Assigned According to Sequence of Original Convair Manufacturer	Month (during the year 1960) in which Aircraft is to be Tendered for Delivery	Position of Aircraft in Sequence of Convair Delivery to all Customers (including Buyer) of Commercial Jet Aircraft
10	May	4
12	May	5
20	May	7
22	May	8
23	June	10
24	June	11
25	June	12
26	June	13
27	July	14
28	July	15
30	July	17
31	July	18
2	July	19
5	August	20
32	August	21
33	August	22
34	August	23
35	August	24
3	September	26

Manufacture Sequence (Cont'd.)	Month (Cont'd.)	Delivery Sequence (Cont'd.)
39	September	29
40	September	30
42	September	32
13	October	33
14	October	34
15	October	35
18	October	36
19	October	37
6	November	38
9	November	39
8	November	40

(The numbers missing in regular numerical sequence from the first and third columns above represent those assigned, for manufacturing and delivery sequence purposes, respectively, to Delta Air Lines, Inc., except that the number 1, or first, jet aircraft in Convair's sequence of original manufacture is to be retained by Convair).

2. By deleting the second sentence in Article 5(c) and inserting in lieu thereof the following three sentences:

"All non-recurring charges or credits occasioned by Change Orders dated prior to, and affecting Aircraft delivered or to be delivered prior to, 30 November 1960, shall be reflected on an invoice issued by Convair on 30 November 1960. Non-recurring charges or credits occasioned by all other Change

Orders, to the extent such charges or credits have not theretofore or will not thereafter be included or includable in the invoice referred to in the next preceding sentence, shall be reflected on the invoices covering each Aircraft to which the charge is applicable. All recurring charges or credits shall be reflected on invoices covering each Aircraft to which the charge is applicable.

3. This Amendment No. 4 shall not be varied in its terms by any oral agreement or representation or otherwise than by an instrument in writing of even or subsequent date hereto, executed by both parties by their officers thereunto duly authorized.

4. Except as amended hereby, all terms and conditions of the AGREEMENT shall remain in full force and effect.

Executed in quadruplicate as of the day and year first above written.

Amendment No. 6 to Purchase Agreement
between
General Dynamics Corporation (Convair Division)
and
Hughes Tool Company
dated 10 September 1956

THIS AGREEMENT (hereinafter called "Amendment No. 6") entered into as of this 10th day of November 1960, by and between GENERAL DYNAMICS CORPORATION, a Delaware corporation, having an office (Convair Division) in San Diego, California, (hereinafter called "CONVAIR") and HUGHES TOOL COMPANY, with its general offices at Houston, Texas (hereinafter called "Buyer"):

WITNESSETH:

WHEREAS, Buyer and CONVAIR have entered into a Purchase Agreement dated 10 September 1956, relating to the purchase and sale of thirty (30) Model 880 Convair aircraft (hereinafter referred to as the "AGREEMENT"); and

WHEREAS, Buyer and CONVAIR now desire to reduce the quantity of Model 880 Convair aircraft covered by the AGREEMENT from thirty (30) to twenty-four (24) and to that end desire to amend the AGREEMENT as more specifically hereinafter set forth;

NOW, THEREFORE, in consideration of the mutual covenants herein contained, the parties hereto agree to amend the AGREEMENT as follows:

1. By changing the word "Thirty (30)" where it appears in paragraph (a) of Article 1 to "Twenty-four (24)".

2. By deleting, from the delivery schedule set forth in Article 2(a)(1) (as provided in Amendment No. 4 to the AGREEMENT), the following six (6) aircraft, as identified by manufacturing number assigned according to sequence of original Convair manufacture: 5, 8, 12, 20, 22 and 23.

3. By deleting from Article 3(a) the figures "$112,566,000" and substituting therefor "$90,052,800".

4. By deleting Article 3(b) and by inserting in place thereof the following:

"(b) Payments. The total Base Price of the Aircraft purchased hereunder shall be paid as follows:

(1) $21,013,200 upon execution hereof, representing $875,550 per Aircraft for each of the twenty-four (24) Aircraft, and

(2) The balance of the Base Price of each Aircraft plus or minus charges or credits, if any, resulting from Change Orders heretofore or hereafter executed pursuant to Article 5 hereof, and other price elements expressly provided by this Agreement, upon tender of delivery, in accordance with Article 8 hereof, of each of the Aircraft manufactured in accordance with the terms of this Agreement and the Detail Specification."

5. By changing appropriately, in all Letters of Agreement and in all Change Orders, each reference to thirty (30) aircraft to reflect the reduction in quantity of aircraft to twenty-four (24) and to reflect the elimination from the AGREEMENT of the six (6) aircraft identified in paragraph 2. of this Amendment No. 6.

6. This Amendment No. 6 shall be construed in accordance with the laws of the State of California.

This Amendment No. 6 shall not be varied in its terms by any oral agreement or representation or otherwise than by an instrument in writing of even or subsequent date hereto, executed by both parties by their officers thereunto duly authorized.

Except as amended hereby, all terms and conditions of the AGREEMENT shall remain in full force and effect.

Executed in quadruplicate as of the day and year first above written.

Letter of Agreement No. 1

Hughes Tool Company
Houston, Texas

Gentlemen:

In consideration of the Purchase Agreement entered into concurrently herewith between General Dynamics Corporation and Hughes Tool Company relating to the manufacture of thirty (30) Convair Model 880 aircraft, the parties hereto agree that the Unit Base Price of $3,750,000 provided for in Article 3 of said Purchase Agreement shall be subject to adjustment as additional commercial sales of Model 880 aircraft are made beyond the forty (40) aircraft purchased by Hughes Tool Company and Delta Air Lines, Inc., said adjustment to be made on the following basis:

1. The Unit Base Price of $3,750,000 stated in Article 3(a) of said Purchase Agreement shall be reduced, without regard to the proviso in paragraph 2 below, at the rate of $8,333.33 per Aircraft for each commercial sale of Model 880 aircraft from No. 41 through No. 70 for a total reduction of $250,000 per Aircraft sold under said Purchase Agreement.

2. The said Unit Base Price of said Aircraft shall be further adjusted as additional commercial sales of Model 880 aircraft are made beyond the forty (40) Aircraft covered by said Purchase Agreement and the Purchase Agreement with Delta Air Lines, Inc., as follows:

(i) A reduction of $5,000 per Aircraft for each commercial sale from No. 41 through No. 100, resulting in an adjusted Unit Base Price of $3,200,000 at such 100th sale.

(ii) A reduction of $6,000 per Aircraft for each commercial sale from No. 101 through No. 150, resulting in an adjusted Unit Base Price of $2,900,000 at such 150th sale.

(iii) A reduction of $3,400 per Aircraft for each commercial sale from No. 151 through No. 200, resulting in an adjusted Unit Base Price of $2,730,000 at such 200th sale.

(iv) A reduction of $1,600 per Aircraft for each commercial sale from No. 201 through No. 250, resulting in an adjusted Unit Base Price of $2,650,000 at such 250th sale.

Hughes Tool Company
Houston, Texas

(v) An appropriate reduction per Aircraft for each commercial sale from No. 251 through No. 1,000, consistent with reasonable accounting procedures on a basis of computation consistent with the principles followed in computing reductions as set out in (i) through (iv) above, resulting in an adjusted Unit Base Price of $2,500,000 at such 1,000th sale; provided, however:

(a) that each of the adjusted Unit Base Prices listed in sub-paragraphs (i) through (iv) shall in no event become finally effective, nor shall CONVAIR be required to give final effect thereto, if any such adjusted Unit Base Price would operate to reduce the combined total price of all the Model 880 commercial aircraft then sold below the actual cost of such aircraft to CONVAIR as charged or to be charged against the Model 880 commercial program under CONVAIR's usual accounting procedures which shall be in accordance with sound accounting practice; and,

(b) that each of the adjusted Unit Base Prices listed in sub-paragraph (v) above shall in no event become finally effective, nor shall CONVAIR be required to give final effect thereto, if any such adjusted Unit Base Price would operate to reduce CONVAIR's overall gross profit on all the Model 880 commercial aircraft then sold below six per cent (6%) of the actual cost of such aircraft to CONVAIR as charged or to be charged against the Model 880 commercial program under CONVAIR's usual accounting procedures which shall be in accordance with sound accounting practice; and,

(c) that the foregoing provisos shall be applied, insofar as the abatement of reductions is provided for therein, only pro tanto to the extent and during the period required to avoid violation of the terms of such provisos.

3. It is recognized by the parties hereto that CONVAIR may invoke the provisos in paragraph 2. (v)(a) and (b) and (c) above before or after payment for the Aircraft or a portion thereof by Buyer in accordance with Article 3(b) of said Purchase Agreement. In such event, and upon the establishment of facts required hereunder to bring such proviso into operation, any initial effectiveness, pursuant to paragraph 5. hereof, theretofore given by way of price reduction shall be reversed to the extent final effectiveness would violate such proviso; i.e., if such initial effectiveness but subsequent reversal both occur prior to Aircraft delivery, Buyer shall make payment at the time of Aircraft delivery without benefit of such price reduction which has been reversed; and similarly, if such reversal occurs subsequent to Aircraft delivery, Buyer shall forthwith repay to CONVAIR any such price reduction so reversed which Buyer has theretofore enjoyed either as a sum Buyer did not pay at the time of Aircraft delivery or as a sum paid by CONVAIR to Buyer subsequent to Aircraft delivery.

4. The Unit Base Price reductions shown above are without effect on other price elements; i.e., the total purchase price of each of the thirty (30) Aircraft covered by the Purchase Agreement with HUGHES TOOL COMPANY shall consist of the adjusted Unit Base Price increased or decreased as the case may be by specification changes, and other price elements expressly provided by said Purchase Agreement.

5. The term "commercial sales" means any arrangement, firm by ordinary standards prevailing in the aircraft manufacturing industry, under which CONVAIR agrees to deliver Aircraft for commercial use to any other person, firm, corporation or other entity, whether passage of title be involved or pursuant to conditional sale, chattel mortgage, lease, or otherwise; and, subject to the other provisions of this letter agreement and the provisions contained in the said Purchase Agreement referred to in the first paragraph hereof, the Unit Base Price reductions provided hereby shall become initially effective upon CONVAIR entering into any such arrangement.

6. The price adjustments contemplated by this letter agreement have been computed without reference to the possibility of sales of Model 880 aircraft to the United States Military Forces, and no adjustment shall be made in relation to such sales except as hereinafter set out. It is mutually agreed that should the United States Military Forces purchase aircraft from CONVAIR in the same basic Model 880, passenger-transport configuration for delivery prior to delivery of Aircraft No. 100 of the commercial Model 880 aircraft, CONVAIR will determine the cost effect of such military purchases upon the Model 880 commercial program. Such determination will be based upon, but not limited to, a consideration of the effect of such military purchases upon the development costs of the said Model 880 aircraft, learning curves and/or resulting profit to CONVAIR applicable to the Model 880 program. Depending upon the extent to which the said military purchases may benefit the Model 880 commercial program, CONVAIR and the Buyer will negotiate as to whether any price revision to the Buyer is appropriate and, if so, the extent thereof.

7. CONVAIR shall promptly notify Buyer of any Model number change which, because of fundamental dissimilarity of the new model from prior production, in CONVAIR's opinion would operate to exclude aircraft of the new Model from the price adjustment provisions contained in this agreement. In the event there are sales of any such new Model, CONVAIR will determine the cost effect of such sales on the Model 880 program. Depending upon the extent to which such sales may benefit the Model 880 program, CONVAIR and the Buyer will negotiate as to whether any price revision to the Buyer is appropriate and, if so, the extent thereof. Failure of CONVAIR to notify Buyer of any such Model number change within fifteen (15) days after the sale of such changed Model shall constitute a waiver by CONVAIR of the effect thereof on the aforesaid price adjustment provisions.

8. Notwithstanding any provisions to the contrary elsewhere contained, the final adjusted Unit Base Price of each Aircraft shall in no event exceed the applicable Unit Base Price set out below, in event CONVAIR's total commercial sales, including the forty (40) aircraft covered by said Purchase Agreement and the Purchase Agreement with Delta Air Lines, Inc., become 150 or greater:

ghes Tool Company
ouston, Texas

Applicable Unit Base Price	Total Sales
$3,075,000	150
$2,805,000	200
$2,725,000	250 or more

e applicable Unit Base Price for total sales between the total sales numbers ove specified shall be computed on an equal, straight line basis; for example, e applicable Unit Base Price in event of total sales of 151 is $3,069,600; in ent of total sales of 152 is $3,064,200; in event of total sales of 201 is 2,805,400; etc. The provisions of this paragraph 8. are independent of the ovisions of paragraphs 1. and 2. of this letter agreement and vice versa; i.e., reduction is applicable pursuant to this paragraph 8. in event total sales are s than 150 nor on account of total sales in excess of 250; and the said pro- isos of paragraph 2. and all matters relating to such provisos have no application this paragraph 8.

. Each payment by Buyer, at the time of delivery of an Aircraft and as part of e purchase price thereof, of any sum to whose return Buyer subsequently becomes titled as representing a reduction in Unit Base Price pursuant to any of the ovisions of this letter agreement shall bear interest at the rate of three and e-half per cent (3-1/2%) per annum computed on the basis of a year of 365 days, the period from the date of such payment to the date of such return. Interest e to Buyer pursuant to this paragraph shall be paid by CONVAIR to Buyer, or redited to Buyer's account to the extent of amounts then due and owing from Buyer CONVAIR, at the same time as the sum upon which said interest has accrued comes due to Buyer. The maximum period with respect to which said interest shall payable as to any particular sum shall be five (5) years, regardless of the tent to which the actual length of the period applicable to such particular sum referred to in the preceding sentence may be greater than five (5) years, but is sentence shall not relieve CONVAIR of the obligation to pay said interest en due.

0. The phrase "applicable Unit Base Price of the Aircraft hereunder" as used in rticle 19 of the Purchase Agreement has reference to the Unit Base Price as djusted by the terms of this letter agreement.

would appreciate the return to us of two (2) copies of this letter indicating ur acceptance of the above, executed by an appropriate officer of your Company.

Very truly yours,

GENERAL DY[illegible]ORPORATION

Re: General Dynamics Corporation (Convair Division)-Hughes Tool Company Purchase Agreement, dated September 20, 1956, Relating to Convair Model 880 Aircraft.

Convair Division
General Dynamics Corporation
3165 Pacific Highway
San Diego 12, California

Attention: Director of Contracts

Gentlemen:

Article 5 of the subject contract provides that change orders affecting amendments to the detail specification and other terms and conditions of the agreement may be executed from time to time by persons duly authorized by Convair and Hughes Tool Company. For the purpose of representing Hughes Tool Company in matters involving detail specification and other technical changes, we have named as our Special Representative, Mr. R.W. Rummel, whose address is 10 Richards Road, Kansas City, Missouri.

This letter is to evidence Mr. Rummel's authority to represent Hughes Tool Company and, on its behalf, to conduct all negotiations and execute all change orders regarding specifications and other technical matters in connection with the captioned contract; provided, however, that without the written approval of an officer of Hughes Tool Company, Mr. Rummel may not execute change orders evidencing any single change having a price effect per airplane of more than $30,000.00 or evidencing total changes which in the aggregate have a net price effect in excess of $150,000.00 per airplane. Please furnish to our Houston office, to the attention of Mr. C.H. Price, copies of all change orders regardless of the amount.

Side Letter of Agreement No. 18 relating to the capitoned agreement provides for notice to buyer's representative in those instances specified in the captioned agreement, side letters of agreement and detail specification requiring buyer's approval of the use of materials, methods, processes, equipment or design. This letter is to evidence buyer's representative to receive such notices, together with such information as is otherwise required, with authority to represent buyer in such matters.

In addition to Mr. Rummel's authority as hereinabove set out, we have also authorized him to designate the factory representative for Hughes Tool Company as that term is employed in the captioned contract and related agreements, and we have granted Mr. Rummel the authority to delegate the functions of the buyer's representative to other persons as he deems appropriate. You may, therefore, consider any designation of factory representative or delegation of authority of buyer's representative made by Mr. Rummel as approved by Hughes Tool Company

Yours very truly,

HUGHES TOOL COMPANY

TWA Equipment Program

CONFIDENTIAL

IT SEEMS APPROPRIATE THAT THE TWA BOARD OF DIRECTORS AT ITS MARCH 20 MEETING TAKE THE FOLLOWING ACTION:

1. AUTHORIZE TWA TO LEASE UP TO SIX BOEING 720B'S.

2. AUTHORIZE TWA TO ENTER INTO A LETTER OF INTENT WITH BOEING (BY MARCH 31, 1961) FOR THE PROCUREMENT OF TWENTY 131B AND SIX 331B TYPE AIRCRAFT, TO BE FOLLOWED BY DEVELOPMENT OF A FIRM CONTRACT BY TWA MANAGEMENT FOR REVIEW BY THE BOARD AT ITS APRIL MEETING AND FOR CONSUMMATION BY APRIL 30, 1961.

3. AUTHORIZE TWA TO CONCLUDE ARRANGEMENTS REQUIRED TO SATISFY THE INITIAL CASH REQUIREMENTS OUTLINED IN THIS LETTER.

AUTHORITY FOR PROCUREMENT OF THE FORTY-EIGHT SPARE PRATT & WHITNEY ENGINES CAN BE DEFERRED UNTIL THE APRIL BOARD MEETING.

AFFIRMATIVE ACTION WILL AVOID THE NEED FOR INCURRING SUBSTANTIAL AIRPLANE PRICE AND ENGINE PRICE INCREASES ($6,752,000), PRESERVE DELIVERY POSITIONS AT INITIAL INVESTMENT, AND PROVIDE TWA WITH INTERIM LEASE AIRCRAFT. OF COURSE THE MARCH 31 LETTER OF INTENT WOULD CONTAIN ALL THE NECESSARY AND USUAL CONDITIONS SUCH AS BEING WHOLLY SUBJECT TO SUCCESSFUL CONCLUSION OF FINANCING ARRANGEMENTS, MUTUAL AGREEMENT ON SPECIFICATIONS, ETC.

WORTHWHILE PROGRESS HAS BEEN MADE WITH BOEING. BOEING WILL CARRY ALL PROGRAM RISKS THROUGH MARCH 31, 1961 AND WILL CONTINUE TO HOLD DELIVERY POSITIONS FOR THE TWENTY 131B'S, THE SIX 331B'S, AND THE SIX LEASE 720B'S UNTIL THEN.

A. BOEING IS NOW WILLING TO PROCEED ON THE BASIS OF A LETTER OF INTENT FOR THE 131B'S AND THE 331B'S, PROVIDING SUCH A LETTER IS SIGNED BY MARCH 31 AND FURTHER PROVIDED THAT WITHIN TEN DAYS THEREAFTER TWA MAKES AN INITIAL MODEST DOWN PAYMENT OF $25,000 PER AIRPLANE, OR $650,000 FOR THE TWENTY-SIX AIRCRAFT.

B. BOEING IS WILLING TO DEFER FINAL COMMITMENT UNTIL APRIL 30, 1961. WITHIN TEN DAYS THEREAFTER, OR ON MAY 10, BOEING WOULD REQUIRE COMPLETION OF THE 5% REQUIRED DOWN PAYMENT. THIS WOULD AMOUNT TO APPROXIMATELY $7,190,000 FOR THE TWENTY 131B'S AND SIX 331B'S. IF NECESSARY, BOEING MIGHT BE WILLING TO ALTER THE 5% DOWN PAYMENT REQUIREMENT UNTIL SUCH TIME AS SEEMS PRACTICAL. IN THIS CONNECTION, I ASSUME MR. LESLIE WOULD WANT TO NEGOTIATE WITH OUR FINANCIAL OFFICERS.

DX 71

MESSRS. W. L. PIERSON
E. O. COCKE
A. V. LESLIE

R. W. RUMMEL

MARCH 15, 1961

CONFIDENTIAL

C. BOEING NOW REQUIRES A FIRM CONTRACT FOR THESE AIRCRAFT BY APRIL 30 IN ORDER TO

1) HOLD AIRPLANE PRICE,

2) HOLD AIRPLANE DELIVERY POSITION.

ALTHOUGH THEY APPEAR VERY RIGID ABOUT THIS, PERHAPS STEPS A AND B COULD BE USED AS A NEGOTIATING BASIS TO GET AN EXTENSION OF THIS DATE.

AS PREVIOUSLY ADVISED, SOME TIME AGO BOEING ANNOUNCED TO THE INDUSTRY A $310,000 PRICE INCREASE EFFECTIVE MAY 1, 1961. UNLESS A FIRM CONTRACT, INCLUDING INITIAL PAYMENTS, IS CONSUMMATED BY THAT DATE, THE TWENTY 1313 AIRCRAFT WOULD INCREASE $5,800,000 IN PRICE. FURTHER, PRATT & WHITNEY HAS ANNOUNCED A 5% PRICE INCREASE ON SPARE ENGINES EFFECTIVE MAY 1, 1961. THIS AMOUNTS TO $552,000 FOR THE FORTY-EIGHT SPARE ENGINES THAT WILL BE REQUIRED FOR THE TWENTY-SIX AIRPLANES. IN THIS RESPECT, PRATT & WHITNEY REQUIRES A 5% DOWN PAYMENT WHICH IN THIS INSTANCE IS EQUIVALENT TO THE PRICE INCREASE. IN ORDER TO AVOID THESE PRICE INCREASES AIRPLANES AND ENGINES SHOULD BE PLACED ON FIRM ORDER PRIOR TO MAY 1.

I PROVIDED MR. LESLIE WITH AN ESTIMATED CASH SCHEDULE WITH MY LETTER OF MARCH 10. THESE DATA WERE SUBSEQUENTLY REVISED TO INCLUDE MORE RELAXED BOEING PROGRESS PAYMENT TERMS FOR THE 1963 AND 1964 AIRCRAFT. THE REVISED SCHEDULES WERE HANDED TO MR. LESLIE INFORMALLY AND ARE AVAILABLE TO OTHER RECIPIENTS OF THIS LETTER IF DESIRED.

USE OF THE LEASE 720B'S IS ENCOURAGING. THE PLAN OUTLINED IN MY LETTER OF MARCH 10 TO MR. LESLIE IS WORKING OUT FAVORABLY AND IT WOULD APPEAR LEASE OF FOUR OR SIX SUCH AIRCRAFT IS DEFINITELY WORTHWHILE. ORIGINAL TERMS HOLD EXCEPT THAT IT IS NO LONGER NECESSARY TO PROTECT BOEING'S INVESTMENT PRIOR TO MARCH 31. BOEING REQUIRES THAT THE LEASE BE SIGNED BY MARCH 31, THE SAME DATE REQUIRED FOR SIGNING THE AIRPLANE LETTER OF INTENT, AT WHICH TIME FIRST AND LAST MONTHS' LEASE PAYMENT WOULD BE IN ORDER. THIS AMOUNTS TO $160,000 PER AIRPLANE, OR $640,000 FOR THE FOUR AIRPLANES THAT ARE PRESENTLY OFFERED FOR LEASE ON A FIRM BASIS.

IN THE EVENT TWA WOULD NOT SIGN FINAL CONTRACTS FOR THE PURCHASE OF AT LEAST TEN NEW BOEING AIRPLANES, THEN THE LEASE OF THE 720B'S WOULD AUTOMATICALLY BECOME A SEVEN-YEAR LEASE. IN MY OPINION, IN THIS UNLIKELY EVENTUALITY THE RISK OF DISPOSING OF THE LEASE 720B'S IS NOT GREAT, PARTICULARLY IN LIGHT OF YESTERDAY'S CAB ACTION AWARDING TWO NEW TRANSCONTINENTAL ROUTES.

I RECOMMEND THAT THIS ALL BE PUT FORWARD TO TWA'S BOARD OF DIRECTORS FOR AFFIRMATIVE ACTION DURING ITS MARCH 20 MEETING.

ATTACHED FOR POSSIBLE REFERENCE PURPOSES IS A COPY OF BOEING'S CURRENT BRIEF PROPOSALS.

Attention: Mr. Raymond M. Holliday

Gentlemen:

We have been informed that the Hughes Tool Company is willing to assign to TWA its rights to acquire from the manufacturer 4 Convair 880's, Nos. 29, 34, 9 and 16. TWA is interested in acquiring these airplanes if this can be arranged promptly and would like to discuss with you the terms and conditions on which this can be accomplished.

We suggest a meeting with your representative in this connection at the earliest possible date.

Very truly yours,

A. V. Leslie

April 3, 1961

Hughes Tool Company
2200 Gulf Building
Houston 2, Texas

Attention: Mr. Raymond M. Holliday

You have requested that we advise you of the terms and conditions under which we might be willing to accept the four additional Convair 880 aircraft covered by your agreement of September 10, 1956 with General Dynamics Corporation.

Subject to the conditions hereinafter set forth we would be willing to acquire such aircraft by (1) assuming payment to General Dynamics Corporation of the balance of the original purchase price specified in the agreement of September 10, 1956, as adjusted to reflect changes in specifications and as adjusted to reflect reductions in the purchase price pursuant to letter agreement No. 1 accepted September 20, 1956, as amended to date (including rights to reductions accruing after delivery of such aircraft), but not including any amounts that may be due from you to General Dynamics Corporation resulting from delayed delivery of such aircraft or from the delivery of any thereof to you prior to their completion or for any other reason, and (2) paying you amounts equivalent to the sum of your down payments on such aircraft, such amounts to be paid to you by a subordinated note (at an interest rate to be agreed upon) otherwise similar in terms to the interim subordinated 6 1/2% note of TWA presently held by you, except for the omission of the fourth paragraph thereof.

The acquisition of these aircraft would be conditional upon (1) necessary approvals of holders of our funded debt, (2) approval by the Civil Aeronautics Board, (3) our obtaining satisfactory financing therefor, and (4) approval thereof by TWA's Board of Directors.

Very truly yours,

A. V. Leslie

Gentlemen:

Referring to previous correspondence and conferences relating to the need of Trans World Airlines, Inc. (TWA), for additional jet aircraft, the financing thereof, the interests of Hughes Tool Company and its positions relating thereto, and in an

effort to arrive at a solution of the various questions involved, Hughes Tool Company hereby submits three separate and distinct proposals. You may accept any one or any two or all three of said proposals. This is also to advise you that Mr. Chester C. Davis is authorized to discuss with you said proposals and is fully empowered by Hughes Tool Company to commit Hughes Tool Company with respect to any or all of said proposals.

PROPOSAL NUMBER ONE

Hughes Tool Company hereby offers to guarantee subscription by the stockholders of TWA to an offering of 100 million dollars of additional common stock of TWA (or such other equity security or securities as may be mutually agreed upon), such guarantee to be comparable to the one agreed upon in the Hughes Financing and Subordination Agreement of December, 1960, in that Hughes Tool Company will agree to subscribe to a pro rata share of any such new offering and will subscribe to any portion unsubscribed by the other stockholders of TWA up to a maximum amount of 100 million dollars.

Should you question the ability of Hughes Tool Company to perform or its good faith in submitting the offer represented by this proposal, Hughes Tool Company is prepared

to place in escrow securities of a value commensurate with such undertaking which would be forfeited in the event that Hughes Tool Company fails to perform in accordance with any obligation it undertakes pursuant to this proposal.

The foregoing proposal is open for consideration by you for a period of ten days from the date hereof. If, at the end of that period, you are favorably disposed to an acceptance of this proposal, but desire additional time for a definitive acceptance thereof, and so indicate in writing, Hughes Tool Company would give careful consideration to a reasonable request for an extension of time of the offer represented by this proposal.

It is not a condition of this proposal that TWA acquire, to supplement its fleet of jet aircraft, either Boeing aircraft or Convair aircraft or any combination thereof or any other type of aircraft. The foregoing offer, however, is conditioned upon termination of the existing voting trust with respect to the shares of common stock of TWA owned by Hughes Tool Company and the transfer and return of all of said shares to Hughes Tool Company.

In connection with your consideration of this proposal, Hughes Tool Company points out the following:

(a) Hughes Tool Company would guarantee to TWA an additional 100 million dollars of equity capital which would

not only further secure the lending institutions, but would enable TWA to undertake an aggressive program for acquiring additional jet aircraft which, according to our understanding of your position, are unquestionably desired by TWA. Furthermore, with such additional equity capital, TWA should be able to obtain without difficulty adequate financing from the present lending institutions or others for expanding its present jet aircraft fleet with either Boeing aircraft or Convair aircraft or both as may be determined by the management of TWA.

(b) If this proposal is accepted, it would not be the intention of Hughes Tool Company to change the present management of TWA. The Mortgage Indenture of December 1960, securing the notes held by the lending institutions, contains provisions which, upon termination of the voting trust, adequately protect the noteholders with respect to the management of the Company. If this proposal is accepted, Hughes Tool Company will agree to the continuance of these provisions, which are sometimes called "the management clause", without change.

PROPOSAL NUMBER TWO

Hughes Tool Company, in addition to its having guaranteed the purchase from TWA of 100 million dollars of subordinated income debentures currently offered to the stockholders of TWA, hereby offers to subscribe to an additional $11,235,900 principal amount of such debentures with warrants attached at the offering price thereof, payable in cash at the closing to be held Tuesday, June 13, 1961, provided that TWA will commit itself to acquire, and to apply said sum to

amounts heretofore paid by Hughes Tool Company or now due and payable by it to General Dynamics Corporation with respect to, 13 Model 990 (formerly Model 600) jet aircraft which were heretofore ordered by Hughes Tool Company from General Dynamics Corporation for the benefit of TWA and which are available to TWA, pursuant to that commitment by Hughes Tool Company, upon terms and conditions similar to the terms and conditions under which Hughes Tool Company has heretofore made aircraft available to TWA. Said terms and conditions are more fully described under Proposal Number Three.

PROPOSAL NUMBER THREE

Hughes Tool Company hereby reaffirms that is prepared to ass gn to TWA, at Hughes Tool Company's cost in accordance with past practices of Hughes Tool Company, all rights to acquire from General Dynamics Corporation 13 Model 990 (formerly Model 600) aircraft under a purchase agreement dated November 10, 1960 as amended February 22, 1961 between Hughes Tool Company and General Dynamics Corporation. In addition, Hughes Tool Company reaffirms its willingness to make available or to cause to be made available to TWA on comparable terms four Convair Model 880's which, according to General Dynamics Corporation, will be available for delivery to TWA as follows: one in August, 1961; one in September, 1961 and two in October, 1961.

Said four Convair 880's are in the process of completion by General Dynamics Corporation with the configuration designed by TWA. Upon the acceptance of this proposal Hughes Tool Company will use its best efforts to cause General Dynamics Corporation to make available, if TWA wishes to have them, an additional four Convair 880 M's for delivery at approximately the same time as the four Convair 880's. There is attached hereto, as a separate letter dated June 9, 1961, a more complete statement of this proposal.

You will notice that favorable consideration of Proposal Number Two hereinabove set forth requires action on your part on or before June 13, 1961, because Hughes Tool Company is informed that the availability of the debentures may expire on that date. If you feel that you need additional time to consider Proposal Number Two, Hughes Tool Company is prepared to discuss with you the feasibility of extending such time and to take such action as may be appropriate toward that end.

In order to expedite favorable consideration by you of the above, copies hereof are being delivered to Francis Reed, Esq., of Messrs. Hughes, Hubbard, Blair & Reed, counsel for the voting trustees and to Messrs. Chadbourne, Parke, Whiteside & Wolff, counsel for TWA. Mr. Reed has also been requested to communicate to appropriate individuals, by telephone or otherwise, as promptly as possible the substance of

the above.

Mr. Chester C. Davis, who is empowered to discuss all or any of the above proposals and to take whatever action is necessary to commit Hughes Tool Company with respect thereto, will be continually available to you during the next ten days.

Very truly yours,

HUGHES TOOL COMPANY

By Raymond Holcombe
Vice President

EXECUTIVE OFFICES
TWENTY-SECOND FLOOR GULF BUILDING
HOUSTON 2, TEXAS

RAYMOND H. HOLLIDAY
VICE PRESIDENT

June 9, 1961

Trans World Airlines, Inc.
380 Madison Avenue
New York 17, N. Y.

Attention: Mr. Charles C. Tillinghast, Jr.
President

Dear Sirs:

Referring to the representations made by Mr. Chester C. Davis on behalf of the Hughes Tool Company at a conference held the afternoon of June 2, 1961, this will confirm that Hughes Tool Company has currently on order from General Dynamics Corporation thirteen (13) Model 990 (formerly Model 600) aircraft which are available to Trans World Airlines, Inc. (TWA). Hughes Tool Company claims that TWA is obligated to acquire said aircraft in accordance with past practices. Said 13 aircraft are being manufactured by General Dynamics Corporation under a Purchase Agreement dated November 10, 1960, as amended February 22, 1961 (said Agreement as so amended being hereafter referred to as the "Purchase Agreement"). The Purchase Agreement provides for the delivery of the first of said aircraft in December, 1961 and of the remaining aircraft at the rate of 3 per month thereafter through April, 1962. You should note, however, that such delivery schedule is contingent upon certain

customer equipment being furnished to General Dynamics Corporation by a specified date, and that in order to maintain said delivery schedule immediate action is required by TWA. Hughes Tool Company assumes that you are fully familiar with said Purchase Agreement. If you do not have a copy thereof, you may inspect same at the offices of Chester C. Davis, 120 Broadway, Room 3113, New York, New York, or upon request a duplicate copy will be furnished to you.

Hughes Tool Company hereby reaffirms that it is prepared to assign to TWA all of its rights to acquire said aircraft pursuant to the Purchase Agreement, in accordance with past practices, namely, in consideration of an agreement by TWA to pay:

(1) The balance of the purchase price of said aircraft;

(2) All amounts hereafter payable for customer-furnished equipment installed or to be installed in said aircraft; and

(3) The undepreciated cost of said aircraft to Hughes Tool Company.

As in the past, the phrase "the undepreciated cost to Hughes Tool Company" means the sum of:

(a) All amounts Hughes Tool Company shall have paid the vendors (in cash or with notes) with respect

to said aircraft including amounts paid vendors of customer-furnished equipment;

(b) All other costs, including expenses in connection with the aircraft or other related property; and

(c) An amount representing interest on items (a) and (b) at the rate of 5-1/2% per annum, computed on the average amount of the outstanding payments applicable to such aircraft and by considering the payments made as outstanding from the respective dates such payments were made and until repayment thereof to Hughes Tool Company.

With respect to the suggestion made by Mr. Tillinghast at the abovementioned conference concerning adequate assurances as to the delivery dates of such aircraft, Hughes Tool Company believes that this is a matter which should be discussed between TWA and General Dynamics Corporation. Hughes Tool Company is prepared to participate in any such discussions and to assist TWA to the extent possible in obtaining appropriate assurances from General Dynamics Corporation. In this connection TWA should recognize that, in accordance with past practices and prior to the change in management of TWA, it was customary for qualified personnel of TWA to be made available to General Dynamics Corporation as a contract representative or otherwise

for the purpose of complying with the requirements of any purchase agreement and to assist in and expedite the ultimate delivery of the aircraft covered by such purchase agreement.

As to the terms of payments or payment dates to be made or met by TWA to Hughes Tool Company upon the assumption by TWA of the Purchase Agreement, Hughes Tool Company is prepared to discuss same with TWA at any time. Hughes Tool Company is also willing to furnish to TWA any further information available to Hughes Tool Company which TWA requires with respect to said aircraft and with respect to the advantages which Hughes Tool Company believes would inure to the benefit of TWA from the acquisition of said aircraft by TWA. Hughes Tool Company understands that General Dynamics Corporation is prepared to join in or otherwise cooperate in the assignment of the Purchase Agreement to TWA.

In addition to the above, Hughes Tool Company reaffirms its willingness to make available or to cause to be made available to TWA, on comparable terms, 4 Convair 880's which, according to General Dynamics Corporation, would be available for delivery to TWA as follows:

One in August, 1961
One in September, 1961
Two in October, 1961

The said 4 Convair 880's are in the process of completion with the configuration designed by TWA.

Furthermore, upon the assumption by TWA of the Purchase Agreement Hughes Tool Company would use its best efforts to cause General Dynamics Corporation to make available to TWA an additional 4 Convair 880 M's for delivery at approximately the same time as the 4 Convair 880's hereinabove mentioned.

The availability to TWA of the above mentioned aircraft depends upon immediate action by TWA.

In order to avoid any further delay in making available to TWA the 13 Model 990 aircraft and in order to insure the availability thereof to TWA, will you please indicate your willingness to accept an assignment of the Purchase Agreement by having a duly authorized officer of TWA execute in the space hereinbelow provided a duplicate of this letter enclosed for that purpose and return same to the undersigned or to Chester C. Davis, 120 Broadway, Room 3113, New York, New York.

Very truly yours,

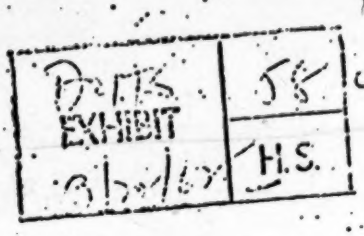
HUGHES TOOL COMPANY

By Raymond Holliday
Vice President

ACCEPTED:

TRANS WORLD AIRLINES, INC.

By _____



June 16, 1961

Mr. Raymond M. Holliday
Hughes Tool Company
Gulf Building
Houston 2, Texas

Dear Mr. Holliday:

This will acknowledge receipt of your letter of June 10, 1961, outlining several proposals. I also have your supplementary letter of June 13, 1961.

As I am sure you appreciate, these proposals are of such a nature as to require consideration by the full Board of Directors of TWA and, in view of this, it will not be possible for me to give you any definitive answers prior to the next scheduled meeting of the Board on June 21, 1961. In the interests of time, however, I would like to make a number of preliminary comments relative to various issues which appear to be presented by your proposals.

Your proposal relative to increasing the Common Stock of TWA is a new one and will have our careful consideration. TWA has suffered greatly from its under-capitalization of the past and we would wish to take every reasonable step to achieve an improvement in our debt-equity ratio.

It clearly will not be possible to dispose of the equity financing proposal within the ten day period suggested in your letter. As you undoubtedly realize, any refinancing under the conditions suggested would require not only the agreement of Hughes Tool Company, TWA and the holders of TWA's senior debt but, in addition, would require approval by the Civil Aeronautics Board. From the standpoint of TWA, it is difficult to see why an arrangement of this type would not be just as valid several months from today as now. Possibly, I misunderstand some of the factors involved but, at the moment, it would appear that the proposal should

be dealt with deliberately and carefully and not under any unnecessary pressure of time.

I have proceeded and will proceed, within the bounds that time permits, to assemble such information as I believe necessary for an intelligent consideration by the Board of Directors and others of the equity financing proposal. You can be of assistance in furnishing further details with respect to your proposals, as from time to time elaboration may seem desirable. At this time I believe further information is required in two areas of your first proposal. They are:

(a) You should advise us as to what securities Hughes Tool Company proposes to place in escrow and, in particular, whether such securities would include the recently issued subordinated debentures of TWA. Obviously, the nature of the securities in question are factors which need to be considered.

(b) Your proposal is conditioned upon termination of the existing Voting Trust. It is my understanding that the lending institutions insisted upon a Voting Trust, in addition to the "management clause", as a necessary condition to making loans to TWA at the end of 1960 and that this decision was reached only after the matter had been considered at great length. We cannot, with any realistic hope of success, ask the lending institutions to reverse an important policy decision made less than six months ago, unless you can supply us with facts not now in our possession. These facts should consist of an expression from you of the reasons which prompt Hughes Tool Company to seek at this time the termination of the Voting Trust and of the changes, internal to Hughes Tool Company or otherwise, which have occurred and will continue which would make desirable now that which was undesirable to them in December, 1960. The mere statement that Hughes Tool does not now intend to change the management is, of course, not sufficient, for otherwise you would not at this time request the termination of the Voting Trust.

Facts with respect to these changes, internal to Hughes Tool Company or otherwise, have particular significance in connection with future financing. Since the establishment of the Voting

Trust was an essential condition to our obtaining our existing loans of $165,000,000, they have been stated to us as obvious requirements of any future financing, unless the causes for the establishment of the Voting Trust have been removed. Present indications are that substantial financing will be needed in the next few years additional to the equity proposed to be added.

You are mindful, I know, that stability of management is an important element in the receipt of credit, and that this is particularly so in the instance of a company whose past history has been marked by a high degree of instability. It is also particularly true of a carrier whose only available security is a chattel having a relatively high depreciation rate and being subject to abnormal risks of obsolescence.

Further in this connection, we cannot ignore the fact that the vesting of control of TWA in Hughes Tool Company will require the approval of the Civil Aeronautics Board. In light of the clear statements of the CAB in connection with such control, it would be foolish as practical businessmen to spend time and effort in seeking to carry out your proposal without some facts that would lead us to believe that there was a reasonable chance of success in this forum. You should furnish us with the information you would propose to present to the CAB in support of your application to reassume control.

Turning to proposal number two, Mr. Rowe explained to Mr. Davis the obvious impracticability of obtaining on a day's notice an answer to this proposal. You have expressed a willingness to extend the period of time. The mechanics of achieving the desired result, should the parties reach agreement, would not seem to present any serious problems. Consequently, I shall discuss the merits of the proposal.

It would hardly seem that an offer to loan TWA an additional $11,235,900 would be sufficient at this late date to induce TWA to purchase the Convair 990s in question. We have reviewed the points raised by Mr. Davis' technical presentation and have not yet perceived any circumstances which should lead us to alter our views as to the superiority of the Boeings for our purposes. The question will again be reviewed by the directors, but I cannot be optimistic that the proferred inducement will be sufficient to cause a change in [illegible]

Addressing myself to proposal number three, we are happy at least to have a more definite proposal than has heretofore been presented to us. It should be noted, however, that you have not even yet advised us of the purchase price of the planes, an obviously essential term. You have also failed to advise us of the form in which Hughes Tool Company would want payment for the assignment of its rights under the Purchase Agreement -- whether in cash or subordinated obligations or otherwise. These are all facts that, in addition to the relative advantages to TWA of the Convair 990s and other equipment, must be taken into consideration in weighing your proposal.

I note the claim on page one of your second letter that TWA is obligated to acquire the thirteen 990 aircraft "in accordance with past practices". Now that Hughes Tool Company has come to the point of making a flat assertion in this regard, I take the occasion unequivocally to deny it and to remind you that over a period of years both Hughes Tool Company and a TWA that was under its complete control consistently maintained to their creditors and stockholders and to government regulatory agencies that even as to aircraft subsequently acquired by TWA no such obligation existed. I also remind you that at ners of the directors meetings in recent months at which the proposed Boeing purchase was discussed did you make any such claim or assertion.

I should also like to note that the assumption on page two of your second letter that we are fully familiar with the Hughes Convair purchase agreement is entirely in error.

You may consider this our final answer that we have no interest in the Convair 880Ms to which you referred. These would be four odd planes in our fleet and would, therefore, present serious operational problems. As to the regular 880s of our design, I would repeat (wi' out any commitment whatsoever) the request already made sever l times by Mr. Leslie that you present us with a

definite proposal, including price. I would also welcome your advice as to whether you would be prepared to rent these planes. If so, the terms should be clearly stated.

Please let us have answers to our various questions at an early date. The matters relating to the purchase of airplanes should have been raised and discussed months ago and the time within which further discussions could lead to any practical results is rapidly disappearing.

Very truly yours,

TRANS WORLD AIRLINES, INC.

PURCHASE AGREEMENT
Relating to
BOEING MODEL 707 AIRCRAFT

THIS AGREEMENT entered into this 13th day of October, 1955, by and between BOEING AIRPLANE COMPANY, a Delaware corporation, with its principal office in the City of Seattle, State of Washington (hereinafter called Boeing) and PAN AMERICAN WORLD AIRWAYS, INC., a New York corporation, with its principal office in the City of New York, State of New York (hereinafter called Buyer);

WITNESSETH:

WHEREAS, Buyer desires to obtain by purchase aircraft of the type hereinafter described for the transportation of passengers, mail, express and cargo, and Boeing desires to manufacture and sell the same to Buyer;

Now, THEREFORE, in consideration of the mutual covenants herein contained the parties hereto agree as follows:

ARTICLE 1. *Subject Matter of Sale.*

Boeing shall manufacture, sell and deliver to Buyer, and Buyer shall purchase from Boeing, the following:

(a) Twenty (20) Boeing Model 707 aircraft (hereinafter called Aircraft) to be manufactured by Boeing in accordance with the terms of this Agreement and the detail specification (hereinafter called Detail Specification) set forth in Exhibit A attached hereto and made a part hereof; and

(b) Spare parts for the Aircraft, as more particularly set forth in Article 11 hereof.

ARTICLE 2. *Delivery of Aircraft.*

(a) Each Aircraft shall be delivered to Buyer assembled and completed ready for flight, and the Buyer shall accept delivery of such Aircraft, at a suitable airport in the State of Washington to be selected by Boeing. Upon written request of Buyer, delivery shall be made at a location in the United States other than the State of Washington to be determined by mutual agreement (except with respect to the Aircraft referred to in paragraph (d) below, at a suitable airport in the United States designated by Buyer) and set forth in a Change Order executed in accordance with Article 11 hereof, which shall also provide for the payment to Boeing by Buyer of an amount representing Boeing's increased costs occasioned thereby. The Aircraft shall be delivered during or before the months set forth in the following schedule:

Month of Delivery	Quantity of Aircraft
December 1958	2
January 1959	2
February 1959	1
March 1959	1
April 1959	2
May 1959	2
June 1959	2
July 1959	1
August 1959	2
September 1959	2
October 1959	2

Boeing agrees, however, to the extent practicable, to use its best efforts to accelerate deliveries of Aircraft under this Agreement, and particularly shall use its best efforts to deliver the first four Aircraft, and the Aircraft referred to in paragraph (d) of this Article, by two months earlier than otherwise provided for in this Agreement.

(b) In the event Boeing gives Buyer at least seven (7) days' notice that it is ready to deliver any Aircraft hereunder, and at the fault or upon the responsibility of Buyer delivery thereof is delayed, Buyer shall promptly reimburse Boeing for all cost or expense, including without limitation reasonable amounts for storage, insurance, preservation and protection, sustained by Boeing resulting from any such delay in excess of one (1) week.

(c) Boeing agrees that

(i) at least six (6) of the Aircraft, duly certificated by the Civil Aeronautics Administration, shall be delivered to Buyer prior to delivery of any Civil Aeronautics Administration certificated Model 707 type commercial aircraft to any other customer; and

(ii) the Aircraft referred to in paragraph (d) of this Article shall be delivered to Buyer prior to delivery of any Model 707 type commercial aircraft to any other customer.

(d) Boeing shall deliver, and Buyer shall accept delivery of, one of the Aircraft in October 1958, notwithstanding that a Civil Aeronautics Administration Type Certificate has not been issued for the Boeing Model 707 type aircraft, for use by Buyer for flight and maintenance training instruction and proving and test purposes. It is intended that such Aircraft shall be one of the Aircraft scheduled for delivery during the month of June 1959 as provided in paragraph (a) of this Article, but in any event the delivery schedule set forth in said paragraph (a) shall be retained with respect to the delivery of Civil Aeronautics Administration certificated Aircraft.

(e) Buyer will, not earlier than five (5) days and not later than sixty (60) days after delivery to Buyer of the second Aircraft to be certificated by the Civil Aeronautics Administration with an Airworthiness Certificate in the transport category in scheduled air carrier service, return said first delivered Aircraft referred to in paragraph (d) above to Boeing at a suitable location in the State of Washington designated by Boeing, and Boeing shall promptly incorporate in said Aircraft all of the changes or alterations referred to in Article 11(c) and in Article 12 hereof which were not incorporated in said Aircraft at the time of delivery thereof to Buyer. The cost of such changes or alterations shall be borne as provided in the article pursuant to which said change or alteration is made. Boeing shall promptly deliver such Aircraft to Buyer after incorporation therein of such changes or alterations. Notwithstanding the foregoing provisions of this paragraph, in the event Buyer does not desire to return said Aircraft to Boeing for incorporation therein of such changes or alterations and if Boeing agrees thereto, Boeing will, promptly after receipt of Buyer's purchase orders therefor, sell and deliver to Buyer, without charge to Buyer, all necessary kits of parts to accomplish such changes or alterations to such Aircraft, and, in such event, said Aircraft shall be deemed, for the purposes of this Agreement, to have been delivered, provided that the provisions of this paragraph (e) shall not relieve Boeing of its obligation to obtain an Airworthiness Certificate for said Aircraft as provided in this Agreement.

(f) In the event Boeing shall not have obtained a Type Certificate for the Model 707 aircraft on or before December 31, 1958, Buyer shall have the right to redeliver to

Boeing the Aircraft referred to in paragraph (d) above at any time after said date and prior to the issuance of the Type Certificate, and at the time of such redelivery said Aircraft shall be in as good condition as when received from Boeing, reasonable wear and tear excepted. Upon such redelivery of said Aircraft, title to and risk of loss of or damage to such Aircraft shall revert to Boeing, and Boeing shall promptly repay to Buyer the amount paid by Buyer to Boeing at the time of delivery thereof. Upon any such redelivery and repayment, it shall be deemed that no delivery of said Aircraft has theretofore been made by Boeing to Buyer hereunder, and Boeing shall thereafter deliver said Aircraft to Buyer in accordance with the delivery schedule set forth in paragraph (a) hereof and all of the other terms of this Purchase Agreement.

ARTICLE 3. *Price of Aircraft.*

(a) The basic price of each Aircraft shall be Four Million Four Hundred and Six Thousand Eight Hundred and Twenty One Dollars ($4,406,821), increased or decreased on account of price changes specified in Change Orders executed in accordance with Article 11 hereof.

(b) The purchase price of each Aircraft shall be the basic price adjusted as follows:

(i) It shall be increased or decreased by the aggregate excess over or deficiency under the prices in the Escalation List, set forth in Exhibit B attached hereto and made a part hereof, of the cost to Boeing of the items in such list included in that Aircraft. Boeing represents that the prices set forth in the Escalation List were used by Boeing as the cost of such items in arriving at the basic price of the Aircraft. Boeing shall use its best efforts to obtain such items at prices which are reasonable under the circumstances and shall notify Buyer as to the firm prices for such items as soon as possible but in any event before March 31, 1956; provided, that in the event such firm prices are not available upon the above date, Boeing shall advise Buyer as soon as such prices are available.

(ii) In the event that on April 5, 1956, Boeing shall be obligated by firm contract to sell to purchasers, including Buyer but excluding the United States Government or any agency thereof, at least sixty-five (65) Model 707 aircraft (substantially identical to the Aircraft described in Exhibit A or Exhibit C hereto except for items required for overseas flights and except for interior passenger equipment and appointments insofar as the differences do not require any structural or system changes) the basic price of each Aircraft hereunder shall be reduced by the amount of Two Hundred Thousand Dollars ($200,000).

(iii) The basic price of each Aircraft shall be decreased by the amount by which $4,300,000 (or, in the event at the time below mentioned at least sixty-five (65) Model 707 aircraft are under firm sale contracts, $4,100,000) exceeds the lowest basic price by which Boeing, at any time prior to the sale by Boeing of one hundred (100) aircraft of such type (including the Aircraft sold hereunder), may have sold or contracted to sell any complete Boeing passenger Model 707 aircraft to other purchasers, except the United States Government or any agency thereof, after appropriate adjustment for changes from the standard Model 707 aircraft of basic configuration.

(c) At least ten (10) days prior to the delivery date of each Aircraft, Boeing shall give to Buyer a written notice stating the increase or decrease in the basic price of such Aircraft by reason of the operation of the provisions contained in paragraph (b) (i) above, and a summary in such reasonable detail as the Buyer may require of the factors occasioning such

increase or decrease. At the request of Buyer, Boeing shall at reasonable intervals (but not oftener than quarterly) during the manufacture of the Aircraft advise Buyer of the estimated amount of adjustment in the basic price of each Aircraft resulting from the application of paragraph (b) (i) above.

ARTICLE 4. *Taxes.*

(a) In addition to the purchase price of the Aircraft and Spare Parts, Buyer shall pay to Boeing, upon demand, any sales, use, gross receipts or excise taxes required to be paid by Boeing as a result of any sale, use, delivery, storage (after tender of delivery in accordance with the provisions hereof) or transfer under this Agreement of any of the Aircraft, Spare Parts, services, instructions and data furnished or delivered hereunder, except any such taxes which Boeing or Buyer may be required to pay as a result of redelivery of an Aircraft by Buyer to Boeing pursuant to Article 2(f) hereof the liability for which shall be borne by Boeing.

(b) If claim is made against Boeing for any such tax, Boeing shall promptly notify Buyer. If seasonably requested by Buyer in writing, Boeing shall, at Buyer's expense, take such action as Buyer may reasonably direct with respect to such asserted liability, and shall not pay such tax except under protest, if protest is necessary. If payment be made, Boeing shall, at Buyer's expense, take such action as Buyer may reasonably direct to recover such payment and shall, if requested, permit Buyer in Boeing's name to file claim or commence an action to recover such payment.

ARTICLE 5. *Payment.*

(a) *Advance Payments for Aircraft.* Buyer shall pay to Boeing as advance payments on the Aircraft to be purchased hereunder, in accordance with the following schedule (each percentage represents an amount equal to that percentage of the aggregate basic price of the Aircraft):

Due Date of Payment	Amount
10 days after date of this Agreement	1%
January 25, 1956	4%
April 1, 1956	2%
July 1, 1956	2%
October 1, 1956	3%
January 1, 1957	3%
April 1, 1957	3%
July 1, 1957	3%
October 1, 1957	3%
January 1, 1958	3%
April 1, 1958	3%
July 1, 1958	3%

amounting to a total of 33% of the aggregate basic price of the Aircraft.

(b) *Payment for Aircraft.* Upon the delivery of each Aircraft to Buyer hereunder, Buyer shall pay the purchase price thereof as follows: There shall be credited against such purchase price an amount determined by dividing the aggregate of the amounts advanced by Buyer to Boeing under paragraph (a) above, less the aggregate amount of such advance payments previously credited against the purchase price of Aircraft delivered hereunder,

PURCHASE AGREEMENT

Relating to

BOEING MODEL 707-321 AIRCRAFT

THIS AGREEMENT entered into this 19 day of December, 1955, by and between BOEING AIRPLANE COMPANY, a Delaware corporation, with its principal office in the City of Seattle, State of Washington (hereinafter called Boeing) and PAN AMERICAN WORLD AIRWAYS, INC., a New York corporation, with its principal office in the City of New York, State of New York (hereinafter called Buyer);

WITNESSETH:

WHEREAS, Buyer desires to obtain by purchase aircraft of the type hereinafter described for the transportation of passengers, mail, express and cargo, and Boeing desires to manufacture and sell the same to Buyer;

NOW, THEREFORE, in consideration of the mutual covenants herein contained the parties hereto agree as follows:

ARTICLE 1. *Subject Matter of Sale.*

Boeing shall manufacture, sell and deliver to Buyer, and Buyer shall purchase from Boeing, the following:

(a) Twelve (12) Boeing Model 707-321 aircraft (hereinafter called Aircraft) to be manufactured by Boeing in accordance with the terms of this Agreement and the detail specification (hereinafter called Detail Specification) set forth in Exhibit A attached hereto and made a part hereof; and

(b) Spare parts for the Aircraft, as more particularly set forth in Article 14 hereof.

ARTICLE 2. *Delivery of Aircraft.*

(a) Each Aircraft shall be delivered to Buyer assembled and completed ready for flight, and the Buyer shall accept delivery of such Aircraft, at a suitable airport in the State of Washington to be selected by Boeing. Upon written request of Buyer, delivery shall be made at a location in the United States other than the State of Washington to be determined by mutual agreement and set forth in a Change Order executed in accordance with Article 11 hereof, which shall also provide for the payment to Boeing by Buyer of an amount representing Boeing's increased costs occasioned thereby. The Aircraft shall be delivered during or before the months set forth in the following schedule:

Month of Delivery	Quantity of Aircraft
August 1959	1
September 1959	2
October 1959	2
November 1959	2
December 1959	2
January 1960	2
February 1960	1

Boeing agrees, however, to the extent practicable, to use its best efforts to accelerate deliveries of Aircraft under this Agreement.

(b) In the event Boeing gives Buyer at least seven (7) days' notice that it is ready to deliver any Aircraft hereunder, and at the fault or upon the responsibility of Buyer delivery thereof is delayed, Buyer shall promptly reimburse Boeing for all cost or expense, including without limitation reasonable amounts for storage, insurance, preservation and protection, sustained by Boeing resulting from any such delay in excess of one (1) week.

(c) Boeing agrees that at least five (5) of the Aircraft shall be delivered to Buyer prior to delivery of any Model 707-320 (Intercontinental) series commercial aircraft to any other customer.

ARTICLE 3. *Price of Aircraft.*

(a) The basic price of each Aircraft shall be Five Million Two Hundred Thirty-five Thousand Two Hundred and Eighty-six Dollars ($5,235,286), increased or decreased on account of price changes specified in Change Orders executed in accordance with Article 11 hereof.

(b) The purchase price of each Aircraft shall be the basic price adjusted as follows:

(i) It shall be increased or decreased by the amount by which the cost to Boeing of the Automatic Pilot included in such Aircraft exceeds or is less than Twenty Seven Thousand Five Hundred Dollars ($27,500) which Boeing represents was used by Boeing as the cost of such item in arriving at the basic price of the Aircraft. Boeing shall use its best efforts to obtain such item at a price which is reasonable under the circumstances and shall notify Buyer as to the firm price for such item as soon as possible but in any event before March 31, 1956; provided, that in the event such firm price is not available upon the above date, Boeing shall advise Buyer as soon as such price is available.

(ii) The basic price of each Aircraft shall be decreased by the amount by which $5,250,000 exceeds the lowest basic price for which Boeing, at any time before Boeing shall have under order, by firm contracts of sale, one hundred (100) Model 707 aircraft (including the Aircraft sold hereunder), may have sold or contracted to sell any complete Boeing passenger Model 707-320 (Intercontinental) series aircraft (or any other aircraft of a type conforming to the basic engineering design of the Model 707-320 (Intercontinental) series except for body length) powered by Pratt & Whitney Model JT4 (J-75) type engines to any other purchaser, except the United States Government or any agency thereof, after appropriate adjustment for changes from the standard Model 707-320 (Intercontinental) series aircraft of basic configuration powered by such type engines.

(c) At least ten (10) days prior to the delivery date of each Aircraft, Boeing shall give to Buyer a written notice stating the increase or decrease in the basic price of such Aircraft by reason of the operation of the provisions contained in paragraph (b) (i) above, and a summary in such reasonable detail as the Buyer may require of the factors occasioning such increase or decrease. At the request of Buyer, Boeing shall at reasonable intervals (but not oftener than quarterly) during the manufacture of the Aircraft advise Buyer of the estimated amount of adjustment in the basic price of each Aircraft resulting from the application of paragraph (b) (i) above.

ARTICLE 4. *Taxes.*

(a) In addition to the purchase price of the Aircraft and Spare Parts, Buyer shall pay to Boeing, upon demand, any sales, use, gross receipts or excise taxes required to be paid by

Boeing as a result of any sale, use, delivery, storage (after tender of delivery in accordance with the provisions hereof) or transfer under this Agreement of any of the Aircraft, Spare Parts, services, instructions and data furnished or delivered hereunder.

(b) If claim is made against Boeing for any such tax, Boeing shall promptly notify Buyer. If seasonably requested by Buyer in writing, Boeing shall, at Buyer's expense, take such action as Buyer may reasonably direct with respect to such asserted liability, and shall not pay such tax except under protest, if protest is necessary. If payment be made, Boeing shall, at Buyer's expense, take such action as Buyer may reasonably direct to recover such payment and shall, if requested, permit Buyer in Boeing's name to file claim or commence an action to recover such payment.

ARTICLE 5. *Payment.*

(a) *Advance Payments for Aircraft.* Buyer shall pay to Boeing as advance payments on the Aircraft to be purchased hereunder, in accordance with the following schedule (each percentage represents an amount equal to that percentage of the aggregate basic price of the Aircraft):

Due Date of Payment	Amount
10 days after date of this Agreement	1%
January 25, 1956	4%
April 1, 1956	2%
July 1, 1956	2%
October 1, 1956	3%
January 1, 1957	3%
April 1, 1957	3%
July 1, 1957	3%
October 1, 1957	3%
January 1, 1958	3%
April 1, 1958	3%
July 1, 1958	3%

amounting to a total of 33% of the aggregate basic price of the Aircraft.

(b) *Payment for Aircraft.* Upon the delivery of each Aircraft to Buyer hereunder, Buyer shall pay the purchase price thereof as follows: There shall be credited against such purchase price an amount determined by dividing the aggregate of the amounts advanced by Buyer to Boeing under paragraph (a) above, less the aggregate amount of such advance payments previously credited against the purchase price of Aircraft delivered hereunder, by the number of Aircraft remaining to be delivered (including the one being delivered), and Buyer shall pay to Boeing the difference between the amount of such credit and the basic price of such Aircraft adjusted pursuant to Article 3(b) hereof to the date of delivery of such Aircraft.

(c) *Payment in U. S. Funds.* All payments hereunder shall be made in lawful money of the United States, or by a cashier's check of a member bank, located in Seattle, Washington, of the United States Federal Reserve System, payable in such money.

(d) *Repayment of Advance Payments.* In any of the following events:

(i) delivery by Boeing to Buyer in accordance with the provisions of this Agreement of all of the Aircraft to be purchased hereunder;

(ii) termination of this Agreement by Buyer under Article 10(b) hereof;

(iii) termination of this Agreement by either party under Article 10(c) hereof;

(iv) termination of this Agreement by Buyer under Article 21 hereof as to any or all Aircraft and Spare Parts then undelivered hereunder; or

(v) termination of this Agreement by Buyer by reason of a substantial default of Boeing in the performance of its obligations hereunder, if such default shall under the applicable law entitle Buyer to terminate this Agreement; provided, however, that no such default of Boeing hereunder shall entitle Buyer to terminate this Agreement or relieve Buyer of its obligations hereunder unless Boeing shall have failed to remedy such default within thirty (30) days after receiving notice thereof from Buyer;

then, in any such event, Boeing shall forthwith repay to Buyer the entire amount of the advance payments, if any, received by Boeing hereunder, less (1) the aggregate amount of such advance payments previously credited against the purchase price of Aircraft theretofore delivered to Buyer hereunder; (2) the amount determined to be due to Boeing from Buyer pursuant to the provisions of Article 10(b) hereof, if this Agreement is terminated by Buyer pursuant to said article; and (3) if this Agreement is terminated by Buyer under Article 21 hereof as to any, but not all, Aircraft and Spare Parts then undelivered hereunder, less the aggregate amount of such advance payments to be credited against the purchase price of any remaining Aircraft as to which this Agreement is not so terminated. In the event of termination of this Agreement by Buyer as provided in subparagraph (v) above, such repayment shall be without prejudice to any rights which Buyer may have under the applicable law.

ARTICLE 6. *Option to Purchase Additional Aircraft.*

In consideration of the payment by Buyer to Boeing, simultaneously with the execution of this Agreement, of the amount of Two Hundred Fifty Thousand Dollars ($250,000), receipt of which is hereby acknowledged by Boeing, Boeing hereby grants to Buyer an option to purchase up to an additional ten (10) Model 707-321 aircraft conforming to the Detail Specification, subject to all of the provisions of this Agreement except as otherwise specifically provided in this Article 6, said additional aircraft to be delivered by Boeing to Buyer during or before the months set forth in the following schedule in the event of the exercise of such option:

Month of Delivery	Quantity of Aircraft
March 1960	2
April 1960	1
May 1960	2
June 1960	1
July 1960	2
August 1960	1
September 1960	1

It is understood that Boeing has reserved for delivery to another customer or customers three (3) Model 707-320 (Intercontinental) series aircraft to be delivered at the rate of one (1) aircraft per month during the months of February, April and June, 1960, respectively, and in the event Boeing does not enter into a firm agreement or agreements with such other customer or customers with respect to any one of such aircraft, Boeing will accelerate the schedule indicated above so as to deliver one (1) additional aircraft during the month for

which delivery of such aircraft has been so reserved and one (1) aircraft shall be removed from the end of such schedule for each aircraft as to which the schedule for delivery is so accelerated. Upon request from Buyer at any time prior to January 15, 1956, Boeing shall promptly notify Buyer by telegraph as to whether it has entered into a firm agreement or agreements with such other customer or customers for the sale of any one (1) or more of such three (3) aircraft. Such option may be exercised by Buyer by giving notice to Boeing not later than January 15, 1956. If such option is exercised as to less than all of the additional ten (10) aircraft referred to above, the additional aircraft to be so purchased shall be those aircraft scheduled for earliest delivery as specified above in this Article 6. In the event of the exercise of such option by Buyer as to one or more of such additional aircraft:

(a) Paragraph (a) of Article 1 of this Agreement shall be deemed amended so as to increase the number of Aircraft to be purchased hereunder by the number of aircraft as to which the option is so exercised.

(b) The first advance payment in the amount of one percent (1%) of the aggregate basic price of such additional aircraft as to which the option is so exercised shall be paid by Buyer to Boeing ten (10) days after the date of exercise of the option, the second such payment in the amount of four per cent (4%) of such aggregate basic price shall be paid by Buyer to Boeing on or before March 1, 1956, and the remaining advance payments, commencing with the payment due on April 1, 1956, shall be made in accordance with the provisions of paragraph (a) of Article 5 of this Agreement; provided, that the amount of Two Hundred and Fifty Thousand Dollars ($250,000) paid by Buyer to Boeing in accordance with the foregoing provisions of this Article 6 shall be credited against the first advance payments to be made with respect to such aircraft until the full amount has been so credited.

ARTICLE 7. *Warranty.*

(a) Boeing agrees, represents and warrants that the Boeing Model 707-321 type aircraft will be certificated by the Civil Aeronautics Administration with a Type Certificate and that each Aircraft, prior to and at the time of delivery thereof, will be certificated by the Civil Aeronautics Administration with an appropriate Airworthiness Certificate in the transport category, in scheduled air carrier service, within the meaning of the Civil Air Regulations issued by the Civil Aeronautics Board, at takeoff and landing weights which will permit compliance with the performance guarantees set forth in the Detail Specification and under the conditions set forth therein; but said Aircraft need not meet the Civil Aeronautics Administration requirements for specific operation or operations on Buyer's routes. Boeing further agrees, represents and warrants that, prior to and at the time of delivery of each of the Aircraft, there will be in effect a release from the appropriate agency or agencies of the United States Government of the engines described in the Detail Specification, so as to permit installation of such engines in the Aircraft and delivery of the Aircraft (with such engines installed) to Buyer for use on its certificated air routes.

(b) Boeing agrees, represents and warrants that each Aircraft and Spare Part delivered under this Agreement shall, at the time of delivery thereof to Buyer, conform to the Detail Specification (excepting such portions of the Detail Specification as are stated not to be guaranteed by Boeing and subject to such changes therein as are made pursuant to Article 11 hereof entitled "Changes") and shall be free from defects in material and workmanship, and from defects or faults in design in view of the state of the art at the time of design thereof. Such warranty shall not apply to Buyer-Furnished Equipment or to accessories, equipment or parts purchased by Boeing unless they are manufactured pursuant to Boeing's detailed

(Pan American-Boeing Purchase Agreement-B707-321s, 12/19/55)

BOEING AIRPLANE COMPANY
SEATTLE 14, WASHINGTON

TELEPHONE MADISON 2222
IN REPLY REFER TO

December 19, 1955

Pan American World Airways, Inc.
135 East 42nd Street
New York 17, New York

Attention: Mr. Franklin Gledhill,
Vice President

Subject: PAA/Boeing Purchase Agreement dated October 13, 1955 Re Model 707 Aircraft, and Purchase Agreement Re Model 707-321 Aircraft

Dear Sirs:

We are enclosing herewith four (4) execution copies of each of the following proposed agreements between Boeing Airplane Company and Pan American World Airways, Inc., which agreements have been executed on behalf of Boeing:

A. Supplemental Agreement No. 2 to the Purchase Agreement dated October 13, 1955 between our respective companies, relating to Boeing Model 707 aircraft, reducing the number of Aircraft to be purchased by Pan American thereunder from twenty (20) to ten (10) and amending the Purchase Agreement in certain other respects.

B. Purchase Agreement relating to the purchase by Pan American of twelve (12) Boeing Model 707-321 aircraft.

C. Letter Agreement relating to the Purchase Agreement referred to in B above, and entitled "PAA/Boeing Model 707-321 Purchase Agreement - Assignment to Foreign Airlines and PAA Special Features".

This letter, when accepted by you and returned to us with copies of the above mentioned agreements executed on behalf of Pan American, will evidence our further agreement with respect to the following matters:

1. The rights granted to Pan American in accordance with the provisions of Article 19(c) of the Purchase Agreement dated October 13, 1955, as amended by Supplemental Agreement No. 2,

are in addition to the rights granted to Pan American in accordance with the provisions of paragraph 2 of the Letter Agreement referred to in C above.

2. In regard to the provisions of paragraph 1 of Supplemental Agreement No. 2 to the Purchase Agreement dated October 13, 1955, reducing the number of Aircraft to be purchased thereunder from twenty (20) to ten (10), it is understood and agreed that the amount by which the first advance payment heretofore paid by Pan American to Boeing pursuant to Article 5(a) of said Purchase Agreement exceeds one percent (1%) of the aggregate basic price of the ten (10) Aircraft to be purchased under said Agreement, amended as provided in Supplemental Agreement No. 2 thereto, shall be credited against the first advance payment due from Pan American to Boeing pursuant to the provisions of Article 5(a) of the Purchase Agreement relating to the Model 707-321 aircraft.

3. Paragraph 3 of the Letter Agreement between our respective companies dated November 8, 1955, relating to the Purchase Agreement dated October 13, 1955, is revised in its entirety to read as follows:

"3. If delivery of the first certificated Aircraft shall be delayed beyond December, 1958, by reason of the failure of the appropriate agency or agencies of the United States Government to grant a security release permitting installation in the Aircraft and delivery to Buyer of the engines described in the Detail Specification for use on Buyer's certificated air routes, Boeing shall pay to Buyer $250,000 for each month of such delay after December, 1958. If the first certificated Aircraft shall be delivered prior to December, 1958, and if deliveries of the remaining certificated Aircraft shall follow, commencing with the next succeeding month, at a rate not less than specified for deliveries commencing in January, 1959, as set forth in paragraph (a) of Article 2 of the Purchase Agreement, as amended, Buyer shall pay to Boeing $250,000 for each month by which the delivery of said first certificated Aircraft shall be prior to December, 1958. For the purpose of calculating any payment to be made pursuant to this paragraph 3, the day of delivery within a calendar month shall be disregarded and each calendar month shall be treated as one full month."

4. Boeing hereby grants to Pan American the following options, in addition to the right granted to Pan American to cancel the Purchase Agreement dated October 13, 1955, as provided in Article 2(g) of said Agreement as amended by Supplemental Agreement No. 2:

(a) Upon the exercise by Pan American, not later than January 15, 1956, of the option provided for in Article 6 of the Purchase Agreement relating to the Model 707-321

Pan American World Airways, Inc. December 19, 1955

aircraft, to the extent of five (5) or more additional Model 707-321 aircraft, Pan American shall have the further right without Boeing's consent,

(i) in addition to the rights set forth in the Letter Agreement entitled "PAA/Boeing Model 707-321 Purchase Agreement - Assignment to Foreign Airlines and PAA Special Features", referred to in paragraph C above, and

(ii) notwithstanding any limitations contained in the Purchase Agreement dated October 13, 1955,

to resell, lease, transfer, or assign its rights with respe to the first six (6) Aircraft to be purchased under the Purchase Agreement dated October 13, 1955, as amended.

(b) Pan American shall have the option, exercisable by giving written notice to Boeing on or before February 4, 1956, to elect to substitute for the Detail Specification attached to the Purchase Agreement dated October 13, 1955, as Exhibit A:

(i) the American Airlines detail specification provided for in the definitive contract between Boeing and American Airlines (Boeing agreeing to use its best efforts to obtain such detail specification, and submit a copy thereof to Pan American, by January 15, 1956), except that the requirements for Pan American's overseas operations set forth in its Detail Specification shall be retained; or

(ii) the said American Airlines detail specification referred to (i) above, except that said overseas requirements and the Pan American interior configuratich and colors shall be retained; provided, that the doors, windows and systems, other than those required for Pan American's overseas operations, shall conform to the American Airlines configuration.

Boeing's prices for such substitutions shall not exceed those charged to American Airlines.

(c) Provided Pan American shall have exercised its option to cancel the Purchase Agreement dated October 13, 1955, as to one (1) or more of the last four (4) Aircraft to be delivered thereunder, as provided in Article 2(g) of said Agreement as amended by Supplemental Agreement No. 2, and provided Pan American shall have exercised the option provided for in subparagraph (b) above, upon written notice given to Boeing by Pan American at any time on or before February 4, 1956, Boeing agrees that:

(i) it will, upon written request of American Airlines, enter into an amendment to its contract with American Airlines to accelerate deliveries of Model 707 aircraft thereunder, so as to deliver one (1) additional Aircraft thereunder during each month in which an Aircraft, as to which the Purchase Agreement dated October 13, 1955 has been cancelled pursuant to the provisions of Article 2(a) thereof, was scheduled for delivery to Pan American, and terminate such contract as to one (1) of the aircraft scheduled for later delivery to American Airlines thereunder, and

(ii) it will enter into an amendment to the Purchase Agreement dated October 13, 1955, to provide for the return to Boeing of the first six (6) Aircraft to be delivered to Pan American thereunder, and the performance by Boeing of the modification work necessary to conform said Aircraft with the American Airlines configuration for its Model 707 aircraft, at Boeing's prices therefor which shall be reasonable; and

(iii) upon the written request of American Airlines, it will enter into an amendment to the contract between Boeing and American Airlines, revising the schedule for delivery of Model 707 aircraft so as to terminate such contract with respect to the last six (6) aircraft to be purchased thereunder.

The time for performance of the modification work referred to in (ii) above, and the terms and conditions thereof, shall be mutually satisfactory to Boeing and Pan American. The exercise of the option provided for in this subparagraph (c) is subject to Pan American giving written notice to Boeing at the time of or prior to the notice from Pan American referred to above, that it has entered into an agreement with American Airlines, pursuant to the rights granted to Pan American in accordance with the provisions of subparagraph (a) above, providing for the sale by Pan American to American Airlines of, or the assignment by Pan American to American Airlines of its rights with respect to, the first six (6) Aircraft to be delivered under the Purchase Agreement dated October 13, 1955, as amended.

5. The Letter Agreements entered into between our respective companies on October 13, 1955, relating to the Purchase Agreement dated October 13, 1955, shall remain in full force and effect, to the extent that the same have not heretofore been cancelled, except as follows:

(a) The Letter Agreement entitled "PAA/Boeing Model 707 Purchase Agreement - Options re Model JT4A-3 Engines", as amended, is hereby cancelled and all rights and obligations thereunder are terminated.

(b) With respect to the Letter Agreement entitled "PAA/Boeing Model 707 Purchase Agreement - Engines Prices and Availability of Model JT3D-5 Engines", paragraph 2 thereof and all references in said Letter Agreement and all

visions thereof relating to the Model JT4A-3 engines are hereby deleted.

(c) Paragraph 1 of the Letter Agreement entitled "PAA/Boeing Model 707 Purchase Agreement - Assignment to Foreign Airlines and PAA Special Features" is hereby cancelled and all rights or obligations thereunder are terminated. The provisions of paragraph 1 of said Letter Agreement are superseded by the provisions set forth in paragraphs 1 and 2 of the Letter Agreement referred to in C above.

6. The letters dated October 13, 1955 (Nos. 550-0-141 and 550-0-150) from Boeing to Pan American shall remain in full force and effect, and none of the prices set forth therein for Boeing Model 707 Master Changes or Proposed Master Changes shall be subject to any increase by reason of the execution of Supplemental Agreement No. 2 to the Purchase Agreement dated October 13, 1955.

7. All notices required or permitted to be given in accordance with the provisions set forth above shall be given in accordance with the provisions of the Article entitled "Notices and Requests" set forth in the respective Model 707 and Model 707-321 Purchase Agreements.

8. Press releases and other publicity with respect to the enclosed agreements and the matters set forth above will be prepared jointly, for publication not earlier than the afternoon of December 22, 1955.

The enclosed agreements referred to in A, B, and C above, and the matters set forth above, constitute the amendment to the Purchase Agreement dated October 13, 1955, the definitive Model 707-321 Purchase Agreement and other related agreements referred to in the Memoranda of Understanding and Letter Agreement between our respective companies dated December 14, 1955, and supersede said Memoranda and Letter Agreement.

If the enclosed forms of Supplemental Agreement No. 2, Purchase Agreement and Letter Agreement, and the matters set forth above, are acceptable to you, will you please indicate your acceptance on the enclosed copy of this letter and return the same to us with two (2) copies of the Supplemental Agreement, Purchase Agreement, and Letter Agreement, executed on behalf of Pan American.

Very truly yours,

PURCHASE AGREEMENT

Relating to

BOEING MODEL 707-123 AIRCRAFT

THIS AGREEMENT entered into this First day of March, 1956, by and between BOEING AIRPLANE COMPANY, a Delaware corporation, with its principal office in the City of Seattle, State of Washington (hereinafter called Boeing) and AMERICAN AIRLINES, INC., a Delaware corporation, with its principal office in the City of New York, State of New York (hereinafter called Buyer):

WITNESSETH:

WHEREAS, Buyer desires to obtain by purchase aircraft of the type hereinafter described for the transportation of passengers, mail, express and cargo and Boeing desires to manufacture and sell the same to Buyer;

Now, THEREFORE, in consideration of the mutual covenants hereinafter contained the parties hereto agree as follows:

ARTICLE 1.

Subject Matter of Sale.

Boeing shall manufacture, sell and deliver to Buyer, and Buyer shall purchase from Boeing, upon the terms and conditions hereinafter set forth, the following:

(a) Thirty (30) Boeing Model 707-123 aircraft (hereinafter called the Aircraft) to be manufactured by Boeing in accordance with the detail specification (No. D-17231, dated October 21, 1955, as revised to February 24, 1956 and identified by signature of the parties on the date hereof) set forth as Exhibit A attached hereto and hereby made a part hereof (such detail specification, as the same may be amended and modified from time to time pursuant to Article 11 hereof, being hereinafter called the Detail Specification), provided that Buyer shall at all times and from time to time by notice to Boeing prior to January 15, 1958 have the right to terminate, in reverse order of delivery and without charge, its obligation to purchase any one (1) or more of the last five (5) of such Aircraft to be delivered, as provided in paragraph (a) of Article 2 hereof; and

(b) Spare parts (as referred to in Article 14 hereof), together with the special tools and equipment therein referred to, for the Aircraft, as more particularly set forth in said Article 14.

ARTICLE 2.

Delivery of Aircraft.

(a) Each Aircraft shall be delivered to Buyer in good operating condition, and Buyer shall accept delivery of such Aircraft, at a suitable airport in the State of Washington to be selected by Boeing or at such other place as may be mutually agreed upon by a Change Order providing for delivery at such

other place and for the payment to Boeing by Buyer of Boeing's increased costs, if any, occasioned thereby. The Aircraft shall be delivered during or before the months set forth in the following schedule:

Month of Delivery	Quantity of Aircraft
February, 1959	2
March, 1959	2
April, 1959	2
May, 1959	3
June, 1959	2
July, 1959	2
August, 1959	1
September, 1959	1
October, 1959	1
November, 1959	1
December, 1959	1
January, 1960	1
February, 1960	1
March, 1960	1
April, 1960	2
May, 1960	2
June, 1960	1
July, 1960	1
August, 1960	1
September, 1960	1
October, 1960	1

(b) In the event Boeing gives Buyer at least seven (7) days' notice that it is ready to deliver any Aircraft hereunder, and at the fault or upon the responsibility of Buyer delivery thereof is delayed, Buyer shall promptly reimburse Boeing for all cost or expense, including without limitation reasonable amounts for storage, insurance, preservation and protection, sustained by Boeing resulting from any such delay in excess of one (1) week.

(c) Boeing shall deliver, and Buyer shall accept delivery of, one of the Aircraft in November, 1958, notwithstanding that an appropriate Civil Aeronautics Authority Type Certificate has not been issued for the Aircraft, for use by Buyer for flight and maintenance training instruction and proving and test purposes. It is intended that such Aircraft shall be one of the Aircraft scheduled for delivery during the month of May, 1959, as provided in paragraph (a) of this Article, but in any event the delivery schedule set forth in said paragraph (a) shall be retained with respect to the delivery of Civil Aeronautics Authority certificated Aircraft.

(d) Buyer will, not prior to, and not later than fifteen (15) days after, delivery to Buyer of the notice provided for in paragraph (b) above, in respect to the first Aircraft to be certificated by the Civil Aeronautics Authority with an Airworthiness Certificate in the transport category in scheduled air carrier service, return said first delivered Aircraft referred to in paragraph (c) above to Boeing at a suitable location in the State of Washington designated by Boeing, and Boeing shall promptly incorporate in said Aircraft all of the changes or alterations referred to in Article 12 hereof which were not incorporated in said Aircraft at the time of delivery thereof to Buyer, the cost of such changes or alterations to be borne as therein provided. Boeing shall promptly deliver such Aircraft to Buyer after incorporation therein of such changes or alterations. Notwithstanding the foregoing provisions of this paragraph (d), in the event Buyer does not desire to return said Aircraft to Boeing for incorporation therein of such changes or alterations and if Boeing agrees thereto, Boeing will, promptly after receipt of Buyer's purchase orders therefor, sell and deliver to Buyer, without charge to Buyer, all necessary kits of parts to accomplish such changes or alterations to such Aircraft and will pay to Buyer all reasonable charges for incorporation of such kits of parts in such Aircraft, and, in such event, said Aircraft shall be deemed, for the purposes of this Agreement, to have been delivered, provided that the

provisions of this paragraph (d) shall not relieve Boeing of its obligation to obtain an Airworthiness Certificate for said Aircraft as provided in this Agreement.

(e) Prior to delivery of the first Aircraft hereunder (i) Boeing shall request the manufacturer of the engines to appraise the installation thereof in such Aircraft as accomplished by Boeing, and (ii) Boeing shall request the manufacturer of the automatic pilot and integrated flight system to appraise the installation thereof in such Aircraft as accomplished by Boeing. In the event that the installation of the engines or the automatic pilot and integrated flight system is changed on any Aircraft delivered after delivery of the first Aircraft hereunder or after any prior appraisal requested hereunder, Boeing will request the manufacturer thereof to appraise the installation as so changed. Boeing will furnish to Buyer copies of each such appraisal received by Boeing. Any failure of such engines or automatic pilot and integrated flight systems to operate in accordance with the manufacturer's specification therefor caused by any item of such installation which the manufacturer has, upon any such written appraisal, found unacceptable and set forth the reasons therefor, shall as between the parties hereto be deemed to be a failure of Boeing to comply with subdivisions (i), (ii) and/or (iii) of the last sentence of paragraph (b) of Article 7 hereof.

ARTICLE 3.

Price of Aircraft.

(a) The basic price of each Aircraft shall be Four Million Six Hundred Fifty-two Thousand Four Hundred Sixty Dollars ($4,652,460), increased or decreased, as the case may be, by the net amount of all price changes specified in Change Orders applicable thereto executed in accordance with Article 11 hereof.

(b) The purchase price of each Aircraft shall be the basic price increased or decreased by the amount by which the cost to Boeing of the Automatic Pilot included in such Aircraft exceeds or is less than Twenty-seven Thousand Five Hundred Dollars ($27,500), which Boeing represents was used by Boeing as the cost of such item in arriving at the basic price of the Aircraft. Boeing will use its best efforts to obtain such item at a price which is reasonable under the circumstances and will notify Buyer as to the firm price therefor as soon as possible.

(c) Boeing shall give to Buyer a written notice stating the increase or decrease in the basic price of the Aircraft by reason of the operation of the provisions contained in paragraph (b) above promptly after the occurrence thereof but in any event not less than ten (10) days prior to the delivery date of each Aircraft.

ARTICLE 4.

Taxes.

(a) In addition to the purchase price of the Aircraft, spare parts, special tools and equipment, Buyer shall pay to Boeing, upon demand, any sales or use taxes or the amount of any new or increased gross receipts or excise taxes required to be paid by Boeing as a result of any sale, use, delivery, storage or transfer under this Agreement.

(b) If claim is made against Boeing for any such tax, Boeing shall promptly notify Buyer. If seasonably requested by Buyer in writing, Boeing shall, at Buyer's expense, take such action as Buyer may reasonably direct with respect to such asserted liability, and shall not pay such tax except under protest, if protest is necessary. If payment be made, Boeing shall, at Buyer's expense, take such action as Buyer may reasonably direct to recover such payment and shall, if requested, permit Buyer in Boeing's name to file claim or commence an action to recover such payment.

ARTICLE 5.

Payment.

(a) *Advance Payments for Aircraft.* Buyer shall pay to Boeing, as advance payments on all Aircraft to be purchased hereunder, in accordance with the following schedule (each percentage representing

amount equal to that percentage of the aggregate basic price of the maximum number of Aircraft that to be purchased hereunder at the time such payment is made):

Due date of Payment	Amount
On or before date of this Agreement	5%
August 1, 1956	2%
November 1, 1956	2%
February 1, 1957	3%
May 1, 1957	3%
August 1, 1957	3%
November 1, 1957	3%
February 1, 1958	3%
May 1, 1958	3%
August 1, 1958	3%
November 1, 1958	3%

amounting to a total of 33% of the aggregate basic price of all such Aircraft.

(b) *Payment for Aircraft.* Upon the delivery of each Aircraft to Buyer hereunder (including the Aircraft to be delivered to Buyer under Article 2(c) hereof) Buyer shall pay the purchase price thereof as follows: There shall be credited against such purchase price an amount determined by dividing the aggregate of the advance payments theretofore made by Buyer to Boeing under paragraph (a) above, less the aggregate amount of such advance payments previously credited against the purchase price of Aircraft delivered hereunder, by the number of Aircraft remaining to be delivered (including the one being delivered), and Buyer shall pay to Boeing the difference between the amount of such credit and the purchase price of such Aircraft determined in accordance with paragraph (b) of Article 3 hereof.

(c) *Payment in United States Funds.* All payments hereunder shall be made in lawful money of the United States of America, or by a cashier's check of a member bank, located in Seattle, Washington, of the United States Federal Reserve System, payable in such money, or at Buyer's election may be made by unconditional credit to Boeing's account, in Federal Reserve funds, in The First National City Bank of New York in New York City, New York, or such other bank in New York City, New York, as Boeing may designate.

(d) *Credit of Advance Payments.* In the event that Buyer notifies Boeing pursuant to paragraph (a) of Article 1 hereof that Buyer is terminating its obligation to purchase one or more of the Aircraft as provided in said paragraph (a), Boeing shall credit the aggregate amount of the previously made advance payments applicable to the Aircraft covered by such notice to the next advance payment or advance payments to be made by Buyer pursuant to paragraph (a) of this Article 5.

ARTICLE 6.

Authority to Use Government-Owned Facilities.

Boeing represents to Buyer that Boeing will have authority from the Government of the United States for the use by Boeing for the manufacture of the Aircraft of such facilities (which term as used in this Article 6 includes, without limitation, special tooling, dies and jigs) to which the Government has any title, as owner or otherwise, or in which the Government has any interest, right or privilege, as are used by Boeing in the manufacture of the Boeing Model KC-135 airplane for the U. S. Air Force and as may be necessary for the manufacture of the Aircraft in accordance with the delivery schedules herein provided.

SUPPLEMENTAL AGREEMENT NO. 5

TO

PURCHASE AGREEMENT NO. 8 DATED MARCH 1, 1956

BETWEEN

BOEING AIRPLANE COMPANY

AND

AMERICAN AIRLINES, INC.

RELATING TO BOEING MODEL 707-120 SERIES AIRCRAFT

MODEL 707-123

THIS SUPPLEMENTAL AGREEMENT entered into as of this 24th day of July, 1958, by and between BOEING AIRPLANE COMPANY, a Delaware corporation (hereinafter called Boeing) and AMERICAN AIRLINES, INC., a Delaware corporation (hereinafter called Buyer):

W I T N E S S E T H:

WHEREAS, the parties hereto entered into an agreement dated March 1, 1956, relating to Boeing Model 707-123 Aircraft, which agreement, as heretofore amended, modified and supplemented, is hereinafter called "the Purchase Agreement"; and

WHEREAS, the parties desire to further amend the Purchase Agreement as hereinafter provided,

NOW, THEREFORE, in consideration of the mutual covenants herein contained, the parties hereto agree that the Purchase Agreement is hereby amended as follows:

1. In paragraph (a) of Article 1, substitute the words and figures "Twenty-five (25)" for the words and figures "Thirty (30)".

2. In paragraph (a) of Article 2, the schedule for the delivery of the Aircraft is hereby revised in its entirety to read as follows:

MONTH OF DELIVERY	QUANTITY OF AIRCRAFT
February, 1959	2
March, 1959	2
April, 1959	2
May, 1959	3
June, 1959	2
July, 1959	2
August, 1959	1
September, 1959	1
October, 1959	1
November, 1959	1
December, 1959	1
January, 1960	1
February, 1960	1
March, 1960	1
April, 1960	2
May, 1960	2

3. Paragraph (a) of Article 3 is hereby revised in its entirety to read as follows:

"(a) The basic price of each Aircraft shall be Four Million Six Hundred Fifty-two Thousand Four Hundred Sixty and no/100 Dollars ($4,652,460.00). The purchase price of each Aircraft shall be the basic price increased or decreased, as the case may be, by the net amount of all price changes specified in Change Orders applicable thereto, executed in accordance with Article 11 or 12 hereof."

4. Paragraph (b) of Article 5 is hereby revised in its entirety to read as follows:

"(b) Payment for Aircraft. Upon the delivery of each Aircraft to Buyer hereunder (including the

AX-1584

DX 95, page 1
(Allen Letter Announcing Boeing Jet, Nov. 19, 1954)

DX 95

November 19, 1954

Dear Eddie:

In the early part of 1952 the Boeing Company commenced the design and manufacture of a prototype jet transport. This airplane made its first flight on July 15, 1954, and has now been flown more than 69 hours in 47 flights.

In January, 1954, the Boeing Company commenced work on a production model jet tanker-transport. Although this airplane will have a somewhat larger and longer fuselage than the prototype, its configuration in all other respects does not differ materially from that of the prototype. This work is now proceeding under a contract which the Company has with the Air Force.

The Company has for some time been engaged in the preparation of a specification covering a proposed commercial jet transport. It has also ascertained certain performance warranties of United Aircraft Corporation with respect to the J-57 engine. The engine specification and attendant warranties will be incorporated in the specification covering the airplane which should be in form for discussion with prospective commercial customers by November 22nd.

The Boeing Company has a sincere desire to produce a jet transport for interested air lines and believes that the time has arrived to undertake negotiations. Before actual construction of commercial transports can begin, the Company must work out with the Air Force an arrangement which would permit the use, for commercial production, of tooling designed and constructed for use on the Government contract. It must also arrange for the use of a portion of the Government owned Renton Plant for commercial production.

The Boeing Company proposes that a production notice type contract be negotiated. Under such a contract, upon notice given by Boeing within an agreed period of time, the contract would become binding upon both parties if:

1. The final price is not in excess of the price set forth in the production notice contract.
2. The delivery schedule is as favorable as that set forth in the production notice contract.
3. There is no substantial change in the aircraft specification.

This arrangement would permit Boeing to determine the position of the Air Force with respect to the use of tooling and plant area, to determine if sufficient orders could be secured to make commercial production feasible and to determine the degree of uniformity that could be achieved as between the different commercial customers.

The very rough estimates which we have made on costs indicate a sales price in the neighborhood of $4,250,000 per airplane, assuming a quantity of fifty. This price might be somewhat lower if initial production orders warranted establishing a sales price on a larger quantity. This price assumes that the configuration of all commercial airplanes would be substantially identical and is based upon (1) existing labor costs on the assumption that the contract would provide for escalation on labor, and (2) estimated costs as to major items of purchased equipment on the assumption that the contract would provide for escalation on such items.

We are acquainting the major American flag air lines as well as some of the larger foreign operators with our proposed delivery schedules. In the interest of lower prices every effort must be made to secure as large a production order as possible. This will require an equitable distribution of delivery positions. Based on a go-ahead next spring, deliveries would commence in the early part of 1958. The delivery

schedule for any customer would be based on the order in which commitments are made and will take into account the quantity purchased by each customer. The attached table sets forth proposed delivery schedules for various quantities. The second customer to make a commitment would receive airplanes at the same rate as shown in the table for the quantity ordered but would start three months later than the first customer. The third customer to make a commitment would follow the same rule.

Our experience with the prototype has been highly satisfactory. We are in a position to state that we have a design that is outstanding. By reason of the experience obtained in the design, development, production and flight testing of the B-47, B-52 and 707 prototype airplanes, we can produce a commercial jet transport that will have sound economics, great passenger appeal and outstanding performance characteristics.

If you are interested in pursuing this proposal, I trust that we will hear from you at an early date.

Very truly yours,

William M. Allen

Attention: Mr. Franklin Gledhill
Vice President

Dear Mr. Gledhill:

At your request we are pleased to submit our firm proposal for the manufacture and sale to you of twenty-five (25) Boeing Model 707 aircraft of basic configuration as described in Boeing Detail Specification D-10707, dated April 7, 1955, as follows:

1. Contract Terms

The general terms and conditions of the sale would be as set forth in the Proof of April 29, 1955, of Purchase Agreement (Production Notice Type Contract) copies of which have been previously furnished you, subject to such changes therein as are reflected in this proposal letter or are made by mutual agreement. The contract would provide that the Production Notice must be given by September 15, 1955.

2. Price

Alternate No. 1:

The basic price per airplane is $4,500,000, subject to adjustment as follows:

(a) On account of price changes hereafter agreed upon between the parties for any special features and departures requested by you from the basic configuration as described in the Detail Specification above mentioned.

(b) On account of increase or decrease by reason of changes in Boeing's average hourly wage rate, subject to the limitation that any increase is limited to $250,000 per aircraft.

(c) On account of increase or decrease by reason of changes in prices of certain items of outside purchased equipment, such as engines, automatic pilot system, air conditioning system and reverse thrust unit.

(d) If on August 1, 1958, Boeing has firm contracts for the sale of eighty (80) or more Model 707 aircraft to commercial customers (including Pan American World Airways, Inc.), the basic price of each aircraft would be reduced as follows:

Total Quantity of Model 707 Aircraft sold by August 1, 1958	Reduction in Price: If such reduction would result in no loss or in a profit of less than 10% of cost to Boeing	Reduction in Price: If such reduction would result in a profit of at least 10% of cost to Boeing
80 - 89, inclusive	$100,000	$200,000
90 - 99, inclusive	175,000	350,000
100 and over	250,000	500,000

Alternate No. 2

The basic price per airplane is $4,500,000, subject to adjustment as follows:

(a) On account of price changes hereafter agreed upon between the parties for any special features and departures requested by you from the basic configuration as described in the Detail Specification above mentioned.

(b) No provision for labor escalation.

(c) Increase or decrease by reason of changes in prices of certain items of outside purchased equipment, such as engines, automatic pilot system, air conditioning system, and reverse thrust unit.

(d) No price reduction for additional aircraft sold.

3. Delivery

The aircraft would be delivered to you as follows:

Month of Delivery	Quantity of Aircraft
[illegible]ber, 1958	

January, 1959	2
February	2
March	2
April	2
May	2
June	2
July	2
August	2
September	2
October	2
November	2
December	1

This delivery schedule contemplates that at least eight (8) Model 707 aircraft will be delivered to you before any will be delivered to any other commercial customer.

6. Term of Offer

This offer will remain firm until July 18, 1955.

If this proposal is accepted by you, we would suggest that both parties cooperate to the end that the Purchase Agreement be finalized and executed at the earliest possible date. This would enable Boeing and Pan American to proceed promptly to obtain the Air Force approval required before the program can go forward.

Very truly yours,

BOEING AIRPLANE COMPANY

Attention: Mr. C. R. Smith, President

Gentlemen:

Pursuant to our discussions with you, we are pleased to submit our firm proposal for the manufacture and sale to you of fifteen (15) Boeing Model 707 aircraft of basic configuration as described in Boeing Detail Specification D-16787, dated April 7, 1955, as follows:

1. Contract Terms

The general terms and conditions of the sale would be set forth in a Purchase Agreement of the production notice type. It would provide that (a) Boeing must give the production notice by September 15, 1956, or Buyer may cancel; and (b) Boeing may cancel if the required Air Force approval is not obtained prior to delivery of production notice or if within 60 days thereafter Boeing does not have firm orders for at least fifty (50) Model 707 aircraft.

2. Price

Alternate No. 1:

The basic price per airplane is $4,530,000, subject to adjustment as follows:

(a) On account of price changes hereafter agreed upon between the parties for any special features and departures requested by you from the basic configuration as described in the Detail Specification above mentioned.

(b) On account of increase or decrease by reason of changes in Boeing's average hourly wage rate, subject to the limitation that any increase is limited to $225,000 per aircraft.

(c) On account of increase or decrease by reason of changes in prices of certain items of outside purchased equipment, such

LIMITED

as engines, automatic pilot system, air conditioning system and reverse thrust unit.

(d) If on August 1, 1958, Boeing has firm contracts for the sale of eighty (80) or more Model 707 aircraft to commercial customers (including American), the basic price of each aircraft would be reduced as follows:

Total Quantity of Model 707 aircraft sold by August 1, 1958	Reduction in Price: If such reduction would result in no loss or in a profit of less than 10% of cost to Boeing	If such reduction would result in a profit of at least 10% of cost to Boeing
80-89, inclusive	$100,000	$200,000
90-99, inclusive	175,000	350,000
100 and over	250,000	500,000

Alternate No. 2:

The basic price per airplane is $4,500,000, subject to adjustments as follows:

(a) On account of price changes hereafter agreed upon between the parties for any special features and departures requested by you from the basic configuration as described in the Detail Specification above mentioned.

(b) No provision for labor escalation.

(c) Increase or decrease by reason of changes in prices of certain items of outside purchased equipment, such as engines, automatic pilot system, air conditioning system and reverse thrust unit.

(d) No price reduction for additional aircraft sold.

3. Payment

Advance payments would be made by the buyer to Boeing as follows:

(a) 1% of basic price within 30 days after execution of purchase agreement;

(b) 4% of basic price within 30 days after delivery of production

(c) 20% of basic price in ten (10) monthly installments beginning seventh month after production notice; and

(d) 33⅓% of price increases resulting from change orders.

The foregoing advance payments totaling 33⅓% of the aggregate basic price would be credited proram against the purchase price of the aircraft and the balance would be payable on delivery.

4. Delivery

The aircraft would be delivered to you as follows:

Month of Delivery	Quantity of Aircraft
April, 1959	1
May	1
June	1
July	1
August	1
September	1
October	1
November	1
December	1
January, 1960	2
February	2
March	1
April	1

Boeing would agree not to deliver Model 707 aircraft to any other customer engaged in commercial air transport service between points within the United States earlier than such aircraft will be delivered to American. Prior delivery to another customer during any one month will not be construed as earlier delivery to such other customer.

5. Term of Offer

This offer will remain open until July 15, 1955.

If this proposal appears acceptable to you, we will be glad to submit a complete form of Purchase Agreement for your consideration to the end that the Purchase Agreement be formalized and executed at the earliest possible date.

Very truly yours,
Boeing Airplane Company

Gentlemen:

Pursuant to our discussions with your Mr. Keilhy, we are pleased to submit our firm proposal for the manufacture and sale to you of fifteen (15) Boeing Model 707 aircraft of basic configuration as described in Boeing Detail Specification D-16737, dated April 7, 1955, as follows:

1. Contract Terms

The general terms and conditions of the sale would be set forth in a Purchase Agreement of the production noted type. It would provide that (a) Boeing must give the production notice by September 15, 1955, or buyer may cancel; and (b) Boeing may cancel if the required Air Force approval is not obtained prior to delivery of production notice or if within 60 days thereafter Boeing does not have firm orders for at least fifty (50) Model 707 aircraft.

2. Price

Alternate No. 1:

The basic price per airplane is $4,500,000, subject to adjustment as follows:

(a) On account of price changes hereafter agreed upon between the parties for any special features and departures requested by you from the basic configuration as described in the Detail Specification above mentioned.

(b) On account of increase or decrease by reason of changes in Boeing's average hourly wage rate, subject to the limitation that any increase is limited to $250,000 per aircraft.

(c) On account of increase or decrease by reason of changes in prices of certain items of outside purchased equipment, such

as engines, automatic pilot system, air conditioning system and reverse thrust unit.

(b) If on August 1, 1959, Boeing has firm contracts for the sale of eighty (80) or more Model 707 aircraft to commercial customers (including United), the basic price of each aircraft would be reduced as follows:

Total Quantity of Model 707 aircraft sold by August 1, 1958	Reduction in Price If such reduction would result in no loss or in a profit of less than 10% of cost to Boeing	Reduction in Price If such reduction would result in a profit of at least 10% of cost to Bo
80-89, inclusive	$100,000	$200,000
90-99, inclusive	175,000	350,000
100 and over	250,000	500,000

Alternate No. 2:

The basic price per airplane is $4,500,000, subject to adjustment as follows:

(a) On account of price changes hereafter agreed upon between the parties for any special features and departures requested by you from the basic configuration as described in the Detail Specification above mentioned.

(b) No provision for labor escalation.

(c) Increase or decrease by reason of changes in prices of certain items of outside purchased equipment, such as engines, automatic pilot system, air conditioning system and reverse thrust unit.

(d) No price reduction for additional aircraft sold.

3. Payment

Advance payments would be made by the buyer to Boeing as follows:

(a) 1% of basic price within 30 days after execution of purchase agreement;

(b) 4% of basic price within 30 days after delivery of production notice;

[illegible]% of basic price in ten (10) monthly installments beginning

seventh month after production notice; and

(d) 33⅓ of price increases resulting from change orders.

The foregoing advance payments totaling 33⅓ of the aggregate basic price would be credited prorata against the purchase price of the aircraft and the balance would be payable on delivery.

4. Delivery

The aircraft would be delivered to you as follows:

Month of Delivery	Quantity of Aircraft
April, 1959	1
May	1
June	1
July	1
August	1
September	1
October	1
November	1
December	1
January, 1960	2

(1) The information pertaining to delivery positions for Pan American is contained in DX 79. Specifically, the delivery positions in the first column are found in Article 2(a) on page 2 of Purchase Agreement No. 2, and those in the second column are found in paragraph 2 on page 2 of Supplemental Agreement No. 3 (3/13/56).

(2) The information pertaining to delivery positions for Continental is contained in DX 80. Specifically, the delivery positions in the first column are found in Article 2(a) on page 2 of Purchase Agreement No. 2; this schedule was not changed prior to 1960.

(3) The information pertaining to delivery positions for Braniff is contained in DX 82. Specifically, the delivery positions in the first column are found in Article 2(a) on page 2 of Purchase Agreement No. 4; this delivery schedule was not changed prior to 1960.

(4) The information pertaining to delivery positions for TWA (Boeing) is contained in DX 66. Specifically, the delivery positions in the first column are found in Article 2(a) on page 2 of Purchase Agreement No. 7, and those in the second column are found in paragraph 2 on page 2 of Supplemental Agreement No. 3 (1/10/57).

(5) The information pertaining to delivery positions for American is contained in DX 85. Specifically, the delivery positions in the first column are found in Article 2(a) on page 2 of Purchase Agreement No. 8, and those in the second column are found in paragraph 2 on page 2 of Supplemental Agreement No. 5 (7/28/58).

(6) The information pertaining to delivery positions for Qantas is contained in DX 68. Specifically, the delivery positions in the first column are found in Article 2(a) on page 2 of Purchase Agreement No. 14, and those in the second column are found in paragraph 2 on page 1 of Letter Agreement 14-3 (6/12/59).

(7) The information pertaining to delivery positions for Pan American is contained in DX 81. Specifically, the delivery positions in the first column are found in Article 2(a) on page 2 of Purchase Agreement No. 3, and those in the second column are found in paragraph 2 on page 2 of Supplemental Agreement No. 2 (3/13/56).

(8) The information pertaining to delivery positions for Air France is contained in DX 83. Specifically, the delivery positions in the first column are found in Article 2(a) on pages 2-3 of Purchase Agreement No. 5, and those in the second column are found in paragraph 2 on page 2 of Supplemental Agreement No. 2 (12/15/57).

(9) The information pertaining to delivery positions for Sabena is contained in DX 84. Specifically, the delivery positions in the first column are found in Article 2(a) on pages

2-3 of Purchase Agreement No. 5, and those in the second column are found in paragraph 2 on page 2 of Supplemental Agreement No. 2 (4/5/57).

(10) The information pertaining to delivery positions for TWA (Boeing, [illegible] is contained in DX 87. Specifically, the delivery positions in the first column are found in Article 2(a) on page 2 of Purchase Agreement No. [illegible]; this schedule was not changed prior to 1960.

(11) The information pertaining to delivery positions for Lufthansa is contained in DX 85. Specifically, the delivery positions in the first column are found in Article 2(a) on page 2 of Purchase Agreement No. 10; this schedule was not changed prior to 1960.

(12) The information pertaining to delivery positions for Braniff is contained in DX 87. Specifically, the delivery positions in the first column are found in Article 2(a) on pages 1-2 of Purchase Agreement No. 12; this schedule was not changed prior to 1960.

(13) The information pertaining to delivery positions for Air India is contained in DX 83. Specifically, the delivery positions in the first column are found in Article 2(a) on page 1 of Purchase Agreement No. 15, and those in the second column are found in paragraph 2 on page 2 of Supplemental Agreement No. 5 (11/13/59).

. . . . .

The general designations, "Boeing 707 (Transcontinental Version)" and "Boeing 707 (Intercontinental Version)," used to describe the aircraft considered in these cases, are determined by the types of aircraft ordered by the airlines from Boeing -- specifically whether the aircraft is of the Boeing 707-120 class (transcontinental version) or the Boeing 707-320 class (intercontinental version). Set forth below are the airlines' designations of the aircraft types ordered as set forth in the agreements with Boeing, and the class of aircraft (120 class or 320 class) to which each type belongs. The information as to aircraft [illegible] is taken from page 193 of Jane's - All The World's Aircraft, 1965-1966 Edition, published by McGraw-Hill.

Purchase Agreement Number & Airline	Airline's Designation of Aircraft Type Ordered	707-120 Class or 707-320 Class
#1 - Pan American	707 - 121	120
#2 - Continental	707 - 124	120
#3 - Pan American	707 - 321	320
#4 - Braniff	707 - 227	120
#5 - Air France	707 - 328	320
#[illegible] - Lufthansa	707 - 329	320
#[illegible] - TWA	707 - 131	120
#[illegible] - American	707 - 123	120
#[illegible] - [illegible]	707 - 331	320
#[illegible] - [illegible] Qantas	707 - 430	320
#[illegible] - [illegible]	707 - 436	320

Subject: 707 Over-Ocean Configuration and Proposal Letters to be Prepared for Foreign Airlines

To expand upon my report during the Operations Meeting of 1 November 1955, regarding the competitive aspects of our Model 707 when applied to overseas operation, I should like to state again that while there is a large sales potential for the 707 to overseas operators, our airplane is not competitive with the DC-8 - payload-range capability.

To be competitive and to do the overseas job properly our objective should be an airplane with a still air range of 4500 nautical miles plus fuel reserves for 350 nautical miles and one hour holding. The optimum airplane should be able to fly these distances, with reserves as noted, with tourist configuration space limit payload. The take-off field length to achieve this range objective should not exceed 9500 feet, sea level, hot day.

The optimum fuselage length for this configuration cannot be fully determined until economic analyses of varying lengths versus range capability can be completed. In any event, the passenger capacity must be sufficient to insure that the 707 seat mile costs are not greater than those of the DC-8.

During the past two months we have made commitments to four of the major European airlines and one Canadian airline, to supply them with price and delivery quotations on the 707. These companies and the dates on which we promised them this information are listed below:

1. KLM - Royal Dutch Airlines

   During his visit to Seattle on September 19 and 20 Fritz Koolhoven, on behalf of General Aler, requested 707 price and delivery quotations for six aircraft. We advised that we would transmit this information to General Aler within a few weeks.

   Subsequently, in a letter from Mr. Allen to General Aler, dated September 23, 1955, the following commitment was made:

550-10-99

"We are now reviewing costs and schedules and will, at Frits Rasmcon's suggestion, present a new proposal within the next ten days."

No further communication with KLM has taken place in this regard since that date. In his letter to Mr. Allen of October 10th General Aler again indicated he desires this information and is expecting to receive a firm proposal from Boeing.

2. SAS - Scandinavian Airlines System

During the past week we have advised Per Norlin that we will forward to him a proposal letter covering delivery of five aircraft. He has requested that the delivery positions as quoted in this proposal be guaranteed to SAS for a period of ninety days.

In a letter from Mr. Tryone-Holst to Mr. Allen dated October 24, 1955, the president of SAS requests the following proposal from Boeing to be submitted to SAS at least several days prior to the SAS Board of Directors meeting scheduled to take place in Stockholm on November 14, 1955:

". . . . .contract proposal for six (6) 707's with an option for an additional four (4) to be delivered as soon as possible . . . . . should like to have alternative offers for planes with the J-57 and with the J-75 engines."

3. Air France

On October 23 and 24 the Chairman of the Board, President, two Deputy General Managers and the Manager of Air France, North American Operations, visited Boeing to study the 707. They were very favorably impressed and prior to their departure asked us to submit price and delivery quotations for quantities of six, ten and fourteen aircraft of the J-57 and J-75 configurations. They further requested this proposal be valid for a period of ninety days. We advised the Air France executives that we would submit a proposal to them at the earliest opportunity.

4. TCA

The engineer in charge of Jet Transport evaluations will be visiting Boeing on November 14th to further discuss details of the 707. Following this visit we should submit to TCA a proposal letter covering four aircraft with option for J-57, J-75 or Rolls Royce Conway engine installations.

550-10-99. Page three

5. BOAC

We have a long standing commitment to provide price and delivery data to BOAC based on a configuration of the 707 incorporating Conway engines and with no cabin interior furnishings. Before we can submit such a proposal it will be necessary to obtain current information on the price and availability dates of the Conway engines from Rolls Royce.

It is of interest to note that other airlines such as KLM and SAS have also shown interest in taking delivery of jet transports without interior furnishings and completing this work in their own shops abroad. It is recommended that a suitable interior configuration of this type be defined for the 707 and a cost reduction for same estimated.

It will be recalled that 707 proposal letters were initially sent to KLM and SAS on July 26, 1955, a few days after similar proposals were mailed out to several domestic airlines. No proposal has ever been furnished to Air France or TCA.

We must expect that the foreign airlines will request delivery position quotations valid for a period of ninety days. By virtue of their nationalized or majority state owned status it simply takes these airlines longer to convince their directors and their governing state agencies of the necessity and choice of new equipment. Even with the United States domestic airlines in the case of PAA, UAL and American it has been from three to five months time from first proposal to signed contract.

The four European airlines noted above will probably be the first in that market area to purchase jet transports. As they are the largest of the European airlines they represent the best sales potential in terms of initial and follow-on quantities of aircraft amongst the foreign operators. It is probable that they will each commit themselves with either Boeing or Douglas within the next three months time. Top technical representatives of each of these airlines will be in the States during this month studying in detail both the 707 and the DC-8. A tabulation of the anticipated sales potential of the foreign airlines is attached to this memorandum for your review.

We are prepared to submit price and delivery proposals covering the JT3-C4 configuration of the 707 to the aforementioned foreign airlines and are proceeding to prepare drafts of proposals.

550-10-99

We are not in position, unfortunately, to submit proposals to them on the aircraft they are really interested in and which is competitive with that being offered by Douglas; namely, the long range configuration of the 707 with JT4A-3 engine installation.

It is imperative that we hasten the availability of technical data, price and delivery information on this latter configuration of the 707 in order to submit the proposals the foreign airlines have requested of us and forestall their purchase of DC-8's.

We urge that plans be formulated for a series of technical team contacts to be made at the headquarters of the major foreign airlines. These contacts should be instigated just as soon as the technical data on the long range J-75 version of the 707 is available.

Subject: Model 707 Delivery Schedules

In accordance with TWA's request, we are holding slots for TWA the following Model 707 delivery positions:

Model 707-120 Series

Month	No. of Aircraft
April 1959	1
May 1959	2
June 1959	2
July 1959	2
August 1959	1
Total	8

Model 707-320 Series

Month	No. of Aircraft
Nov. 1959	1
Dec. 1959	1
Jan. 1960	1
Feb. 1960	1
Mar. 1960	1
April 1960	1
May 1960	2
June 1960	1
July 1960	1
Aug. 1960	2
Sept. 1960	2
Oct. 1960	2
Nov. 1960	2
Dec. 1960	2
Jan. 1961	2
Total	22

The following additional Model 707-320 series positions are available and will be quoted to Delta, Northeast, Northwest and Western Airlines:

Month		No. of Aircraft
June	1959	1
July	1959	1
Aug.	1959	2
Sept.	1959	2
Oct.	1959	3
Nov.	1959	1

Additional Model 707-120 series or Model 707-220 series aircraft will become available starting March 1960, at a rate of two per month.

Additional Model 707-320 series airplanes will become available as follows:

Month		No. of Aircraft
July	1960	2
Aug.	1960	2
Sept.	1960	1
Oct.	1960	3
Nov.	1960	2
Dec.	1960	3
Jan.	1960	4
Feb.	1960	5

Subject: Visit with R. W. Rummel and L. V. Leslie of TWA in Beverly Hills, July 19 and 20, 1956

Upon meeting Messrs. Rummel and Leslie on July 19, it became immediately apparent that their principal interest was that of discussing the procurement of additional 707-131 airplanes, but that, undoubtedly on instructions from Mr. Hughes, they were to limit the discussion to a relatively few additional early airplanes, preferably the 3 MK airplanes previously discussed.

I outlined the history of the -131 negotiations and discussions as I knew it, and told them that it was our belief, in the light of previous discussions, as well as obligations to other customers and proposals to prospective customers, that we had made an attractive and favorable offer to TWA.

They outlined their reasons for believing that the conditional aspects of our offer were not favorable, as follows:

1. They are not ready to commit to a substantially larger number of 707-131's at this time.

2. They believe that they may require additional 707-131's, and that the size of their present 707 commitment should be given full consideration as compared to other customers in allocating MK airplanes.

3. They believe that the MK airplanes can be of substantially more benefit to their early operations than to the early operations of later customers.

4. They feel that the advantage of timing on the MK airplanes is sufficient to them, even though they are not ready to commit for substantially larger purchases, to justify their immediate purchase of the 3 MK airplanes in addition to the present orders.

I told them that we would consider their points carefully, and that I would talk to Mr. Allen directly as soon as possible, and that I would appreciate their indication concerning any alternative counter proposal which we might consider. I further stated that after such consideration, I would call both Rummel and Leslie, and that possibly Mr. Allen might want to call Hughes, but I did not commit him to make such a call.

After covering this subject, I was able then to talk to Rummel and Leslie about our thoughts on economics of jet design, and developed some interest in the subject, perhaps not to the extent of jeopardizing the Convair sale immediately, but at least encouraging Rummel to take another look, and interesting Leslie in the possibilities of a truly economic design. In this discussion it was also apparent that both Rummel and Leslie take a relatively conservative view of TWA's real growth potential, and this in turn keeps them in a cautious frame of mind about thinking of any substantially larger number of 707-131's at this time. I left with them one copy each of our economic study of Boeing vs Boeing-Convair fleets, with the understanding that they would study the data presented and give me their considered opinions as to the validity of our assumptions.

On the 20th, I had an opportunity to review my understanding of the above items, and in addition during the trip to the airport with Rummel had a chance to discuss with him the subject of DC-8 vs 707 design philosophy. It is apparent that Douglas has done a tremendous job of industry-wide brainwashing on their new "more efficient" wing design, and that we must develop an effective counter program both with present and prospective customers.

With reference to TWA's interest in additional airplanes, I have studied the various possibilities since talking to Rummel and Leslie, and would like to suggest the following:

1. I believe that due to conservative thinking on the part of TWA, we are not likely to sell them a large number of additional 707-131's in the immediate future.

2. They will buy 3 additional airplanes immediately if offered (IX airplanes), since this helps them inaugurate early jet service.

3. If they buy 3 additional airplanes, they will be better equipped for 1959 jet operations, and with 12 total -131's they will be further committed and less likely to think of turning to Convair for substantial quantities or for -131 replacements. (Incidentally their total would then be 30, which would make a better announcement.)

4. Although it is desirable from our point of view to sell additional airplanes to TWA immediately, a study of our proposed schedules will show that a sale of 3 now would not hurt our prospects to other customers. In fact if TWA purchases 3 now, we might consider improving other proposals with some of the airplanes not immediately desired by TWA.

1-7000-7

5. Accordingly, I would recommend that we give serious consideration to the sale of 3 additional airplanes (at least one EM) to TWA without condition as to acceptance of additional certificated airplanes. I would recommend further, that to the extent these 3 airplanes are the same airplanes previously offered TWA as certificated airplanes (1 July, 1 August, 1 September) we make clear the dates on which additional airplanes are currently available, with an understanding that we will keep them advised as to any change in such availability by reason of modified proposals and/or sale to others.

I believe that the above procedure is in the best interest of our overall 707 program, and will possibly help our total sales by increasing the probability of added TWA sales, without adversely affecting our proposals to others. In addition, I believe that if we could firm up a program for the so-called "small" airplane in the near future, this in itself could resolve the TWA purchase of additional 707-120's.

Boeing deliveries

Mr. Raymond Cook
Andrews, Kurth, Campbell & Bradley
2200 Gulf Building
Houston 2, Texas

Dear Ray:

You will recall my recent advice that Mr. Hughes requested that I ask you and Harry West to review early Boeing jet deliveries with American Airlines re antitrust aspects.

I hope the following brief report will provide useful information.

1) Bruce Connelly and George Sandborn claim Boeing has an agreement with American Airlines which requires Boeing to deliver six Model 120 jet aircraft to American sixty days prior to delivering commercial jet aircraft to any other U. S. domestic operator. They also claim Boeing is obligated to maintain American's initial six aircraft sixty day delivery advantage throughout American's delivery period i.e., February 1959 through June 1960. Both men claim this agreement existed when the H. T. Company signed for its eight Model 131's.

2) Messrs. Connelly and Sandborn claimed to have an agreement with Pan Am which requires Boeing to deliver its first six jet transports to Pan Am sixty days prior to delivering any transports to any other commercial customer.

3) Messrs. Allen, Bell and Sandborn prior to contract signing represented that in the event Boeing could accelerate production and deliver aircraft prior to contract dates that it would maintain "relative delivery positions". This expression was taken as assurance in principle that while Boeing would not agree to specific delivery sequence that it would agree in principle to maintaining order of delivery positions then existing.

4) Sanborn claims, and Connelly reaffirms, that Boeing interpretation of "relative position" is that Boeing will alter relative deliveries when additional aircraft are ordered in order to meet its obligation to American Airlines. In other words, these gentlemen claim that each time the H. T. Company ordered additional aircraft (eight, nine, eleven, then fifteen), that Boeing was forced automatically to improve American's early delivery position and that in so doing maintained "relativity".

5) The H. T. Company contract permits Boeing to deliver twelve Model 120 aircraft (or variant thereof) prior to the month in which the H. T. Company receives its first airplane. Messrs. Sanborn and Connelly are interpreting this clause literally. Boeing is fabricating the first six aircraft to Pan Am's specifications and the next ten to American Airlines' specifications. The first airplane meeting the H. T. Company's specifications is the seventeenth of the 120 series and the eighteenth in sequence, the other airplane being a prototype 320.

6) Boeing has been extremely reluctant through the months to divulge delivery information for customers other than the H. T. Company. We have, however, obtained through undisclosed channels, Boeing's shop schedule, Exhibit A, attached. This is, however, subject to some further refinement and change.

7) We have also obtained Boeing's present target schedule for American, Pan Am and TWA:

	1958			1959											
	O	N	D	J	F	M	A	M	J	J	A	S	O	N	D
Pan Am	1	2	1	2											
AA		1	2	3	2	2	2	2	2	2	1				
TWA					2	2	2	2	2	4	1				

Remaining American Airlines target schedules are believed to be the same as contract schedule shown immediately below.

8) Boeing's contract delivery schedule provides:

	1958			1959												1960					
	O	N	D	J	F	M	A	M	J	J	A	S	O	N	D	J	F	M	A	M	J
Pan Am	1nx	O	1	2	1	2*															
AA		1nx	O	0	2	2	2	3*	2	2	1	1	1	1	1	2	2	2	2	2	2
TWA			1nx				3	4	3	4*	1										

* includes redelivery of one nx airplane.

Inspection of target and the contract schedules immediately reveal that TWA has lost position relative to American Airlines.

9) Boeing has offered six additional airplanes for early delivery. Sandborn states that if the H. T. Company buys additional airplanes for delivery during the American delivery period, American's schedule might require advancement to comply with Boeing's basic obligations as reported in items (1) and (2) of this letter.

10) Boeing has advised that it is currently manufacturing ten additional commercial jets of the 120 series on speculation with deliveries to follow within the H. T. Company delivery period. These ten are international airplanes. If the H. T. Company should purchase these airplanes, American's deliveries would be advanced "appropriately".

11) The following is Boeing's current certification schedule:

	Type of Certificate	Airworthiness
PAA	Mid-July 1958	Mid-September 1958
AA	early September 1958	Mid-November 1958
TWA	December 1958	Mid-January 1959

12) American Airlines' fare investigation data for CAB use dated November 7 included the following information:

last quarter 1958	4 aircraft
first quarter 1959	13 aircraft
second quarter 1959	6 aircraft
third quarter 1959	7 aircrart

13) Messrs. Sandborn and Connelly intimated that if the H. T. Company could agree to use its early airplanes in international operations that perhaps American Airlines would go along with earlier deliveries to TWA. I personally doubt that American would agree to this.

Our objective must be to obtain the Boeing jets at the earliest conceivable date. It appears that Boeing must be persuaded that either its moral obligation to H. T. Company and TWA overrides its written agreement with American (unlikely) or it must be demonstrated that the written agreement with American cannot be viewed as legally valid. Perhaps your and Harry West's study of the situation will reveal other plausible courses to pursue.

The very fact that we have had recent discussions with Sandborn and Connelly seems to me to be a compelling reason for early action since if nothing occurs Boeing can claim at time of delivery that we were fairly forewarned.

I, of course, would be very glad to discuss this situation with you and Harry at your convenience if you wish.

I will wait to hear from you before taking further action and in the meantime, will report any pertinent additional developments from the Boeing front.

Sincerely,

R. W. Rummel
Vice President - Engineering

2. BAC letter 6-1100-41-529 dated 3/12/58, J. B. Connelly to R. W. Rummel (copy attached).

Dear Ray:

Reference (2) outlines Boeing's current target dates for the delivery of Model 707-131 aircraft.

It appears that my talks or something has done some good after all since the target dates are substantially better than outlined in Item 7 of reference (1). However, I do not know whether American's have been moved forward similarly. I am attempting to find out and will provide this information if possible.

Very truly yours,

Subject: Delivery of Model 707-131 Aircraft

Dear Bob:

Very early in the Model 707 program we recognized the mutual benefits to be derived by our customers and Boeing from early delivery of these aircraft, and we established target airplane delivery schedules providing for deliveries in advance of the contract requirements. During the past several months we have constantly monitored this program to determine our capability against these target schedules. We believe we are sufficiently along in our knowledge of the status of the program to provide you with the following data with respect to our target delivery schedule:

MODEL 707-131 AIRPLANE DELIVERIES PER MONTH
TARGET SCHEDULE

December, 1958	1X
January, 1959	3
February, 1959	3
March, 1959	1
April, 1959	2*
May, 1959	1
June, 1959	2
July, 1959	2

* Includes re-delivery of 1X airplane.

The foregoing target schedule is provided so you may be kept abreast of the developments in the Model 707 program. Although we cannot assure you that we shall deliver your aircraft in accordance therewith, the progress to date indicates we should be able to meet these dates barring unforeseen difficulties.

In the event we are able to meet the target schedule shown in this letter, you have our assurance that we can provide spare parts

Page Two

J. A. Rummel

support for Boeing proprietary items and the services, training and data provided by the contract.

The foregoing information is provided to enable you to plan for earliest potential deliveries of Model 707 Aircraft. The information contained in this letter of course does not change the contract delivery schedule set forth in the Purchase Agreement. Should conditions arise which alter the situation as described above we will advise you.

Very truly yours

March 30th, 1958

Re: Contract No. 7

Boeing Airplane Company
P.O. Box No. 3707
Seattle, Washington

Attention: Mr. William M. Allen, President

Gentlemen:

Mr. Connelly's letter to Mr. Fennel (3-1100-41-529) reported a new target schedule of deliveries to Hughes Tool Company. The letter does not include target schedules for other customers; but on the basis of facts indirectly reported to Hughes (and partly from the Hughes schedule itself), it appears that Boeing's combined target schedule seriously discriminates against Hughes and TWA and in favor of TWA's competitors.

From the commencement of negotiations with Boeing Hughes consistently declared that protection against priority or preferential deliveries to competitive customers was an essential condition of any purchase contract, and just as consistently Boeing reaffirmed its adherence to such a policy. When Hughes requested specific contract language relating to sequence of manufacture and delivery, Boeing replied that as a matter of uniform policy Boeing had refused all of its customers any delivery priorities beyond those inherent in the contracted stipulation of delivery months. This declared policy of non-discrimination would prohibit preferential treatment either as to accelerated deliveries in advance of the stipulated delivery months or as to relative deliveries within one month. That such representations and assurances from Boeing were oral rather than written does not impair their effectiveness or importance, since Boeing realized that Hughes was executing the contract, and its several supplements, in good faith reliance upon them.

It is unthinkable that Boeing would deliberately or carelessly misrepresent facts on any matters under formal discussion. It is equally unthinkable that Boeing would cause or permit any discrimination in violation of its solemn declarations of impartiality. It is to be hoped, therefore, that the indirect report given to Hughes was erroneous or that any discriminations were unintended and will promptly be corrected.

Independently of competitive deliveries, however, the new target schedule is irreconcilable with the essence of Boeing's obligation in that it also fails to accelerate delivery of the XX airplane. It was a basic inducement that one airplane would be delivered to Hughes several months in advance of TWA's inauguration of scheduled service. Without an acceleration of the XX delivery, a timely inauguration will be seriously handicapped. Furthermore, with the capabilities demonstrated by the accelerated program Boeing's "best efforts" as required by the contract should produce a substantially earlier certificated redelivery of the airplane than is now scheduled.

Unless immediately rectified, Boeing's threatened discrimination in deliveries and its breaches of basic obligations will expose Hughes and TWA to ruinous losses. Responsibility for these losses must be borne by Boeing, both under principles of contract law and under statutory prohibitions against discrimination and restraint of trade.

Despite the seriousness of these developments and the urgency of a solution, Hughes is willing to discuss them, and for that purpose this letter is being delivered by Mr. Raymond A. Cook, attorney for the Company. Pending a satisfactory explanation and revision of these matters, the progress payments are being withheld.

Yours very truly,

HUGHES TOOL COMPANY

Re: Your File 6-1100-2-376

Mr. William M. Allen, President
Boeing Airplane Company
Seattle, Washington

Dear Mr. Allen:

We acknowledge your letter of April 29, 1958, wherein you stated your beliefs that you had completely explained your position with respect to the delivery issue and that, to the satisfaction of the Hughes representatives, Hughes has been treated by Boeing "with complete fairness and equity under its contracts". It is true that since our letter to you dated March 30, 1958, additional facts and points of view have been developed in discussions between representatives of the two companies; but it is questionable that your position has been "completely explained" and we still can not agree that Hughes has been treated "with complete fairness and equity under its contracts". We do appreciate the cooperative manner in which you have been willing to discuss the problem.

Prior to the recent meetings in Seattle it appeared that Boeing contemplated deliveries on a basis resulting in some degree of discrimination, but Boeing's exact intentions with respect to deliveries were not then known. Boeing has now stated that its deliveries of Model 707-120 airplanes will be made to Hughes in such a sequence, relative to American Air Lines, that at the end of each month American will not have a certificated airplane advantage of more than five airplanes and that during each month this advantage to American will fluctuate, never more than eight and never less than two. That assurance, though limiting the degree of discrimination, does not restore the parity in deliveries to which Hughes is rightfully entitled.

If Boeing's originally stated policy still prevailed, (i.e., that Boeing would not for any customer make a commitment concerning relative sequence of delivery, except by specifying in the contract particular months of delivery) and if the entire Model 120 program were accelerated equally with Boeing's improved production capacity,

PRICE

Mr. William M. Allen Page 92 May 8, 1958

American's advantage would of necessity be reduced through the period of TWA's deliveries. That result is immediately apparent from comparing the two contracts (even without giving weight to the less formal assurances, which Boeing made to Mr. Hughes personally, that TWA could commence service as soon as American). Whether or not it was ever reasonable or "fair" for Boeing to have offered to the industry delivery positions contemporaneous with American's, that offer was accepted and is no longer open to review. No doubt American has contended that as an earlier customer it is entitled to preferential deliveries. Such contention is groundless on either legal or moral grounds, however, unless with American Boeing deviated from its announced policy against sequence commitments. Despite the resulting pressures and embarrassments, Boeing must now accept the responsibility of enforcing equitably the delivery provisions of all of its contracts.

Boeing's mitigating assurances, which establish a maximum disparity at the end of each month, would be more encouraging if Boeing's stop schedule were established on a basis that would at least create the maximum probability of an equitable division of deliveries within each month. As you know, an engineering conference was held in Seattle on April 17 for the purpose of clarifying this phase of the problem. Unfortunately, in the short time available and under Boeing's self-imposed security restrictions many of the material facts were not brought to light; and those that were brought to light did not adequately answer our questions.

It is to be hoped that the current conversations which Mr. Hughes is having both with you and with Mr. Small will soon produce a resolution of these issues. In the meanwhile we trust that you will agree with the propriety, if not the necessity, of our withholding the installment payments.

Yours very truly,

SUBJECT: Convair 880 Delivery and Certification

Reference: TWA letter dated 1-13-60, M. R. Parmet to R. K. Rourke, attached.

DX 116

Confirming my telephone conversation the evening of January 11, I am attaching a summary of the status of completion of the first 880 aircraft that TWA will likely receive. Note that we estimate (assuming no week-end work on the part of Convair) that the first airplane will not deliver until March 2. The second airplane would be approximately ten days later. Delay of delivery until this time would make it impossible to start service by April 1 or 15, even assuming the airplanes were certificated by then. Moreover, all evidence that we can obtain without directly discussing this with Convair indicates that the airplane will not certify until May 1, and it is very possible that the certification will be after that date.

Unless something is done to cause Convair to expedite this program by overtime work, I cannot recommend that TWA continue to plan on the premise with respect to Convair operations as now included in the Jet Plans & Premises Manual.

There may be reasons why it is desirable to continue on this basis, but I think that we are doing the various departments making plans on these dates a disservice.

SUBJECT: Bi-weekly Convair 880 Progress Report

The status of early deliveries has again fluctuated and I will relate an unofficial Convair estimate of delivery months:

One in January, (a remote possibility)
Two in February,
None in March,
Five in April,
Four in May,
Five in June,
Four in July,
Five in August, and
Four in September.

EEC			
JJC			
FILE			

cc: RKR
RJ, NRP

After being secured since 9 October 1959, aircraft manufacturing No. 5 was released to production on 9 December 1959. The plans appear to be to put this No. 5 aircraft into the C and N (communications and navigation) portion of the FAA Certification testing, however, no announcement regarding the aircraft has been made by H.T.Co. or Convair.

Our next two aircraft, No. 6 and No. 8, are no longer being readied for F and R (Function and Reliability) testing and TWA flight training as planned. They are now roped off and secured by H.T.Co. personnel. Production stopped on these two aircraft as of 1530, 5 December 1959.

Aircraft manufacturing No. 9, which will be our first complete aircraft for acceptance is out of the hanger and could conceivably be a late January or early February delivery.

Pari passu aircraft manufacturing No. 10 has rolled off the assembly line sporting a very bright Kelly green acrylic protective coat on all exterior surfaces. No word has been received as to how this aircraft should be marked on the exterior, however, it has the H.T.Co.—TWA interior.

The production line continues to move on schedule, however work is not being completed at proper stations due to late arrival of sub-contracted items and engineering changes. This, of course, results in incomplete aircraft rolling off the end of the line even though the airframe appears to be on schedule. I would estimate that Convair has consumed all of the two-month "fudge-factor" which they had built-in to original schedules and are now very hard pressed to meet the first quarter of even the above revised delivery sequence.

DATE: January 13, 1960

COPIES

SUBJECT: Status of Completion of Early 880 Aircraft

As a result of our discussions, I requested Jimmy Gordon to review the delivery schedule for the first two Convair 880 aircraft and give me his estimate of when these aircraft might be delivered. Thus, we have a comparison of Convair's estimate vs. our own.

After reviewing the situation, Jimmy (with Bill Bow present) advised the following:

We estimate that the No. 9 aircraft, which Convair states is scheduled for delivery on February 12, 1960, will not be ready for delivery until approximately March 2. The No. 10 airplane for which Convair also estimates a February delivery is approximately 10 working days behind the No. 9 airplane, and consequently Jimmy estimates #10 airplane delivery for approximately March 17.

The reasons for the above estimates are as follows: The #9 airplane is outside the hangar undergoing completion and Convair final inspection. This will not be completed until approximately February 1. Following this the airplane will be weighed. This will take one day. Next comes electronics checkout for which Convair estimates ten working days. Then comes Convair pre-flight of two days followed by Convair production flying which we estimate will take five days. Finally we estimate our final inspection and packing sheets along with TWA acceptance flights will take four days. This makes a total of 22 working days from February 1 which brings the estimate to March 2 as previously indicated.

It should be pointed out that this estimate is based on a five-day work week with no overtime being expended. It is our understanding that Convair does not intend to use overtime or to work weekends to complete these aircraft.

The above estimate is based on known factors. Additional unknowns which could alter the above estimates include the following items which have not yet been fully resolved:

1. Cabin door interchangeability check.
2. Eight equipment replacement demonstrations.
3. Cabin seats.
4. Technical problems unknown at the present time.
5. Revision of electrical wiring above the cargo compartment (FAA advised they will not grant a provisional certificate for carrying cargo unless this wiring is protected).

In addition to the above we have had an incident on #12 production airplane wherein this airplane began shedding paint after a recent rainstorm in San Diego. A chunk of paint inches high and 2 feet long fell off the airplane and there are blisters the size of man's fist all over the fuselage. Of course, this airplane will require a complete repainting. Other aircraft which have been painted previously did not experience any

SUBJECT: Convair 880 Delivery and Certification

DX 125 (678) 654 6587 AX

Reference: (1) Letter, Rourke to Rummel, dated 1/15/60
(2) Letter, Rummel to Rourke, dated 1/19/60

In your letter of January 19 you requested that we advise whether or not we believe that Convair could complete 880 aircraft in accordance with TWA's planning premises if they went to work industriously, including weekends. Our review of the state of completion of the first and second aircraft indicates that neither of these aircraft could be delivered in accordance with Page 1.3.1 of the Jet Plans & Premises Manual which calls for delivery of one airplane on January 31 and the second airplane on February 19, 1960. We believe that if Convair worked seven days a week on these aircraft to their maximum capability that the earliest the first airplane could be accepted and delivered is February 22. On this basis the second airplane could possibly be delivered by the last day of February. Obviously for such aircraft to be delivered "complete" we would have to accept items like seats in less than final configuration. As you may recall, Convair presently has three airplane sets of seats on hand, none of which are considered satisfactory by our representatives. In addition to this we would expect that there would be a number of "exceptions letters" required to permit acceptance of aircraft with recognized areas of deficiencies.

Presently we have no reason to change our opinion stated in our January 15 letter with respect to the 880 certification dates.

The above appeared to us to be the most optimistic that we can be at this time with respect to the 880 situation.

A. V. LESLIE

CONVAIR 880 INTEGRATION INTO TWA SERVICE

IT APPEARS TO ME THAT TWA SHOULD PROCEED TO MAKE READY FOR USE OF CONVAIR 880 AIRCRAFT NOW ON ORDER FROM CONVAIR BY THE HUGHES TOOL COMPANY. HOWEVER, I FOUND NO POSITIVE CONFIRMATIVE INFORMATION DURING MY WEST COAST TRIP LAST WEEK CONCERNING TWA'S RECEIPT OF AIRCRAFT FROM THE HUGHES TOOL COMPANY. NOR DID I FIND ANY POSITIVE CONFIRMATIVE INFORMATION THAT TWA WOULD NOT RECEIVE 880 AIRCRAFT.

THE BIG QUESTION REQUIRING RESOLUTION TO PERMIT REVISING CURRENT PLANNING PREMISES IS -- HOW MANY 880'S WHEN? THIS, ALONG WITH OTHER FACETS, IS DISCUSSED IN THE ATTACHMENTS TO THIS LETTER. I RECOMMEND THAT I BE GIVEN A DIRECTIVE CONCERNING HOW MANY 880'S TWA SHOULD PLAN ON AND WHETHER WE SHOULD PLAN ON CONTINUOUS SEQUENCE OR PARI-PASSU, OR SOME OTHER DELIVERY ORDER. WITH THIS MAJOR QUESTION RESOLVED, JET PLANNING COULD ATTEMPT TO MAKE UP LOST TIME TO THE MAXIMUM EXTENT.

AS YOU KNOW, PROVISIONING, FLIGHT TRAINING, MAINTENANCE TRAINING, AND JET ENGINE OVERHAUL REMAIN CRITICAL ITEMS. IF CONTINUOUS SEQUENCE DELIVERY IS SELECTED, ALL OF THESE ITEMS BECOME MORE CRITICAL AND CONTROLLING.

I RECOMMEND THAT TWA'S JET PLANNING ACTIVITY UNDERTAKE FULL SCALE REVIEW OF 880 PLANS ON AN URGENT BASIS, BEGINNING THE MONTH THE DELIVERY PREMISES IS RESOLVED. OF COURSE, IMPLEMENTATION WILL REQUIRE RELEASE OF PROVISIONING AND OTHER APPROPRIATE ORDER AND COMMITMENT ACTIVITIES.

ATTACHED ARE NEW RECOMMENDED PLANNING AND RESEARCH PREMISES FOR MODEL 880 AND OTHER PERTINENT DATA.

R. W. RUMMEL

MISSING

RECOMMENDED PLANNING PREMISES
MODEL 880

A. DELIVERY OF NC TRAINING AIRCRAFT:

1. AIRPLANE #9 — MARCH 10
2. AIRPLANE #10 — MARCH 18.

B. FAA NC CERTIFICATION — MAY 15.

C. NUMBER OF HUGHES TOOL COMPANY AIRCRAFT IN FULL NC CERTIFICATION CONFORMANCE BY MAY 15 - 6
(IN THIS CONNECTION THE NUMBER OF THESE AIRCRAFT TO BE USED BY TWA HAS NOT BEEN DEFINITELY ESTABLISHED).

D. DELIVERY SCHEDULE:

IT IS RECOMMENDED ON A PURELY SPECULATIVE BASIS THAT TWA PLAN ON THE USE OF THE FIRST 20 AIRCRAFT RATHER THAN THE PARI-PASSU DISTRIBUTION NOW CONTAINED IN THE JET PLANS AND PREMISES MANUAL, WHICH SHOULD BE REVISED. HOWEVER, SINCE FIRM KNOWLEDGE OF RECEIPT OF THE FIRST 20 AIRCRAFT IS NOT AVAILABLE, TWA SHOULD BE PREPARED TO RETURN TO THE PARI-PASSU ARRANGEMENT IF THIS SHOULD PROVE TO BE THE CASE.

ON THE OTHER HAND, CONSIDERABLE SPECULATION EXISTS CONCERNING THE POSSIBILITY THAT TWA WILL BE OFFERED MORE THAN 20 CONVAIR 880'S FOR ITS USE AND THAT TWA WOULD BE AGREEABLE TO USE MORE THAN THE 20 AIRCRAFT. IF TWA IS TO ULTIMATELY RECEIVE MORE THAN 20 CONVAIR 880'S DURING 1960, IT WILL BE FAR BETTER TO PLAN IMMEDIATELY ON THE USE OF THE ADDITIONAL AIRCRAFT RATHER THAN WAIT.

THE EXACT EFFECT ON TWA SCHEDULES, AND REVENUE AND COSTS FORECASTS OF CHANGING FROM CURRENT JET IMPLEMENTATIONS PLANS TO EITHER ACCELERATED OR MORE DELIVERIES OR DOWN CAN BEST BE DETERMINED THROUGH REVIEW BY THE JET PLANNING GROUPS AND THE JET PLANNING COMMITTEE.

E. START OF TWA SERVICE: MAY 30.
(PLAN FOR MAY 15).

NEW YORK 17, NEW YORK

A. DELIVERY AND CERTIFICATION OF NP AIRCRAFT FOR FLIGHT AND MAINTENANCE TRAINING PURPOSES.

CURRENT CONVAIR PLANNING CALLS FOR DELIVERY OF TWO NP AIRCRAFT TO HUGHES TOOL COMPANY DURING FEBRUARY. CONVAIR ESTIMATES OFFICIALLY ONE FEBRUARY 25 AND THE SECOND, UNOFFICIALLY, MARCH 2.

CONVAIR ADVISED IT HAS RECEIVED THE NP CERTIFICATE FROM THE FAA FOR THE HUGHES TOOL COMPANY CONFIGURATION AND THAT CONFORMITY ONLY IS REQUIRED TO CERTIFICATE.

PERSONAL INSPECTION OF AIRPLANES #9 AND #10, THE TWO SCHEDULED FOR FEBRUARY DELIVERY, PLUS FURTHER DETAILED REVIEW WITH MESSRS. ROURKE, BEW AND GORDON INDICATES FEBRUARY DELLIVERIES ARE HIGHLY IMPROBABLE, EVEN WITH EXTENSIVE CONVAIR OVERTIME.

IN THE LIGHT OF CURRENT KNOWLEDGE, IT APPEARS REASONABLE TO ANTICIPATE DELIVERY OF TWO NP TRAINING AIRCRAFT TO HUGHES TOOL COMPANY AS FOLLOWS:

AIRPLANE #9	MARCH 10
AIRPLANE #10	MARCH 18.

I RECOMMEND TWA USE THESE DATES AS NEW TWA PLANNING PREMISES. HOWEVER, I HAVE NOT BEEN ABLE TO VERIFY THAT THESE TWO AIRCRAFT WILL IN FACT BE DELIVERED TO EITHER HUGHES TOOL COMPANY OR TWA.

NEW YORK 17, NEW YORK

B. WHY HAS THE CONVAIR 880 AIRPLANE PROGRAM BEEN DELAYED?

THE CONVAIR 880 PROGRAM HAS BEEN DELAYED PRIMARILY BECAUSE OF:

1. VENDOR PARTS SHORTAGES,
2. CORRECTIONS DEVELOPED AND INDICATED DURING CONVAIR FLIGHT TEST PROGRAM,
3. CONVAIR'S DECISION TO MINIMIZE OVERTIME UNTIL CERTIFICATION IS AT HAND.

SETTING ASIDE THE LATTER, AND TWO, AIRCRAFT HAS NOT ADVERSELY AFFECTED THE CONVAIR PRODUCTION LINE. IN FACT, THIS MAY HAVE HELPED CONVAIR MATERIALLY BY:

1. BENEFICIAL READJUSTMENT OF PERSONNEL,
2. PERMITTING MORE TIMELY COMPLETION OF ENGINEERING,
3. PERMITTING MORE ORDERLY, I.E., LESS OUT OF STATION CONSTRUCTION.

OF COURSE, DELIVERY OF THE TWO AIRCRAFT NOW SET ASIDE IS AFFECTED. THEY HAVE BEEN RESCHEDULED FOR SUBSTANTIALLY LATER DELIVERY.

IT SHOULD PERHAPS BE NOTED, ADDITIONALLY, THAT THE CURRENT CONVAIR PRODUCTION BOTTLENECK IS NOT IN THE FACTORY BUT ON FINAL AND THE FLIGHT LINE.

CERTIFICATION HAS NOT BEEN ADVERSELY AFFECTED BY SETTING AIRCRAFT ASIDE.

NEW YORK 17, NEW YORK

RMR
2/1960

WHEN WILL THE CONVAIR 880 RECEIVE FAA TYPE AND AIRWORTHINESS CERTIFICATION?

CONVAIR FIRMLY BELIEVES IT WILL RECEIVE THE 880 TYPE CERTIFICATE BY MAY 1. IT EXPECTS TO HAVE FIVE HUGHES TOOL COMPANY AIRPLANES IN FULL CONFORMANCE BY THEN, FULLY ELIGIBLE FOR AIRWORTHINESS CERTIFICATION ON MAY 1.

IT BELIEVES AUTO PILOT CERTIFICATION TO BE DIFFICULT BY MAY 1, BUT INCLUDES THIS IN ITS MAY 1ST ESTIMATE.

ONE TYPE CERTIFICATE IS BEING OBTAINED TO APPLY TO ALL 880'S. CUSTOMER SPECIAL ITEMS ARE TO BE HANDLED BY INCLUSION ON THE EQUIPMENT LIST, WHICH IS PART OF THE TYPE CERTIFICATE SPECIFICATION.

CONVAIR HAS NOT YET SUBMITTED PERFORMANCE DATA FOR FAA CERTIFICATION. FAA CERTIFICATION FLIGHT TESTS HAVE BEEN UNDERWAY, HOWEVER, SINCE DECEMBER 1, 1959.

CONVAIR EXPECTS TO COMPLETE ITS FAA PERFORMANCE TESTS BY MARCH 31ST.

THE FAA SENT FIVE PILOTS TO CONVAIR TO EVALUATE THE RUDDER SYSTEM. CONVAIR REPORTS THE FAA OFFICIALS HAD ADVERSE COMMENTS TO DATE. HOWEVER, THE FAA MAY REQUIRE CONVAIR TO HOLD WINGS LEVEL DURING ONE ENGINE OUT CLIMB TESTS. THIS NEEDLESSLY ADDS DELAY AND IS A MAKEOVER WHICH WOULD NOT IN FACT BE USED. FAA CLIMB TESTS BOEING CLIMB TESTS WERE RUN THIS WAY, HOWEVER THIS IS NOT TRUE. CONVAIR WILL VERY CORRECTLY FIGHT WITH THE FAA IF IT INSISTS ON NEEDLESS ERRONEOUS OR PERFORMANCE PENALTIES. TWA'S REVIEW OF THE RUDDER SYSTEM INDICATES SUBSTANTIAL IMPROVEMENT OVER BOEING AND VERY ACCEPTABLE PERFORMANCE.

ARBITRARY AND IRRATIONAL FAA ACTS (NOT SPECIFICALLY ANTICIPATED) COULD DELAY CERTIFICATION BEYOND CONVAIR'S ESTIMATE.

THE WITHDRAWING OF THE ADDITIONAL CONVAIR CERTIFICATION TEST AIRPLANE, #3, AND THE SUBSEQUENT SUBSTITUTION OF AIRPLANE #5 HAS NOT ADVERSELY AFFECTED CERTIFICATION. AIRPLANE #5 IS BEING USED TO CERTIFICATE HUGHES TOOL COMPANY SPECIAL ITEMS AND IS PRESENTLY NOT CRITICAL OF TEST TIME. THE AIRPLANE WILL FLY ON FEBRUARY 2ND.

D. WHAT IS CONVAIR'S MANPOWER SCHEDULE?

THE FACTORY IS CURRENTLY WORKING A TWO-SHIFT, FIVE-DAY WEEK.

THE FINAL ASSEMBLY FLIGHT LINE JUST OUTSIDE THE FACTORY IS NOW WORKING A TWO-SHIFT, SIX-DAY WEEK WITH SPOT SWING SHIFT APPLICATION. IT HAS BEEN ON THIS SCHEDULE FOR TWO WEEKS.

CONVAIR'S FLIGHT TEST LINE IS WORKING ON A THREE-SHIFT, SEVEN-DAY BASIS.

THE CURRENT "BOTTLENECK" IS CERTIFICATION ACTIVITIES AND FLIGHT TEST LINE ACTIVITIES. CONVAIR IS SHORT OF FLIGHT LINE SPACE AND APPARENTLY OF TRAINED PERSONNEL TO SOME EXTENT. NORMAL LEARNING CURVE TRENDS WILL AT LEAST PARTIALLY CORRECT, HOWEVER.

PLANNING AND RESEARCH

E. WHAT IS PRESENT SCHEDULE FOR HUGHES TOOL COMPANY DELIVERIES?

THE FOLLOWING TABLE SHOWS CURRENT ESTIMATES OF CONVAIR 880 DELIVERIES TO THE HUGHES TOOL COMPANY AND COMPARES THESE ESTIMATES WITH THE SCHEDULE CONTAINED IN TWA'S "JET PLANS AND PREMISES" MANUAL. I HAVE BEEN UNABLE TO DETERMINE WHAT AIRCRAFT TWA CAN EXPECT TO RECEIVE FROM THE HUGHES TOOL COMPANY.

CONVAIR HAS CONFIRMED IT ESTIMATES DELIVERY OF THE FIRST NP TRAINING AIRPLANE ON FEBRUARY 25TH. THIS IS BASED ON INSPECTION COMPLETION ON FEBRUARY 22ND, DELIVERY ACCEPTANCE ON FEBRUARY 24TH. IN MY OPINION DELIVERY IS MUCH MORE LIKELY ON MARCH 10TH.

CONVAIR UNOFFICIALLY ESTIMATES DELIVERY OF THE SECOND NP TRAINING AIRPLANE ON MARCH 2ND. I ESTIMATE THIS ON MARCH 18TH.

AX-1637

FROM INFORMAL DISCUSSIONS WITH JERALD OWENS AND HIS REFERENCE TO COMMENTS BY CONVAIR PERSONNEL FOLLOWING TALKS WITH MR. HUGHES, IT APPEARS POSSIBLE THAT TWA MAY RECEIVE THE FIRST TWENTY 880'S TO BE DELIVERED TO HUGHES TOOL RATHER THAN THE PARI-PASSU APPROACH. ALTHOUGH NOTHING FIRMLY RELIABLE IS AVAILABLE IN THIS CONNECTION, TWA SHOULD CONSIDER THE EFFECT OF RECEIVING THE TWENTY AIRPLANES AT THIS ACCELERATED RATE.

DX-128

April 7, 1960
Our File: 822-1295

Mr. D. A. Digges
Manager of Contracts
CONVAIR, A Division of
General Dynamics Corporation
3165 Pacific Highway
San Diego 12, California

Through: Mr. J. William Rou, Resident Representative

Dear Dudley:

Mr. Carroll has briefed me as to the outcome of his discussions with Convair regarding the take-off flap settings Convair has selected without coordination with the operators. In my conversation with you on the phone a little over a week ago I expressed extreme dissatisfaction with Convair's handling of this matter and its failure to discuss with us whether the flap settings that you have selected meet the requirements of the operators.

I am sure that you are aware of the disadvantages of having multiple flap settings in an airline operation if these are not needed to gain the optimum performance. From what we have been able to determine a 20° flap setting would be far more satisfactory in that it achieves:

a. Minimum take-off distances for most operating conditions, and

b. Adequate airworthiness climb under the environmental conditions that we will operate.

We certainly have no objection to you providing additional flap settings in the Operating Manual, and even urge you to do so, but our dissatisfaction has to do with the flap settings that you picked, namely 20 and 40°. Since we will have to operate initially with 20° flap setting, this means that we will be unnecessarily penalized at the outset. It also means that we will have to run a second set of airport data to employ the 40° flap setting. Had the flap setting selected included a 20° flap, we would have minimized the initial penalty and probably would not have had to compute newly performance for the 40° flap setting. Moreover, since you visualize flap settings of 20 and 40°, the flap warning horn now becomes practically meaningless.

Under the circumstances I cannot understand Convair's thinking in not consulting with us. As a result of this handling and since this information did not come to light until just a matter of two weeks ago, you apparently are in the position of not being able to supply us with the desired data at the time when we need it.

PLANNING AND RESEARCH
APR 8 1960

Our File 580-1295

It becomes doubly troublesome to me that Convair did not consult with us when I look at our jet operating experience and the fact that we are the most knowledgeable people with respect to our routes and, therefore, know far better what is best for us as an operator. Just in passing, as of March 30, we have flown 45,180 jet hours and have made 17,000 take-offs and are serving 15 cities with jets.

Under the circumstances I think it behooves Convair to correct a very undesirable situation by providing us with 30° flap setting data without cost and to make it available as near as possible to May 15. I believe it has been the general intent of the specification and the contract that Convair would work closely with the operator in defining the operational application of the airplane. It is unfortunate that I must say this, but we have had so many cases of Convair making decisions without consulting us. I think that one of the largest problems we have had in our mutual dealings has been in this area. It has not been our experience heretofore with other manufacturers to find things out by chance and quite often when it is too late to do anything about it. It has been difficult at times for our representatives on routine occasions to have access to your engineering personnel, although of late weeks this certainly has improved. Since Convair has repeatedly desired that our dealings be primarily through the contract group, this means, Dudley, that we must look to you and your people to be our advocate on matters such as this. It also behooves Convair personnel to become more sensitive to operating problems and to keep our people better informed of their thinking while it still is in the formative stage.

Best regards,

R. Z. Rourke
Assistant Vice President
Equipment Planning and Development

Dear Bill:

Yesterday, in a meeting with Messrs. Rourke, Cannady, West, Diggs, Chambers and yourself, we provided you with our target schedule for delivery of the Model 22 Wiz and Hughes Tool Company Aircraft including certain conditions associated therewith. As a matter of record, the information given to you yesterday is set forth below:

Aircraft No.	Date
31	Jan. 1. '61
24	Jan. (As soon as possible) Jan 5
28	Jan. (As soon as possible) Jan. 6
25	Jan. (As soon as possible) Jan. 10
29	Jan. (As soon as possible) Jan. 8
32	Jan. 27 Jan 30
14	Jan. 14 18
	Jan. 22 25
	Feb. 21
	Feb. 7
	Feb. 14
	Feb. 28
	Mar. 9
	Mar. 14
	Mar. 28
	Mar. 31
42	Apr. 30
15	Apr. 10
16	Apr. 15
	Apr. 28
	May 8
	May 20
3	May 31

Convair, A Division of General Dynamics Corporation, San Diego, California

(b) This aircraft will be offered to Hughes Tool Co. representatives on January 24, 61 in an unpainted condition. If Hughes Tool Company responds indicating its ability to process the aircraft for delivery, the aircraft will be painted and processed through final acceptance which task will be completed on or before January 27, 30, 1961. If the Hughes Tool Company does not indicate its ability to process the aircraft for delivery on January 24, 61, the aircraft will not be painted but rather placed in storage.

(c) If the specific paint job and general configuration of these two aircraft can be identified on or before January 15, 1961, the delivery dates as indicated are applicable.

(d) Provided this Ship is returned from Flight Test on 1-12-61 as scheduled.

Since our meeting with you which was held within ten minutes of the time Mr. Loomis made the schedule available to us, certain minor changes have occurred and these changes are shown above in red print.

At the conclusion of our presentation of the schedule, you asked certain questions relative to our planning. These questions which are set out below for clarification will be answered sometime today:

(a) When is Convair going to staff personnel for the above schedule?

(b) What will the Labor Force be as compared to today's Labor Force?

(c) Why did Ships No. 6 and 9 slip from their previous apparent position?

(d) Why did Ship No. 33 move from February to March?

(e) Will rescheduling of the Model 22A Hughes Tool Company program, as indicated in Convair's receipt-letter, interfere with the Model 22 schedule set out above?

Very truly yours,

A Division of General Dynamics Corporation
(San Diego)

16 March 1961

Mr. J. H. Bew
Assistant Representative
Trans World Airlines, Inc./Hughes Tool Co.
c/o Convair
San Diego 12, California

Dear Bill:

On December 30, 1960, General Dynamics Corporation and Trans World Airlines executed an agreement which initiated a program for the completion and delivery of Model 22 aircraft to TWA. Prior to this time, the only 880 production deliveries that had been or were being processed on a standard industrial basis with a definitive completion date were those two aircraft for Delta Air Lines and six aircraft for Northeast Airlines. On January 6, 1961, in response to an urgent request from TWA, we set forth a target delivery schedule for all aircraft ordered by the Hughes Tool Co. (with the exception of the aircraft delivered to Northeast), which was based upon the best analysis we could make in the short period of time between that date and the signing of the Agreement to commence factory completion and delivery. While the delivery of six aircraft for Northeast generated some expansion in our factory schedule objectives, the task in that instance was primarily one of incorporating Northeast peculiarities and otherwise delivering aircraft in an as-is condition. In summary, this afforded an opportunity to achieve full scale re-activation of the Model 22 production line coincident with the signing of the December 30, 1960, Agreement. Subsequent to the January 6 schedule advice, it became apparent that we had not had enough time to fully assess the effects of the long term program stoppage upon aircraft condition, understanding each, manpower, etc., and as a consequence, found it necessary to carry out an exhaustive analysis of the status of the overall program to more accurately define our target delivery schedule.

On November 7, 1960, which was the beginning of the processing of Northeast aircraft, there were 4,268 factory personnel on the payroll. Since that time, 1,692 factory personnel have been progressively added as rapidly as they could be employed and effectively used. Specifically, we have created a new department, 1411, to prepare your aircraft for delivery. This department is now manned with 575 workers. One Shift Operations Department, 171, has been increased from 151 to 213 workers. We plan to schedule a five-day work-week using two ten-hour shifts, two eight-hour shifts on Saturday, two Sundays as required, amounting up to 236 overtime. In addition to this employment activity, we have negotiated the temporary loan of 200 workers with required skills from our other Divisions.

As a result of the above described efforts in analyzing the program status as well as augmenting the build up in the level of factory personnel, and in consideration of Hughes experience with the 880 on the line, we have now established a thoroughly integrated program for the completion and delivery of the remaining aircraft, which provides for the first aircraft completion prior to delivery during [illegible]. The delivery or delivery rates in the Hughes

[illegible] Company's program for 880 aircraft has been [illegible]. While the efforts now [illegible] were unavoidable, it is considered reasonable that the [illegible] by approximately the completion of the [illegible] months.

[illegible], the following delivery schedule has been established for the [illegible] the remaining [illegible] Jet Delivery [illegible]:

[illegible]	Model Number Schedule	Actual or Current Projected Delivery Date
21	January 1	January 1 (Delivered)
24	As soon as possible	January 6 (Delivered)
20	January 7	January 6 (Delivered)
29	January 12	January 12 (Delivered)
27	January 26	January 6 (Delivered)
33	January 30	February 13 (Delivered)
32	January 28	January 31 (Delivered)
34	January 25	February 8 (Delivered)
2	February 24	March 31 [illegible]
25	February 7	March 31 [illegible]
30	February 14	March 14 (Delivered)
28	February 28	March 30
35	March 9	April 28 [illegible]
37	March 14	June 2
39	March 23	June 12
40	March 31	May 15
42	April 28	July 10
43	April 20	June 26
6	April 17	July 24
9A	April 26	September 6
44	May 1	August 14
20A	May 8A	September 15
3	May 24	August 4

This has unsettled circuits and has [illegible] ten January 17 delivery [illegible] anticipated to prevent the receipt by January 19, 1961. No confirmation was received all on January 20, 1961, [illegible] the Liberals in [illegible] calendar week basis.

The [illegible] dates date in the January 6 [illegible] was confirmed upon [illegible] confirmation anticipated to be given by [illegible] on or before January 19, 1961. This anticipation was received on [illegible] May 12, 1961.

[illegible] Wright Boys Airplane

[illegible] [illegible] [illegible]

Mr. J. W. Bew -3- 16 March 1961
AE-61-1235

individual breaks in an index to the items which constitute the above referenced airframe configuration, all of which will be incorporated prior to delivery as the first schedule change in the sequence of ships 2, 25, 33, 39, and 49 which aircraft have been recently committed for delivery on specific dates. In the event that it proves to have incorporation of these items in lower or an earlier delivery schedule, such a program can be established only with the specific understanding that the Air Force assumes all responsibility for incompatibility with items. Convair would, however, retain the obligation to supply the Air Force's Guidance for the installation of the items by GAC.

We regret the necessity for the schedule adjustment as shown above but assure you that everything possible is being done to maintain or improve the above schedules.

Very truly yours,

CONVAIR

(Letter - Convair to Rourke re CV-880 Deliveries, 7/11/61)

July 11, 1961

DX 142

Mr. R. W. Rourke
Assistant Vice President
Equipment Planning and Development
Trans World Airlines
10 Richards Road
Kansas City 8, Mo.

Dear Russ:

Since your telephone call last week regarding the delivery schedule which Bill Bew had recently given Mr. Tillinghast on the remaining 880 aircraft assigned to TWA, I have personally conducted a very thorough analysis of the delivery situation.

At this time I think it is worthwhile to review for the record the delivery picture as of this date for the sixteen 880s delivered so far in 1961. You will recall that in the middle of March of this year I met with you, Oz Cocke, and Bob Rummel in New York and presented Mr. Chambers' March 16, 1961 letter to Mr. Bew, giving the background on the target schedule of January 6, 1961 and submitting a revised schedule. At that time I pointed out that while the first nine aircraft had been delivered approximately on schedule, with no aircraft slipping more than one week, we anticipated a delay on the remaining aircraft because of our inability to forecast on short notice the task involved in preparation of these aircraft because they had not been previously completed nor flown out.

With the exception of aircraft No. 22-00-33 which encountered excessive trim difficulties requiring in excess of one month to correct and No. 40 which was ten days late, the next seven aircraft were delivered ahead of schedule. (See Attachment). Actually, this is a remarkably good performance when you consider that most of these aircraft had been stored outside for over one year and required not only completion but extensive modification for recent engineering changes which were not anticipated at the time of the 16 March schedule. (See Attachment).

We now are required to deliver to you the last three aircraft, specifically, Serials 6, 19, and 3. You will recall, however, that the 16 March schedule suggested a delivery schedule ending July 24 for a total of twenty aircraft but including Serial Nos. 39 and 34 instead of 19 and 3. I feel that this schedule could have been met satisfactorily, since the condition of 39 and 34 was excellent at the time the schedule was proposed. You elected not to further pursue the possibility of convincing the Hughes Tool Company that these aircraft (Nos. 39 and 34) should be assigned to TWA in spite of the fact that you were successful

Mr. R. W. Rourke

July 11, 1961
Page 2

Unfortunately, the result is that the three remaining assigned aircraft for TWA include Nos. 19 and 3 instead of Nos. 39 and 34. The said remaining aircraft (i.e., Nos. 6, 19, and 13) are the ones requiring the greatest re-work of any of the other aircraft and have been in storage for the longest period of time. As we operate the systems on these aircraft we find that extensive removal and refurbishment is required and in spite of the fact that we have used parts extensively from the remaining Hughes Tool Company aircraft in order to meet the TWA schedule, we are having difficulty doing so. We are continuing to bend our best efforts in this direction however.

With regard to the schedule given to you by Mr. Bow showing July 15 for No. 6, August 15 for No. 19, and September 15 for No. 3, those dates are not familiar to me. The dates on our 16 March letter were July 24, August 21, and August respectively. At the present time, do not anticipate that those dates will be substantially slipped, except for No. 3. No. 3 has been the most difficult aircraft to complete since it was the flight test aircraft and had to be extensively stripped and re-built in order to deliver it to you as a new aircraft and fully modified to the latest engineering configuration. In other words, I feel that we will deliver within one week of the July 24 and August 21 dates but No. 3 will probably slip at least thirty days.

I recognize that Mr. Chambers' modified his letter of March 16 by his letter of March 24, but I do not believe that adequate consideration was given in the 24 March letter to the effect of your demands which created the 24 March letter. I would, therefore, prefer to stand on the delivery dates of 16 March recognizing that the schedules for Nos. 39, 34, 9, and 18 have now been violated because preference was given to the aircraft assigned to TWA.

You indicated over the telephone that Mr. Tillinghast had lost confidence in Convair's ability to schedule aircraft, however, in view of the above, I feel that we at Convair have not had a proper opportunity to inform Mr. Tillinghast regarding our performance to schedule and some of the problems which have been experienced in delivering aircraft to TWA.

In view of the fact that Mr. Tillinghast has not had the benefit of our counsel, I would appreciate it if you would at the very least show him this letter. I would appreciate, however, the opportunity to meet with Mr. Tillinghast and review with him the total history of the 880 program which, as you know, has been

Mr. R. W. Rourke

July 11, 1961
Page 3

entirely satisfactory from a delivery standpoint for our other customers.

I trust that the above information fully answers your telephone inquiry. If you desire any further information please do not hesitate to call upon me.

(Letter - Rourke to Convair re CV-880 Deliveries, 8/2/61)

August 2, 1961

Mr. R. C. Loomis
President
GENERAL DYNAMICS/CONVAIR
San Diego, California

Dear Bob:

In response to your letter of July 21, please be assured that your letter has been brought to Mr. Tillinghast's attention, and a copy of this reply is likewise being sent to him. I feel sure that when mutually convenient he will be glad to meet with you and hear your comments concerning the total history of the 880 program.

The really important aspect of the moment is for Convair to find ways and means for expediting delivery of the remaining aircraft, restoring delivery dates to at least those committed in Mr. Chambers' letter of March 24, 1961.

In aid of a full understanding of background, I think the following should be mentioned, some of the events, of course, anteceding your personal connection with the 880 program.

1. As executed in 1956, the 880 contract called for delivery of provisionally certificated aircraft beginning in November of 1959, with full certification to be accomplished by May 1, 1960. This appears to have been amended in March of 1960 so as to provide a revised delivery schedule for fully certified aircraft, four in May of 1960 and some four or five per month in each succeeding month until deliveries were completed in November of 1960.

2. Early in May of 1960, Hughes Tool Company assigned 20 of the 30 aircraft to TWA.

3. Convair refused to honor the assignment to TWA without confirmation from the Hughes Tool Company. During the whole of 1960, such confirmation was received only with respect to one aircraft, delivered in May of 1960. TWA's efforts to obtain further delivery pursuant to the assignment were fruitless until January 1, 1961, when a second airplane was delivered pursuant to the Letter Agreement between Convair and TWA dated December 30, 1960.

4. As time passed between May and the end of 1960, Convair repeatedly asserted its ability to deliver the 880s very promptly. For example, Convair's letter of August 2, 1960, designated 11-2-3945, set forth a delivery schedule indicating delivery of 8 aircraft in August, 5 in September, 5 in October, 3 in November and 4 in December. You and I personally discussed the delivery situation in your office just a few weeks before the close of 1960, and you asserted that with application of overtime effort a total of 10 aircraft could still be delivered before the end of 1960.

On this background, we must take issue with any implication that this story begins with the January 6, 1961 schedule, and that the January 6 schedule was done in haste. On the contrary, the January 6 schedule was a revision of the many preceding schedules, developed over a long period of time. Contrary to being conceived in haste, the January 6 schedule should have been a most deliberate and considered evaluation of all the factors in the situation. Hence our increasing shock that each succeeding delivery schedule should reflect substantial further slippage to our disadvantage.

You tend to place the blame on TWA for failure to obtain assignment from Toolco of airplanes #39 and #34. During the development of your March 16 and March 24 letters Convair had intimate knowledge of the airplanes that were assigned to TWA and the nature of the discussions which took place leading to such assignments. It is our understanding that Convair had many more discussions with the Hughes Tool Company and certainly had knowledge of the assignment schedule. The aircraft assigned to TWA came about after considerable discussions and negotiations and by the March date they represented a contractual understanding between the three parties. TWA was not in position to cause a change in these conditions. You mentioned that it was our requirement to insist on the delivery of the twenty assigned airplanes that caused work effort on the unassigned airplanes to be postponed until last. Had Convair elected, however, to maintain the staffing on the 880 program it had in April, these last airplanes could have been completed in an orderly manner for delivery to your other customer. Convair had in its hands the control of scheduling work on these airplanes concurrent with the TWA deliveries.

Related to this, you mention that delivery of TWA's 880s required robbing of parts from other airplanes. This we are sure was Convair's decision, and it was made necessary by Convair's inadequate provisioning of extra components in order to provide the normal replacements which occur during routine aircraft acceptance. It has been our experience with other manufacturers that units which experience failure during acceptance flying are procured in excess of the normal quantity in contemplation of this situation. Therefore, TWA cannot accept any responsibility or blame for this parts shortage.

We have dealt with most of the major aircraft manufacturers in the United States during our corporate history, and are aware of the problems connected with your business. In all this experience, however, we have never encountered such a disparity between delivery schedules and actual deliveries as has occurred in the 880 program with respect to the aircraft being acquired by TWA.

In conclusion I must repeat that we insist on Convair at least making good its last previous delivery commitment on 880 aircraft and hopefully to better these dates.

Very truly yours,

R. K. Rourke
Assistant Vice President
Equipment Planning and Development

A DIVISION OF GENERAL DYNAMICS CORPORATION

GENERAL OFFICES
SAN DIEGO 12, CALIFORNIA
TELEPHONE: CYPRESS 6-9611

May 6, 1960

DX 146

Hughes Tool Company
Houston, Texas

Attention: Mr. C.H. Price

Gentlemen:

Pursuant to our telephone conversations with your President, Mr. Hughes, some time ago, Convair undertook to hold open for Hughes Tool Company delivery positions for six (6) Convair Model 30 aircraft in the months of July, August and September, 1961. The exact positions which we have held open to date for Hughes Tool Company are one (1) during the month of July, two (2) in August, two (2) in September and one (1) in October, and are the earliest uncommitted delivery positions available for Model 30 aircraft.

Although the holding open of the aforesaid delivery positions has to date been at Convair's risk exclusively, Convair does not feel that its commitment to Hughes for the availability of these delivery positions can be continued beyond this date, May 6, 1960, in the absence of Hughes' agreement to protect Convair against loss as hereinafter provided.

You are advised therefore that, unless you shall have executed before May 7, 1960, the enclosed copies of this letter and returned same promptly to us, thereby evidencing your agreement to the terms hereinafter set forth, the six delivery positions hereinabove prescribed will no longer be available.

In the event, on or before July 6, 1960, Hughes Tool Company shall have executed, and delivered to Convair, a definitive purchase agreement covering the manufacture and sale by Convair and purchase by Hughes of six (6) Convair Model 30 aircraft, for delivery in accordance with the schedule set forth in the first paragraph of this letter, on substantially the same terms as those prescribed by the attached Purchase Agreement, then in such event, this letter agreement shall have no further force or effect; otherwise, Convair may on July 7, 1960 or at any time thereafter cancel all or any of said six aircraft, and, in such event, Hughes agrees to pay to Convair upon Hughes' receipt of

Hughes Tool Company
Houston, Texas

May 6, 1960
Page two

an invoice therefor, all costs which on or prior to July 6, 1960, Convair shall have expended or irrevocably committed for expenditure by Convair directly attributable to the manufacture of such of said six (6) Convair Model 30 aircraft as shall be so cancelled.

Hughes is hereby advised that the six delivery dates committed to Hughes are dependent upon Hughes' acceptance of a detail specification therefor in substantial accordance with that set forth in Detail Specification Report No. ZD-30-005 (Revision of 1 May 1959) including Change Orders thereto numbered 1 through 13.

As you know, Convair is now at Convair's risk and expense holding open for Hughes two (2) delivery positions for Model 30 aircraft for each month beginning October 1961 and ending December 1962. These positions cannot be held beyond July 6, 1960, in the absence of a firm commitment from Hughes to purchase additional Model 30 aircraft.

If the foregoing is acceptable to you, kindly so indicate by executing and returning to us the enclosed two copies hereof.

Yours very truly,

Re: Purchase by Hughes Tool Company of Six (6) Convair Model 30 Aircraft

Gentlemen:

This will confirm our agreements reached last night.

Please refer to our Letter Agreement dated May 6, 1960 wherein Hughes Tool Company is advised that Convair is holding open for the benefit of Hughes certain delivery positions of Model 30 aircraft, and our Letter Agreement of July 7, 1960 amending same.

This letter will confirm our further agreement that wherever in said Letter Agreement of May 6, 1960 the dates "July 6, 1960" or "July 7, 1960" appear, there shall be substituted therefor the dates "August 6, 1960" and "August 7, 1960", respectively.

Our said Letter Agreement of July 7, 1960 is in all respects superseded hereby and shall be of no further force or effect.

Please indicate your agreement to the foregoing by signing in the space provided below the two (2) enclosed copies hereof and returning same to us.

Yours very truly,

tlemen:

Please refer to letter dated May 6, 1960 from General amics Corporation, Convair Division ("Convair") to Hughes l Company ("Hughes") and to the amendment to said letter ed July 14, 1960, and to letter dated July 14, 1960, and to ter dated August 6, 1960, all regarding Convair's agreement hold open for Hughes certain delivery positions for Convair del 30 aircraft and Hughes' agreement, in certain events, to tect Convair against expenditures with respect to such ivery positions.

The next to last paragraph of the aforesaid letter of 6, 1960 refers to Convair's agreement to hold open, at vair's risk and expense, additional delivery positions for del 30 aircraft, such delivery positions consisting of one (1) the month of October 1961 (in addition to the one (1) tober 1961 delivery position referred to in the first paragraph the May 6 letter) and two (2) delivery positions for each th beginning November 1961 and ending December 1962. It is tended by this letter that Hughes agree to protect Convair as reinafter provided, from exposure to loss attributable to the (2) January 1962 positions.

In the event, on or before October 6, 1960, Hughes ll have executed and delivered to Convair a definitive rchase agreement covering the manufacture and sale by Convair l the purchase by Hughes (exclusive of the six (6) Convair del 30 aircraft referred to in the first paragraph of the oresaid May 6 letter and of the three (3) Convair Model 30 craft referred to in the third paragraph of the aforesaid y 14 letter and of the two (2) Convair Model 30 aircraft erred to in the aforesaid August 6 letter) of two (2) Convair del 30 aircraft for delivery in January, 1962 on substantially same terms as those prescribed by the draft of Purchase eement attached to the May 6 letter, then, in such event, s letter agreement shall have no further force or effect;

otherwise, Convair may, on October 7, 1960 or at any time thereafter, cancel any of the said two (2) aircraft with respect to which Hughes shall not have theretofore executed and delivered to Convair such a definitive purchase agreement, and, in such event, Hughes agrees to pay to Convair upon Hughes' receipt of an invoice therefor , all costs which on or prior to October 6, 1960 Convair shall have expended or irrevocably committed for expenditure to the extent such costs are directly attributable to the manufacture of such of said two (2) Convair Model 30 aircraft as shall be so cancelled.

Hughes understands that the two (2) delivery dates herein referred to are dependent upon Hughes' acceptance of the detailed specifications for the two (2) Model 30 aircraft in substantial accordance with that set forth in Detailed Specification Report No. ZD-30-005 (Revision of 1 May 1959) including Change Orders thereto numbered 1 through 13.

If the foregoing is acceptable to you, kindly so indicate by executing and returning to us two of the enclosed copies hereof.

(Boeing Memorandum re Conversations with H.R. Hughes, 9/23/55)

DX 168

To: W. M. Allen, E. C. Wells, J. B. Connelly, G. C. Martin, R. L. Bell, G. S. Schairer

Subject: Contacts with Howard Hughes (TWA)

The following is a resume of the three telephone conversations I had with Howard Hughes on September 21 and 22 in Los Angeles. Mr. Hughes requ that we keep confidential any information he gave to me.

1. Mr. Hughes stated that he had information on good authority that Pan American could finance at this time only the purchase of 12 or 15 jet transports and that would be the extent of their commitment at this time.

2. Hughes feels that C. R. Smith and Juan Trippe are playing Douglas and Boeing against each other in connection with deliveries and specifications with the objectives of (1) getting the best deal possible for themselves, and (2) to retard deliveries to TWA as much as possible. He feels Douglas is much more inclined to go along with these airlines with objective number (2) than is Boeing. He bases this on a series of conversations he has had with Nat Paschall over the last two weeks and yesterday. Two weeks ago, Paschall said Douglas would offer TWA attractive delivery positions, but yesterday he said they could offer TWA nothing until 1961. Hughes said that in yesterday's conversation, Paschall indicated that "he could not care less" whether or not TWA ever got any Douglas airplanes. (Hughes reported that he talked to Mr. Paschall yesterday while Paschall was at UAL's base in San Francisco.)

3. Hughes said that about one month ago, C. R. Smith went to Donald Douglas and told him he thought Boeing's announced price of four and one-half million dollars for the 707 would be reduced and asked how much Douglas intended to reduce its price for the DC-8. Douglas replied to the effect that he didn't intend to reduce the price and, as a matter of fact, he thought his price was too low and might have to be raised irrespective of what Boeing did to their price. Hughes feels this made Mr. Smith unhappy and that it was then that Smith came to Seattle to talk to Mr. Allen and made Boeing an offer. Hughes reported that Bob Gross told him that Smith told Gross in New York last week that Boeing's acceptance of American's offer was hedged with so many provises that Smith withdrew it. I told Hughes that work on the final agreement was being held in abeyance until we negotiated the final specifications and that as far as I knew the basic deal was "on", but Hughes felt to the contrary. Hughes reported that the American Technical Team was at this time in Los Angeles negotiating diligently with Douglas on the detailed

specification for the DC-8. (The American Technical Team were, in fact, in Los Angeles in force, but from the information received by me I gathered they were working with Lockheed on the Electra.)

(4) Upon query Hughes stated that he absolutely had no deal outstanding with Convair because of Air Force pressure on Convair to do more and better on certain Air Force projects at Convair. He said that he had worked secretly for six months with Convair on the deal for 30 jet transports, the first of which is to be delivered in October 1958. He stated that the detail specifications had been completely negotiated, a formal contract had been agreed upon by both parties and the financial arrangements made when the "rug was jerked out from under the project!".

(5) When asked what TWA's interest is in the Boeing 707, Hughes replied that if Trippe, Smith and Douglas shut Boeing out he'd come up and buy 30 airplanes from us if we wanted to go ahead. If we go ahead with Pan American, American and United he said he would consider buying 15 if the deliveries weren't too bad. However, he would not take any action or send his technical men to Seattle until he saw which way the wind blew. (He declared he didn't want an airplane just like American's!)

Conclusions

My general conclusions are that Mr. Hughes is quite frustrated and undecided. He apparently dislikes Pan American, American and Douglas and does not want to see them control the market for jet transports but, on the other hand, I think he would like to see them do so if he thought Boeing would go ahead with TWA with deliveries ahead of his competitors. (He does not consider United a real competitor.) I assured him that we could not go forward with the project with a sale of only 30 airplanes. He thought perhaps we could consummate enough sales to foreign operators to make the project worthwhile, but I doubted it.

It is inconclusive to me that the Convair deal is entirely out. If it is really dead, I am sure he would be more interested in our airplane and would send his technical people to Seattle to learn more about it.

I recommend that we go forward as fast as possible with Pan American, American and United and not worry about TWA for the time being. I do recommend, however, that we hold some delivery positions open and not commit all available airplanes to the first three customers.

[illegible]

W. E. Beall

Note: Model 707 Performance Comparison Sheet (JT3C-6 and JT4A-3) dated September 19, 1955 was sent to Mr. Hughes by special messenger.

707 - Tw

MEMO REPORT

DX 169

To: W. M. Allen R. L. Bell
E. C. Wells ~~J.~~ D. Connelly

Subject: Telephone Conversation between Howard Hughes in Los Angeles and W. E. Beall in Seattle at 8:00 AM, October 31, 1955.

1. Mr. Hughes inquired as to the status of the sale of the Boeing 707 to American Airlines. I told him we were in active negotiations and that we hoped we could sell them.

2. He asked why we were not able to sell United and when I replied that I didn't know, he made the categorical statement that United never had any intention of buying 707's in any event.

3. He asked that if American did not buy 707's, if there would be any chance for us to match Pan American's schedule. I explained to him that we couldn't match Pan American's schedule because it is the period of our production build-up and the first airplanes we could quote to another customer would be April or May.

4. I asked him if he wanted a delivery quotation, but he said he would wait until after our American deal was settled one way or the other. If American does not buy from us he might be tempted to talk to Trippe about matching delivery schedules.

He asked that his conversation with me be kept absolutely confidential.

(C. & C. Letter to Leslie re TWA Financial Forecast, March 13, 1959)

COVERDALE & COLPITTS

CONSULTING ENGINEERS

120 WALL STREET

NEW YORK 5, N. Y.

March 13, 1959

Mr. A. Y. Leslie, Senior Vice President
and Treasurer
Trans World Airlines, Inc.
380 Madison Avenue
New York, New York

Dear Mr. Leslie:

In accordance with your instructions, we have started work on a study of TWA's financial forecast for the period 1958-1962, which includes operation of jet aircraft. In this study, we will examine the various components of your forecast so that our independent judgment on each of these matters is satisfied and so that we will be able to support the financial information which will be used by your investment bankers in connection with the proposed financing. Our work will include a review of the method of forecasting traffic and revenue for both domestic and international air traffic, the projections of expense for the operation of piston equipment, the estimates of expense for operation of jet equipment, the estimates of general and administrative expenses and the assumptions made respecting CAB and TWA rate and route award policies.

In accordance with your instructions, we will do everything possible to complete the first phase of our study by the end of March so that the investment bankers can then hold preliminary discussions with insurance companies and others respecting the financing program. We understand that the closing of the financing is scheduled for June 1st.

We propose that our compensation for this engagement be calculated at our standard rates which are as follows:

For services of staff engineers - within the range of $125 to $175 per day

For services of partners - $300 per day

For clerical, stenographic and other work by our nonengineering employees - book payroll cost plus 50 per cent

For services of temporary employees used on this engagement, if any - payroll cost plus 50 per cent

For out-of-pocket expenses incurred directly in connection with this engagement - at cost

We propose to render monthly bills calculated as described above, and payable within 30 days.

At this early date on the study, we cannot determine the amount of our work which will be required in connection with your financing program. Using our experience with other studies of a generally comparable nature, we estimate that our total billing may be of the magnitude of $25,000.

This description of our proposed engagement is intended to be in accordance with our conversations on the subject; if it is not, please let us know.

We thank you for the engagement.

Very truly yours,

Edward L. Temple

SECTION I BASIC FORECAST ASSUMPTIONS

FINANCIAL FORECAST FOR YEARS 1958 - 1962

Basic Forecast Assumptions

I EQUIPMENT

A. Jet Aircraft - 14 B-707-131 assigned to Domestic mixed service; 18 B-707-331 of which eight are assigned to Domestic mixed service and ten to International mixed service; 30 CV-880 assigned to Domestic all first class service. Delivery schedule summarized on Schedule IV-A.

B. Present Equipment - The forecast reflects the retirement of the DC-4's, L-049's, L-1049A's, L-1049G's and Martin fleets by the end of 1960. No provision is made in the forecast for the sale or lease of these aircraft. Retirement schedule summarized on Schedule VI-C.

C. Leased Equipment - The L-1049H leased aircraft will be operated in Commercial and MATS Charter for the duration of the current lease agreement. It has been assumed the leases will not be renewed past their termination dates.

II FINANCING

A. Jet Aircraft Program - It has been assumed that TWA would purchase the jet aircraft and related spare parts and inventory from the Hughes Tool Company on conditional sales contract at 100% of the cost to TWA. Repayment would be in equal monthly installments over ten years, commencing with the first month of schedule service for each fleet, plus interest at 4% on the unpaid balance.

B. Fuel Systems & Storage - Jet fuel storage and dispensing facilities acquired in 1959 and 1960 are 100% financed. Basic terms include ten year repayment with interest at 4 to 4-1/2% on unpaid balance. Facilities at several locations are amortized without interest charges.

III INCOME STATEMENTS

A. Revenues - No change in the Domestic fare level presently in effect other than those changes effected in October 1958. It has been assumed that all fares in the current level due to expire will be extended throughout the forecast period. International first class fare levels will be maintained at present level, however, there will be no berth or sleeper seat

service on jet aircraft. After April 1, 1960 there will be one class of service replacing the present tourist/economy service at a yield of approximately the same as the weighted average of these yields experienced in 1958. All other revenues have been assumed at present rate levels.

B. Operating Expenses -

1. Direct Flying Expenses - In general, expense rates for projecting costs for piston engine aircraft now in service were based on actual experience for the year ending June 30, 1958 with the exception of those areas commented on below. Jet aircraft operating data, on which cost projections were based, was supplied by TWA's Staff Engineering and Maintenance Departments and is the result of their analysis and interpretation of manufacturers estimates for operating jet aircraft on TWA's routes and under TWA's proposed operating policies and procedures.

   a. Salaries & Wages - Flight crew salary expense was based on rates of pay stipulated in current flight crew contracts plus a percentage increase for contracts now open. (Pilots increased 6% for contract expired August 1, 1958.) A contract with the Flight Engineers was signed July 29, 1958 which extends through 1959 and covers pay rates for operating jet aircraft. It was assumed that pilots pay for operating jet aircraft will be based on current type contracts with such factors as contractual speeds and gross weights estimated. Our estimates were based on the recently signed flight engineers contract and its normal relationship to pilots pay elements and, also taking into consideration Eastern Airlines pilot contract which covers jet pay provisions.

   b. Travel Expense - Flight crew travel expense was based on actual experience rates and then adjusted to reflect a 50% increase in flight engineers travel allowance to incorporate their new contract provisions. Flight engineer and pilots travel allowance are now at the same rates and no increase is anticipated for pilots.

   c. Aircraft Fuel and Oil - Aviation gas and oil expense was based on current prices and experienced fuel consumption by type of aircraft. These prices include the recent reduction in Domestic aviation gas of approximately 1-1/2 cents per gallon. The average price per gallon for kerosene used in jet aircraft was based on bids received by TWA. The federal tax on aviation gas, which is now 2 cents per gallon for fuel used in the U.S., has been estimated to increase to 3 cents per gallon effective July 1, 1959 and to include jet fuel (Kerosene and JP-4) which is not now taxable.

Transatlantic Traffic Slump Continues

By Glenn Garrison

New York—North Atlantic airlines are moving into their winter off-season with little hope of a sharp increase in traffic to offset last summer's slump, which resulted in an increase of only 3% in scheduled passengers in the face of a 37% increase in capacity.

Last year at this time, when most of the carriers were operating large-scale jet fleets for the first off-season period, bookings were reported way up for the winter months, in some cases 50% and more (AW Nov. 7, 1960, p. 40). As it turned out, the North Atlantic airlines carried 35% more passengers in the final quarter of 1960 than in the previous like period. Capacity, however, rose 53% for the quarter.

An AVIATION WEEK survey of current bookings for the off season indicates a level generally only slightly higher than last year at this time. Capacity will be up again, but not as drastically as during the last off-season.

Bookings are less reliable than they used to be as an indicator of traffic because of the tendency to book later. Airlines report that the figures often change for the better a few days before a particular flight. However, little of the optimism evident last year—when the 17-day excursion fare was going in for the first time—seems reflected as this winter season goes into its second month.

The slump in traffic growth, critical when linked with the giant increase in seat capacity, began last May. For the four peak season months, June through September, the scheduled North Atlantic airlines carried 917,754 passengers, up from 884,152 in the summer of 1960. Capacity rose from 1,273,455 seats to 1,743,085, for a load factor in both directions of 53% for the 1961 period. This was a drop from a similar load factor in summer, 1960, of 68% in both directions.

First-class traffic was hardest hit, dropping 34% to a total of 95,225 passengers for the four months. Economy passengers totaled 822,529, a 9% increase.

For the nine months ending last September, scheduled traffic was up 8% to 1,484,674 passengers, and scheduled capacity was up 41% to 2,898,560 seats.

Charter Operations

Charter operations, which present some controversial aspects, zoomed during the summer period with an increase of 73% among the scheduled carriers to a total of 153,383 passengers. Some airline officials, proponents of lower scheduled fares, feel that the charter business is a way of begging the question and offering lower fares through the back door. Also, some question exists as to whether charters are accurately reported to International Air Transport Assn. In this view, an indeterminate number of charter passengers end up in the scheduled passenger totals.

Among the carriers reporting charters for June, July and August were British Overseas Airways Corp., with 202 c... bound legs: Lufthansa, with 72; KL... with 74; Pan Am, with 163; SAS, w... 32; and TWA, with 42.

Last summer's results, both in ca... city offered and traffic carried, va... considerably among the individual c... riers. Some examples:

...on the Berlin situation. Lufthan... ...ng with BOAC and other foreign ...arriers, cites the fly-American pro... ...as a particular source of traffic. The German airline's capacity this ...r will be up about 41% over last ...r's. Bookings are running about ...ast year's level.

...alia carried 40% more passengers ...otal of 42,016. Capacity increased ... to 78,370 seats. This winter's ...ty will be about 51% greater than ...inter's. Bookings were up about ...as of Nov. 3. Alitalia's big capacity ... of last summer coincided with the introduction of a full jet fleet; next summer's increase will be considerably less.

• SAS registered a 15% increase in traffic to 63,387 passengers. Capacity was up 9% to 113,727 seats. SAS plans to offer about the same capacity this winter as last. Bookings are reported as slightly up over this time last year.

• Air France increased its traffic from 59,272 to 71,463 passengers. Scheduled capacity rose about 49% to 143,186 seats. Bookings for the rest of 1961 and the beginning of 1962 are running about 10% ahead of last year's.

...ontrollers Question Future Value ...f Various Air Traffic Measures

By David H. Hoffman

...mi—Air traffic controllers have ... to question whether there is a ... in any future control system for ...ers that can only print flight ...s strips, devices designed to pre...nflict courses, and the present ...over airway structure.

...icism of these devices came dur...he Air Traffic Control Assn.'s ...l meeting here when controllers ...ked to discuss an ATC system ...o be reshaped by recommenda... ...f the Project Beacon task force ... [illegible] ..., then four months overdue, were ...own to most controllers at the ...30-Nov. 1 ATCA conference.

...an informal workshop on "auto... ...a evaluation," controllers made it ...that any plan to install additional ...keeping" computers similar to ...Remington-Rand Univacs now in ...at six Federal Aviation Agency ...Route Traffic Control Centers ...(CCs) would not win solid con... ...support. Their objections:

...the expense of leasing additional ...ters to print, but not update, ...progress strips would divert funds ...projects aimed at developing semi... ...atic ATC systems with greater ...lity.

...mended use of flight progress strips ...ficult to reconcile with the ex... ...l use of radar in controlling air ...

Satisfied with the results of ...to date, controllers want to focus ...attention on radar scopes rather ... strips printed by a computer. ...blem of feeding the computer ...data, stuffing the flight progress ...into holders and distributing the ...to numerous center sectors, in ...cases, requires more personnel ...would be required to print and ...ate the strips by hand.

centers, controllers at the workshop recommended that FAA re-evaluate what constitutes a legal procedure within an ATC facility. They asked, for example, if it still served a useful purpose to require a written record of the control instructions issued to every flight. Would it be necessary to take motion pictures of each radar scope if radar resulted in the elimination of flight progress strips? And would not such requirements, if imposed, lessen the efficiency of the ATC facility?

Automatic conflict prediction—a system for warning a controller well in advance of any clearance that might steer an aircraft toward a collision—also was downgraded by controllers here. According to Horace Adams of FAA's ATC operations group at the Agency's Atlantic City, N. J., test center, the need for conflict detection devices decreases as radar control is substituted for manual control of air traffic. Visual presentations offered by radar, he said, make it relatively easy for a controller to predict en route conflicts without the aid of a sophisticated computer.

Automatic conflict prediction was to be the third function entrusted to the Data Processing Central semi-automatic traffic control system, which FAA once hoped would become operational in Boston during November, 1962. But FAA officials from the National Aviation Facilities Experimental Center said here that the prototype DPC system, according to present plans, will be retained at NAFEC and used to test new traffic control techniques and some components.

It would not, they said, be installed in an operational environment as a complete system. One of the six General Precision/Librascope computers purchased by FAA for use in DPC will be shipped to the Atlanta ARTCC sometime in Fiscal 1963 (AW Aug. 28, cording to Lyle H. Ditzler, acting ... of field operations analysis in the Age...cy's Air Traffic Service.

FAA now looks upon automation ... an "assist to the controller," not as th... "salvation for all our problems," Ditz... told the forum. The concept of DPC, Ditzler added, must be "changed co...siderably" because it is based on th... "old system" of pilot position repor... and estimated times of arrival over rad... checkpoints.

Controllers and airline industry repr...sentatives here had little praise fo... FAA's three-layer airway structure, which went into operation on Apr. ... According to these users, the interme...ate altitude route system that extend... from 14,500 to 24,000 ft. is a "stum...bling block" for jets climbing to ... descending from the high-altitude net...work above 24,000 ft.

Intermediate and high altitude ai...ways often are not defined by the same VOR radials, controllers complained. Pilots added that their transition through the intermediate airway struc...ture involve cluttering the cockpit with unnecessary charts. As more high-speed jets are scheduled over short-range route segments, this problem is aggravated because pilots have only two choices: climb to altitude and then descend shortly thereafter, or remain at low alti...tude where fuel consumption is high and slower piston-powered transports present a traffic control problem.

Computer Use

According to Capt. J. D. Smith, di...rector of air traffic control for United Air Lines, United is using a computer to evaluate just how high its jets should fly on short-range route segments. In this evaluation, fuel consumption is be...ing balanced against time to climb and descend, he said.

Controllers here also expressed con...cern that the qualifications demanded of would-be controllers may be relaxed in the future to attract sufficient new personnel. On this point, Jacob Meisel, chief of personnel programs division, said that the backlog of qualified can...didates already on the civil service roll was adequate to keep controller strength at authorized levels for the next three to four years.

FAA is tackling the problem of con...troller stress, anxiety and fatigue in two ways, reported Dr. David Trites of FAA's Civil Aeromedical Research In...stitute. He said the Agency was re... doubling its testing efforts to ensure that only controllers able to withstand "stress-causing conditions" are hired in the first place. In addition, FAA is studying controller fatigue in an effo... to pinpoint and eliminate the cause. Dr. Trites made it clear, however,

AX-1673

Capacity Overshadowed Traffic On North Atlantic In 1961

Load factor dipped to lowest level in years as 17 carriers flew the equivalent of 14,700 flights without a passenger aboard

By ERIC BRAMLEY

THE SMALLEST passenger traffic increase on the North Atlantic in 10 years, coupled with the biggest jump in capacity, pulled 1961 load factors down to the lowest point in postwar history.

The 17 IATA passenger-carrying airlines—two U.S. and 15 foreign flag—carried 1,919,466 passengers on regular schedules, an increase of 9% over 1960. Seating capacity jumped 36.7%. Charter flights handled an additional 256,478 passengers.

Bright spots in the picture were cargo, up 36.3%, and mail, up 26.2%.

AIRLIFT's analysis of scheduled flights from the U.S. and Canada to Europe shows that 1961 was a year in which:

Load factor dropped an amazing 13 points, from 64.2% in 1960 to 51.2%. This was the first time in at least 10 years that the figure had been less than 60%. First-class was a dismal 37.5%; economy service produced 54.1%.

More than 1 million new seats were offered for sale, but the passenger increase amounted to only 158,694. Thus, for every new passenger, more than six new seats were added. The airlines flew with 1.8 million *empty* seats, which is equal to operating 14,700 flights with no passengers at all.

Six out of every seven passengers used economy service—87.2% against 12.8% first-class.

First-class traffic dropped for the first time since 1954, and the decrease was a sizeable 20.1%.

The U.S. share of the market continued to shrink. More than two out of every three passengers used foreign lines.

Pan American continued to lead in all classes of traffic. Canada-Europe operators fared somewhat better than U.S.-Europe, showing a 57.5% load factor. On U.S.-Europe routes, the traffic increase was only 7.8%. There were 1,654,306 passengers and 3,286,294 seats, for a 50.3% load factor.

68.1% fly non-U.S. airlines

Foreign lines had 68.2% of the total passenger market, up from 65.3% in 1961. Excluding Canada (where U.S. lines do not compete), the foreign carriers had 63.1% of U.S.-Europe against 36.9% for PAA and TWA. In 1960, the division was 60.2% vs 39.8%.

In 1960, when jets were replacing pistons, the airlines increased their seats by 32.3% but the number of flights decreased 3.9%. Last year, however, it was a case of adding jets to jets, and the 36.7% increase in seats was accompanied by an 11.6% increase in flights.

Pan Am increased its passenger traffic 9.7% in 1961 and had 24.4% of the U.S.-Europe market—one out of every four passengers. Its seating capacity increased 41.4%. In 1960, Pan Am had 23.9% of the market. TWA experienced a 14.7% traffic decline last year while seats increased 6.8%, and its share of the market fell from 15.9% to 12.6%.

Foreign carriers lead in cargo

Cargo totaled 69,096.2 tons; 61.4% of it was carried by foreign lines and 38.6% by PAA, TWA and Seaboard World. Excluding Canada, the division was 58.5% vs 41.5%. The three U.S. lines maintained a big lead in carrying the mail, handling 71.9% of the total and 75.6% of U.S.-Europe.

Following is each carrier's share of U.S.-Europe passenger traffic (Canada excluded) in 1961:

Pan Am	24.4%	Alitalia	5.2%
TWA	12.6	Swissair	4.4
BOAC	11.4	Sabena	3.7
Air France	9.6	Irish	2.7
Lufthansa	7.4	El Al	2.6
SAS	6.9	Air India	.9
KLM	6.8	Iberia	.6
		Qantas	.6

Many reasons have been advanced for 1961's unexpected slump. Generally listed as contributing factors were unsettled conditions in Europe, U.S. recession, and curtailing of dollar expenditures abroad. The IATA operators are now convinced that 1962 results will be much better, with estimates of passenger growth running from 12% to 15%. ■

(TWA Board Meeting, Aug. 16, 1961 - Report of System General Manager)

At the July Board of Directors meeting the question was raised as to where TWA's revenue production problems were concentrated. This report will summarize and the attached exhibits illustrate the areas of competitive revenue deficiency.

Chart No. 1 is the most recent competitive load factor comparison on selected non-stop jet segments. These are the segments upon which we have relatively accurate information through exchange of figures with AAL, UAL and CAL. This comparison indicates that our most serious problem is between New York and California where we have consistently trailed behind AAL, and either about the same or ahead of UAL. Secondarily, Chicago to Los Angeles and San Francisco are the other markets where our penetration must be improved. Note that between Baltimore and Los Angeles TWA leads in both directions and has done so consistently.

To further isolate the problem, Chart No. 2 shows a comparison of UAL, TWA and AAL historical load factors from New York to Los Angeles.

Chart No. 3 gives a direct comparison between TWA Flight 5 at 9:30 AM and AAL Flight 1 at 9:45 AM, both non-stop Boeings to Los Angeles. This AAL flight continues to surpass our parallel Flight 5. This chart illustrates one of the problems as it reveals AAL's better ability to feed their flight at Idlewild from their regional route pattern in the northeast.

I would like to enumerate some of the reasons contributing to our competitive problem with AAL, and to a lesser degree UAL, in the transcontinental non-stop markets.

1. The lack of a new modern terminal at Idlewild is becoming increasingly damaging to our business. As an example, we annually make

an on-board survey of our transatlantic passengers, and the most recent survey conducted the last week of June and first week of July this year contained write-in comments from 12% of the passengers criticizing our terminal facilities at Idlewild. These 12% constituted some 300 passengers and compare with adverse comments in last year's survey of 4%. This clearly indicates the adverse passenger reaction to our present temporary facilities, and undoubtedly places TWA at a competitive disadvantage.

2. The success of AAL's "Astrojet" advertising campaign built around their new fan engines has been most successful. Transcontinental schedules by AAL with the "Astrojet" are faster than TWA's Boeing 131 schedules. I previously referred to our problem with AAL's Flight 1 which leaves at 9:45 AM, 15 minutes later than our Flight 5, and arrives in Los Angeles at noon, 10 minutes ahead of us.

3. The ability of AAL in the east and UAL in the west, because of their route structure, to develop and concentrate on scheduling maximum internal connecting service to their long haul jets.

Aside from our position in the transcontinental jet markets, TWA's competitive position compares favorably. If we had load factors equal to our competitors on these major segments, our industry load factor would be equal to AAL and ahead of UAL.

As you know, TWA missed its domestic revenue forecast for the month

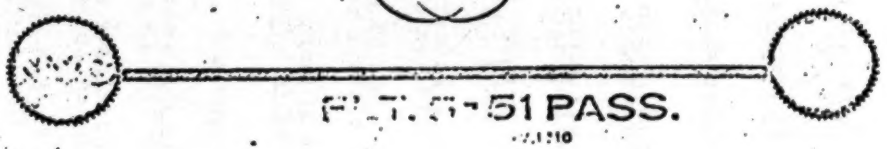
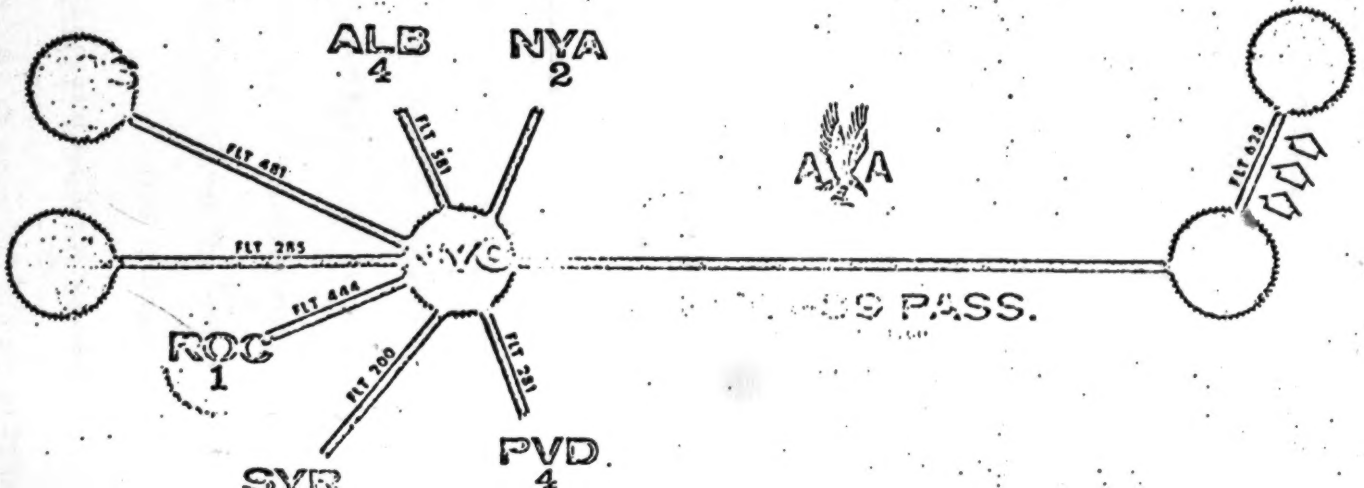
TWA



VERSUS



CIVIL AERONAUTICS BOARD

1964 Budget Estimates

Chairman's Statement
Before House Subcommittee on Appropriations
January 29, 1963

Mr. Chairman and Members of the Committee, the Civil Aeronautics Board is here on its annual pilgrimage to tell you what it has done and is doing with the money Congress appropriated last year and what it needs for waging the good fight in the coming year. Before launching into the details of our accomplishments and future needs, however, I believe it would be valuable to refresh your recollection and bring you up-to-date on some salient facts and figures of the industry the Board is charged with regulating and promoting.

There are 159 direct and indirect air carriers holding economic authority from the Board. These break down into 53 certificated specific route operators, 15 supplemental air carriers, and 91 domestic and international air freight forwarders. The certificated specific route operators include:

11 trunk carriers performing mostly long-haul and medium-haul domestic services, and a majority of them also serving some foreign points;

13 local service carriers operating within the Continental United States;

2 local service carriers operating in Hawaii;

9 carriers operating in Alaska;

3 helicopter carriers;

5 all-cargo carriers;

1 carrier operating primarily between the United States and Pureto Rico;

4 U.S.-flag carriers operating internationally and flying no routes within the Continental United States;

5 other small carriers, three of which are not currently operating scheduled services.

The certificated route air carriers provide regularly scheduled service to 950 U.S. and foreign points, including 234 in Alaska. Their operating statistics for the year ended September 30, 1962, show that they:

Carried a total traffic of 6.1 billion revenue ton-miles;

Transported 62.9 million passengers for a total of 45 billion revenue passenger-miles;

Transported 1.3 billion ton-miles of cargo;

Had 2,033 aircraft which provided a capacity of 83 billion scheduled available seat-miles;

Had 2.9 billion dollars invested and employed 171 thousand persons;

Collected 3.38 billion dollars in revenue, and spent 3.25 billion dollars;

Paid 58 million dollars in various taxes;

Collected 157 million dollars in passenger transportation taxes for the Federal government.

These are impressive statistics and they also reflect a significant growth over the preceding year. We only wish that the profit picture were as rosy but it is not. The fact is that the certificated route industry earnings for the year ended September 30, 1962, provided a return of only 3.97 percent on investment. The eleven domestic

trunklines reported a composite return on investment of only 2.83 percent. Nevertheless, the picture was a bit brighter than that of the preceding 12-month period when the return on investment for the industry was 3.15 percent and for the eleven trunklines 2.16 percent. For the current year, net income was 6.6 million dollars as compared with a net loss of 4.1 million dollars in the preceding year. These are encouraging changes in the generally declining trend of earnings since 1955.

The villain in the poor profit picture continues to be excess capacity. Although the industry has experienced sizeable increases in operating costs per seat-mile flown, the break-even load factor is currently actually below the level which obtained in the good 1954-1955 period. This is so because the operating cost increases have been more than matched by the aggregate impact of several fare increases. Moreover, although traffic growth has fallen considerably below the industry's expectations, it has nevertheless continued. The inescapable conclusion appears to be that the disparity between current earnings and those of earlier good periods is essentially attributable to the substantial decline of passenger load factors as a result of excess capacity. And it should be noted that substantial numbers of jet aircraft continue to be delivered pursuant to firm commitments entered into during more optimistic times.

As we said when we were here last year, the attack on this problem must proceed on many fronts, with the Board's actively exercising its assigned regulatory and promotional roles. We have been working closely

with the airlines on such problems as no-shows, pooling of facilities and reduction of unnecessary and costly cabin frills to effect a reduction of operating costs. We also have underway a broad reassessment of the overall pattern of air carrier operation in this country. No one would dispute that the size of the jets, their operational characteristics, and the burdensome cost of their acquisition, may entail a revolution in the accepted concept of adequate and efficient service. In this connection I might note the very recent Supreme Court decision in the Pan American-Grace anti-trust case which, among other things, indicates that the Board's power to affect route realignments may be greater than heretofore thought. The Board is also pushing a program designed to streamline the provision of air service through the use of centrally located regional airports. This requires a delicate evaluation of the relative public interest in the availability of airline services at individual communities as compared with the establishment of a service framework which will permit the economical use of larger aircraft and more frequent services. On the revenue side of the ledger, we are continuing to encourage experimentation with promotional passenger fares to increase traffic and we have greatly expanded our efforts in both the costing and pricing areas of air freight movements looking toward the long awaited breakthrough that could mean so much to both the shippers and the airlines.

I should now like to turn to our appropriation request for Salaries and Expenses. We are requesting $10,800,000, which is an increase of $1,300,000 over last year. $456,000 of this increase is attributable to the 1962 Pay Act

Excess Seat Problem Will Grow This Year

Jet deliveries to expand trunks' surplus capacity, which depresses load factors, utilization rates.

By L. L. Doty

Washington—Excess capacity problems, which plagued the domestic trunkline industry during 1960 and held its annual profit to the lowest level since 1949, are now expected to continue through 1961.

As first predicted by AVIATION WEEK (Dec. 28, 1959, p. 28), a slight increase in revenue passenger miles during 1960 was rapidly outstripped by a persistent rise in available seat miles, depressing the industry's average load factor and its aircraft utilization rates. Scheduled delivery of more than 100 additional turbojet transports during 1961 will magnify the surplus seat problem and threaten continuation of the steady drop in load factors that began eight months ago.

Revenue passenger miles during 1960 fell off sharply month-by-month to culminate in a modest 4% increase for the year, compared with a 15% jump in 1959. The dwindling traffic figure was most pronounced in November and December when revenue passenger miles showed 3% and 4% decreases respectively.

Available seat miles rose steadily during the year, although the upward trend was arrested in November and December when the monthly volume was held at an almost constant level. Nevertheless, in each of the two months, the industry load factor took its worst drop of the year.

Unrealized Potential

The current situation suggests that the domestic trunkline industry is not achieving the full utilization potential of its fleets. In addition to retiring a number of piston-engine aircraft into inactive status, the industry had held utilization of its turbojet fleet to approximately 8 hr., a figure which includes such activities as flight training and charter operations. Highest rate has been attained by Continental Air Lines, which has averaged a 10.58-hr. utilization since it began service with its Boeing 707 fleet.

During 1962, when only a small number of jets are scheduled for delivery, the industry will have a short breathing spell during which the gap between traffic growth and capacity increases can be narrowed.

In 1963, however, the problem will loom again when production of medium-range jets will create a new rash of aircraft deliveries for scheduled service cession of the past six months and promote a resumption of normal traffic growth. As previously pointed out (AW Feb. 28, p. 38), airline business is extremely sensitive to the fluctuations of the Gross National Product, which, after a 15% increase in the first quarter of 1960, fell 1.5% in the third quarter and showed no change in the final quarter of the year.

In view of the GNP trend last year, coupled with a decline in personal income in the last half of 1960 and a decided drop in corporate earnings beginning early in the year, airline traffic made a remarkably strong showing during 1960. Contrasted with 1960's 4% gain, revenue passenger miles suffered a 0.3% decline during the recession year of 1958.

Industry's Future

This record suggests that should the general economy resurge early this year, airline traffic growth may be quickly restored to prevent a further depression of load factors. Thus, the immediate future of the trunkline industry depends on an early general economic recovery, plus continued attempts to generate new traffic and a reshaping of the present pattern of airline routes—a move that began last year with the proposed merger of Capital Airlines into United Air Lines.

First class revenue passenger miles were hit hardest by 1960's traffic recession. Volume for the year declined 6%, and in only two months of the year did first class revenue passenger miles register an increase. The drop in December was 19%, in November it was 16%.

As a result, the industry was forced seat miles for the industry had declined 0.7%. This reduction began in June when, for the first time, the volume of coach seats sold accounted for more than 50% of all seats sold. In October, first class traffic returned to its dominant position by a small margin.

First class load factors have declined consistently for the last 15 months. In December, the industry first class load factor dropped 4.4 points to a low 51%, compared with a 1959 average of 60%. First class load factor for 1960 was only 56%, compared with 59% for all types of traffic.

Coach Growth

On the other hand, coach traffic continued to climb spectacularly, falling by only a fraction to match first class traffic in revenue passenger miles for the year. Coach traffic showed a 17% gain for the year with a 63% load factor, despite a 19% increase in available seat miles. However, one disturbing factor appears in the coach record: load factors, while relatively high, registered an increase in only four of the last 14 months.

Generally, it is difficult to pinpoint the traffic depression to any particular market or geographical area with one exception: carriers serving the Florida market from East Coast business centers have consistently failed to generate sufficient traffic to maintain high load factors. Traffic activities of other trunklines vary widely.

An analysis of airline business during December, for example, shows that only three of the 12 trunklines were able to report an improvement in revenue passenger miles over December, 1959. United led the industry with a 30% increase in total revenue passenger miles. The airline reported a 60% increase in coach traffic and a 3% increase in first class traffic.

Braniff ended the month with a 4% traffic gain. The carrier's emphasis on coach traffic since its acquisition of turbojet equipment is illustrated by a 107% increase in coach traffic coupled with a 21% decline in first class traffic. In contrast, Delta reported a 16% rise in first class business compared with a small 4% coach increase for a total 10% gain in all categories of traffic.

Because of its current engineers' strike, Northwest Airlines' business fell off 23% and available seat miles were sliced by 20%.

25% decrease in first class traffic and a 2% increase in coach traffic. However, airline ended the year with a 12% increase in total revenue passenger miles over 1959. American says the 6.4-billion revenue passenger miles flown in 1960 is world record.

Effect of turbojet equipment on seat productivity is illustrated by American Airlines' experience during two full years of Boeing 707 operations. During that time the carrier's 707 fleet carried 4.5-million passengers a total of 4.8-billion passenger miles. By contrast, it took close to four years to accumulate the same traffic totals with the airline's fleet of 58 Douglas DC-7 transports—almost twice the size of the 707 fleet.

Big four carriers—American, Eastern, TWA and United—were generally more successful during December than the eight smaller trunk lines. Revenue passenger miles of the larger carriers declined only 2%, available seat miles are about 4% and load factor fell from 66% in December, 1959 to 57% last month.

The smaller airlines reported an 8% drop in revenue passenger miles, a drop of 6% in available seat miles and a decline in load factor from 54% to 52%. The eight airlines showed a 2% increase in coach traffic, compared with a 26% increase in coach traffic registered by the Big Four.

Big question mark in the immediate future is the value of the Florida market to the seven trunklines which now serve the area with turbojet equipment. Eastern, National and Northeast, closely competing for traffic on East Coast routes into Florida, continued to report load factors substantially below the industry average. Although Eastern experienced a 11% decrease in revenue passenger miles in December, available seat miles were sliced 14% to raise the monthly load factor from 49% to 50.3%. National's load factor dropped two points to 50.9%, since a 12% reduction in available seat miles was offset by a 16% drop in revenue passenger miles. First class traffic of both carriers declined sharply, while coach traffic remained fairly stable.

Northeast Airlines, with a 47% load factor—down one point from December, 1959—reported a 5% decrease in revenue passenger miles. The carrier's first class traffic jumped 20%, but coach traffic was down a severe 20.6%.

Although Continental's load factor fell from 53% in December, 1959 to 47% last year, the carrier's traffic dropped only 5%. Coach traffic was up 4%, but first class dipped nearly 16%.

TWA, which has had a 9.5-hr. daily utilization record with its Boeing 707-131 turbojet fleet and is now operating 34% of its schedules with jets, expe-

London—Failure of Rolls-Royce Tyne turbine disks, which was due to an obscure metallurgical problem, has forced Rolls-Royce to change the manufacturing process for the disk and to scrap 3,500 disks made prior to the change (AW June 6, p. 43).

The disks involved included not only the last two high pressure compressor stages but all the turbine disks as well. The possibility of reworking the forgings was considered but was ruled out.

In the new process, both the disk profile and the material, ferritic stainless steel, REX 535, has been retained but the ductility has been raised nearly 15% by improving the steel quality and ensuring more hot working and better grain flow during reduction of the blank. Heat treatment techniques also have been modified.

The purity of the metal has been improved by switching to vacuum melting of the stock material, and the better grain flow has been achieved by considerably increasing the length-to-diameter ratio of the billet so that the reduction of the billet during forging involves more hot working. The forging program itself has been revised.

The failure proved to be one of the most perplexing problems that Rolls has encountered, finally reducing to a statistical problem involving scatter factors of the physical properties of the material. Although the decision was finally taken to scrap all the original disks, the statistical analysis predicted that less than one in 200 of the disks would be affected.

Major Tyne setback followed bursting of a disk on a test bed last May after 2,000 hr. of engine testing, including a comprehensive program of tests at overload conditions. It coincided with the final stages of the redesigning to bring the Tyne-engined Vickers Vanguard and came within a few days of the aircraft's certification (AW Dec. 5, p. 41).

An inspection of every engine that had flown revealed one other disk with a crack radiating from the bore—with virtually the same origin as the burst disk—and all Vanguards were grounded.

Stringent investigations of the turbine disks followed, and "short life" engines were made available so that flight test programs with the aircraft could proceed.

Because the failure was difficult to reproduce, the investigations were protracted. Rolls' management decided to consult world experts and consultants from engine manufacturers, steel alloy makers and research centers before confirming the statistical nature of the problem.

Compressor and turbine disks are now in full production, using the new techniques and are being fitted to all new engines and as replacements for those engines running with short life disks. Engines with the new disks and retrofitted up to the latest standard are now being delivered for installation in Vanguard and Canadair CL-44 aircraft.

7% increase in coach traffic during the month, but a 20% dip in first-class business gave the airline a 14% loss in all types of traffic handled.

There is a tendency to consider last month's midair collision over New York (AW Dec. 26, p. 26) as the chief reason behind December's poor record. Although it has been fully demonstrated that highly-publicized accidents have a decided but short-term affect on airline business, the December record appears to most observers to be a normal sequence to the dismal showing in November when traffic fell 3% and load factors dropped 2.7%.

Net result of the current situation will be continued stress on sales, marketing techniques and new means of generating traffic, all of which will intensify competition that has already reached a heated level. Services to passengers, source of one of the most rapidly growing cost factors in 1960, will be accelerated this year and will draw heavily on the resources of individual car-

from growing competition together with equipment transitional costs which are not leveling off as anticipated when jet services were first launched, will place new fiscal demands on an industry which generally has been denied the benefits of withheld profits as a means of bolstering working capital.

As a result, 1961 will [illegible] prove to be a crucial year of this transitional phase which began in late 1958 when the first traffic gain of the year for margins started to appear. Few carriers can run the risk of low load factors for an extended period of time, and most officials of major carriers have felt for some time that mergers are an inevitable solution to the financial problems some carriers are expected to meet during the next two years.

Despite the rash of merger rumors which persist throughout the industry, there are no firm developments on mergers between any of the trunklines at this time other than the proposed consolidations of United with Capital and

REPORT TO DIRECTORS

At its last meeting, the Board of Directors requested that I prepare for its next meeting a report relative to the company's finances, the reasons for its present critical economic problems, steps being taken to solve these problems, and recommendations to the Board as to further steps which might be taken.

BACKGROUND OF THE PROBLEM

In my opinion, the present crises derives directly from (1) a general depression in the airline industry, (2) the weakness of TWA's financial and market positions relative to its two major transcontinental competitors and its principal transatlantic competitors, and (3) certain events of the recent past which have particularly affected TWA.

Dealing first with the domestic side of the picture, existence of an industry-wide depression requires no argument. Exhibit #1, from the New York Times of Sunday, September 24, 1961, shows that trunk airline profits, which aggregated $63,000,000 in 1955, all but disappeared in 1960. 1961 may see their disappearance altogether barring some startling turnabout in the last quarter. For the first seven months the industry, excluding TWA, suffered a net loss of $4,000,000. The slow months of the fall should aggravate this trend. The situation has become so grave that last month the Chairman of the Civil Aeronautics Board called all of the airline presidents to Washington to seek solutions to the problem.

In circumstances such as these, the weaker companies always are hurt the worst. Thus, TWA suffers more than American Airlines or United.

Exhibits 2 through 8, comparing TWA's domestic performance with that of American and United (Capital excluded) for the years 1951 through August 1961, reveal several significant facts:

(1) Although TWA's rate of growth has roughly matched that of American and United (Exh. 2), its revenues per ton mile have been much less than American's (Exh. 3A) and until recently its expenses considerably higher than United's (Exh. 4B). Its business has been less profitable than that of either of them (Exh. 5A, 5B).

(2) TWA's profit on domestic business has deteriorated since 1955 both absolutely and relative to that of American and (United (Exh. 6). A notable exception was in 1959, when TWA did an outstanding job of utilizing its early jets in the transcontinental market and thereby achieved unusual profitability.

HOLLIDAY

earlier than that of American and contrary to the trend of that of United (Exh. 2). Since the first of this year, TWA's domestic business has fallen less in relation to 1960 than has American's. United's has shown a diminishing gain over the prior year.

(4) TWA's percent of total trunk and big three revenue passenger miles slipped from its 1953 peak until 1959 when it reached a new peak. Thereafter it deteriorated sharply through the early months of 1961 (Exh. 7).

(5) TWA's load factors, which have been in a downward trend for most of the last 10 years, have slipped very sharply both absolutely and relative to those of the other two since 1959 (Exh. 8).

TWA's domestic pre tax profit of $25.3 million in 1959 became a loss of $1.2 million in 1960, a year in which its competitors still made substantial profits. Uncertainties regarding receipt of its 880 fleet increased expenses and interfered with orderly planning. Thus, TWA entered 1961 with a deteriorating domestic position and insufficient financial reserves to enable it without serious problems to weather an industry-wide depression while going through a major equipment program. A strike in February, the lack of a competitive terminal at Idlewild and the absence of a chief executive were complicating factors.

Some understanding of the causes of TWA's poor profit record is necessary to an intelligent consideration of possible remedies. However, a thorough discussion of such causes would unduly extend this report. Therefore, I shall limit myself to highlighting a few of such causes which bear on the course which should be taken now.

The Board is fully aware of TWA's history of absentee management which, among other things, reflected itself in a turnover of chief executives unique in the industry, thus depriving the company of consistent leadership or, at times, of any presidential leadership at all. This combined with inadequate financing and repeated periods of financial stringency have delayed and impeded orderly planning and have prevented the taking of needed action. Deteriorated interdepartmental relationships have been another result of the lack of leadership. Most importantly, the inability of the TWA management to plan and execute adequate long range equipment programs has prejudiced the company's success.

For many years, TWA's flying operations were more costly than those of its competitors (Exh. 9). One important reason was that TWA's Constellations were slower and more costly to operate than competitor's DC-6s and DC-7s. Attempts to operate at competitive speeds resulted in

substantially. With the advent of jets the costs of the Constellation have become increasingly less significant and TWA's costs have become more competitive. Despite the economic advantages of American's fan powered jets, TWA no longer operates at a substantial competitive disadvantage.

In passing, it should be noted that normal depreciation charges on the 1049Gs and 1649s (which have little earning power for TWA) exceed $21,000,000 for 1961. Special yearend writeoffs on this equipment probably will increase the figure to $36,000,000.

Until 1958, TWA had the highest rate of expenditure for advertising in the domestic industry (Exh. 10). Relative to its competitors, TWA depended for its business more on advertising than on performance. Consequently, TWA was more highly regarded by the neophyte than by the experienced traveller.

A sharp change took place in 1957 and 1958. Advertising expenditures which had been at the highest rate in the industry were cut sharply. Concurrently, vigorous efforts were made to improve performance. Outstanding improvements in performance have been made but it is doubtful that public acceptance equal to that of American or United has yet been achieved. In an airline study made early this year, the Chicago Tribune noted that "The ideal airline is visualized in terms of dependability, safety, speed, efficiency and service." It found that TWA was regarded as "a large and powerful airline that emphasized speed, style and glamour over personal attention and efficiency".

The consequence of past policy has been to weight TWA's clientel more in the direction of the tourist than of the business man, despite a route structure that passes through the commercial and industrial heartland of the country. Thus, in September, TWA's coach traffic was 71.7% of its total, as against 60.7% for American and 62.9% for United. While much business traffic now travels in coach accomodations, the percentages are significant. TWA's dependence on the tourist has meant both a lower revenue yield per passenger and a greater seasonality of traffic. TWA's load factors normally improve relative to American's and United's in vacation periods and drop in the fall.

Greater success in obtaining new routes than in acquiring the equipment needed to exploit them has also created problems for TWA. Conspicuous among major cities to which rights have been obtained without adequate means to serve them are Cleveland, Denver and Detroit. Weak efforts to exploit these markets have assured that TWA would not be the first choice of travellers. They have also made it certain that TWA's activities in these markets would not be highly profitable.

Against such a background, changes in advertising policy may

have unusual impact. It is believed that the decision in 1960 to cut advertising expenditures to the bone and eliminate magazine advertising entirely has had an appreciable effect on sagging load factors in 1961.

Delays and indecision with respect to the availability of flight equipment have been most damaging to the company, particularly in this last year. TWA's outstanding job of putting jets into domestic service in 1959 (at considerable sacrifice to its international business) bid fair greatly to improve its industry stature. Within a year, however, its competitors had introduced a greater number of jets and TWA's 880 program had bogged down. As noted by the CAB in its order of December 29, 1960, this adversely affected TWA's competitive position. By the time the 880s were received, a major opportunity for TWA to move to the front of the competitive race had been lost. From a high of 17.4% in the third quarter of 1959, TWA's share of trunk line traffic fell to 13.2% in the first quarter of 1961. In the meantime, TWA had incurred heavy internal costs and lost substantial revenues. This contributes heavily to its present financial problems.

THE INTERNATIONAL SITUATION

Turning briefly to the international front, much that has been said above is applicable. As shown by Exhibit 11, Pan American's business has both grown more vigorously and been more profitable than TWA's. Until 1958, TWA had relatively higher costs but since that time TWA's unit costs have generally been lower than Pan Am's (Exhibit 12). TWA labors under the handicap that between the United States and London both Pan Am and BOAC schedule higher frequencies while Pan Am and Air France do the same between the United States and Paris.

Exhibit 13 (as well as Exh. 11) reflects the damage suffered by TWA through the operation of Super Gs and 1649s rather than DC-6s and DC-7s and by the diversion to Pan Am in 1959 of six Boeings originally destined for TWA. Prior to 1957, TWA generally showed higher load factors than Pan Am. From 1957 on, however, this was not the case and TWA experienced an unfavorable relationship in 1959 and early 1960. The introduction of jet service by TWA overcame this in 1960. In recent months, however, TWA's load factors have been below those of Pan Am reflecting, among other things, our disadvantageous terminal situation at Idlewild and the lack of magazine advertising in 1960.

Within the last few months the economic position of all transatlantic carriers has suffered greatly from sagging load factors resulting from excessive capacity. TWA has not escaped these competitive pressures. Nevertheless, in recent months TWA's international business has earned

a steady but modest profit. At the moment this business is surprisingly strong.

MAJOR OBJECTIVES

From the foregoing, it seems apparent that to obtain future profitability TWA must achieve greater public acceptance and higher load factors. While cost reduction must be a constant challenge, there is little reason to believe that we can so improve our costs vis-a-vis other carriers that we can operate indefinitely with substantially inferior load factors. It is significant that system revenues for the twelve months ended August 31, 1961, were $362.2 million, an increase of 50.7% over those of the year 1956. During the same period the average number of employees had increased by only 8.9%. Thus, a general reduction in headcount does not appear to present a likely solution.

Perhaps as an oversimplification our major objectives for the next few years must be to:

(1) Complete a reequipment program to give us flight equipment comparable to that of our competitors.

(2) Improve our public acceptance through better schedules, better terminals and improved customer service.

(3) Discontinue activities which our resources do not permit us to carry on effectively. Local service type operations must come under particular scrutiny.

(4) Maintain a constant effort to effect savings in operating and overhead costs without impairing our ability to maintain the quality of our essential services.

(5) Improve and strengthen our internal organization with specific reference to better interdepartmental relationships, more consistent planning and more effective marketing.

Short term, our specific problem is one of maintaining solvency while making as much progress as possible toward completion of our reequipment program. Exhibit 14 shows the relative equipment disadvantage at which TWA will be, even if we succeed in completing our Caravelle program. We have an obvious obstacle to overcome.

A reequipment program must assume, of course, that the aircraft can be profitably utilized. In times such as the present, such an assumption must be challenged, and, so far as possible, proved.

The present is not the first depression which the industry has experienced. Others occurred in 1948-49 and, to a limited degree, in 1958. On each occasion the industry eventually pulled out and went on to new records. Looking at the present one, I do not think that we should assume either that the industry will not pull out or that it will pull out with quite the vigor of the past. Quite possibly, future growth will be slower. Most of the long haul business to be taken from the railroads and buses has already been garnered. The remaining market lies largely among those who can be induced to travel more and drivers of automobiles. Factors of economy and convenience make the latter a particularly difficult market to penetrate. Probably a greater potential exists in the international field where a large volume of steamer traffic still remains to be tapped.

Practically all forecasts predict an annual increase in revenue passenger miles for the next few years of more than the approximately 6% which will be roughly the average for 1958-1961. It would appear conservative, however, to use the 6% figure. This compares with an anticipated net increase in available capacity of approximately 5% a year. Thus one cannot expect sharply improved load factors for the industry as a whole. Notwithstanding this, TWA can fairly look forward to improved load factors, comparable to those of American and United, to the extent that it operates competitive schedules with comparable equipment out of comparable terminals.

TWA's jets are with few exceptions producing profits. The major problem is that they are not producing sufficient profits to overcome the loss being occasioned by piston planes. Our operating loss on our 1049G fleet alone amounted to approximately $11,500,000 for the twelve months ended July 31, 1961. In part, this problem must be solved by elimination of certain uneconomical route services. Solution of the problem will also require, however, more modern ships with which to provide the services which are retained. The Caravelle would break even with smaller loads than the 1049G. At the same time, it could be expected to attract substantially higher loads. On routes of the type in question, Caravelles would break even with about 10% fewer passengers than our 880s and, therefore, are to be preferred.

Attached as Exhibit 15 is a table showing for several alternate equipment programs the available domestic seat miles for the years 1962, 1963 and 1964. Also shown are anticipated load factors and the TWA share of total trunk passenger miles required to achieve such load factors. On the chance that the Caravelle program might abort, particular study is being given to alternatives B and C, the latter of which would involve the purchasing of 18 131Bs and 10 727s as opposed to the 20 131Bs and six 331Bs now on order. Alternative C would anticipate a more modest share of the

trunk market than any of the others, a share which approximates that actually realized in the years 1955-1958 and 1960. It suffers, however, in that it would leave us particularly short of jets vis-a-vis our competitors in the next few years.

The question of the extent to which additional jets would produce additional profits is undergoing the most careful scrutiny. It might be wise to postpone the six long-range Boeings if this could be done without severe penalties and if it would enable us to obtain short-range jets. A definite recommendation on this question will be made at the meeting on October 23. Suffice it at this point to note that while the profitability of any jet program must rest in the realm of opinion, one can be almost positive that without substantial additional jets TWA must undergo a vast contraction which would raise the most serious doubts as to the possibility of future profitable operation.

ECONOMY MEASURES

Whether or not we are able to proceed with a Caravelle program, the biggest current question is that of financing our activities for the next twelve months.

At the last meeting of the Board, the financial forecast indicated a need for $1.9 million of additional cash at the year end in order to have the $15 million of cash required for comfortable operation. Barring some further unexpected deterioration in the general level of business, we expect that this amount will be more than made up through operating economies of about $2,000,000 and curtailment in planned capital expenditures of approximately $500,000. Should we be spared another crash before the year is out, an insurance reversal of about $4 million should be available besides, but obviously this cannot be counted on. If the Caravelle program aborts, another $1,000,000 will be available.

All of the trunklines but one have reached an agreement for downgrading the level of service in the coach section. If final agreement is reached and if this is approved by the CAB, which is highly likely, this should result in additional savings in the next half year of nearly $2,000,000.

It is our expectation that at year end, even barring any improvement in business conditions, we will show cash substantially in excess of $15,000,000. The serious problem will occur in the first half of 1962.

Steps are being taken to eliminate various local service type operations. We hope to get rid of Albany, Binghamton, Scranton, Williamsport, Reading, Allentown, Fort Wayne, South Bend, Terre Haute and Fresno. Additionally, vigorous attempts are being made at less active stations to handle ground services through or in cooperation with other airlines. It is hoped that from all of these activities a saving of $2,000,000 per

year or $500,000 per quarter can be realized. It is doubtful that elimination of these services can be accomplished in time to be of material assistance, however. Steps to eliminate certain unprofitable foreign services already have been taken.

Another source of first quarter savings might be curtailed advertising. However, our need to add volume suggests that we should proceed cautiously here. It would seem prudent to reduce our expenditures somewhat in the next few months so as to be in a position to mount a major campaign to build up to the opening of our new Idlewild terminal, the receipt of our new Boeing jets and the normal spring increase in business.

Efforts are being made to cut down crew costs through use of doppler on transatlantic flights and through achievement of a three man cockpit. If successful, these efforts should prove to be of real financial significance over the long run. From a short term standpoint, however, severance pay provisions probably will prevent realization of any significant economies.

At the present time, Mr. Hall is engaged in a crash program to eliminate expense and improve operating results over the next six months. Among other things, this involves a complete review of schedules and of the level and type of service being offered in the various markets which we serve. At this writing, this effort has not been brought to a point that it is possible to include in this discussion a definitive forecast for the first quarter of 1962. Hopefully, this will be embodied in Mr. Leslie's financial report which will be presented to the October 23 meeting. Suffice it to say here that it is expected that while the forecast will represent a definite improvement over that presented to the September meeting of the Board, it will still leave us with a financial problem during the early months of 1962.

REVENUE MEASURES

Considerable thought has been given to means of effecting a rapid increase in revenues. One such possibility is that of instituting a new and cheaper high density jet coach type of travel in order to stimulate new business. This general approach has been tried by TWA in the past; at times with considerable success and on one occasion with little to show as a result. Undoubtedly a high density low fare jet coach to the Pacific Coast would attract considerable business. If successful, however, our competitors undoubtedly would follow suit and the end result probably would be a general debasement of the fare level without a sufficient increase in volume to cure the basic problem.

The best estimates seem to indicate that two-thirds of those who patronize the airlines are regular travellers who will travel via the airlines for business or other reasons without particular regard to fares. Market

elasticity must be found among the casual travellers making up the remaining third who are responsive to fare levels. A general drop of 5% in coach fare levels would require a 16% increase in these casual travellers in order to break even. Particularly at this time of year, such an increase would appear too unlikely to be a sound solution to our problem.

Thought has also been given to special discounts or promotional fares. The general industry feeling, however, is that promotional fares have done more harm than good. The current youth fare is subject to widespread abuse and even its originators now wish to get rid of it. To date, our own promotional 13-30 day fare appears to have been a limited success but its effectiveness may be diminishing with time. It is unlikely that any promotional fare in jets which we might conceive would be sufficiently beneficial to warrant interrupting an apparent industry trend to eliminate discounts in order to avoid a general debasement of the coach fare level. We believe that in the near future low cost fare activities should be limited to our piston planes.

A coach fare increase should seem preferable to a fare cut and it is quite possible that the CAB will sanction a jet coach fare increase in the near future. Just what this will yield cannot be stated with certainty at this point. However, one might fairly assume that taking into account some upgrading of traffic to first class which will result and after allowing for some possible diminution of traffic, an increase in revenues of about 5% could be expected. This would mean a net increase in income of approximately $500,000 per month.

MERGER POSSIBILITIES

Before concluding, note should be taken of merger possibilities and of the possible sale of our international business.

The management has held informal discussions with Northeast, Eastern and Pan American, the largest single stockholder in National. Northeast seems to be out of the question because its financial problems are beyond our capacity to deal with. Eastern may be interested in more serious discussions but there are obvious problems which would take time to work out. Such a merger very likely would have to be accompanied by an equity offering in order to provide needed cash because Eastern also has a difficult cash problem.

Pan American is quite worried about National which is having great difficulty in financing jets required to serve its new southern route. As National's major stockholder, it is seeking a merger for National which would improve its chances of success. From a route standpoint, this might be of interest to TWA, but as yet we have seen no evidence of interest on the part of National. Also, there would be a serious cash problem and

more equity would be required. The diversity of interests in this situation will prevent any quick consummation of merger plans, even if the long-run possibility exists.

We should, I feel, be alert to any serious merger proposals which give promise of strengthening our business. At the same time, we should recognize that any merger will take time and will be fraught with complications. Our immediate problems will not be solved in this way.

FUTURE OF INTERNATIONAL BUSINESS

So far as our foreign business is concerned, I feel that our new terminal and other factors may put us in a position to carry this on profitably for some years to come, despite increasing foreign competition. For the last few months, the international business has been carrying the domestic and at the moment is surprisingly strong. There is perhaps an even chance that our government will go to an area concept in Europe, the result of which would be to lessen the points of competition with Pan American and maximize the number of points at which we would hold a monopoly among U. S. carriers. Some program of pooling or otherwise rationalizing our service with that of Pan American appears to be a real likelihood. Should this happen, it would increase greatly the profitability of our overseas services. At the moment, it would not seem the part of wisdom to surrender any of our routes.

The question of selling our overseas routes to Pan American has been explored very cautiously. Pan American seems to have a reasonable amount of cash with which to pay at least part of the purchase price. However, there is the most serious question as to whether the CAB would approve such a sale and as to whether TWA should surrender its unique position of serving both the major cities of the United States and the major gateways of Europe. To date, this potential has not been capitalized on fully, but with the new terminal it is hoped that this can be achieved. Contacts will be maintained with Pan Am to facilitate a quick discussion of such a sale, should circumstances warrant it.

RECOMMENDED PROGRAM

It seems clear to your management that there is no spectacular feat which will reverse overnight a trend as deep-seated as that which has been affecting TWA. We feel that the problem will be solved by improved planning and by consistent and intelligent application to a variety of details. It is our recommendation that we continue on this course even though it does not promise spectacular results from a short-term standpoint.

We are optimistic that the business of TWA will experience a very substantial lift next spring. Industry forecasts indicate that business

improved over levels prevailing a year before. TWA's new Idlewild terminal and its new fan jet fleet should give it tools with which substantially to increase its market penetration. We presently are laying our plans to capitalize on this to a maximum degree.

This leaves undisposed of the question of how we manage through the lean first half of 1962. Even the substantial improvements in our operating performance over the next six months, we may come to the end of March $10 to $12 million short of our desired $15 million of cash. Conceivably, the required funds could come from (a) bank loans, (b) a deferment of payments to Boeing, or (c) an equity offering. Dealing with the latter possibility first, it seems likely that we should seek additional equity at the earliest opportunity. At the moment, so many uncertainties surround the situation that it is doubtful that an equity offering could be made under the most favorable circumstances. Also, there is doubt as to how successful such an attempt would be unless made for some positive purpose such as the acquisition of new planes. We must, however, give the most serious thought to taking such a step.

Boeing has not yet been asked for an extension of terms. Nevertheless, this should be considered a real possibility. It will depend somewhat on what our total equipment program turns out to be. So far as bank loans are concerned, we feel that a real possiblity exists here, just as soon as we are in a position to forecast our future with sufficient confidence to talk in definitive terms as to what sort of financial help will be needed. The banks undoubtedly will wish to see some evidence that we are making progress in the solution of our various problems, but we hope to be able to satisfy them in this regard in the very near future.

By way of conclusion, what TWA needs more than anything else is a period of time free of crises, during which it can engage in the orderly planning and development which, there is every reason to believe, would make it the competitive equal of American and United. Consistent application to the fundamentals of the business will be far more significant in the long run than any spectacular step which we are likely to conceive suddenly to revolutionize the situation. It is to this end that we should put our efforts.

Apologies must be made for the length of this report. It is felt, however, that any less would involve a failure adequately to discuss significant facets of TWA's problem.

Order No. E-17[illegible]

UNITED STATES OF AMERICA
CIVIL AERONAUTICS BOARD
WASHINGTON, D. C.

Adopted by the Civil Aeronautics Board
at its office in Washington, D. C.
on the 28th day of December, 1961

In the matter of passenger fa[illegible]s :
proposed by :
: Docket 13313
UNITED AIR LINES, INC. :

ORDER OF INVESTIGATION AND SUSPENSION

On November 1, 1961, United Air Lines, Inc. (United), filed a tariff effective January 1, 1962, proposing to increase its first-class jet fares by $1.00 and its first-class propeller fares by approximately 6 percent plus $1.00; to increase its day coach fares (jet and piston) by 5 percent plus $1.00; and to cancel its night coach fares. United states that these fare changes would increase its passenger revenues by 6.5 percent.

Six other carriers--American, Eastern, Braniff, Delta, Northeast, and TWA--have set forth their proposals for fare increases in letters to the Board and have stated their intention to file new tariffs in the future. The proposals embrace a fairly wide range of fare changes, at least in detail. These carriers appear unanimous in their proposals to decrease the spread between first-class and coach fares, generally (but not in every instance) by increasing coach fares approximately 5 percent, or to a range of 83 to 85 percent of first-class fares. Generally, the carriers propose little or no increases in first-class fares. American, however, would reduce long-haul (over 1,200 miles) first-class fares by 5 percent and increase the corresponding coach fares by 5 percent. Various carriers would cancel certain discounts or

promotional fares.[1/] In support of their fare proposals, the carriers state that for the past few years the rate of return on invested capital has been inadequate and below the return found appropriate by the Board in the General Passenger Fare Investigation. The carriers point out that in 1960 the domestic trunklines earned only 3.25 percent on their investment and that for the first nine months of 1961 there is evidence of further decline in earnings. The carriers assert that if the present low level of earnings is continued, the industry's financial structure will be threatened; and that there must be some fare increase to check and possibly reverse this unfavorable trend in earnings.

1/ American, Eastern, Northwest, and TWA propose increases in day coach fares of approximately 5 percent; Eastern and Northeast, however, would implement an increase of approximately 5 percent by raising these day coach fares to 83 1/3 percent of first-class fares; Braniff and Delta would increase such fares to 85 percent of propeller first-class fares, rounded to the next higher even dollar and then add a jet surcharge. In addition to the 5 percent fare increase, TWA would add $1.00 to each ticket sold. With regard to first-class fares, American would reduce such fares by 5 percent for trips of 1,200 miles or more but would leave the fares for distances under 1,200 miles unchanged, although it would not oppose a moderate increase in such fares if proposed by other carriers. Braniff and Delta would increase all fares to the next higher even dollar, while Eastern and Northeast would retain present jet fares and increase first-class propeller fares 5 percent. TWA would increase each passenger fare in both jet and propeller services by $1.00 and would increase by 5 percent all piston fares for flights of less than 1,200 miles.

American, Braniff, Eastern, and TWA would increase night coach fares approximately 5 percent; TWA would also apply an increase of $1.00 for each passenger ticket sold and Eastern would add jet surcharges where not presently applied.

Some carriers propose publishing a rule that no food or alcoholic beverages will be served to coach passengers. The general view is that the present promotional fares should be limited or reduced in scope, although the carriers differ in their approaches. Braniff, Continental, Eastern, Northeast, TWA, and Western would discontinue family fares, while United and Northwest would retain these fares. Eastern, Braniff, and Western oppose the continuation of the present 10 percent discount for official military traffic within the United States, which is the subject of a carrier agreement which expires December 31, 1961.

The principal problem of the industry, according to the carriers, is the continuing diversion of passenger traffic from first class to coach; that coach service, particularly on jets, has been such a tremendous bargain that first-class passengers have been diverted to this service in large numbers, thus reducing passenger mile yields and overall profits.2/

The 11 domestic trunklines reported a composite return on investment of 2.1 percent3/ for the 12-month period ended September 30, 1961. That level of earnings is inadequate by any standard. Moreover, those results mark the low point in a declining trend of earnings experienced during the last six years, notwithstanding a series of fare adjustments starting in February of 1958 which to date have increased the average first class fare by 23 percent and the average coach fare by 27 percent. The overall fare level has increased by almost 25 percent in this period.

This same six-year period has seen a substantial reduction in the year-to-year rate of passenger traffic growth from growth rates enjoyed during the first half of the 1950's. Capacity, however, during this period was increased at a faster rate than traffic with the result that industry passenger load factors have declined nearly 7 points from the favorable levels maintained during 1954 and 1955. Furthermore, aircraft now on order and scheduled for delivery during 1962 and 1963 represent very substantial potential capacity increases, even assuming that passenger traffic volume increases at a moderate pace.

The industry has also experienced sizeable increases in operating costs per seat-mile flown but those increases have been almost entirely matched by the aggregate impact of the fare increases described above. Stated differently the trunkline industry's composite break-even load factor is currently very close to the level experienced in the favorable 1954-5 period and the disparity between current earnings and those of the earlier period appears to be attributable largely to the sharp decline in passenger load factor.

With this background in mind, the Board is convinced that while limited fare changes may improve revenues moderately, no fare program alone can restore earnings to reasonable levels. On the contrary, the industry's economic problems must be attacked on a broad front of which load factor improvement is the cornerstone. We will, therefore, institute an investigation of United's proposed fare changes, except their proposed cancellation of night coach fares

---

2/ American states that in the first nine months of 1960 first-class traffic was 51 percent of total passenger traffic, and that in the same period of 1961 first-class traffic declined to 43 percent of the total traffic, while coach traffic increased to 57 percent.

3/ Before interest and after income taxes. In the same period, the carriers reported a net loss of $19,390,000 after interest and taxes.

The carriers attribute much of their current financial distress to the shift of passengers from first-class to coach services and the attendant loss of revenues without commensurate cost savings. However, we are not convinced at this time that the present fare differential of approximately 25 percent is greater than the difference between the seat-mile costs of the respective services or that the coach services are inherently less profitable than first class. Moreover, the effectuation of a general revenue increase primarily by raising coach fares might tend to inhibit the growth of traffic and magnify the difficulty in improving load factors.

As an interim revenue measure, however, the Board would permit the domestic industry to effect a general fare increase of not more than three percent. Any such tariffs would have to be filed on at least 30 days' notice and provide for expiration not more than six months after effectiveness. During that period a series of steps will be undertaken in a program to resolve the underlying economic problems. In addition the Board urges the carriers to undertake the closest scrutiny of the various remaining special fares or fare discounts and to discontinue those of doubtful economic validity. On the basis of available information, the maintenance of the family fare between points where coach service is offered appears of doubtful economic value, since it results in a first-class family fare ticket being offered at a price significantly below the corresponding coach fare. As measures to enhance the relative attractiveness of first-class service without undue burden on the coach passenger or the required coach fares, the Board would not object to an increase in the first-class free baggage allowance to 66 pounds (as suggested by at least one carrier) and the establishment of a rule permitting stopovers at reasonable charge in first-class service.

In other than passenger fare areas, several programs are already underway and others will be promptly commenced. The Board has authorized inter-carrier discussions of matters relating to cabin services, the "no-show" problem,[4/] and the use of joint facilities. The Board believes that cabin services tend to be overemphasized today and there exist opportunities for significant

---

4/ The trunkline carriers have reached agreement on a program to deal with the "no-show" problem and have filed that agreement with the Board. We anticipate passing on the agreement in the very near future.

operating economies without eliminating the real necessities. The elimination of service of alcoholic beverages without appropriate charge appears to present one important area for economy measures at a time when first-class fares are clearly inadequate in relation to the cost of service. Similarly, the use of common facilities by two or more carriers appears to be a useful area to explore.

The load factor improvement program will include short and long range steps. For the long range, we anticipate that programs currently being embarked upon will, directly or indirectly, result in improved load factors for the trunkline industry. However, this program, which includes an increased emphasis on consolidated services at regional airports, suspension of service to uneconomic points, substitution of local service for trunkline service where mutually beneficial, and route investigations looking toward reduction in excessive competitive carrier authorizations can be implemented only after formal proceedings.

It is evident that the time required to complete the regulatory procedures necessary to effectuate any action which the Board can take in these areas forecloses these affording any real prospect of immediate relief. The urgency of the need for capacity reduction or other economic operation action aimed at improving the imbalance between traffic and capacity, particularly on the normally profitable high density markets in which load factors are currently abnormally low makes it incumbent upon the carriers to initiate a short range interim program to provide fairly immediate relief. Therefore, each carrier will be requested to submit to the Board by January 15, 1962, its suggestions as to actions it may take to improve its load factor.

Accordingly, pursuant to the Federal Aviation Act of 1958, and particularly sections 204(a) and 1002 thereof,

IT IS ORDERED THAT:

1. An investigation is instituted to determine whether the fares, charges and provisions described in Appendix A hereto are , or will be, unjust or unreasonable, unjustly discriminatory, unduly preferential, unduly prejudicial, or otherwise unlawful, and if found to be unlawful, to determine and prescribe the lawful fares, charges and provisions.

2. Pending hearing and decision by the Board, the fares, charges and provisions described in Appendix A hereto, so far as applicable to interstate air transportation, are suspended and their use deferred to and including March 31, 1962, unless otherwise ordered by the Board and that no changes be made therein during the period of suspension except by order or special permission of the Board.

3. The proceeding ordered herein be assigned for hearing before an examiner of the Board at a time and place hereafter to be designated.

4. Copies of this order shall be filed with the tariff and shall be served upon United Air Lines, Inc., which is hereby made a party to this proceeding.

This order will be published in the Federal Register.

By the Civil Aeronautics Board:

/s/ Harold R. Sanderson

Harold R. Sanderson
Secretary

(SEAL)

Murphy, Vice Chairman, and Minetti, Member, filed the attached joint concurrence and dissent.

MURPHY, VICE CHAIRMAN, AND MINETTI, MEMBER, CONCURRING AND DISSENTING:

We concur in the suspension and investigation of United's proposed fare increase. We also agree that a multifaceted program as outlined in the majority opinion should be implemented by the carriers to improve earnings. We cannot assent, however, to a general 3% fare increase at this time. In our opinion, low trunkline load factors, due to the greatly increased capacity of the new jet aircraft, will not be improved by increasing fares. We believe that further fare increases (on top of the almost 25% increase over the past four years) may discourage the growth of traffic and compound, rather than alleviate, the carriers' financial problems.

There are a number of areas which promise fruitful reduction of unnecessary expenses and costs to which the attention of the industry has been invited and to which it is now addressing itself. This is a task which is vitally affected by the public interest and offers greater promise of producing a worthwhile solution to the financial difficulties of the industry than any further fare increase.

Since the Board agrees that declining passenger load factors are the essence of the industry's present economic problem, it is important to note that an improvement of a single percentage point in the overall load factor (presently only 56.2% for the industry) would produce an additional 30 million dollars in gross revenues. It is interesting,

also, to observe that the almost 25% in fare increases over the past four years has balanced out the rise in cost levels in this period so that the present average revenue yield per revenue passenger-mile bears the same ratio to average seat-mile costs as obtained during the financially favorable climate of 1954-5. Moreover, with many of the non-recurring jet integration costs behind us, costs give every indication of leveling out, and no dramatic changes are reasonably anticipated. These facts would seem to dictate that now is the time to hold the line. Moreover, it is reasonable to assume that an industry trend toward pure transportation service on a more economic basis (a trend which we all encourage) should eventually lead to a reduction in fares and open new and even greater markets for air transportation as we move forward in the jet age.

In short, additional trunkline passengers must be attracted to fill the present empty seats and this is unlikely to occur if fares are raised. The inevitable result of the fare increase authorized by the majority is a contribution by the traveling public of an additional 54 million dollars (on an annual basis) without any real expectation that this will solve the carriers' complex problems. We believe that such a fare increase will hamper the growth of air traffic and load factor improvement and may delay or deter a consistent and aggressive attack upon the root causes responsible for the temporary economic malady which now affects some elements of the industry.

In addition, we wish to register a dissent from any Board encouragement which would move the industry to abolish all of the special fares

or fare discounts without discrimination. We believe that certain traditional promotional fares, such as the family plan and half-fare for children should be retained as constructive merchandising programs which have developed new markets and will continue to encourage growth in air travel. Moreover, the 10% discount now afforded military personnel on first-class flights helps to fill first-class seats.

CIVIL AERONAUTICS BOARD

January 29, 1962

The Honorable Alan S. Boyd
Chairman
Civil Aeronautics Board
Washington 25, D. C.

13313

Dear Mr. Boyd:

TWA submits this letter in response to requests contained in Order No. E-17885 and your letter of January 4, 1962. Comments were invited on programs designed to improve load factors, particularly in high-density markets.

In general, TWA agrees that the imbalance between traffic and capacity and the resulting low load factors have been a principal cause of unprofitable trunkline operations. We believe that a most important underlying cause of the imbalance is excessive competition in the high-density markets. TWA's plans include steps to improve load factors and to avoid an aggravation of the excessive capacity in these markets. Nevertheless, everyone must recognize that ultimately its actions are necessarily affected by the actions and reactions of competitors in the same markets.

TWA's scheduling policy will be to increase load factors by improving the quality of the product without significant additions to capacity. In effect, TWA plans basically to hold 1962 levels of service and frequency of schedules to 1961 standards. TWA expects to improve its load factors in June 1962 by approximately 2% over June 1961 pursuing the policy outlined above.

TWA derives 72.3% of its domestic passenger miles from service in the 100 top-ranking domestic markets. Consequently, our plans for the top 100 markets largely coincide with our plans for our entire domestic system.

In the peak month of August 1961, TWA flew an average of 247,000 plane miles per day in domestic passenger service - the same daily mileage presently planned for June 1962. Monthly seat miles available will increase 3.5%, from 709 million in August of 1961 to 734 million in June of 1962. This modest rise is attributable as much to an increase in coach seats at the expense

of first class as it is to the substitution of jet for piston mileage. Although August 1962 plans are not yet as firmly established as June's, they are expected to show only a modest increase in capacity over June.

The most significant statistic, however, relates to the number of frequencies operated in markets of major importance to TWA. These markets are obviously of paramount significance to our major competitors as well. It is in these markets that excess capacity has tended especially to depress load factors. TWA presently plans but a single frequency increase in its top 10 markets during 1962. These 10 markets account for over 40% of our domestic passenger miles.

According to present plans, TWA's peak schedules in its top 15 markets will total 43 in June 1962 compared with 45 1/2 in August 1961. In its top 25 segment, TWA will offer 60 frequencies in June 1962 compared with 62 1/2 in August 1961. August frequencies are also expected to be below August 1961. These markets account for 60% of the company's revenue passenger miles.

Perhaps it would be fair to evaluate relative carrier contribution to excess capacity on the basis of historic market participation. Using this bench mark, it can be seen that TWA's projected levels of service will tend only to regain a share-of-the-market position which has been trending slightly downward in the last two years.

Obviously, the [illegible] of the foregoing program will depend upon whether our competitors will exercise similar restraint or will try to turn our restraint to their advantage. This question arises in each individual market. One cannot fairly expect the competitor to restrict frequencies or capacity unless other competitors do likewise.

A current example highlights this problem. In December, TWA and one of its competitors each reduced a frequency in the New York - Los Angeles market to adjust their services to seasonal requirements. The other competitor, however, promptly added a flight which raised its frequency to 5 nonstop flights each way per day. It then sought to achieve an important competitive advantage by an intensive and widespread advertising and sales promotion campaign stressing the fact that its frequency was equal to the combined services of its competitors. Under such circumstances, those who restricted their capacity can only look forward to the day when they can again match frequencies with the third competitor and thus erase the competitive disadvantage under which they now labor.

Numerous other examples, with most of which the Board must be familiar, could be cited. In the light of these experiences, TWA's scheduling policy as set forth above is and will be subject to the need for response to the practices of its competitors. As the Board knows, frequency of service is a most potent competitive weapon. A carrier's participation in a market is directly related not only to its general prominence or to the tendency of the public to identify it with transportation in that particular market, but more specifically to the frequency of its operations. Capacity and frequency which are excessive at one point in time may later become naked dominance in the market if the competitors are subordinated by a substantial margin and for a sufficient time. TWA cannot remain insensitive to such threats.

Two other factors which contribute to excessive capacity should be mentioned. The first concerns the supplemental lines. While it may be true that their capacity constitutes a small percentage of industry total, such capacity is significantly concentrated in markets which vitally affect TWA.

The second difficulty stems from high-frequency schedules operated by local service lines between major terminals. These are particularly vexatious because the government is partially underwriting the capacity that contributes to our problem. In one market, for example, a local service carrier is operating nine daily non-stop schedules with on board loads averaging below 50%.

As already stated, TWA plans to hold schedule frequencies down so that anticipated traffic increases will result in higher load factors, and we have indicated some of the major assumptions and considerations involved in these plans. We have not here attempted to submit a detailed market-by-market analysis. To do so would require a most voluminous submission involving so many assumptions and variables that it would be of little value to the Board. In addition, it would require a complete statement of our marketing analyses and sales objectives on a segment by segment basis. It is questionable whether the Board desires at this time so much proprietary information.

"Plans to improve load factors" vary with flights and with segments. Such plans could include changing the type of equipment formerly employed, or changing configuration, time of departure, cabin service or routing of the schedule itself. In fact, a carrier might plan schedules which were intended to reduce load factors in a given market but produce more profit for the company. Cross-connections, interline or on-line feed, avoidance of multiple operations during congested periods and a host of other considerations might figure in any plan to improve load factors in a given market.

Honorable Alan S. Boyd
Page 4

January 29, 1962

TWA suggests that the Board might wish to make a more detailed examination of a relatively few selected markets which account for important percentages of total travel or which appear particularly suspect as examples of excess capacity. Such an investigation might bring to the Board valuable information enabling it better to come to a conclusion as to whether it wished to exercise existing powers or seek additional power to deal with the over-capacity problem. TWA would be most willing to cooperate and assist in such further studies as may be of interest to the Board. It would seem obviously desirable to select markets with respect to which the Board is in the best position to adopt effective remedies or to cause affected carriers to do so.

Specific consideration should be given to the question of whether it would be in the public interest for the Board to encourage capacity and frequency agreements among the carriers, subject to Board approval. TWA specifically suggests that an initial step in this direction could be taken if the carriers were to address themselves to the levels and frequency of services to be operated in selected markets on low traffic days (holiday weekends are one example). Substantial mileage reductions which would mean dollar savings could be effected without prejudice to public convenience. TWA is interested, and prepared to participate in such discussions.

In addition to encouraging the airlines to solve this problem in part by agreement, we believe the Board should also seriously consider preventing the operating of excess capacity, at least when this amounts to an unfair method of competition, by exercising the powers it may have under the Act. Section 411, for example, gives the Board power to order any airline to cease and desist unfair or deceptive practices or unfair methods of competition.

While the Board has indicated these comments should be addressed primarily to domestic problems, TWA believes that international operations by U. S. flag carriers are subject to the same difficulties. The Board and other segments of government are aware of allegedly excess capacity situations on international markets.

In this connection, TWA's record for a three-year period is as follows:

	Pack Frequency		
Year	Jet	Piston	Total
1960	35	8	42
1961	40	1	41
1962	46	0	46

CIVIL AERONAUTICS BOARD

January 29, 1962

The Honorable Alan S. Boyd
Chairman
Civil Aeronautics Board
Washington 25, D. C.

13313

Dear Mr. Boyd:

TWA submits this letter in response to requests contained in Order No. E-17865 and your letter of January 4, 1962. Comments were invited on programs designed to improve load factors, particularly in high-density markets.

In general, TWA agrees that the imbalance between traffic and capacity and the resulting low load factors have been a principal cause of unprofitable trunkline operations. We believe that a most important underlying cause of the imbalance is excessive competition in the high-density markets. TWA's plans include steps to improve load factors and to avoid an aggravation of the excessive capacity in these markets. Nevertheless, everyone must recognize that ultimately its actions are necessarily affected by the actions and reactions of competitors in the same markets.

TWA's scheduling policy will be to increase load factors by improving the quality of the product without significant additions to capacity. In effect, TWA plans basically to hold 1962 levels of service and frequency of schedules to 1961 standards. TWA expects to improve its load factors in June 1962 by approximately 2% over June 1961 pursuing the policy outlined above.

TWA derives 72.3% of its domestic passenger miles from service in the 100 top-ranking domestic markets. Consequently, our plans for the top 100 markets largely coincide with our plans for our entire domestic system.

In the peak month of August 1961, TWA flew an average of 247,000 plane miles per day in domestic passenger service - the same daily mileage presently planned for June 1962. Monthly seat miles available will increase 3.5%, from 709 million in August of 1961 to 734 million in June of 1962. This modest rise is attributable as much to an increase in coach seats at the expense

of first class as it is to the substitution of jet for piston mileage. Although August 1962 plans are not yet as firmly established as June's, they are expected to show only a modest increase in capacity over June.

The most significant statistic, however, relates to the number of frequencies operated in markets of major importance to TWA. These markets are obviously of paramount significance to our major competitors as well. It is in these markets that excess capacity has tended especially to depress load factors. TWA presently plans but a single frequency increase in its top 10 markets during 1962. These 10 markets account for over 40% of our domestic passenger miles.

According to present plans, TWA's peak schedules in its top 15 markets will total 3 43 in June 1962 compared with 45 1/2 in August 1961. In its top 25 segments, TWA will offer 60 frequencies in June 1962 compared with 62 1/2 in August 1961. August frequencies are also expected to be below August 1961. These markets account for 60% of the company's revenue passenger miles.

Perhaps it would be fair to evaluate relative carrier contribution to excess capacity on the basis of historic market participation. Using this bench mark, it can be seen that TWA's projected levels of service will tend only to regain a share-of-the-market position which has been trending slightly downward in the last two years.

Obviously, the success of the foregoing program will depend upon whether our competitors will meet this dollar restraint or will try to turn our restraint to their advantage. This question arises in each individual market. One cannot fairly expect one competitor to restrict frequencies or capacity unless other competitors do likewise.

A current example highlights this problem. In December, TWA and one of its competitors each reduced a frequency in the New York - Los Angeles market to adjust service to seasonal requirements. The other competitor, however, promptly added a flight which raised its frequency to 5 non-stop flights each way per day. It then sought to achieve an important competitive advantage by its intensive and widespread advertising and sales promotion campaign stressing the fact that its frequency was equal to the combined services of its competitors. Under such circumstances, those who restricted their capacity can only look forward to the day when they can again match frequencies with the third competitor and thus erase the competitive disadvantage under which they now labor.

Numerous other examples, with most of which the Board must be familiar, could be cited. In the light of these experiences, TWA's scheduling policy as set forth above is and will be subject to the need for response to the practices of its competitors. As the Board knows, frequency of service is a most potent competitive weapon. A carrier's participation in a market is directly related not only to its general prominence or to the tendency of the public to identify it with transportation in that particular market, but more specifically to the frequency of its operations. Capacity and frequency which are excessive at one point in time may later become naked dominance in the market if the competitors are subordinated by a substantial margin and for a sufficient time. TWA cannot remain insensitive to such threats.

Two other factors which contribute to excessive capacity should be mentioned. The first concerns the supplemental lines. While it may be true that their capacity constitutes a small percentage of industry total, such capacity is significantly concentrated in markets which vitally affect TWA.

The second difficulty stems from high-frequency schedules operated by local service lines between major terminals. These are particularly vexatious because the government is partially underwriting the capacity that contributes to our problem. In one market, for example, a local service carrier is operating nine daily non-stop schedules with on board loads averaging below 50%.

As already stated, TWA plans to hold total schedule frequencies down so that anticipated traffic increases will result in higher load factors, and we have indicated some of the major assumptions and contingencies involved in these plans. We have not here attempted to submit a detailed market-by-market analysis. To do so would require a most voluminous submission involving so many assumptions and variables that it would be of little value to the Board. In addition, it would require a complete statement of our marketing analyses and sales objectives on a segment by segment basis. It is questionable whether the Board desires at this time so much proprietary information.

"Plans to improve load factors" vary with flights and with segments. Such plans could include changing the type of equipment formerly employed, or changing configuration, time of departure, cabin service or routing of the schedule itself. In fact, a carrier might plan schedules which were intended to reduce load factors in a given market but produce more profit for the company. Cross-connections, interline or on-line feed, avoidance of multiple operations during congested periods and a host of other considerations might figure in any plan to improve load factors in a given market.

Honorable Alan S. Boyd
Page 4

January 29, 1962

TWA suggests that the Board might wish to make a more detailed examination of a relatively few selected markets which account for important percentages of total travel or which appear particularly suspect as examples of excess capacity. Such an investigation might bring to the Board valuable information enabling it better to come to a conclusion as to whether it wished to exercise existing powers or seek additional power to deal with the over-capacity problem. TWA would be most willing to cooperate and assist in such further studies as may be of interest to the Board. It would seem obviously desirable to select markets with respect to which the Board is in the best position to adopt effective remedies or to cause affected carriers to do so.

Specific consideration should be given to the question of whether it would be in the public interest for the Board to encourage capacity and frequency agreements among the carriers, subject to Board approval. TWA specifically suggests that an initial step in this direction could be taken if the carriers were to address themselves to the levels and frequency of services to be operated in selected markets on low traffic days (holiday weekends are one example). Substantial mileage reductions which would mean dollar savings could be effected without prejudice to public convenience. TWA is interested, and prepared to participate in such discussions.

In addition to encouraging the airlines to solve this problem in part by agreement, we believe the Board should also seriously consider preventing the operating of excess capacity, at least when this amounts to an unfair method of competition, by exercising the powers it may have under the Act. Section 411, for example, gives the Board power to order any airline to cease and desist unfair or deceptive practices or unfair methods of competition.

While the Board has indicated these comments should be addressed primarily to domestic problems, TWA believes that international operations by U. S. flag carriers are subject to the same difficulties. The Board and other segments of government are aware of allegedly excess capacity situations on international markets.

In this connection, TWA's record for a three-year period is as follows:

Year	Peck Frequency Jet	Piston	Total
1960	35	8	42
1961	40	1	41
1962	46	0	46

The record of TWA's principal transatlantic competitor, for the same period, is as follows:

Year	North Frequency Jet	Piston	Total
1960	50	8	58
1961	73	7	80
1962	92	8	100

Particularly in view of the notorious over-capacity on the North Atlantic one might well question whether such an increase in capacity was not prompted by a desire to achieve a special competitive advantage. Obviously, one faced with such an increase in capacity cannot help but give serious thought as to how it can add capacity sufficient to offset this advantage.

While the criteria for determining excess capacity in international operations are different so far as bilateral air transport agreements are concerned, excess capacity per se is a subject of legitimate interest to the Board. TWA suggests only that the area of the Board's concern should not be bound by the continental limits of the United States.

In summary, efforts to fit capacity to the demand are basic to our plans and the effectiveness of these efforts will depend in large part on what our competitors do. Consequently, we share the Board's concern and express our willingness to participate in such further studies as the Board may undertake.

Sincerely,

Charles C. Tillinghast, Jr.

cc: Members of the CAB
All trunklines Presidents

Using this pattern of changing service for the fleet of thirty CV 880 aircraft, we calculate the reduction of piston aircraft service as follows:

Year	Additional Jet Plane-Miles With 30 CV 880s (a)	Piston Plane-Miles Reduction, at 51%(b)	Seats Per Average Piston Aircraft(c)	Average Piston Aircraft Load Factor(c)	Passenger-Miles for Reduced Piston Service(b)
	(Millions)	(Millions)			(Millions)
1960	5.8	3.0	68.0	60.2%	123
1961	11.2	5.7	68.3	~~60.4~~ 59.3	~~235~~ 231
1962	11.6	5.9	67.9	61.7	247
1963	9.4	4.8	68.2	59.6	195

(a) From page 67.
(b) By calculation.
(c) Calculated from data in TWA's Schedule 3-TCM.

REVENUE INCREASE

The foregoing changes in passenger-miles, at TWA's average yields, would have produced a passenger revenue increase as follows:

Year	Passenger-Miles			Average Yield (d)	Net Increase of Passenger Revenue(c)
	Additional CV 880(a)	Deleted Piston (b)	Net Increase (c)		
	(Millions)				(Millions)
1960	351	123	228	5.645¢	$12.9
1961	648	~~235~~ 231	~~413~~ 417	5.882	~~24.3~~ 24.5
1962	599	247	352	6.104	21.5
1963	506	195	311	5.845	18.2

(a) From page 67.
(b) From table above.
(c) By calculation.
(d) From page 30.

Using the 5 percent additional revenue for various kinds of cargo including mail, express, freight and excess (weight) baggage as mentioned on pages 63 and 31, we calculated additional revenue for these types of cargo and total additional revenue with a fleet of thirty CV 880 aircraft, as fol-

Year	Additional Passenger Revenue(a)	Additional Revenue from Various Types of Cargo, at 5%(b)	Total Additional Revenue(c)
	(Millions)		
1960	$13.9	$0.6	$13.5
1961	24.3	1.2	25.5
1962	21.5	1.1	22.6
1963	18.2	0.9	19.1

(a) From previous page.
(b) By calculation.
(c) By addition.

OPERATING EXPENSES

We estimated changes in Operating Expenses that would have occurred if TWA had received a fleet of thirty CV 880 aircraft rather than twenty aircraft generally in accordance with the method and considerations used for expense estimates of previous Chapters of this report. The details of our estimates are set forth in Exhibit J. The table below summarizes these estimates.

Estimated Changes in Operating Expenses That Would Have Occurred if TWA had Received Thirty CV 880 Aircraft

Operating Expense	1960	1961	1962	1963
	(Millions)			
Flying Operations	$ +2.2	$ +4.2	$ +4.2	$ +3.1
Maintenance	+1.8	+3.6	+3.9	-
Aircraft Servicing	+0.6	+1.2	+1.3	+1.1
Passenger Service	+1.0	+1.9	+1.6	+1.4
Traffic Servicing	+0.8	+1.5	+1.5	+1.3
Servicing Administration	+0.1	+0.1	+0.1	+0.1
Promotion and Sales	+1.3	+2.6	+2.4	+2.2
General and Administrative	+0.3	+0.8	+0.6	+0.5
Depreciation and Amortization(A)	+2.7	+5.7	+5.4	+4.4
	$+10.8	$+21.6	$+21.0	$+14.1

(A) Furnished by Price Waterhouse & Co.

GAIN OR LOSS FROM OPERATIONS

We calculate the change in Gain or Loss from Operations that would have been the result of TWA receiving thirty rather than twenty CV 880 aircraft as follows:

Year	Additional Revenue(a)	Additional Expense(b)	Improvement In Gain or Loss from Operations(c)
	(Millions)		
1960	$13.5	$10.8	$2.7
1961	~~25.7~~ 25.7	21.6	~~3.9~~ 4.1
1962	22.6	21.0	1.6
1963	19.1	14.1	5.0

(a) From table at top of page 71.
(b) From table at bottom of page 71.
(c) By subtraction.

CHAPTER VI

FINANCIAL GAIN OR LOSS FROM OPERATIONS: SUMMARY

The foregoing estimates of change in TWA's Financial Gain or Loss from Operations (also called Operating Profit) are summarized in the following table for the changes in jet aircraft ownership, numbers and receipt dates.

Change in Jet Aircraft	Change in Gain or Loss from Operations				
	1959	1960	1961	1962	1963
	(Millions)				
I- Ownership rather than lease of 15 B-131 and 12 B-331 jets	$ +3.4	$ +7.9	-	-	-
II- Six additional B-331 jets	+0.3	+16.0	$ +3.7	$+2.0	$-0.2
III- Earlier receipt of 15 B-131 and 18 B-331 jets	+6.9	+3.2	-	-	-
IV- Receipt of 20 CV 880 jets on dates in purchase contract	-	+4.0	+2.4	-	-
V- Fleet of 30 rather than 20 CV 880 jets	-	+2.7	~~+3.9~~ 4.1	+1.6	+5.0
Annual Totals	$+10.6	$+33.8	~~$+10.9~~ $+10.2	$+3.6	$+4.8

In addition to the estimated changes listed above, Price Waterhouse & Co. calculated for the assumptions you gave us for Chapters I through V changes in Depreciation and Amortization Expense for other years affecting the Gain or Loss from Operations as follows:

Calculated by Price Waterhouse & Co.					
I- Ownership rather than lease of 15 B-131 and 12 B-331 jets	-	-	$ +1.0	$+0.1	$+0.3
II- Six additional B-331 jets	-	-	-	-	-
III- Earlier receipt of 15 B-131 and 18 B-331 jets	-	-	-0.1	-	-0.3
IV- Receipt of 20 CV 880 jets on dates in purchase contract	-	-	-	+0.8	-0.6
V- Fleet of 30 rather than 20 CV 880 jets	-	-	-	-	-
Annual Totals	-	-	$ +0.9	$+0.9	$-0.6
Grand Total	$+10.6	$+33.8	$+10.9	$+4.5	$+4.2

Total for All Years: $+64.0

Respectfully submitted,

Curtis & Colpitts

LOEB, RHOADES & CO.
FORTY TWO WALL STREET
NEW YORK, N.Y. 10005
TELEPHONE 530-4000

June 8, 1967

Donovan, Leisure, Newton & Irvine
2 Wall Street
New York, N. Y. 10005

Gentlemen:

You have requested information as to the qualifications of Loeb, Rhoades & Co., as Investment Bankers in connection with our proposed testimony in the subject case.

Loeb, Rhoades is one of the major underwriting firms in the investment banking community, having its principal offices at 42 Wall Street, New York, N.Y., with 29 Partners and approximately 1265 employees. We carry on a full service business, including not only the normal functions of broker-dealers and investment advisors but also as specialists in corporate acquisitions and mergers, private placements and the origination of, or participation in underwritings for our clients.

There are appended hereto tabulations showing (i) Offerings Managed Or Co-managed by Loeb, Rhoades & Co., (or our wholly owned subsidiary firm Loeb, Rhoades Inc.) and (ii) Dollar Totals - Underwriting Participations - by Loeb, Rhoades & Co., and Loeb, Rhoades Inc., from 1955 through 1966. We have not maintained complete records of our private placement activities for such period but there is appended hereto a partial list of such activities.

On December 12, 1956, we were the Managing Underwriter and offered to the public 784,402 shares of Northeast Airlines common stock.

TWA and Pan American Airways concluded a merger agreement in 1962. We were retained by the Voting Trustees under the Voting Trust Agreement created in connection with the December 30, 1960 financing to advise and consult with them, with respect to such merger agreement. On December 31, 1962 a petition to approve the merger was filed with the Civil Aeronautics Board. On March 4, 1963 the Board handed down an order deferring proceedings in such case indefinitely. In October, 1963 the Board of Directors of both TWA and Pan American decided to terminate the merger agreement. As a consequence of this action, while we engaged in several months' work in connection with

the merger agreement, no final action could be taken in respect thereto.

With respect to the qualifications of the individual Partners of Loeb, Rhoades who are the signatories and will appear as witnesses in this matter if requested, they are as follows:

Armand G. Erpf was born on December 8, 1897 in New York City and received his B.S. Degree at Columbia University in 1917. After overseas experience in the mining and commodity fields, and association with Cornell, Linder & Co., Management Engineers, he became Director of the Statistical and Research Departments of Carl M. Loeb, Rhoades & Co. in 1933 and a General Partner in 1936.

He is Chairman of the Executive Committee and a Director of Crowell Collier and Macmillan; Member of the Executive Committee and a Director of Seaboard Air Line Railroad Company; Member of the Finance Committee and a Director of General Instrument Corporation; a Director of Jefferson Insurance Company of New York; Jersey External Trust; Raynier Incorporated; Stein Roe & Farnham International Fund; Adela Investment Co., S.A.

He has taken an active part in numerous corporate reorganizations, mergers, and underwritings on behalf of his firm. He was instrumental in establishing the Pennsylvania-Central Air Lines which became Capital Air Lines and was subsequently merged into United Air Lines. He arranged for the financing of Northeast Air Lines in negotiation with Atlas Corporation. He has guided the building up of Crowell Collier and Macmillan through extensive acquisitions and underwritings to an eminent position in educational publications.

He is Chairman of the Council of the Graduate School of Business of Columbia University, Member of the Visiting Committee of the Graduate School of Business at the University of California (Los Angeles), Chairman of the Program for Studies of the Modern Corporation of Columbia University.

He served in the Office of the Commanding General, Headquarters Army Service Forces, Washington, D.C. during 1942-45, and was on duty with the Headquarters, U. S. Army Forces, Western Pacific and with the Commanding General, U. S. Army Forces, China Theater, in 1945-46. He was appointed to the General Staff Corps in 1944, and awarded the Legion of Merit in 1946.

Donovan, Leisure, Newton & Irvine

Kenrick S. Gillespie was born on April 13, 1907 in Morristown, New Jersey; graduated from the Taft School cum laude in 1925 and from Yale University in 1929; BA Degree, Phi Beta Kappa. Spent one year (1929-1930) at Lehman Brothers and one year at the Harvard Business School (1930-1931). Until coming to Loeb, Rhoades & Co. in 1950 he was engaged in investment research successively for an investment trust, Charles D. Barney & Co., and Barrett Associates, Inc., an investment counseling firm. Became a Partner of Loeb, Rhoades & Co., on January 1, 1955. In post World War II period his work in security analysis was fairly heavily concentrated in the air transport and aerospace industries and he assumed senior responsibility for this area at Loeb, Rhoades & Co. He is a member of the New York Society of Security Analysts, Airline Analysts Society of New York and the Aerospace Analysts of New York. He lead a panel of three speakers at the October, 1964 meeting of the National Federation of Financial Analysts covering the Air Transport Industry. He was largely responsible for a financing program for Seaboard World Airlines, Inc., which covered close to a year's work in 1959-1960 and culminated in a $6 million financing program in the fall of 1960, including Convertible Debentures and a Rights Offering. In addition to the above activities he has been Manager of the Investment Advisory Department, head of the Loeb, Rhoades Research Department and is now the Partner in charge of the Correspondent Service Department.

Gene M. Woodfin was born on February 7, 1919 in Paris, Texas; attended public schools; graduated from The University of Texas in 1940 - LLB, with highest honors; became associated with Vinson, Elkins, Weems & Francis in June, 1940; became a Partner of the firm in January, 1950 and remained with such firm (except for duty with the U.S. Navy 1942-46) until May, 1959, at which time he became a General Partner of Carl M. Loeb, Rhoades & Co. As a practicing lawyer he engaged primarily in corporate practice, particularly specializing in Oil and Gas and Gas Pipeline work. He had the primary responsibility for the development and implementation of the financing of Trunklines Gas Co., Gulf Interstate Gas Co. and Transwestern Pipe Line Co., each such financing requiring the placement of long term debt with the lending institutions and negotiations with and the completion of underwriting agreements with the several underwriters. With Loeb, Rhoades he is one of the Partners in charge of its Corporate Finance Division, and in such capacity he passes upon and assists in all underwritings and the placement of institutional loans. Mr. Woodfin is authorized to practice in the States of Texas and Illinois and is a member of the American Bar Association as well as the Bars of the States mentioned.

Very truly yours,

Gene M. Woodfin

I. Questions Posed

Donovan Leisure Newton & Irvine has asked Loeb, Rhoades & Co., a partnership, to review a plan of financing entitled "The Financing Of Trans World Airlines, Inc. During the 1955-1960 Period," dated May 2, 1966, and presented in the form of written testimony by Edward J. Morehouse, Senior Vice President of Drexel Harriman Ripley, Inc. (DHR) and to render its opinion as investment bankers with respect to:

1. Whether the officers and directors of TWA, assuming them to have been prudent and competent in the management of its affairs, and to have had due regard for the interests of TWA and its stockholders, would have accepted and implemented the equity financing plan suggested by Mr. Morehouse to have been engaged in in late May or early June of 1955.

2. Whether Loeb, Rhoades & Co. would have recommended to TWA or to its stockholders the said equity financing plan proposed by Mr. Morehouse.

3. Whether the opinions given in response to the foregoing questions would be altered by either of the following assumptions:

(a) that TWA could not or would not have looked to Hughes Tool Company (Toolco) for assistance in the said equity financing proposed by Mr. Morehouse; or

(b) that TWA was a widely-held company with no controlling stockholder.

4. Whether TWA, without the assistance of Toolco, could have accomplished the other and later financing steps proposed by Mr. Morehouse in his testimony, to wit: (a) the obtaining of a loan commitment in the amount of $150-170 million on October 1, 1955; (b) the issuance of $60 million 5% convertible subordinated debentures on a non-pre-emptive basis in May of 1959; and (c) the obtaining of a commitment for a $90-110 million mortgage loan in May of 1959; and

5. Whether TWA, without the assistance of Toolco, could have financed the "reconstructed" capital requirements of $544.8 million during the period October 1955 through December 1960.

II. Conclusions

The following is a summary of our conclusions:

The equity financing plan suggested by DHR in the Morehouse testimony as of the Spring of 1955 would have been a plan so contrary to the best interests of TWA and its stockholders that it would not have been accepted or implemented by prudent and competent officers and directors of that company.

We would not have recommended to TWA or to its stockholders that TWA engage in Mr. Morehouse's proposed equity financing in the Spring of 1955. It could not have been accomplished without Toolco actively participating by subscribing to its proportionate share of the proposed equity offering, and it would not have been in the best interests of TWA's stockholders for Toolco to have done so at that time.

Our opinion that TWA would have rejected Mr. Morehouse's 1955 equity financing plan is the same on the assumptions that TWA could not or would not have looked to Toolco for assistance in such a financing, or that TWA was widely held with no controlling stockholder.

Lastly, TWA without the assistance of Toolco, could not have financed the so-called "reconstructed" capital requirements of $544.8 million during the period October 1955 through December 1960, on any reasonable basis.

III. Discussion

A. Introduction

Mr. Morehouse's written testimony and exhibits, despite the labor devoted to their presentation, are no more than an exercise in a hypothetical financing conducted without regard to certain important historical facts and yet with the benefit of hindsight on such things as the peaks of the stock market for airline stocks. This is no criticism of Mr. Morehouse or of DHR, who, pursuant to counsel's instructions, prepared an academic answer to an academic question. We have examined that exercise in the light of important historical facts, which cannot be ignored. Only thus can its validity be tested.

The conclusions and opinions expressed herein reflect in particular, the views of Armand G. Erpf, Kenrick S. Gillespie and Gene M. Woodfin. During the period of time in question, 1955-1960 and earlier, both Mr. Erpf and Mr. Gillespie closely followed the airlines with a view to giving investment advice to Loeb Rhoades clients. Mr. Woodfin is one of the partners in charge of the Corporate Department which has the responsibility of handling the buying functions and private placements of Loeb Rhoades, and, as such, is particularly familiar with

the various factors which must be considered in connection with advising or participating in offerings or private placements such as those suggested in the testimony of Mr. Morehouse.

In formulating the opinions expressed herein, we have utilized the Loeb Rhoades Research Department facilities, its library and its personnel to assist in our review of contemporaneous information for the 1946-1960 period. Materials reviewed include aviation and financial publications, airline annual reports, and SEC and CAB documents and exhibits. In addition, we have consulted with various of our partners and with members of our staff who are and have been knowledgeable in the area of airline finance.

B. The Status of the Airline Industry in Early 1955

It is essential to examine any proposed equity financing of TWA in early 1955 in the light of the then existing facts. Mr. Morehouse tends to take the euphoria of the investment community's attitude toward the air transport industry today, and apply it to a period when the investor's attitude toward the future of the airlines was steeped in doubt and skepticism.

The airline industry of early 1955 was very different from what it was in 1960 after a full year of jet operations and even more different from what it is today. Today's maturing adult was a baby in early 1955 and only a child in 1960. For example, total domestic trunk passenger revenues produced in scheduled service were $872,125,000 in 1954, $1,756,439,000 in 1960 and $2,908,045,000 in 1965. Overall available ton miles in scheduled service for domestic trunk airlines were 3,297,122,000 in 1954, 6,548,473,000 in 1960 and 12,593,477,000 in 1965. Total revenue passenger miles in scheduled service for the domestic trunk airlines were 16,234,638,000 in 1954, 29,233,199,000 in 1960 and 48,986,972,000 in 1965* In short, it would be fallacious to view the airline industry of early 1955 as it is viewed today.

Unquestionably the greatest uncertainty facing the airlines in early 1955 was the anticipated coming of the jet age to commercial aviation. There were no commercial jet aircraft actually available at that time and no one knew the answers to the many questions airline executives were pondering: When would commercial jet aircraft become

Statistics for the year 1965 are given in lieu of 1966 statistics because of the effect of the strike on 1966 statistics.

available for ordering? Who would build them? Would they be turbo-prop or turbo-jet, or both? How large would they be? How much would they cost? When would they be delivered? To what extent and when would they replace piston operations? Would they win a high degree of public acceptance? How many would the airlines purchase? Could airport facilities be improved in time?

As Mr. Morehouse pointed out at page 6 of his report, none of the airlines, in early 1955, could have estimated with any degree of certainty how much capital would be required for the purchase of jet aircraft. At the same time it would have been obvious to anyone knowledgeable in the airline and aircraft industries that only down payments and perhaps progress payments would be required in the early years, with the heavy money requirements coming three, four or five years after orders were placed.

A further uncertainty facing the airlines at that time, especially the Big Four domestic trunk airlines (American, United, Eastern and TWA) was the prospect of a substantial increase in competition in the domestic trunk airline industry as a result of new route awards expected during 1955. Several major route cases were pending in early 1955, and with most of the major trunk airlines operating free of subsidy, the CAB was expected to make a

major reappraisal of the nation's airline routes in the course of deciding these cases.

In early 1955 the ability of the airline industry to obtain equity financing was extremely limited, as is apparent from the history of airline financing during the post-war years. Attached hereto as Exhibit A is a compilation of airline financing for the period 1946-1960, from which the paucity of equity financing during the 1950's is clearly evident.

Among Pan American,* United, American and Eastern, the first equity financing done after the sale of $40.8 million 3-1/2% cumulative convertible preferred by American on June 11,1946,** was the offering by United to its common shareholders on March 19, 1952 of 223,865 shares of 4-1/2% convertible cumulative preferred stock (convertible to common prior to 1962) at $100 per share

---

* On July 3, 1945 Pan American sold $43.4 million of capital stock through an underwritten offering of capital stock with stock purchase warrants attached. 2,043,261 units were sold at $21.50 each unit consisting of one share of capital stock and a stock purchase warrant for an additional share exercisable at $18 a share. Because of the market decline beginning in 1946, very few of the warrants were exercised. (See DHR Exhibits: Pan American 1 and 2.)

** The American 3-1/2% convertible preferred stock issue (DHR Exhibit: American 3) may well have been one of the reasons why comparatively little convertible financing was undertaken by the airlines thereafter. The preferred stock dropped precipitatively in price shortly after issuance. The market price was well below par value for about 8 years. The market price of the common stock did not reach the conversion price based on redemption until December 1954. (See McClintock, Exhibit No. U-3.0, Docket No. 8008, pp. 67-8, attached as Exhibit B.)

on a basis of 1 share of preferred to every 11 shares of common (Exhibit A and DHR Exhibit: United 4.) 81,510 shares (36%) were subscribed for. The underwriters on this issue, led by Harriman Ripley, had to pick up 142,355 shares or nearly 64% of the issue. There was no other equity financing by any of these airlines until the 1958-60 period.

Attached hereto as Exhibit C is a compilation of all the common stock offerings by domestic trunk airlines during the period January 1946 to June 1957. It is readily discernible that common stock offerings were rare and in very small dollar amounts during that period. The larger offerings were those of TWA in 1952 totalling $10.7 million (DHR Exhibits: Trans World 2 and 3), that of TWA in 1957 of $43.4 million (DHR Exhibit: Trans World 7), that of Braniff in 1956 of $11.1 million (Braniff Prospectus, August 7, 1956), and that of Northeast in 1956 of $7.5 million (Northeast Prospectus, December 11, 1956). Each of these was underwritten in whole or in part by a principal shareholder. TWA offerings underwritten or guaranteed by the Hughes Tool Company accounted for over 30% of the common stock financing done by all the domestic trunk airlines through 1955 and for over 50% of such financing done through June of 1957.

The history of equity financing during the post-war piston era was summarized as follows in the initial

decision of Examiner Ralph L. Wiser in General Passenger Fare Investigation Case (Dkt. 8008) dated May 27, 1959:

> "An outstanding phenomenon of the airlines' postwar financial record has been the paucity of direct equity financing by either rights subscriptions or public offerings. A compilation presented by bureau counsel shows that between January 1, 1946, and June 30, 1956, the airlines had total financing of $604 million, of which $214 million, or 35 percent, came from long-term debt; $16 million, or 3 percent, came from preferred stock; and $374 million, or 52 percent, came from common stock ($171 million) and retained earnings ($203 million). However, most of the common-stock funds came from conversion of senior securities and only $39 million, or 6 percent of total funds, came from public sale of airline equities (i.e., subscription offering and direct offering). While there is much discussion of needs for ability to raise equity capital, the same general pattern of primary reliance upon debt and retained earnings is planned by the air carriers for the next few years." 32 CAB 291, 361-62.

This dearth of equity financing was not by design. The airlines were forced to rely on debt financing during the post-war piston era because airline equities had no investment status and most airlines were simply unable to obtain equity financing. For example, W. C. Barkes, Vice President of Finance and Property for United Airlines, explained United's 1955 debt financing program in testimony before the CAB in 1957 in the General Passenger Fare Investigation as follows (United Ex. U-2, Docket No. 8008, pp. 12-13; attached hereto as Exhibit D):

> "The 1955 financing program for United was handled entirely by arranging for issuance of debt. This was not a matter of choice, for the ability of United, as well as the industry, to sell equity has been limited. That further increase in equity is necessary and desirable is apparent, but it is equally apparent that it cannot be accomplished satisfactorily until the present period of depressed earnings is brought to an end."

In 1955 airline shares were speculative securities and they were not held in quantity by institutional investors. The CAB took note of this fact in its decision in the General Passenger Fare Investigation:

> "Airline securities represent only .58 percent of the total assets of the 43 largest investment houses, 13 of which disposed of all airline holdings by the end of 1957. Holdings of airline stock by 20 of the largest open-end investment houses declined between 1946 and 1955 from 1 percent to 0.3 percent. Holdings of 28 leading closed-end investment companies declined from 0.5 percent at the end of 1955 to 0.2 percent during the middle of 1957. Less than 0.04 percent of insurance company corporate stock investment was in airline securities." 32 CAB, 291, 303, fn. 29.

Unable to accomplish any substantial amount of equity financing, the airlines financed equipment purchases chiefly out of earnings, cash accumulations from fast depreciation and tax amortization certificates and short-term bank credits. Long-term debt was obtained only infrequently and then the maximum term was generally not

more than 20 years. As of the end of the first half of 1955 none of the airlines had obtained any financing for jet aircraft. Pan American did arrange for a long-term (25 years) $60 million loan from a group of insurance companies in May 1955, but this as well as all other airline financings done prior to the Fall of 1955 was for the purpose of financing the acquisition of piston aircraft. (Exhibit A).

C. The Proposed Financing

1. The Morehouse "Fundamental Principles"

At pages 4-5 of Mr. Morehouse's written testimony there are stated three "fundamental principles" which he says should have been followed in airline finance during the 1955-1960 period: (a) the airline should get, or endeavor to get, its equity or junior capital prior to or simultaneously with getting its senior borrowed capital; (b) the airline should own its own equipment rather than lease it from other parties; and (c) contractual commitments for capital expenditures should be prepared for reasonably in advance of the time they are to become due. Principles (a) and (c), are, of course, related.

We believe that it is unrealistic to postulate a set of principles to which diverse companies in a growth industry with varying needs and abilities should conform.

In the real world of finance an individual company's needs and abilities determine the principles by which it finances.

The relevance to his report of Mr. Morehouse's second principle, that an airline should own rather than lease its equipment, escapes us. We know of no such general principle. A decision as between ownership and leasing must depend upon the facts of each particular situation and requires not only a comparison of the relative costs, including the cost of capital, but also a determination of a company's needs and objectives. We do not attempt to set forth here the reasons why an airline might choose to lease rather than own equipment, but note that leasing of aircraft took place during the 1955-1960 period and remains a fairly common practice in the airline industry today.

With respect to Mr. Morehouse's first principle, getting equity prior to or simultaneously with senior debt, it is our experience that most companies raise funds through the sale of common equity or convertible securities only when the need therefor is clearly demonstrable. It is common practice for a lending institution to make a commitment to lend senior debt conditioned upon equity or subordinated debt financing being done prior to or contemporaneous with the later takedown of the senior funds. A well organized financin plan raises equity only when required, not in unknowing anticipation of possible future needs some years away.

As we shall show below, the fact of the matter is that historically no major airline followed Mr. Morehouse's first principle. The facts indicate that during the 1955-1960 period none of the airlines sold equity or securities convertible into equity until the latest date possible and then in amounts as minimal as possible. This is reasonable and what one would expect, rather than the converse suggested by Mr. Morehouse's first principle.

Mr. Morehouse's third principle, that contractual commitments for capital expenditures should be prepared for reasonably in advance of the time they are to become due, is difficult to quarrel with as a general proposition. The statement of the principle, however, totally fails to answer the important questions of timing and amount. No guidelines are given as to how much money should be raised, by what method or what is meant by "reasonably in advance."

In short, we do not believe that a realistic financing program can be devised or reconstructed upon any such a set of principles of airline finance. Instead, a careful analysis of the factual situation existing in the securities markets, the airline industry at large, and the individual company is required.

2. The Spring 1955 Equity Financing

(a) The Keystone Step

The financing plan for TWA as postulated by Mr. Morehouse has as its keystone a one-for-one pre-emptive equity offering proposed for the Spring of 1955.

It is apparently the opinion of Mr. Morehouse (Tr. pp. 3981, 4313-14) that the program suggested in his written testimony depends upon the success of the proposed Spring 1955 equity offering. Consequently, if this part of the program should not prove feasible the subsequent steps suggested fall of their own weight.

(b) No Need for Equity in Early 1955

We doubt that any TWA management would have been persuaded by Mr. Morehouse's "proprietary capital" argument that TWA was short of proprietary capital in comparison with the other airlines in early 1955 (pp. 8-10, Morehouse Report). We know of no airline that bases its equity or debt financing plans upon its relationship to other airlines using "yardsticks" such as those formulated by Mr. Morehouse.

Even using Mr. Morehouse's yardsticks and accepting the airlines he selected for comparison, TWA's "shortage" of proprietary capital ranges all the way from $13 million to $74 million. In addition, when TWA is compared with Eastern, the fourth member of the Big Four domestic

trunks, which Mr. Morehouse chose to ignore in this part of his discussion, it would appear by his own yardsticks that TWA was over-capitalized in early 1955 by $19 million. (p. 10, Morehouse Report and Exhibit E). A guide to the need for proprietary capital which produces results ranging all the way from $19 million over-capitalization to a "shortage" of $74 million is no guide at all.

A widely accepted measurement of the strength of a company's capital structure is its debt-equity ratio. On that basis, TWA with its ratio of 78.4% equity to 21.6% debt (p. 10, Morehouse Report) was in a better financial position than American, United and Eastern and equally as well off as Pan American.

Clearly these figures show no urgent need by TWA for equity funds. While it likely was recognized by all of the airlines and by their financial advisers in the forepart of 1955 that, at some time in the future, both additional equity and debt financing would be required by each of them to meet the oncoming jet age, no one could be sure of "when" or of "how much."

(c) Excessive Size of the Proposed Equity Financing

We have already noted in B above (pp. 5-12) that airline common stock offerings from 1946 through 1955 were not only rare, but undertaken in very small dollar amounts.

As shown in Exhibit C there were 17 common stock offerings from January 1946 through December 1955 by domestic trunk airlines for a total of $47,179,924. This was an average of $2,775,290 for each offering, even including those underwritten by majority stockholders.

The largest single offering by a domestic trunk airline during the period was by Braniff in 1955 for $5,758,050. The success of this offering and the TWA offerings in 1949 of $4,041,120 and in 1952 of $5,116,448 and $5,661,152 was guaranteed prior to each offering by a controlling stockholder (Braniff Prospectus, May 12, 1955; TWA Prospectus, February 18, 1949; DHR Exhibits: Trans World 2 and 3). Moreover, the success of the three largest common stock offerings in the year and a half subsequent to 1955 (Braniff $11,055,450 in 1956, Northeast $7,451,819 in 1956 and TWA $43,381,468 in June 1957) was similarly assured. (Braniff Prospectus, August 7, 1956; Northeast Prospectus, December 11, 1956; DHR Exhibit: Trans World 7).

It is clear that the $58.4 million common stock offering proposed by Mr. Morehouse for the Spring of 1955 would have been of astounding size, exceeding by more than $11 million the sum total of all domestic trunk common stock offerings during the 1946-1955 period. (Exhibit C). While TWA historically had raised equity during the 1946-1955 period

through the sale of common stock, the total amount aggregated not quite $15 million. It was raised in three separate offerings, the largest of which was less than one-tenth as large as that proposed by Mr. Morehouse, and was accomplished only through the very substantial and guaranteed assistance of its controlling stockholder, Toolco. To suggest, as Mr. Morehouse does, that TWA or any other domestic trunk airline, could have sold in the Spring of 1955 what was a theretofore unheard of dollar amount of stock is in our opinion utterly unrealistic, unless a financially sound majority stockholder for some reason insisted upon it and agreed in advance to assure its success.

(d) Premature Nature of the Proposed Equity Financing

To have accomplished an offering of $58.4 million of common stock in the Spring of 1955 Mr. Morehouse would have to have made his recommendations to TWA and had them accepted early in 1955.

It is common knowledge that in early 1955 there were not yet any jet aircraft available for order by TWA or any other airline and that the magnitude of the orders and investment required by the airlines was unknown. We agree with Mr. Morehouse (p. 6) that, while it was generally recognized that the amounts would be very large,

none of the airlines could estimate with any degree of certainty just how much additional capital would be required. Certainly no airline management could have foreseen in early 1955, when or in what amounts, funds would be required for the purchase of jet aircraft. No major airline saw fit, or (as we pointed out in B above at pp. 5-12) was able, to raise any equity in 1955. (Exhibit A).

Pan American was the first carrier to order jets. In October of 1955 it placed a $269 million order for 25 Douglas DC-8s and 20 Boeing 707s. Pan American had arranged for a $60 million insurance loan on May 10, 1955 to increase working capital and to acquire 7 DC-7Bs and 33 DC7-Cs, all piston aircraft. On December 19, 1956, it borrowed $30 million to provide payment for 9DC-7s and make advances on 23 707s and 21 DC-8s. It was not until July 29, 1959 that Pan American did any equity financing. In that year it had a rights offering of $46.97 million of 4-7/8% convertible subordinated debentures, convertible at $30 per share.

By the end of 1955 Eastern had ordered 19 DC-8s at a cost of $130 million, with options for 7 others. Eastern had also ordered 40 Electras costing $100 million with options on 30 more. Eastern, on October 31, 1955, entered into a credit agreement with Equitable for a total amount of $90 million which was to retire previous bank

loans and provide funds to finance aircraft purchases, including pistons. On October 21, 1958, Eastern sold to Prudential $25 million of convertible subordinated 5% notes, convertible at $41 per share.

American ordered 30 707s in November of 1955 and made arrangements on November 1, 1955 for the private placement of $75 million of 4% notes and on September 1, 1956 for the private placement of $60 million of 4-1/4% notes, the funds to be added to general funds and to be available for the purchase of jet aircraft. It was not until June 18, 1959 that American raised any equity. It then sold $40 million of 5% convertible subordinated debentures.

United ordered 30 DC-8s at a cost of $175 million in late October of 1955. It also ordered 45 four-engine piston aircraft, for a total commitment of $254.5 million. It arranged with three insurance companies on December 22, 1955 to borrow a maximum of $120 million prior to March 1, 1959. At the same time it arranged a $30 million standby revolving credit with the First National City Bank and 37 other banks. On December 20, 1957 it arranged for another $130 million of bank credit. It was not until November of 1960 that it sold $25 million of 4-7/8% convertible subordinated debentures.

The actions of these airlines clearly indicate that competent management did not raise equity in the mid-1950's as a part of long-range financing for the purchase of jet aircraft.

Finally, as is demonstrated by the "Application of Proceeds" appearing on page 22 of Mr. Morehouse's testimony, TWA had no use for equity funds in the Spring of 1955. The major dollar portion of the proceeds, $35 million, was to be used to pay off a 15-year 3-3/4% equipment mortgage loan which had just been arranged in December 1954 with Equitable. (DHR Exhibit: Trans World 4). The remainder was to liquidate other obligations so as to leave TWA debt free.

(e) Damaging Effect on TWA's Stockholders

Mr. Morehouse's proposal to raise $58.4 million in equity in the Spring of 1955 would have been a very expensive undertaking for the stockholders. In the CAB General Passenger Fare Investigation, Docket No. 8008, 32 CAB 291, 298-309, dated November 25, 1960, the CAB found that for the Big Four airlines the proper debt-equity ratio was 50%, that the cost of debt was 4-1/2%, and that the public investor required a 16% return on common equity, producing a composite return of 10.25%. Mr. Morehouse is assuming, contrary to our view, that the common stockholders would double their holdings in TWA when they could at best expect only a nominal rate of return for the foreseeable future.

A one-for-one pre-emptive offering is a drastic measure and would only be resorted to under the most unusual

circumstances such as those existing for historical TWA in 1957. As far as we have been able to determine there is no historical precedent for such an abnormally high ratio among companies of TWA's size and financial condition without the willing participation of a majority stockholder.

Some measure of the damage that might be done to all common stockholders through the proposed equity offering can be gained by a reference to figures in Mr. Morehouse's own report.

At page 22 of his report, Mr. Morehouse states that the Aggregate Indicated Market Value (AIMV) of TWA after the subscription offering would have been $116,800,000. On the 6,673,288 shares then to have been outstanding, this would indicate a post offering market price of $17.50 per share. We believe the market price would have been much lower. But even accepting the figure of $17.50, we find that the AIMV has increased only $13,400,000 after the stockholders and/or underwriters have put into the company a new amount of cash equity capital of $55,500,000. In other words, the TWA stockholders as a group having started with an aggregate market value for their shares of $103,400,000 before the offering, are being asked to put up another $58,390,000 (before underwriting fees and corporate offering expenses) to increase the AIMV not to $161,790,000 but only

to $116,800,000, a resultant self-inflicted loss of $44,990,000. A stockholder who either could not or did not choose to exercise his rights, would find his holding diluted in market value by $13.50 per share ($31 less $17.50).

Important indicia of competent management, especially as measured by the investing public, are earnings per share and yield per share. The overall money earned by a company is unimpressive to a stockholder if his earnings per share are diluted. No competent management desires to dilute the equity position of its stockholders unless required by the most pressing circumstances, and then only when the need for equity is clearly apparent.

In a regulated industry such as the airline industry, principles of reducing dilution and enhancing leverage within prudent limits are of fundamental importance to stockholders as well as to the regulatory authorities and to the public. The history of the financing of jet aircraft as arranged by the major airlines, discussed above, clearly reflects the desire of the managements of airlines to obtain the benefit of leverage afforded by debt whenever possible and to maintain the highest per share earnings possible consistent with good operating practices. Moreover, the CAB has recognized the importance of leverage by premising a rate of return for the Big Four airlines upon a capital structure containing 50 per cent debt.*

* 32 CAB 291, 307.

Since return on total investment in a regulated industry is limited on the high side, but not on the low side, the importance of leverage is magnified. The highest earnings per share will be realized by maintaining the highest level of debt the money market will accept, as long as the net interest rate is less than the return on total investment.

Quite obviously the importance of leverage is also of legitimate concern to a large majority stockholder. A competent professional management would do everything possible to maximize earnings per share, even at the expense of paying higher interest rates, approximately one half of which are paid by the government.

In our opinion a prudent and competent management would have considered both dilution and leverage in weighing Mr. Morehouse's proposal to raise equity in the Spring of 1955, and would have decided to postpone any equity financing until the need for the money could be more clearly demonstrated. In our view these considerations would have led to the same result whether the shares of the company were widely held by the public or largely held by a majority stockholder.

The fact that TWA actually did a one-for-one rights offering in 1957 does not change our view. This was not a public offering underwritten by investment bankers.

There was a definitive and immediate need for the funds* and the issue was underwritten by Toolco which had agreed to provide TWA with a minimum of $34 million of proceeds, exceeding Toolco's pro rata portion by approximately $2 million. Actually, Toolco subscribed to $35 million or 80.69% of the issue. (DHR Exhibit: Trans World 7).

(f) Alternative Assumptions as to Toolco

(i) If we assume that TWA had accepted Mr. Morehouse's recommendation with respect to the $58.4 million equity offering in the Spring of 1955 and that Toolco had agreed to take up its pro rata share of the offering in order to maintain its percentage of ownership, such a financing probably could have been done. It is our opinion, however, that such an expensive, premature and unnecessary financing would have been a bad business decisi We would not have recommended such a financing to TWA management or to the stockholders of TWA in the Spring of 1955. If such a recommendation had been made, it is our opinion that it would not have been accepted by TWA manage- ment, by its majority stockholder or by its other stockhold

(ii) If Toolco could not have been looked to for participation in the suggested equity offering, it is o

---

* See Purpose of Issue Section, DHR Exhibit: Trans World

opinion that it could not have been accomplished. We would not have participated in such an underwriting and it is our opinion that a syndicate could not have been formed to have underwritten such an offering. We have already discussed the difficulties of accomplishing such a large financing under any circumstances, and we believe the impact on the financial community of a declination by Toolco to subscribe to its share of the offering would have doomed the proposal at the outset. In short, had Toolco declined to participate, Mr. Morehouse's suggested 1955 equity financing in our opinion, could not have been accomplished.

(iii) It is difficult to comment upon the purely hypothetical question presented by the assumption that there was no Toolco and that TWA was a widely-held company with no controlling stockholder. Such was not the case. Moreover, in view of the assistance TWA received as the result of Toolco's financial backing in the post-war years, it is difficult to assume that TWA, absent Toolco, could have been in as good a financial condition as it was in historically, in the Spring of 1955. Even indulging in the assumption that it was, it is our opinion that no prudent and competent management with due regard for the interests of its stockholders would have accepted the suggested equity financing plan, and if it had, we do not

believe that such an offering could have been underwritten.

The size of the offering, the lack of any precedent, the speculative nature of airline shares, the cost to the stockholders and the lack of any definitive need for the funds all argue persuasively against the doability of such a proposal. The management of TWA would have been asking its stockholders to invest their funds without any hope of a reasonable return thereon for an indefinite period of time (at least 5 years) not to finance a definitive jet aircraft program, but simply to redeem newly refinanced bonds and make the company totally debt free.

The stupendous nature of this proposed undertaking becomes fully apparent when it is realized that only $47.2 million of common stock was sold to the public by all the domestic trunk airlines during the entire 1946 to 1956 period. (Exhibit C). Moreover, if the offering had not been held precisely in the Spring of 1955, the subsequent history of TWA's earnings would have made any later offering even more difficult to consummate. Earnings for the third quarter of 1955 were $4.2 million compared to $7.1 million for that quarter in 1954 and the fourth quarter earnings dropped to $100,000 from $1.3 million the preceding year. (Exhibit F).

The years 1956, 1957 and 1958 were all loss years for TWA. (DHR Exhibit: Financials-5). Commencing in June 1955 the stocks of the airline group declined counter to the general market. (DHR Exhibits: General 5 and 7). TWA shares declined from a high of 31-5/8 in June to a low of 22-3/4 in October 1955, and, of course, went much lower thereafter. (DHR Exhibit: Trans World 9). Even accepting Mr. Morehouse's fortuitous selection of late May or early June 1955 for the proposed equity financing, we do not believe it could have been done without the assistance of Toolco. The selection of a somewhat later date would have made the success of any such a proposed financing even more improbable.

3. The Balance of the Financing Plan

As noted earlier, Mr. Morehouse testified that his financing program depends upon the success of the proposed Spring 1955 equity financing (Tr. pp. 3981, 4313-14). Therefore, if the first step had been unsuccessful, the subsequent steps in the suggested financing plan fall of their own weight. We have expressed the firm conviction that the proposed 1955 equity financing was unsound and not doable. But even assuming that such an equity financing did take place, it is our opinion that on their merits, the further financings proposed by Mr. Morehouse could not have been accomplished by TWA.

(a) The October 1, 1955 $150-170 Million Debt Financing

In assessing the likelihood of success for Mr. Morehouse's projected $150-170 million flight equipment mortgage loan of October 1, 1955, we think it relevant to consider the following:

(i) By October 1, 1955 no jets had been ordered by any airlines;

(ii) By October 1, 1955 none of the airlines had arranged any financing (debt or equity) for the purchase of jet aircraft; (Exhibit A)*

(iii) The maximum $170 million mortgage commitment which Mr. Morehouse assumes TWA could have obtained substantially exceeds the long-term commitments obtained by any other airline in 1955** The large commitments obtained by United, Eastern and American later in the Fall of 1955 were the largest in the history of the airline industry. Indeed, a $150-170 million loan to TWA on October 1, 1955, would have been almost three times as large as any long-term commitment that had been made

---

* The debt financings referred to by Morehouse on page 32 of his Report (see also Financials-13) were arranged on the following dates: Pan American May 10, 1955; Northwest June 30, 1955; Eastern October 31, 1955; American, Novembe 1, 1955 and United December 21, 1955. However, the earlie Pan American and Northwest financings were for the purpos of acquiring the latest series of pistons ordered. (Exhibi

** American obtained $75 million; Eastern obtained $90 mill and United obtained $120 million of long-term debt. Financing done by other airlines during this period was for much smaller amounts. (Exhibit A).

to that date to any airline for any purpose, and would have exceeded the commitments to the other airlines by a minimum of $30-50 million. (Exhibit A).

(iv) Detailed projections with respect to the Boeing 707-331s and the Convair 880s could not have been prepared as of October 1, 1955. Lending institutions, such as life insurance companies did not make commitments of the size envisaged by Mr. Morehouse without making a comprehensive analysis of the planned use of the funds. Jet aircraft were an unknown and untested commodity in the Fall of 1955. Any insurance company asked to lend large sums of money for such a purchase during this period would have demanded detailed information as to the type and size of the fleet, cost, terms of payment, delivery dates, earning power, depreciation, planned usage, configuration and the like.

We are advised by counsel that we may assume, based upon the record in the case to date, that the intercontinental Boeing, the 707-320 series, was not ordered by any airline until December, 1955 and that detailed information on that aircraft such as described above was not available to the airlines until some time after October 1, 1955. We do not believe that funds could have been borrowed for the acquisition of this aircraft until detailed projections

containing information relating to cost, terms, delivery, earning power and the like could have been made available to prospective lenders. We note that such detailed projections, although hypothetical, were in fact included as a part of Mr. Morehouse's Report (Financials-8, 9 and 10) but that his projections were based upon information apparently not yet available to the industry. We also note the detailed projections which United in fact used in order to obtain its loan commitment in December 1955. (Defendants' Exhibit 197 in evidence.)

Moreover, Mr. Morehouse assumed that TWA's proposed borrowing on October 1, 1955 would have included a $25 million projected down payment for medium/long-range airplanes not yet selected. As to the last item, it is our opinion that a commitment of this size could not have been obtained as of October 1, 1955 to buy an unspecified number of unselected airplanes which had not yet been developed or identified.

(v) Although not disclosed by Mr. Morehouse's exhibits, TWA's earnings, as compared to 1954, began to fall in the second quarter of 1955 and dropped sharply in the third and fourth quarters. (Exhibit F).

In view of the above, and even assuming, contrary to our view, that the proposed 1955 equity financing

had been accomplished, it is our opinion that TWA would not have and could not have obtained a commitment for $150-170 million on October 1, 1955.

(b) The May 1959 $60 Million of Convertible Debentures

Notwithstanding our conviction that neither the equity nor the debt financing proposed by Mr. Morehouse for the year 1955 could have been accomplished, we will assume for the purpose of the following comments on Mr. Morehouse's 1959 proposals that both of his 1955 financings had been accomplished.

The convertible debenture financing of $60 million proposed by Mr. Morehouse for May 1959 (page 68) substantially exceeds any equity financing done by Pan American, American, Eastern or United during the 1955-1960 period. On October 21, 1958, Eastern sold $25 million of convertible subordinated notes; on June 18, 1959 American sold $40 million of convertible subordinated debentures; on July 29, 1959 Pan American sold $46.97 million of convertible subordinated debentures; on November 30, 1960, United sold $25 million of convertible subordinated debentures. Based on these facts and in light of the reconstructed earnings of TWA during the years 1956, 1957 and 1958 it seems questionable that the offering would have been doable.

We note that this proposed financing was deferred from 1956, although on page 38 of his report,

Mr. Morehouse acknowledged that a need for additional junior financing was apparent in 1956. Mr. Morehouse declined to suggest equity financing in 1956, but delayed such financing until he could take advantage of the more favorable market climate of 1959. Examination of the market price for airline stocks during the period indicates that again in May and June of 1959 the market was at its all-time high for the preceding four years and for that matter for the succeeding three and one-half years as well. (See DHR Exhibit: General 7). We find it difficult to believe that it would have been possible to have had two equity financings - one in 1955 and one in 1959 - and catch the market each time at or near its high over a thirteen-year period. One would have indeed been fortunate to have been able to do this.

(c) The May 1959 $90-110 Million Loan Commitment

With respect to the private placement of $90-110 million of 6% mortgage notes in May 1959, we doubt that an institutional investor would have been willing to enter into the commitment in light of the poor earnings and cash flow coverages and the high senior debt ratio of 60.7% shown for reconstructed TWA in Mr. Morehouse's schedule at page 70. According to the schedule, on a pro forma basis reconstructed TWA had earned an average over five years

(1954-1958) of only half of the interest that would have been payable had the total reconstructed senior debt of $280 million been outstanding. The 12 months ended March 31, 1959 were not much better than the five year average, as only 70% of the interest had been earned. None of these figures would seem to justify an institutional lender making an additional $90-110 million senior debt investment in reconstructed TWA.

Based upon our dealings with insurance companies in arranging financing for our clients, we know that all insurance companies, including the major lenders, are regulated in their investments by state laws, which prevent the lenders from acquiring obligations which are predominantly speculative in character.

We note that Mr. Morehouse speculated as to the quality of both his proposed October 1955 mortgage obligations and his $60 million May 1959 convertible subordinated debentures. In Mr. Morehouse's opinion the institutional investors would have viewed the October 1955 obligations as "not quite up to Baa quality" (page 31). As to the May, 1959 convertible subordinated debenture issue, he states that it "might have been rated no higher than B".* (page 68).

---

* Although DHR Exhibit: General 1 defines Baa and Ba ratings, no definition of a B rating is given. Moody's defines a B rating as follows: "Bonds which are rated B generally lack characteristics of the desirable investment. Assurance of interest and principal payments or of maintenance of other terms of the contract over any long period of time may be small."

However, he gives no clue as to a possible rating for the $90-110 million May 1959 mortgage notes. It is our opinion that the May 1959 mortgage notes would have been considered at best of B quality, and thus might well have presented to institutional lenders a question as to whether such an investment would have complied with applicable state laws.

We are aware of so-called "basket provisions" under which insurance companies technically are permitted by state statutes to make otherwise unqualified investments up to a very small percentage of admitted assets. However, in our experience insurance companies are reluctant to make loans directly under the "basket provisions", and when they do, it is only in special situations and in small dollar amounts, certainly not in the $100 million category.

We do not attempt to pass upon the legality of the loan proposed by Mr. Morehouse, but our experience in dealing with institutional lenders leads us to the conclusion that, as a practical matter, it would have been a most difficult, if not impossible task to persuade an institutional lender to enter into the loan commitment proposed by Mr. Morehouse for May of 1959.

D. The Feasibility of TWA Independently Financing the Projected Capital Requirements of $544.8 Million

The reconstructed capital requirements of TWA from October 1, 1955 through December 31, 1960, which appear in DHR Exhibit: Financials-31, were $544.8 million. These

requirements include the cost of the 63 jet planes originally ordered by Toolco for TWA, as well as the cost of the piston acquisitions TWA historically incurred. Assuming the reconstructed funds available from operations during the period (DHR Exhibit: Financials-30) TWA would have been faced with the task of raising in excess of $300 million of new money to carry out its hypothetical program.

It is our view that in the light of the diminishing reconstructed earnings in 1955 and the loss years of 1956, 1957 and 1958 (DHR Exhibit: Financials-29), TWA could not independently have raised $300 million on reasonable terms.

TWA historically financed its requirements during the 1955-1960 period only with the substantial assistance of Toolco. In 1957 TWA had an equity financing totalling $43.4 million, of which Toolco furnished over $35 million. (DHR Exhibit: Trans World-7). TWA incurred debts at the end of December 1960 of $165 million of senior debt consisting of $92.8 million to insurance companies and $72.2 million to banks, and $100 million in the form of interim subordinated notes purchased by Toolco, to be exchanged for subordinated debentures with detachable common stock warrants (which issue was to be guaranteed by Toolco). TWA also obtained a $50 million credit from Toolco on a subordinated basis for working capital purposes. (TWA 1960 Annual Report). The total of

these 1957 and 1960 financings (not including the $50 million working capital credit) was $308.4 million, of which Toolco supplied over $135 million.

These financings assisted TWA historically in acquiring 47 jet airplanes (15 Boeing 131s, 12 Boeing 331s and 20 Convair 880s) and various piston planes, all of which are included in the larger reconstructed acquisition program Mr. Morehouse attempts to finance. In light of the substantial contributions by Toolco which made TWA's historical acquisitions possible, we do not see how TWA could have independently financed the even greater capital requirements of the hypothetical program including 63 jet planes (15 Boeing 131s, 18 Boeing 331s and 30 Convair 880s).

In his conclusion, Mr. Morehouse states (p. 75) that DHR did not wish its report to be interpreted as meaning that the financial program recommended was the only program by which TWA might have successfully financed to meet the question posed. There are no other suggestions given, so we are left with the program suggested by Mr. Morehouse which has as its cornerstone the $58.4 million equity financing in the Spring of 1955. We have stated that we do not believe that such a financing was possible without Toolco's participation, and assuming that there was no Toolco we do not believe that any prudent and competent management without the benefit of hindsight would have

adopted such a program. If there were another financial program available without Toolco's help, we believe Mr. Morehouse would have recommended it and not a program so subject to criticism because of hindsight opportunism as the program he did recommend.

DX270, Exhibit A-10
(Report of Loeb, Rhoades & Co.)

consisted entirely of subordinated convertible debentures. The deductibility of interest for tax purposes accounts for this situation. It is only recently that the investment markets have been receptive to subordinated debt financing. While it has recently been a popular method of financing, we should point out that any debt security whether subordinated or not, is by its nature an obligation on which default entails consequences which do not ensue from a failure to pay preferred dividends.

b. The Market History of Airline Convertible Securities

American Airlines 3 1/2% convertible preferred stock was sold publicly in June, 1946, at $102 per share. The market for airline common stocks was then relatively high. The conversion price, based on the public offering price of the preferred stock rather than its $100 par value, amounted to $21.42 per common share. The preferred shares are convertible at any time prior to redemption. The redemption prices, and the applicable conversion prices per share of common stock have been as follows:

	Redemption Price Preferred	Equivalent Conversion Price Per Share Common
On or before June 1, 1951	$104	$21.84
Thereafter on or before June 1, 1956	103	21.63
After June 1, 1956	102	21.42

Source: Offering prospectus dated June 11, 1946.

Unless the common stock sells above the equivalent conversion price at the applicable redemption price, the company cannot force conversion through redemption.

The subsequent market range in price for both the preferred stock and the common stock has been as follows:

Year	Preferred Stock High	Preferred Stock Low	Common Stock High	Common Stock Low
1946//	102//	57 1/2	17 1/4	9
1947	80	50 3/4	11 3/8	7
1948	68	47	10	6 1/8
1949	70	51	10 3/8	6 3/4
1950	82	66	14	9 5/8
1951	93	78	17 1/8	13 1/8
1952	90	73	16 3/4	12 1/4
1953	84 1/2	70 3/4	15 3/8	11 3/8
1954	109	70 1/2	22 5/8	11 1/2
1955	139 1/2	102	29 1/8	20 1/2
1956	126	105 1/2	26 1/4	22
1957*	113	89	24 1/8	16 3/4

// From June 1.
// Approximate, the shares were not listed until November, 1946.
* Through September 10.

Source: Bank & Quotation Record

It is apparent that the preferred shares dropped precipitously in price after issuance. The market price was well below par value for about eight years. The market price of the common stock did not reach the conversion price, based on redemption, until December, 1954. Thereafter the market price of the common remained above such conversion prices, both at the highs and the lows, until January, 1957. For about eight months since that date the common shares have sold consistently below such conversion price.

None of American's 3 1/2% preferred stock had been converted prior to December 31, 1954. The amounts outstanding at various balance sheet dates on and subsequent to that date have been reported as follows:

Date	Par Value Outstanding
12-31-54	$40,000,000
6-30-55	n.a.
12-31-55	21,956,300
6-30-56	18,300,200
12-31-56	15,651,600
6-30-57	15,191,100

n.a. - not readily available.

When United Air Lines sold issues of convertible preferred stock in 1947 and again in 1952, its common stock was priced lower in relation to potentialities than the common stock of American Airlines at the time its convertible preferred stock was first offered. Both of the convertible issues of United have since been converted into common, the conversion in each instance having been forced through a call for redemption. There is no need to go into detail concerning the market action of these issues. However, we have made calculations, based on the closing market price for United common stock as of September 4, 1957, to determine how an investor, who bought 100 shares of each preferred issue at the issue price and converted his shares into common on the redemption dates, had fared through holding his investment. After giving effect to the 4% stock dividend in June, 1957, such an investor would now own 766 shares of common stock at a cost of $20,288. On the redemption date for the 1947 stock (March 18, 1952) he would have had a paper profit of about 20% on his investment in such stock, and on the redemption date of the 1952 stock (October 10, 1955) he would have had approximately a 15% profit on that portion of his investment. But on September 4, 1957, his total investment would show a loss of about $1,800.

AX-1783

As shown, during the week which immediately followed the Board's announcement of its decision denying the interim fare increase, the value of the Big Four common stocks dropped an average of 8.1% while the Dow-Jones Industrial Average declined only 1.7%. In the period from August 5 to October 25, the Big Four stocks dropped 27.1% while the Dow-Jones Industrial Average sold off by 13.1%. These declines are even more significant in that they came on top of the substantial decline already experienced from market prices at year-end 1956.

	United	American	Eastern	TWA	Dow-Jones Industrials
12/31/56	$42.75	$23.38	$49.75	$19.00	$499.47
8/5/57	29.00	19.25	38.75	14.00	500.78
% Change	-32.2%	-17.7%	-22.1%	-26.3%	+0.3%

In United's case, the decline in the market price of its equity has placed it at an obvious disadvantage in that its stock at October 25 was selling at a discount of more than 45% from its book value per share. Under these circumstances, United is effectively barred from equity financing unless existing stockholders have the value of their equity adversely affected to a serious degree.

It is apparent that the composite judgment of the market place strongly supports the view that there is a serious problem confronting the industry. The investor is indeed asking the question, "What is Wrong with the Airlines?".

United's Present and Future Financing Programs

Late in 1955 United completed a financing program designed to cover its commitments for the 30 DC-8 jet aircraft ordered late in that year, together with related ground equipment and facilities. The details of this program are covered in Exhibit U-510. As shown, the program consisted of an agreement to sell a maximum of $120,000,000 of Series D 4% Debentures to three insurance companies and an agreement providing for the borrowing of up to $30,000,000 from a group of 38 banks headed by The

All of this financing was privately arranged because United did not have a sufficiently high potential rating to go to a public offering. Prior to financing our program we explored the question of a rating with the rating agencies. It was made clear that we could not obtain a higher rating than "Ba", a rating unsatisfactory for public sale in the amounts required at satisfactory terms and conditions. The opportunity for public sale of debt by United is important, as Mr. McClintock will discuss in his testimony, but the stability of earnings of the past decade has not been sufficiently great to produce a rating which will permit such sale.

The 1955 financing program for United was handled entirely by arranging for issuance of debt. This was not a matter of choice, for the ability of United, as well as the industry, to sell equity has been limited. That further increase in equity is necessary and desirable is apparent, but it is equally apparent that it cannot be accomplished satisfactorily until the present period of depressed earnings is brought to an end.

Meanwhile, the ratio of debt in the capital structure of United will be higher than we would like to see it. Over the long term, a debt ratio of approximately 30% is a desirable goal. The Civil Aeronautics Board should permit the carriers earnings and a rate of return which will lessen the dependence on debt financing and the achievement of lower debt ratios.

The 1955 financing program did not provide for all of United's expansion needs in the 1956 - 1961 period. If we are to meet the demands of expanded air traffic volume and bring to the public the benefits of turbine powered aircraft in the intermediate haul market it is necessary that United acquire a fleet of jet aircraft designed to do that job, in addition to an expanded order for long-haul jet aircraft. Studies have been under way for many months relating to choice of aircraft type. Market projections indicate a need for a substantial number of such air-

Comparative Financial Status
TWA and EAL

(Based on Yardsticks of DHR at page 9 of Part II of TWA 5(a))

Summarized Balance Sheets
December 31, 1954

	TWA(1)	EAL(2)
	----(000 omitted)----	
Net Current Assets	$ 4,089	$ 37,740
Property, Plant, Flight Equipment, etc. - Net	84,414	59,350
Other Assets, Deferred Items, etc.	1,682	2,639
Net Current & Fixed Assets	$90,185	$ 99,729
Funded Debt	$18,513	$36,000
Deferred Credits, Reserves, etc.	4,465	4,482
Total Deductions	$22,978	$40,482
Book Net Worth	$67,207	$59,247

(1) TWA 5(a), Part II, Page 9.

(2) Eastern 1954 Annual Report.

DX270, Exhibit E, page 2
(Report of Loeb, Rhoades & Co.)

	TWA	EAL
Capital Structure - Percent		
Funded Debt	21.6%	37.8%
Equity	78.4%	62.2%
Total	100.0%	100.0%

			% of TWA
Revenue Airplane Miles Flown - 1954(3)	89,087	88,502(2)	99.4%
Available Seat Miles - 1954(4)	4,768	5,287(6)	111.0%
Overall Available Ton Miles Flown - 1954(3)	581,131(5)	682,493(6)	117.0%

On the basis of Revenue Airplane Miles Flown and Available Seat Miles, respectively, TWA was approximately the same size or 11% smaller than EAL. Applying the same yardsticks as DHR on page 9 of its report, TWA compared to EAL had an excess of $8 million to $15 million of proprietary capital. Based upon Overall Available Ton Miles Flown, TWA had an excess of $19 million when compared to EAL.

NATHAN S. SIMAT, being duly sworn, deposes and says:

I am President of Simat, Helliesen & Eichner, Inc., and the following report consisting of Volume I, Parts I through XI and Volume II, Parts A through G, was prepared under my direct supervision. I have read the report, know the contents thereof, and all statements therein contained are true as stated to the best of my knowledge, information and belief. I hereby adopt the report as my direct testimony in the proceedings before the Honorable Herbert Brownell, Special Master, entitled Trans World Airlines, Inc. v. Howard R. Hughes, et al., 61 Civil 2324, United States District Court for the Southern District of New York.

Domestic Revenue Yield Estimates	Part D
International Revenue Estimates	Part E
Direct Operating Expenses	Part F

I. QUALIFICATIONS

A. BACKGROUND OF SIMAT, HELLIESEN & EICHNER, INC.

The present organization was formed in February 1963 by Nathan S. Simat to engage in economic and transportation studies for government and private clients. The present officers are Nathan S. Simat, President, and Robert I. Helliesen and L. John Eichner, Vice Presidents. The current staff includes more than twenty full-time professional employees with qualifications and experience in the fields of statistical analysis, accounting and financial analysis, and transportation economics. Close working relationships are maintained with members of the faculties of nearby universities and with other research organizations to provide specialized skills and experience, as needed, to supplement and extend the capabilities of the full-time staff. Offices are maintained in Boston, New York, and Washington. A research office is also maintained in Calgary, Canada, by Simat, Helliesen & Associates, Ltd., an affiliated company. Computer facilities and services are maintained at the Boston office.

In the four years since its formation the firm has engaged in study projects for more than twenty government and commercial clients, including the U.S. Departments of Commerce and Defense, the Federal Aviation Agency, the Government of American Samoa, the Trust Territories of the Pacific, various local government bodies and individual air

carriers from every sector of the air transport industry (air taxi, local services, supplemental, domestic trunkline, and international air carriers). A brief description of the more important projects follows.

Projects for the U.S. Government

Development of airline route simulation model for estimating the costs, revenues, and rate of return on investment of operations with up to five different types of aircraft over major route segments of the Free World and use of the model to estimate the results of operations of various types of SST and subsonic jet aircraft.

Development and applications of methods of estimating the cost of developing, producing, and operating advanced types of aircraft, including the SST and jet aircraft of greatly enlarged capacity.

Analysis and development of methods of the costing of railroad operations, in order to provide management with improved cost information for investment decision-making, pricing of services, and control of operations.

Analysis of the economic feasibility of expanding

and modernizing Washington National Airport to permit operations with small, medium, and large jet aircraft.

Projects for Local Government Agencies

Analyses of the existing and future needs for commercial air services.

Analyses of the present and future adequacy of airport facilities and the needs for new and additional facilities.

Analyses to estimate the revenues and costs of specific air services under consideration.

Projects for Air Carriers

Analyses to determine the economic feasibility of air services in new markets.

Analyses to determine the profit and loss from existing services and the addition and deletion of flights.

Analyses to determine the effects of changing the prices charged for air passenger and cargo services.

Projects for Equipment Manufacturers

Analysis of peaking in the passenger demand for

transportation services and of the effect on the timing and severity of peaking of changes in the price and speed of transportation services and of changes in the national economy.

B. QUALIFICATIONS OF NATHAN S. SIMAT

Nathan S. Simat, who is 47 years of age, is President of Simat, Helliesen & Eichner, Inc. and operating manager of the Boston research office. He is a resident of Brookline, Massachusetts.

He was graduated from the College of the City of New York in 1940. In the years 1940-1943 and 1946-1948 he pursued graduate studies in finance, statistics, and transportation economics at New York University, George Washington University and American University.

From 1941 through 1956, with the exception of military service and a short period of employment by the Interstate Commerce Commission, he was employed by the Civil Aeronautics Board as a transportation economist. His positions at the Civil Aeronautics Board included Head Economist of the Analysis Division of the Bureau of Economic Regulation and Chief Economist and later Chief of the Certificates Section of the Routes Division of the Bureau of Air Operations.

As Head Economist of the Analysis Division, he prepared numerous operating and financial analyses for the use of the Board and its staff, dealing with traffic, revenue, and costs of air transport operations by certificated U.S. airlines. He prepared analyses of the economic feasibility of equipment purchase programs for which appli-

cations were made to the Reconstruction Finance Corporation for financing and for which the certification of the Civil Aeronautics Board was required as to the feasibility of the programs. He also prepared analyses and appeared as a staff witness in proceedings before the Civil Aeronautics Board involving the charges for commercial services of U.S. air carriers and presented evidence concerning the reasonableness of commercial rates under consideration. In both commercial rate and mail rate proceedings before the Board, he appeared as the staff expert on matters of rate of return. He authored, in connection with the latter role, the publications entitled "Comparative Costs of Air Carrier Capital," published by the Civil Aeronautics Board in 1947 and 1948. In addition, he undertook special studies at the request of the Board to review the adequacy of the liability rules of air carriers and their insurance coverage.

As Chief Economist and, subsequently, Chief of the Certificates Section of the Routes Division of the Board, he prepared and supervised the preparation of many studies dealing with the economic consequences of adding and deleting air services. These studies were prepared for and at the request of the Board and, in many instances, were presented in formal proceedings before the Board concerned with new airline operating authority and the adequacy

and necessity of existing operating authority. During the period from 1950 through 1956, Mr. Simat appeared as a witness in over 50 economic proceedings. He also was the representative of the Civil Aeronautics Board on the joint government-industry committee to plan the role of commercial air transportation operations in time of national emergencies and to establish the Civil Reserve Air Fleet.

In November 1956, Mr. Simat joined the staff of the Aeronautical Research Foundation, a non-profit organization governed jointly by members of the faculties of Harvard University and the Massachusetts Institute of Technology. As Project Director for the Foundation, he supervised and participated in the studies of the Foundation dealing with various transportation problems. The studies included:

A study for Mr. Edward P. Curtis, Special Assistant to the President for Aviation Facilities Planning, to project the volume of aviation activities in the U.S. through 1975 and the national requirements for aviation facilities.

A study for the U.S. Air Force to establish procedures for the systematic acquisition and retirement of military support aircraft (transports, training, and special purpose air vehicles)

based on economic considerations including realizable proceeds from the disposition of such aircraft taking into account the impact of the disposition program itself on the market value of used aircraft.

A study for the Association of American Railroads to estimate the avoidable costs of passenger train services, using statistical costing procedures.

A study for the New England Conference of State Aviation Officials of the need for local air services in the New England area.

A study for the Harvard Business School analyzing and projecting the financing requirements of major U.S. airlines in the period from 1957 through 1962.

As consultant to E. R. Quesada, the President's Special Assistant for Aviation, he participated in the report on "The Status and Economic Significance of the Airline Equipment Investment Program" (known as the "Cherington Report").

In 1958, Mr. Simat and other members of the Foundation staff purchased the assets of the Foundation and established United Research Incorporated. He became

Vice President and head of the Management Sciences Division of the newly formed company. In this role, he supervised and participated in the following studies, among others:

A study for Sabena Belgian World Airlines dealing with the choice and economic feasibility of a second terminal in the U.S.

A study for the Federal Aviation Agency establishing methodology for determining the economic value of improvements in the air traffic control system and aviation facilities, and the application of this methodology to estimating the economic value of an all-weather landing system.

Studies for North American Aviation to estimate the commercial market for supersonic aircraft and small subsonic jets.

A study for the U.S. Air Force on theatre logistic support, with special attention to dispersed site operations.

A study for the Association of Local Transport Airlines and the Air Transport Association of America to develop a formula basis for subsidizing

the operations of local transport airlines.

A study for the Federal Aviation Agency to develop a mathematical model for simulating the operation of the air traffic control system, with special focus on the estimation of disruptions to flight operations from limitations of system capacity.

A forecast of the civil demand for aviation gasoline and jet fuel for the Standard Oil Co. of New Jersey.

A study for the Federal Aviation Agency of the benefits and costs of a program to improve the air traffic control system.

A study for the U.S. Department of Commerce on federal regulation of the air transport industry.

A report on the equipment and financing program of Allegheny Airlines.

A study for Lockheed Aircraft International on the market for general aviation aircraft.

A study for British West Indies Airways on the economic feasibility of jet services.

A study for the Canadian Pacific Railroad to

develop a system of capital budgeting on a company-wide basis for the uniform consideration of alternative investment possibilities.

A study for the American Express Company on the extension of credit facilities to airline passengers.

A study for Canadair Ltd. on the economic and financial outlook for Seaboard World Airlines.

A study for the Federal Aviation Agency on the feasibility of a commercial supersonic transport program.

A study for American Airlines to determine the effectiveness of and procedures for identifying frequent air travelers.

A study for the Civil Aeronautics Board of the economic feasibility of U.S. air routes and services across the Antarctic.

In addition, Mr. Simat participated in a number of economic proceedings before the Civil Aeronautics Board on behalf of various communities and air carriers, including Bonanza Airlines, the City of Toledo, the City of Houston,

Allegheny Airlines, Grand Rapids, Portland (Oregon), Seaboard World Airlines, Eagle Airways, Riddle Airlines, Northeast Airlines, and the City of Spokane. He also directed several studies of the air cargo market for Pan American World Airways, Canadair Ltd., and North American Aviation.

In 1961 Mr. Simat resigned from United Research Inc. to become President of Systems Analysis and Research Corporation, a position he held until 1963. Systems Analysis and Research Corporation was a company formed by Mr. Simat and others to engage in transportation research. While with Systems Analysis he supervised and participated in the following major studies, among others:

A study or the need and procedures for subsidizing commercial air services in the Commonwealth of Puerto Rico.

A study for Aero Commander or the market for so-called "third-level" air services.

A study for Northwest Airlines of its required rate of return in domestic operations.

A study for Canadair Ltd. on methods for estimating the indirect costs of air carrier operations.

A review of the scheduling and management practices or Canadian Pacific Airlines and Quebecair, Inc.

A review of U.S. international civil aviation policies for the Bureau of the Budget and other U.S. agencies.

Various studies of the benefits or possible mergers among local service carriers.

Studies for the U.S. Department of Commerce on the demand for intercity passenger transportation and the economic feasibility of greatly expanded air services in the Washington-Boston megalopolitan corridor.

During this period Mr. Simat appeared as an expert witness for the State of Hawaii on the matter of rate of return in a proceeding before the Maritime Commission. He also appeared in various Civil Aeronautics Board proceedings on behalf of airlines and communities, including Northeast Airlines, Allegheny Airlines, Seaboard World Airlines, the Commonwealth of Puerto Rico, and the City of Houston.

In 1963 Mr. Simat founded the organization presently known as Simat, Helliesen & Eichner, Inc. In his capacity as President, he has supervised and participated in the following studies, among others:

A review of the air service requirement of the City of Calgary, Canada.

A study of passenger service pricing policies for Canadian Pacific Airlines.

The development of an airline route simulation model for estimating the costs, revenues, and

rate of return on investment for operations with up to five different types of aircraft over major route segments of the free World and use of the model to estimate the results of operations of various types of SST and subsonic jet aircraft for the U.S. Department of Commerce.

Development and applications of methods of estimating the costs of developing, producing, and operating advanced types of aircraft, including the SST and jet aircraft of greatly enlarged capacity, for the U.S. Department of Defense.

A study to analyze the economic feasibility of expanding and modernizing Washington National Airport to permit operations with small, medium, and large jets for the Federal Aviation Agency.

In addition to the foregoing, and various appearances before the Civil Aeronautics Board, Mr. Simat has engaged in management and economic consulting to Northeast Airlines and Sabena Belgian World Airlines and has advised the Governor of American Samoa and the Trust Territories of the Pacific on aviation matters.

C. QUALIFICATIONS OF ROBERT I. HELLIESEN

Robert I. Helliesen, who is 48 years of age, is a Vice President of Simat, Helliesen & Eichner, Inc., and operating manager of the New York office. He is a

resident of Haworth, New Jersey.

In 1941 Mr. Helliesen was graduated from Colgate University where he majored in economics. In 1947 he received a masters degree in transportation economics from the New York University Graduate School of Business Administration.

From 1943 to 1956, with the exception of a two-year period of employment by The Port of New York Authority, he was employed by American Airlines, Inc. in various economics and marketing capacities. His last position prior to leaving was that of Director of Schedule Planning and Business Research. In this capacity he reported to American's Senior Vice President of Finance and Planning and was responsibile for the economic and marketing aspects of American's planning for schedules, equipment, facilities, prices, and routes, and for direction of the corporation's forecasting and market research. From an equipment standpoint, Mr. Helliesen directed and participated in economic and marketing studies resulting in the acquisition by American of piston aircraft, the turboprop Electra, and the Boeing 707 jet aircraft. He also participated in efforts to acquire piston aircraft from other airlines.

From 1956 to 1958 Mr. Helliesen was with Aviation Advisory Services, a consulting organization, as a Senior Associate. In this capacity he participated in economic, marketing and financial studies for local service, domestic

trunk and international airlines, both foreign flag and Pan American. He did economic research and studies for the Air Transport Association of America in connection with the CAB's General Passenger Fare Investigation. One study for General Dynamics entailed a market analysis relative to the advisability of acceptance by the Convair Division of General Dynamics of a large number of DC-7 aircraft as trade-ins on Convair jet aircraft.

In the latter part of 1958, Mr. Helliesen formed the Aircraft Exchange to provide the free world air transport industry with a regular market report of bids and offers for the purchase, sale and lease of used transport aircraft. A tri-lingual market report was issued on a regular basis. Regular members included most or the free world's manufacturers of transport aircraft, and most or the world's major airlines. Other members subscribed to the market report largely for information as to the status or the used aircraft market. These included many government organizations, major banks, insurance companies and miscellaneous aviation organizations. During his operation of the Aircraft Exchange, Mr. Helliesen devoted much of his time to the appraisal of present and future values of used piston aircraft and to efforts to obtain financing for aircraft transactions. Early in 1962 Mr. Helliesen sold his interest in the Aircraft Exchange,

which still exists and continues to publish its market reports.

After participating in a study for the Civil Aeronautics Board on the "Cost of Air Cargo", in July 1962 he became Senior Director or Market Development for Trans World Airlines, Inc. In 1964 Mr. Helliesen returned to American Airlines as Director of Market Development.

In 1965 Mr. Helliesen joined the firm now known as Simat, Helliesen & Eichner, Inc. In this capacity he has supervised and participated in a number of studies for government and other organizations including the following:

Analysis of peaking in the passenger demand for intercity transportation services by time of day, day of week, and season of year, and the manner and degree to which this peaking can be alleviated.

Analysis of the economic feasibility of expanding and modernizing Washington National Airport to permit jet operations.

Development and sponsoring of Northeast Airline's economic case in connection with its application to provide nonstop service between major cities in the Northeast portion of the United States and points in the Bahamas.

Development and sponsoring of Airlift International's economic case in connection with an application to provide all-cargo service between points in the United States and points in the Pacific.

D. QUALIFICATIONS OF L. JOHN EICHNER

L. John Eichner, who is 46 years of age, is a Vice President of Simat, Helliesen & Eichner, Inc. He is a resident of Greens Farms, Connecticut.

In 1942 Mr. Eichner was graduated from the Johns Hopkins University with a degree in economics.

From 1942 to 1945 he served in the U.S. Air Force as Squadron Executive Officer, attaining the rank of Major. At present, he is a Lieutenant Colonel in the U.S. Air Force Reserve with a primary specialty in administration and a secondary specialty in transportation.

In late 1945 he joined Capital Airlines as a District Cargo Manager at the beginning of its air cargo program development. He was active in the developing, marketing, and servicing of air freight during the years immediately following World War II.

He next became Assistant General Cargo Sales Manager for Capital, in which capacity he was responsible for the air mail, air express, freighter scheduling, cargo sales, service programs and the air freight programs of the airline. During this period he also served as Chairman of the Air Transport Association's Air Mail Committee and as the air postal transport expert for the Senate Postal Advisory Council. He was active in the joint program or the airlines and the U.S. Post Office Department in the development of the first experimental programs to carry regular first class mail by air on the domestic trunks and local service airlines.

In 1953 Mr. Eichner left Capital and became Vice President, Traffic & Sales, for Trans-Texas Airways, a position which he held until he left Trans-Texas in 1961. He was responsible for all marketing activities, including both passenger and cargo sales and services, for all scheduling or flight equipment, for tariffs and pricing, and for all community and public relations activities of the airline. He was active in the development of new routes for the airline and appeared in numerous CAB hearings as a witness testifying as to passenger traffic forecasts, airline schedules, comparative profitability or existing and alternate airline routes, as well as appearing in CAB and ICC hearings involving matters such as military fare policies.

During this period he served on the Board of Directors of Air Cargo, Inc., an airline industry corporation, as the representative of 13 local service airlines. He also represented the local service industry in the negotiation of new Air Express contracts for the entire domestic airline industry. He was also chairman of the Air Express Committee, an organization established jointly by the air transport industry and the Railway Express Agency to administer Air Express contracts. For eight years he was a member of the Air Transport Association's Air Traffic Conference, which is responsible for the inter-airline arrangements for all passenger and cargo service in the United States, including Alaska and Hawaii.

From 1961 until 1966 Mr. Eichner was Assistant Vice President of Corporate Planning for American Airlines, Inc. In this position he developed and presented American Airlines' initial five-year plan. This was the first known program in the airline industry to integrate the planning of scheduling, passenger and cargo marketing, finance, economic regulation, personnel, maintenance, flight operations, engineering, ground facilities, and economic research. This plan was used by American Airlines in determining existing and future aircraft needs by types of aircraft.

AX-1812

"DX271A, page I-21
(S.H.E. Report (Revised) - Volume One)"

New methods or measuring, allocating, and forecasting direct and indirect costs were developed by a research team under Mr. Eichner's direction, and new techniques for projecting operating results with various aircraft types were developed. Studies were prepared for American's management covering a wide range or areas, including market research, new routes, possible airline mergers, pricing policies, airline scheduling strategies, and projections of competing airline schedules and equipment purchases.

He developed new methods of forecasting capacity and relating it to demand and devised new profitability reports by flight, by segment, and for individual aircraft on a weekly basis, taking advantage of new computer technology.

He prepared special studies and forecasts of revenues, expenses and ground facilities for future equipment types, such as B-747's, "stretched" DC-8's, "stretched" B-727's, B-737's, DC-10's, CL-1011's and various SST's. Periodic reports were also prepared on helicopter and V/STOL development and prospective uses.

Since Mr. Eichner joined Simat, Helliesen & Eichner in late 1966, he has been responsible for the preparation of airline studies and exhibits in several cases now being considered by the Civil Aeronautics Board.

II. JET EQUIPMENT PREMISES

Donovan Leisure Newton & Irvine (DLNI) has submitted to us for our review TWA Exhibit 4C, entitled "Report on Financial Results from Operations for Trans World Airlines, Inc., 1959-1963," prepared by Coverdale and Colpitts (C&C) and testified to by Mr. Wemple of that firm, and has asked us to give our estimates of the changes in TWA's operating revenues and expenses which would have occurred in the years 1959-1963 if TWA had had the additional number and types of jet aircraft available for commercial service assumed by Mr. Wemple. DLNI has also asked us to estimate the added expense which would have been incurred by TWA after 1963 in operating five B-331 aircraft instead of the five B-331B aircraft which it did operate and still operates under lease, computing such added expense for the remaining term of the B-331B leases. DLNI has further asked us to give our opinion as to the costs of capital which would have been incurred by TWA if it had owned, instead of leased, certain B-131 and B-331 aircraft, in 1959 and 1960, and to compare such capital costs with the actual costs of leasing.

With reference to the first request, DLNI has specifically instructed us to assume, as Mr. Wemple did, that TWA received the following jet aircraft in

addition to, or at an earlier date than, the jet aircraft which it in fact received in 1959-1961:

(a) Six additional B-331's on the dates shown in C&C Report,1/ page 10.

(b) Fifteen B-131's and eighteen B-331's on the earlier dates shown in C&C Report, page 40.

(c) Twenty CV-880's on the earlier dates shown in C&C Report, page 52.

(d) Ten additional CV-880's on the dates shown in C&C Report, page 65.

DLNI has also instructed us to assume, as Mr. Wemple did, that TWA would not have acquired the five B-331B's leased in 1962 and 1963 or the six CV-880's purchased in 1963 if it had acquired six additional B-331's and ten additional CV-880's.

DLNI has further instructed us to assume, as Mr. Wemple did, that TWA, even though it acquired six additional B-331's and ten additional CV-880's, would nevertheless have acquired the four B-720B's leased during 1961 and 1962 and purchased the eighteen B-131B's received in 1962.

The foregoing assumptions, which set forth a hypothetical jet fleet operated by TWA in 1959-1963, constitute

---

1/ References hereinafter to "C&C Report" are to TWA 4C-1 unless otherwise noted.

the basic equipment premises for our Report. DLNI has not given us any assumptions as to the piston fleet operated by TWA during this period but has instructed us to make such adjustments in TWA's actual piston operations as, in our opinion, would have accompanied the hypothesized jet operations.

In view of the exigencies of time and in order to simplify our Report, DLNI has requested us to follow certain initial procedures used by Mr. Wemple, even though they may be arbitrary or erroneous in our opinion. In compliance with this request, after consultation with DLNI, we have accepted for purposes of this Report Mr. Wemple's tabulations, as amended during cross-examination, of actual availability of jet aircraft for commercial service (TWA Ex. 4C-4, Exhibit B) and of revised availability of jet aircraft for commercial service on the basis of receipt of a jet fleet as assumed above (TWA Ex. 4C-4, Exhibit C), although we do not agree in every instance with Mr. Wemple's computation.1/

1/ For example, in calculating the actual availability of aircraft (as reflected in TWA Ex. 4C-4, Ex. B), TWA excluded certain aircraft which had been allocated to "Central Training School" (See DX-222). In computing the constructive aircraft availability (TWA Ex. 4C-4, Ex. C), Mr. Wemple made no allowance for a similar exclusion of aircraft used for training. This results in a systematic overstatement of additional aircraft availability. We also do not agree with the start-of-service dates estimated for earlier delivery of B-131's and B-331's as shown in C&C Report, page 41, or with Mr. Wemple's computation or time to be excluded because of strikes.

DLNI has instructed us to use, for purposes of our Report, Mr. Wemple's allocations or additional availability of B-331's between TWA's Domestic and International Divisions, as set forth in the tables in the C&C Report, page 13, for the assumed six additional B-331's and in the table in the C&C Report, page 42, for the assumed earlier delivery or eighteen B-331's, again as amended during cross-examination. DLNI has further instructed us to assume, as Mr. Wemple did, that all additional available B-131 and CV-880 aircraft would be allocated exclusively to TWA domestic commercial services and none to training and other uses.

The foregoing assumptions and allocations provide the premises used in our Report for the assumed additional availability or jet aircraft in TWA's Domestic and International Divisions, as set forth below.

"DX271A, page II-5
(S.H.E. Report (Revised) - Volume One)"

Table II-A

Additional Aircraft Available for Commercial Service

Year	C&C Report,1/ Chapter II			C&C Report,2/ Chapter III				C&C Report,3/ Chapter IV	C&C Report,4/ Chapter V
	B-331			B-131	B-331			CV-880	CV-880
	Dom.	Int'l	Sys.	Dom.	Dom.	Int'l	Sys.	Dom.	Dom.
	(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)	(10)
1959	-	0.2	0.2	1.2	0.6	0.9	1.5	-	--
1960	1.4	3.6	5.0	-	0.7	0.6	1.3	10.3	5.1
1961	2.2	3.7	5.9	-	-	-	-	5.3	9.9
1962	1.0	4.8	5.8	-	-	-	-	-	10.0
1963	0.5	0.9	1.4	-	-	-	-	-	7.9

1/ p. 13.

2/ pp. 41-42, as amended by TWA Ex. 43(a).

3/ p. 53. For 1961, the actual number of CV-880's available was amended by Mr. Wemple from 14.6 aircraft to 14.5 aircraft (TWA Ex. 4C-4-i). This, when subtracted from 19.8 aircraft assumed available in Chapter IV, produces an additional availability of 5.3 aircraft.

4/ p. 66.

DLNI has instructed us to follow Mr. Wemple's procedure for estimating the additional jet aircraft miles which would have been operated by TWA if it had had the additional jet availability set forth in Table II-A. Mr. Wemple's estimates were obtained by applying the experienced annual utilization for each type of jet, in a particular year and division, to the assumed additional availability of that type of jet in the same year and division. Application of this procedure to the assumed additional jet availability shown in Table II-A gives

the assumed additional jet plane miles set forth in Table II-B (Domestic Division) and Table II-C (International Division).[1]

Table II-B

Aircraft Type	TWA Domestic Division Additional Jet Plane Miles (millions) 1959	1960	1961	1962	1963	C&C Report
(1)	(2)	(3)	(4)	(5)	(6)	(7)
B-331	-	2.0	3.3	1.4	0.7	Chapt. II, p. 28

B-331	1.6[1]	-	-	-	-	Chapt. III, p. 43
CV-880	-	11.7[2]	6.0[3]	-	-	Chapt. IV, p. 54
CV-880	-	5.8	11.3[4]	11.6	9.4	Chapt. V, p. 67

1/ As amended by TWA Ex. 43 (a).

2/ As amended by TWA Ex. 42 (a).

3/ Corrected: 5.3 additional CV-880 aircraft (see Table II-A) times $\frac{16.5}{14.5}$ = 6.0 million additional plane miles

4/ As amended by TWA Ex. 42(a).

Table II-C

Aircraft Type	TWA International Division Additional Jet Plane Miles (millions) 1959	1960	1961	1962	1963	C&C Report
(1)	(2)	(3)	(4)	(5)	(6)	(7)
B-331	0.1	6.3	6.6	8.4	1.5	Chapt. II. p. 15
B-331	1.6	1.1	-	-	-	Chapt. III. p. 46

1/ We do not agree, in every instance, with the way in which Mr. Wemple has applied his procedure. For example, in

[Continued on p. 7]

Tables II-B and II-C provide the additional jet aircraft miles on which the remainder of our Report is premised. We do not, however, regard them as necessarily setting forth a realistic estimate or the additional jet operations that would have been undertaken by TWA with the assumed fleet. In our opinion, as explained in the following Part III of our Report, the only reliable way to estimate the probable allocation and utilization of assumed additional equipment is through the assignment of such equipment to specific services, based upon a detailed study or existing services.

1/ [Cont'd from p. 6]

computing the additional aircraft miles resulting in 1963 from the ownership of 6 additional B-331's, Mr. Wemple used a "plane miles per aircraft" ratio based upon a combination of B-331 and B-331B experience. Since the B-331B had a higher "plane miles per aircraft" ratio than the B-331, the inclusion of B-331B aircraft results in an overstatement of aircraft miles as follows: Mr. Wemple's estimate or 1963 added international airplane miles was 1.5 million (0.9 aircraft times 1.72 million average plane miles per B-331/331B aircraft). When the aircraft types are separated, the following results:

Equipment	Average Airplane Miles per Aircraft (Million) (Calculated from Ex. C&C-4(39) and TWA 4C-4, Ex.B)	Change In Miles (Million)
(1)	(2)	(3)
5.2 B-331's added	1.695	+8.8
4.3 B-331B's deleted	1.758	-7.6
		1.2 Net Add'l. Aircraft Miles

"DX271A, page II-8
(S.H.E. Report (Revised) - Volume One)"

In addition to the procedures noted above, we have from time to time used, for the purposes of our Report, certain other assumptions of Mr. Wemple which we do not necessarily endorse. Such assumptions are noted where used.

III INTRODUCTION AND CRITIQUE

Estimation of the changes in TWA's operating revenues and expenses on the basis or the jet equipment premises in Part II requires a consideration both of the added revenues and costs that would have accompanied additional jet operations and of the decreased revenues and costs that would have resulted from eliminated piston operations. Mr. Wemple has estimated that TWA would have experienced an increase in operating profits after jet depreciation adjustments for the years 1959 through 1963 in the amount of $64 million. He did not disclose what portion of this amount was attributable to increased jet operations and what portion was attributable to decreased piston operations. Our analysis of the C&C Report shows that this $64 million breaks down as follows:

	(millions)
Operating Profit for Added and Earlier Jets, Before Depreciation	$ 87.8
Less: Jet Depreciation	-46.9
	40.9
Plus: Operating Loss Eliminated by Decreased Piston Operations 1/	+10.4
	51.3
Plus: Operating Profit from Ownership of Boeing Jets versus Leasing	+12.7
	$ 64.0

1/ The C&C Report does not eliminate any piston aircraft depreciation resulting from decreased piston operations. However, the Price Waterhouse Report, TWA Exhibit 7B, does estimate a reduction in piston aircraft depreciation expense.

In our opinion, based upon our estimating procedures described hereinafter, Mr. Wemple's estimates are wholly unreasonable and result in substantial error both as to the benefits attributed to added jet operations and those attributed to decreased piston operations.

Focus of Our Report

It is our opinion that realistic estimation of the changes in net operating profit that would result from substantial additions to available jet capacity requires an articulated operating plan in which specific consideration is given to how the added jet capacity would be integrated with existing operations, to what types of services would be added, to what existing services would be eliminated in their entirety, and to what shifts in aircraft usage would occur as added jet aircraft displace other available aircraft from their existing usage to displace, in turn, other aircraft in a chain reaction.

The scheduling and integration of new aircraft capacity is one of the most complex functions performed in the operation of an airline. It cannot be dealt with in generalities. In our view, an extensive bank of background information is needed to make appropriately informed judgments concerning the most probable and suitable use of additional aircraft on a route system as large and heterogeneous as that of TWA and the resulting effect on net operating profit.

It is necessary, for instance, to have information on past traffic behavior from which it can be determined whether and to what extent the volume of traffic would be affected by changes in the quantity and quality of air services. It is necessary to have information on historical flight performances as a guide to the estimation of the performance of new and changed air services. It is necessary to have information on cost behavior in order to arrive at reliable estimates of changes in operating expenses. And, it is necessary to have sufficient information on the structure of fares and charges and the actual revenues yielded by the established tariffs in order to satisfactorily estimate the revenue changes associated with changes in traffic.

These data were not available to us. As a result, we have not attempted the development of the comprehensive and detailed operating plan which we believe is needed for the most accurate and reliable estimation of revenues and expenses.

Instead, we have limited the focus of this statement to certain of the more significant errors of fact and judgment in the development of Mr. Wemple's estimates and to the overstatements and understatements in the estimates which flow from these errors. Even on the basis of this limited focus, we are convinced that it was not possible for TWA to have used additional jet aircraft profitably and to have realized the alleged benefits from the assumed reductions

of piston aircraft operations and fleet. We believe that this conclusion would only be reinforced by analysis of the detailed data that we lack.

Fundamental Errors in Mr. Wemple's Methodology

Mr. Wemple's estimates of the net changes in operating revenues and expenses rest primarily on a structure of arbitrary assumptions and generalizations that have no factual support and do not afford an accurate foundation for estimation.

1. Equipment usage. It is a fundamental assumption of Mr. Wemple's estimates that an added jet aircraft of a particular type would be used exactly as the average of all aircraft of the same or similar types. There is no factual support for this assumption. The fact is that added aircraft are not used as productively or as economically as available aircraft of the same or similar types. By the same token, piston services displaced by the spread of jet operations were not average piston aircraft services, but were services affording better-than-average use of piston aircraft with respect to productivity and operating economics.

2. Load factors. It is a fundamental assumption of Mr. Wemple in estimating domestic operations that added jet aircraft and displaced piston aircraft would be operated at the same average load factors (percent of available space which is occupied) as all flights operated with aircraft of the same or similar types. This assumption, too, has no

support. Experience shows that added jet operations would be operated at load factors well below the average. Displaced piston aircraft operations would be drawn from the most effective of the piston aircraft services, rather than services of average effectiveness.

3. Passenger mile yields. Mr. Wemple's domestic passenger revenue estimation assumes that passenger traffic added by added jet services would yield revenues per passenger mile equal to the average experienced yield per passenger mile for the year in which added. Here again is an unsupported assumption. Actually, the yields from added jet passenger traffic would be below average revenue yields per passenger mile from TWA's domestic passengers. Similarly, the revenue yields applicable to traffic moving on displaced piston aircraft services would not necessarily be at the average revenue yield for TWA's Domestic Division.

4. Costs. Mr. Wemple's estimates of cost changes are predicated on faulty assumptions as to cost behavior. For example, he assumed that aircraft operating costs would be increased or decreased proportionately with changes in the volume of aircraft miles operated with each type of aircraft. This does not accord with generally held concepts of aircraft operating cost behavior, unless it is further assumed that the average distance between aircraft stops is the same for added and displaced flights as it is for the average flight, an assumption which is contrary to TWA's experience. In other

cost categories, such as aircraft and traffic servicing, inappropriate factors are used by him for estimating cost changes, resulting in erroneous estimates of added and eliminated expenses.

Mr. Wemple's Failure to Test His Assumptions

Mr. Wemple's failure to test adequately his generalizations and assumptions is, in our opinion, a serious weakness. There was available to him in publicly reported information for the airline industry, as well as in information for TWA's own operations which is even more comprehensive than the data available for other airlines, a factual basis for testing whether his major generalizations and assumptions are supported by the actual experience of TWA and the airline industry. Little or no use was made of the facts available.

The Form 41 Reports of U.S. airlines to the CAB are a prime source of financial, operating, and physical data concerning airline resources and their uses. From these data it is possible to determine whether airlines were using jet and piston aircraft equipment in the same manner and whether the usage patterns changed as jet services were added from one time period to another. It is also possible, by applying available analytical methods, to identify the factors with which changes in the uses of jet and piston aircraft are associated. From comparisons of the changes in each airline's use of aircraft from one period to another,

it is possible to determine whether the number and proportion of aircraft of each type added and eliminated have a bearing on the average usage.

There were available to Mr. Wemple from TWA's source records, not publicly reported, sufficient data to make comparisons and analyses for TWA with respect to the uses of added and deleted aircraft. From aircraft routing and schedule information, it is possible to ascertain the extent of differences among individual aircraft of each type in the miles or use achieved daily and in the average stage lengths operated because the limited opportunities for use of aircraft preclude equal productivity. It is further possible to ascertain from these internal records, by examining the differences from one period to another, the extent to which the number and proportions of aircraft available of each type affected usage. Specifically, a short run increase in the number and proportions of jet aircraft decreases marginal productivity. Mr. Wemple, in failing to analyze TWA's scheduling experience, does not adequately reflect the decreased marginal productivity of added jet aircraft in his estimates.

Mr. Wemple's assumption that additions and deletions of aircraft would have been at average load factors is unsupported and unsupportable. The worksheets, exhibits and testimony made available to us disclosed no analyses by Mr. Wemple of the load factor experience of other airlines, during

the years when jet aircraft were integrated into domestic airline fleets, to determine whether the assumption is borne out by industry experience. Nor do we find analysis of the year-to-year changes in load factors for TWA operations and variations in load factors among the individual flights of TWA to determine whether short-run additions and deletions of aircraft services were made in fact without a change in the average experienced load factors. Our own analysis shows that there were substantial differences between average load factors and the load factors at which flights were added and deleted.

The estimates of operating cost changes made by Mr. Temple are premised on unsupportable generalizations and assumptions. Arbitrary judgments were made as to the proportions of expenses that would not be increased or decreased by changes in jet and piston aircraft operations, and as to the appropriate factors for estimating cost changes. These judgments were not supported by the experience of TWA and other airlines.

It is not necessary or sufficient to rely on arbitrary judgments in determining which items and proportions of operating costs are fixed and which are variable. There are commonly used methods for making this determination by means of analyses of experienced costs and cost changes. These methods enable the cost estimator to test initial judgments concerning the degree of sensitivity of costs to changes in the scale of

operations. Equally important, these methods enable the cost estimator to test assumptions with respect to the factors that are effective and valid in estimating costs. If Mr. Wemple had used these methods - testing his assumptions in the light of experienced costs of TWA and other airlines - errors in the selection of costing units and in the estimation of unit costs applicable to the changes in operations flowing from the availability or added jet aircraft would have been avoided.

The failure of Mr. Wemple to verify the validity of his costing assumptions is particularly significant because the methods of costing used by him differ in important respects from methods more usually accepted and applied by TWA and others in estimating airline operating expenses. For instance, aircraft and equipment manufacturers use substantially different methods or estimating the comparative aircrart operating costs or new and added aircraft. Similarly, costing methods used by the staff of the CAB and airlines in proceedings before the CAB dealing with the economic effects of changes in operations are substantially different from those applied by Mr. Wemple. In addition, costing methods used by airlines - including TWA - for internal planning and control purposes differ from his costing methods. While mere differences in costing methods, of course, do not signify that Mr. Wemple's methods are "wrong" and that other

methods are "right," the significant departures from more commonly accepted and used methods called for the testing and verification of the validity of the differences, which are not provided by Mr. Wemple. Our own tests show that the departures by him from more generally used methods of costing are not justified.

Mr. Wemple's Failure to Develop Articulated Plan

It was not necessary for Mr. Wemple to rely so heavily on unsupportable generalizations and assumptions. Mr. Wemple had both the time and data to develop a detailed and realistic operating plan. Available to him were the records of TWA providing information on the use and performance of each available aircraft, the on-line origin and destination of each TWA passenger and the TWA flight routings used by each passenger. Further available to him were TWA cost records, providing fuller details regarding TWA's cost experience than are publicly available. He had access to records and analyses of ticket sales and passenger revenues needed to establish more precisely the differences in revenue yields for operations in the individual markets served by TWA.[1/]

1/ We note, in this connection, that TWA recently was able to develop from its records the information supplied to the CAB with respect to passenger fares and experienced passenger yields between pairs of cities accounting for 75% of TWA's domestic air passenger traffic, both in terms of passengers and passenger miles. This information was requested by the CAB for a study of the domestic air fare structure. ("Analysis of Domestic Air Fare Structure in Effect during September 1966.")

The use of these resources would have enabled Mr. Wemple to develop an operating plan realistically integrating the use of added jet aircraft into existing schedule patterns and realistically reflecting the displacements in piston aircraft operations. Guided by information regarding the actual financial performance of scheduled flights, he would have been able to assign added jet aircraft and select the displacements of piston aircraft on an optimum and practical basis.

The use of the resources available to Mr. Wemple would have further provided the costing tools needed for accurate estimation of the specific changes in physical operations that would have occurred under the operating plan. It would have been possible for him to reflect in the cost estimates, for example, the applicable landing fees at airports where changes in operations would be contemplated. It would also have been possible for him to reflect more accurately in the cost estimates the costs of operating aircraft over the stage lengths of flights added and deleted. He thereby could have developed cost estimating relationships consistent with experienced patterns and trends in TWA's actual costs of operation.

Finally, Mr. Wemple would have avoided the risk of significant errors in the revenue estimates by using data for

experienced revenue yields available for individual markets and operations with different types of aircraft. It is inherent in the domestic fare structure that fares per mile and revenue yields per mile for transportation services decrease as the distance of travel increases. Operations conducted at longer flight stage lengths, in general, produce lower revenue yields per mile than operations on shorter stage lengths. Mr. Wemple, in estimating the net change in passenger revenues in TWA's domestic services, has assumed that the average experienced revenue yield per mile for the Domestic Division of TWA would be applicable to added and deleted operations, without reflecting differences in revenue yields applicable to added jet operations in longer than average stage lengths and deleted piston aircraft operations in shorter than average stage lengths. The most accurate method of estimating revenues is to apply the revenue yields for individual city pairs and aircraft types to the estimates of changes in traffic for the city pairs. Accuracy is somewhat impaired by the use of formulas that rely on an overall average and that do not take into account the differences in revenue yields applicable to operations over different flight segments with individual types of aircraft.1/ The

---

1/ The CAB domestic air fare structure study, previously referenced, notes the following:

(Fn. cont. on p. III-13)

least accurate of the available revenue estimating procedures is the use of a broad average revenue yield without regard to the degree of comparability between the operations from which the average revenue yield is determined and the operations to which the average revenue yield is applied. Mr. Wemple used this method.

An additional factor, which could have been introduced by Mr. Wemple as a result of access to the primary source records of TWA, is the adjustment of his estimates to take account of the seasonal peaking and ebbing in both domestic and international operations. It is assumed by him that annual averages for load factors, unit operating costs, and revenue yields can be applied to added and deleted operations without recognizing that different load factors, unit costs, and revenue yields apply in estimates relating to changes in operations in the winter as opposed to the summer season. The error arising out of this assumption is most significant for changes in aircraft operations occurring only in the fall and winter

---

(Fn. contd. from p. III-12)

"Inspection of fare data. . . reveals that fares generally vary with distance--the longer the distance, the higher the fare. However, the relationships of fares at various distances are not perfectly consistent in that the fares do not vary in exact proportion to distance. The use of the standard formula is merely a convenient method of expressing the average relationship between fare and distance. Fares derived from these formulas will in some instances closely approximate the actual published fares and will in other instances be substantially different since the relationship of the actual fare to distance varies from market to market."

months of a particular year, i.e., where the assumed delivery schedule calls for the delivery of jet aircraft in late summer or early fall. Since TWA operations are at seasonal ebb during the fall and winter months, load factors are at levels below the average for the year and unit operating costs are somewhat higher than the average annual levels. Revenue yields may be higher or lower than annual averages, depending on differences in the proportions of business and personal air travelers, on the availability of off-season fares, and on differences in the proportions of family groups, students, and other travel which is characterized by marked seasonality. Our analysis shows that failure to make specific allowance for seasonality biases the estimates of changes in net operating profit in the direction of overestimating the profits. We believe that it would have been feasible for Mr. Wemple to avoid this bias by taking advantage of seasonal information available from TWA records.

Our approach

Because we have not had access to the information that we believe is needed for the most accurate estimation of net operating profit changes, we have confined our analyses to those matters which present the greatest sources of errors in Mr. Wemple's estimates.

Wherever it appeared, on the basis of our initial examination, that the differences resulting from the substitution of more reasonable premises, or even from the correction of arithmetic, would not change the final estimates substantially, we have adopted Mr. Wemple's premises. We have made only the most significant corrections of the estimates.

Where Mr. Wemple has used assumptions, we have based our estimates on the experience of the airline industry and of TWA available to us. Where his approach is simplistic, we have found it necessary to use somewhat more complex methods of estimating revenue and expense changes in order to reflect more realistically the experienced behavior of revenues and costs in the airline industry.

Even on the basis of our limited departures from Mr. Wemple's assumptions and procedures, and our limited adjustments of Mr. Wemple's estimates, it is clear that added jet aircraft would not have produced added profits from operations. Our conclusions are amply supported by industry experience during this period of re-equipment with jets.

Our Conclusion

Our estimates of the increases (decreases) in TWA operating profits for added jet operations and deleted piston operations by Chapter in the C&C Report, the details of which appear hereinafter, are:

(Amounts in Millions of Dollars)

	Chapter II	Chapter III	Chapter IV	Chapter V	Total
Added Jet Operations	(37.47)	0.15	(21.63)	(26.55)	(85.50)
Deleted Piston Operations	16.40	(0.75)	4.03	7.00	26.68
Net Change in Operations	(21.07)	(0.60)	(17.60)	(19.55)	(58.82)

XI. COMPARATIVE PROFIT STUDY

DLNI has also requested us to review the Comparative Profit Study, TWA 4B, (hereinafter referred to as Comparative Profit Study) which was prepared by C & C and was testified to by Mr. Wemple. DLNI has asked us to give our opinion, based on such review, as to whether the Comparative Profit Study is a standard, recognized or reasonable method of determining the effect on the operating profits of TWA for the years 1959-1963 of its not receiving in the years 1959 and 1960 a jet aircraft fleet consisting of 18 B331 aircraft, 15 B131 aircraft and 30 CV 880 aircraft rather than the jet fleet it did receive in the years 1959-1961.

1. General Conclusion

There are standard and accepted methods used in the airline industry for measuring the effect upon an airline's operating profits of changes in operations resulting from the addition and disposition of equipment. The Comparative Profit Study is not such a method. As a quantification of what effect the availability of more or less jet equipment would have had on TWA's operating profits during the 1959-1963 period it is meaningless. Comparisons of the character presented in the Comparative Profit Study might at best be considered a very general and most imprecise index of the overall efficiency of the managements of the compared airlines,

but only after appropriate adjustments had been made to insure their comparability. Even for this limited purpose the Comparative Profit Study has no value, since, in its preparation, Mr. Wemple made no attempt to make the statistics he used comparable or to take into account all other factors affecting either the profits or the profit potentials of the airlines he compared.

2. Accepted Methods of Estimation

The most reasonable, realistic and accurate method of measuring the effect that would have been produced on TWA's operating profits as the result of the availability of additional jet equipment would be the development of an articulated operating plan for TWA that would take into account the specific markets in which such additional equipment would be used and the effect of such usage on existing operations. Although he had access to TWA's internal records, Mr. Wemple did not develop such a detailed and comprehensive operating plan, even though analyses of that character are generally required and supplied in route proceedings before the CAB.

Another and more general method of estimation that could be used is illustrated by the procedures we employed in the prior parts of our Report to measure the effect on TWA's operating profits during the 1959 to 1963 period of the additional jet fleet assumed by Mr. Wemple in TWA Ex. 4C.

While we followed generally the approach used by Mr. Wemple, we tested our assumptions in the light of TWA and industry experience and made the indicated adjustments such as, for example, the substitution of marginal load factors for average load factors and the substitution of tapered yields for average yields.

In our opinion, it would be absurd to consider the Comparative Profit Study as a measure of the operating profits TWA would have made with the additional jet equipment assumed by Mr. Wemple. We note in passing that Mr. Wemple quite properly declined to make any such claim for the Comparative Profit Study. While the amount of equipment available to an airline can affect the profitability of its operations, there are many other factors which can have an equal or greater effect on its profitability. The mere addition of seats and flights provides no assurance that the seats will be occupied or the flights patronized.

The important factors which were not considered by Mr. Wemple while preparing the Comparative Profit Study render the study valueless.

3. Factors Not Considered

a. Load factor

Perhaps the single most important factor affecting the profitability of an airline is the overall load factor it

is able to achieve on its flights. The low overall load factors at which TWA operated during the 1959-1963 period compared with the higher load factors of American (AAL) and Pan American's Atlantic Division (PAA-ATL) were the chief reason for the differences in operating profits. If TWA's passenger load factors during this five-year period had been as high as those of AAL and PAA-ATL for the Domestic and International Divisions respectively, TWA's passenger revenues would have been $107 million greater without any additions or deletions of equipment. (Exhibit XI-A)

Load factors are influenced by a wide variety of factors. Some are within the control of management, such as advertising, the quality of equipment and terminal facilities, on-time performance, passenger service features, cuisine, fare policies and scheduling. Others, not under management's control, include actions of the CAB and overall demand flowing from the level of economic activity. These are not merely theoretical considerations. Rather they have a real and measurable effect on an airline's operations. Some illustrative examples may be helpful.

Quite obviously, competition has a substantial effect on load factors. CAB decisions during 1959-1964 substantially reduced the percentage of American's monopoly markets, thereby significantly weakening the profit potential of American's

domestic route structure relative to that of TWA[1/] (Exhibit XI-B). In particular, the decision in the Southern Transcontinental Case took away American's great monopoly routes from Texas to the West Coast.

American benefited greatly during the 1961-1962 period from its conversion to "fan jets" and from its advertising program exploiting the superiority of fan jet performance. TWA suffered during this same period because of the inferior quality of its service in some respects, such as poor on-time performance and the lack of modern terminals in Los Angeles until late 1961 and at Idlewild until the spring of 1962. On the other hand, in 1964 TWA reaped considerable temporary competitive benefits from the in-flight movies and as a result of United's disastrous experiment with one-class service, a policy that caused a significant transfer of passengers from United to TWA in the lucrative transcontinental markets.

It is interesting to see that TWA had lower load factors in the earlier period in spite of the fact that TWA was operating a higher percentage of its plane miles, seat miles, and passenger miles with jets during the 1959-1962

1/ We emphatically disagree with Mr. Wemple's statement that the route structures of TWA and the compared airlines were not materially different in 1964-1965 from what they were in 1959-1963. The changes in the route structures of each were numerous and substantial.

period than American and PAA-Atlantic. (Exhibit XI-C) As a comparison of its percentage of seat miles with its percentage of passenger miles shows TWA's load factor problem lay in its jets. From 1961 thru 1963 its percentage of domestic passenger miles in jets was lower than its percentage of domestic seat miles in jets.

b. Additional business activities

The non-comparability of the three airlines may be seen by examining the non-airline activities of TWA. In its 1963 Annual Report (p. 10) published in the spring of 1964, TWA forecast revenues of $7 million "in its first year" for its new Special Services Division at Cape Kennedy. Apparently this became an even more substantial part of its operations in 1965 because in the 1964 Annual Report (p. 22), TWA forecast $15 million revenues for the Special Services Division. TWA had no substantial revenues of this nature during the 1959-1963 period and American had no such division in either period.

c. Travel habits

Changing travel habits on the part of the public can have a great impact upon the profit potential of an airline's routes. For example, TWA profited in both its Domestic and International Divisions in 1964 and later periods as the result of such changes. Internationally, TWA benefited significantly vis-a-vis PAA-ATL as the result of the greater

growth in travel between the United States and southern Europe than between the United States and northern Europe. Domestically, TWA benefited from the recent growth of travel to resort areas which TWA serves and American does not. For example, by 1965 Las Vegas had become the destination in six of TWA's top 100 markets. (Exhibit XI-D)

These limited examples are but a few of many that could be used to illustrate the myriad of factors affecting an airline's profitability from year to year.

d. Areas served

There are basic and substantial differences between the domestic operations of TWA and American and between the international operations of TWA and PAA-ATL.[1/] For example, the PAA-ATL certificate includes the entire former operation of American Overseas Airlines to the Scandinavian countries, the Low Countries, northern Germany and Berlin, which TWA is not authorized to serve. Domestically, at the end of 1965 TWA did not have competitive operating rights in 27 out of American's top 50 markets and American did not have competitive operating rights in 31 of TWA's top 50 markets. (Exhibit XI-E) The differences were even greater in 1959.

1/ We caution against the use of the route maps provided by Mr. Wemple in the Comparative Profit Study, because they are replete with errors and because they fail to take into account operating restrictions on various important route segments.

e. Accounting changes

Accounting changes also operate to render comparisons misleading, especially when made over a long period of time. With respect to the comparisons made in the Comparative Profit Study, we note the following examples:

1. During the first period flight equipment rental costs were different for the three airlines than they were in the second period in proportion to their total operating costs. Since the cost of capital of rental aircraft is included in the lease payment, it becomes a direct operating cost; but cost of capital of wholly-owned aircraft becomes a "below-the-line" expense. A simple comparison without correcting all three carriers for this single difference in both periods is misleading. (Exhibit XI-F)
2. Numerous accounting changes and changes in depreciation methods were made by the carriers during these periods. An outstanding example is the special depreciation charge for piston equipment which TWA took in 1961. This added an adjustment of $26.3 million before taxes (TWA 1961 Annual Report, p. 8) to expense in 1961 and increased TWA's 1964 and 1965 operating profits by the amounts moved forward from those later years to 1961.

3. In 1965, there was the reverse occurrence at American Airlines. The CV-990's which were originally depreciated over a 12-year life, beginning with deliveries in 1962, were changed to a 10-year life in 1965. The effect of this change was to charge a higher rate of depreciation in 1965 than in 1962 and 1963 for the CV-990's, thus reducing AA's net earnings in 1965 by $1,964,000.[1/]

Other changes in accounting methods, such as TWA's change in use of overhaul reserves at the end of 1963, also made significant differences in reported profits and in the comparability of the reported profits from period to period and from airline to airline.

f. Time periods

The selection of appropriate periods of time is also important if a comparison is to be meaningful. By selecting different time periods, a wide variety of different results can be produced from comparisons of the type made in the Comparative Profit Study. The periods selected by Mr. Wemple, 1959-1963 vs. 1964-1965, were about as different as any two periods that can be imagined. During the 1959-1963 period,

---

1/ American Airlines 1965 Annual Report, p. 12, n. 2.

the introduction of jet aircraft coincided with a decline in traffic below the levels that had been forecast. The industry entered a period of excess capacity in which profits were the exception, not the rule. By 1964, this trend had been reversed, traffic boomed, load factors were greatly improved, and operating profits were restored to the levels preceding the introduction of jet aircraft.

4. Irreconcilability of the Comparative Profit Study and the C & C Report

The absurdity of the Comparative Profit Study as a measurement of "damages" is shown by a comparison of the profit estimates in the C & C Report with the Comparative Profit Study estimates allocated to individual years (Exhibit XI-G). Internationally, the Comparative Profit Study would add profits of $31.8 million in 1959 and $22.3 million in 1963 when only 1.1 and 0.9 jets, respectively, would have been added to TWA operations under the assumptions in the C & C Report. The Comparative Profit Study would add only $1.8 million in profits in 1962 when 4.8 jets would have been added. In 1963 $22.3 million in profits is added to the International Division by the Comparative Profit Study, although the C & C Report estimates a reduction of $900,000. Domestically, the Comparative Profit Study would diminish TWA's operating profit for 1959, although the C & C Report adds two additional jets and estimates additional profits of $7 million.

In sum, the Comparative Profit Study is meaningless as a measurement of damages.

TWA Passenger Load Factors Compared With American and PAA-Atlantic 1959-1963

Domestic	TWA Load Factor	AAL Load Factor	Load Factor Ratio AAL/TWA
1959	70.5%	70.4%	99.9%
1960	63.9	65.3	102.2
1961	56.7	61.4	108.3
1962	51.3	57.0	111.1

REPORT OF

SIMAT, HELLIESEN & EICHNER, INC.

VOLUME II

A. MARGINAL STAGE LENGTHS
(OPERATIONAL CHANGES IN JET AND PISTON SERVICES)

The uses of jet aircraft in domestic services changed during the 1959-1963 period. When the jets were first introduced, they were deployed by airline managements, in view of the heavy investment which they represented, in the most profitable types of operations--the long haul, high load factor flight segments. As jets continued to be added, they were used in less economic and profitable operations because the more profitable uses had been exhausted. This pattern of change in usage of resources is characteristic in industry and has been popularly described by the term "diminishing utility."

Because aircraft usage in the International Division of TWA is dominated by transatlantic operations, changes in the average stage lengths of flights as jet equipment was added were not as substantial as in the Domestic Division. But the diminishing productivity of added capacity in terms of load factors was no less severe.

In the Domestic Division, comprehensive analysis of TWA's schedules during the period of jet service buildup shows that there were parallel downward trends in the average stage

lengths of both jet and piston flights from 1959 to 1963.

Added jet flights were added at progressively decreasing stage lengths which were well below the average of existing flights with jets. The piston flights being deleted were generally those operated at significantly longer stage lengths than the average stage length for the type of piston aircraft deleted.

To perform our schedule analyses, we converted all schedule information for TWA's domestic services into a form suitable for computer processing. For each flight and each segment of a flight scheduled during each month of the five year 1959-1963 period, we recorded the flight itinerary, the departure and arrival times at each point served by the flight, the number of times monthly that the flight was scheduled to be operated (exclusive of holiday cancellations), the type of equipment, the classes of services offered, the number of available first class and coach seats, and the distances between the points served.[1/] From this basic information we were able to determine the number of flights scheduled daily between each combination of points, the average stage length of flights operated with each type of aircraft, and various other significant relationships.

We were able to determine, by appropriate sorting and tabulating of the available information, the average stage length of flights added or deleted for each type of aircraft

---

1/ The complete transcription of TWA's domestic schedules for computer processing involved the creation of 46,795 individual records of flight segment data. By summarizing the data for monthly flights over the same flight segments with the same type of aircraft, the number of records was reduced to 12,047.

during each consecutive month of the period. To obtain this information, we first compared the number of daily services with each type of aircraft operated monthly over each of the flight segments (pairs of points) where non-stop services were provided with that type of aircraft. In those cases where the number of daily flight services over a particular flight segment increased from one month to another, we computed the increase in daily flight services and the increase in daily aircraft miles scheduled. By aggregating the increases in daily flight services among all flight segments and the increases in daily aircraft miles and, further, by dividing the daily aircraft mileage totals by the daily flight service totals, we were able to compute the average stage lengths of flights added each month with each type of aircraft. By determining and collecting the information for flight segments where services were reduced, we similarly were able to determine the average stage lengths of deleted flights with each type of aircraft.

When we compared the average stage length of added jet flights from one month to the next with the average stage length of all flights operated with the same type of jet aircraft in the earlier month, the comparisons showed a pronounced pattern. Average stage lengths of jet flights added were generally lower

than the average stage length of all jet flights operated in the prior month.

Comparisons between the average stage lengths of piston aircraft services deleted and the average stage length of piston services operated with the same types of aircraft in the prior month showed an opposite pattern. In the case of deleted piston aircraft services, the average stage lengths were longer than the average stage lengths of all flights scheduled in the prior month. The results of the comparisons of the added jet and deleted piston aircraft services with the average stage lengths of the services to which they were added and from which they were deleted are presented in Exhibits A-A, A-B, and A-C.

Exhibit A-A shows that the pattern of declining average distance of domestic nonstop jet flights as the number of jets increased was well established and common to the entire domestic trunk industry during the 1959-1963 period.

Exhibit A-B shows that as the B-707-131's and CV-880's were added to TWA's fleet, the jets added flew shorter distances than the jets already in service. For the 30 months from mid-1960 to the end of 1962, the stage length of the jet flights added with B-707-131's was less than the average for 26 months and above the average for

only four months. As a result, twelve-month moving averages of the stage lengths declined sharply from about 1,000 miles to below 600 miles per flight within a two-year period. In our opinion, a further addition of jets would have accelerated the decline.

Exhibit A-C shows that as the number of jets increased each year from 1959 through 1963, the average nonstop flight distances for the year declined for the L-049-749 and L-1049G aircraft. Exhibit A-C shows the annual declines in the two types of aircraft; it also shows the declines in monthly average stage lengths and compares the monthly average historical stage length of the two types of aircraft with monthly and 12 month averages of the stage length of deleted flights.

The averages, showing a sharp drop in length of piston flights as additional jets were added, signify that if even more jets had been added to TWA's domestic operations for 1959-1963, the average stage length of piston services would have dropped even more sharply.

Mr. Wemple inherently assumed that the added jet and deleted piston flights would be at the same stage lengths as the average jet or piston flights actually operated each year. We have statistically analyzed the relationship of the added jet and deleted piston flights to determine if it was possible to make a more accurate

estimate of the stage lengths of these flights. We found that the relationships set forth in Table A-I represent a statistically valid and significant improvement, in estimating the stage lengths of added jet and deleted piston flights, over the use of average stage lengths of existing jet and piston flights.

Table A-I

RELATIONSHIPS FOR ESTIMATING THE STAGE LENGTHS OF ADDED JET AND DELETED PISTON AIRCRAFT SERVICES FROM EXPERIENCED AVERAGE STAGE LENGTHS

Type of Aircraft	Statistically Determined Formula for Estimating Stage Length of Added or Deleted Flights
Added Jet Services	
B-707-131	59.8% of average stage length plus 258 miles
B-707-331	40.2% of average stage length plus 498 miles
CV-880	45.0% of average stage length plus 387 miles
B-707-131B	50.3% of average stage length plus 524 miles
Deleted Piston Services	
L-1649A	113% of average stage length plus 45 miles
L-1049G/H	141% of average stage length less 132 miles
L-049/749	158% of average stage length less 103 miles
M-404	203% of average stage length less 140 miles

Sources: TWA 4C-3 and Computer Print-outs.

The formulas set forth in Table A-I were determined by regression analysis and are as follows:

Table A-II

Type of Aircraft	Formula
B-707-131	$258 + [(.598) \quad (\overline{SL})]$
B-707-331	$498 + [(.402) \quad (\overline{SL})]$
CV-880	$387 + [(.450) \quad (\overline{SL})]$
B-707-131B	$524 + [(.503) \quad (\overline{SL})]$
L-1649A	$45 + [(1.13) \quad (\overline{SL})]$
L-1049G/H	$-132 + [(1.41) \quad (\overline{SL})]$
L-049/749	$-103 + [(1.58) \quad (\overline{SL})]$
M-404	$-140 + [(2.03) \quad (\overline{SL})]$

There were insufficient data to establish reliable relationships for estimating the stage lengths of added services with B-720B aircraft or the stage lengths of deleted services with L-1049, DC-3 and CV-240 aircraft. To the extent that operations with these aircraft would have been affected, we have used the average stage length for the added and deleted services for want of a better alternative.

The stage length relationships determined from TWA's actual experience as it added domestic jet services enabled us to make more reliable estimates, for each year, of the stage lengths of added jet flights and deleted piston flights. Because we developed the relationships from schedule information exclusively, the relationships can be properly applied only to the estimates of stage lengths in scheduled services. Our estimates for changes in aircraft miles also include changes in the miles flown in nonscheduled (charter) revenue passenger services. We have no basis for believing that the stage lengths for added and deleted nonscheduled services would have been different than they were in existing services. Consequently, for added and deleted nonscheduled services, we have used historical average stage lengths, which are determinable from data reported quarterly.[1/]

1/ TWA Ex. C & C 4(24).

We made the necessary adjustment to obtain the overall average stage length of added and deleted services by further assuming that the added scheduled and nonscheduled miles would be in the same relative proportions as the miles actually flown in scheduled and nonscheduled services in the same years. The overall average stage length of added and deleted flights was calculated for each year and aircraft type as follows:

Overall Average Stage Length of Added or Deleted Services	=	Proportion of Total Revenue Aircraft Miles in scheduled Services	x	Estimated Average Stage Length of Added or Deleted Flights in Scheduled Services
	+	Proportion of Total Revenue Aircraft Miles in Nonscheduled Services	x	Average Stage Length of Non-scheduled Revenue Flights

The results of our calculation of the average stage lengths of added and deleted services with each equipment type, compared with the average stage lengths assumed by Mr. Wemple, are shown in Exhibit A-D. For example, Mr. Wemple makes the inherent assumption for costing purposes that the marginal stage lengths of the B-331 flights added in C & C Report, Chapters II and III for 1960 would be the same as those of existing flights, or 1,841 miles. We have estimated that these stage lengths would be 1,250 miles for

the jets added by Chapter II and 1,140 miles for the jets added by Chapter III. This makes a difference in revenue and cost estimation.

As Exhibit A-D shows, in 1960 the added stage lengths would have been shorter for the B-331 flights added by C & C Report Chapter III than for the B-331 flights added by Chapter II. Similarly, in 1960 and 1961 the CV-880 flights added by Chapter V would have been at shorter stage lengths than the flights added by Chapter IV. This is because the changes made in one chapter are carried forward to succeeding chapters.[1/] Similarly, in 1960 the initial deletions of piston flights made in Chapter II would have been at longer stage lengths than the ones removed in later chapters.

1/ For example, Vol. IV of the C & C Report, Exhibit G, Sheet 2, shows actual plane miles, domestic and international, and then carries forward the additions and deletions made in Exhibit F to reflect changes in TWA's historical operations made by Chapter II before calculating the changes caused by Chapter III.

(S.H.E. Report (Revised - Volume Two)"

C. DOMESTIC TRAFFIC ESTIMATES

Mr. Wemple's estimates of net changes in domestic revenues assume that added jet aircraft of each type would add to TWA's domestic traffic in the proportion that the added capacity is to the existing capacity of aircraft of the same type. Thus, if the available seat miles operated with B-331 aircraft were increased by 10%, Mr. Wemple would estimate that 10% would be added to the passenger revenue miles flown with B-331's. This assumption, which of all Mr. Wemple's assumptions has by far the greatest dollar impact on his estimates of net gain in domestic operating profits, is contradicted by the experience of TWA and of the other domestic trunk carriers.

Mr. Wemple's assumption presupposes that TWA could introduce jet capacity into the market in unlimited quantity without suffering a decrease in average jet load factors. But the history of the changes in traffic that resulted from the addition of jet services establishes that TWA and other airlines were not able to maintain average load factors. With each addition of jet capacity, the traffic increase that resulted was less than proportionate to the added capacity.

In estimating the losses in revenues from deletion of piston aircraft, Mr. Wemple similarly assumed that traffic would be reduced in proportion to the capacity deleted. This assumption is likewise contradicted by experience. With each decrease in piston aircraft capacity operated by the domestic trunklines, the loss in piston traffic was more than proportionate to the reduced capacity.

Mr. Wemple's procedures rest on the underlying assumption that in the period under consideration, TWA could use net added capacity as effectively and economically as the capacity to which it was added. Our review of the experience of TWA and the domestic airlines shows that the trunkline industry was unable to add capacity profitably during the greater part of the period. In our opinion, a further addition of capacity by TWA, or by any other air carrier, would have been even more unprofitable.

The economic climate for increased airline capacity in the early years of jet services was not favorable. In 1959, the U. S. economy had emerged from the recession in business activity that started in August, 1957 and continued through April, 1958. But, in June, 1960, the economy again started a downward drift which continued through February, 1961. The trough of the downturn in 1961 was followed by a period of gradual recovery through the third quarter of 1962 and, finally, by an accelerated period of growth which has persisted until recently.[1/] The paths of downward drift and recovery may be traced through the indexes of

---

1/ See Business Cycle Developments, July, 1966, published by the Bureau of the Census, U.S. Department of Commerce.

Gross National Product (GNP) and Disposable Personal Income (DPI), both indexes adjusted for changes in price levels during the period, in Table C-I. GNP, as an index of total business activity, provides an index to the air travel activity of the business sector of the economy. DPI reflects more directly the ability of people to engage in air travel for personal reasons. The more important turning points in the trends of the indexes are evident from an examination of the table.

6: Col. 4 ÷ 329.3 (DPI in 1st Quarter, 1959)

While the volume of domestic air travel has shown a long term trend of generally more rapid rate of growth than the economy as a whole, it mirrors the forces of growth and decline in the economy. Passenger traffic (revenue passenger miles flown in domestic trunkline scheduled services) increased from 1958 to 1959, during the period of economic recovery. From 1959 through 1961, the years during which the bulk of the additional TWA capacity would have been introduced under the jet equipment premises of Mr. Wemple, the volume of traffic stayed nearly level, gaining at the rate of 2% per year. In 1962, in the first phase of the recovery, traffic increased by 8%. Even this was below the historical rate of growth of 10% per year in the 1955-1959 period preceding the introduction of jet aircraft. It was not until 1963 that the rate of traffic increase returned to the level of the pre-jet era.[1/]

These economic factors explain, in part, why increases in air traffic during the 1959-1963 period were not proportionate to the increases in aircraft capacity operated, as Mr. Wemple assumed. Load factors declined precipitously from 1959 through 1962, as jet aircraft were added, leveling out only in 1963 when the decline was arrested by the accelerated growth of the economy, a corresponding growth in domestic trunkline air traffic, and a tapering in the number of jet aircraft added.

1/ The rates of increase in revenue passenger miles flown by domes trunklines were computed by us from information contained in th CAB Handbook of Airline Statistics, 1965 ed.

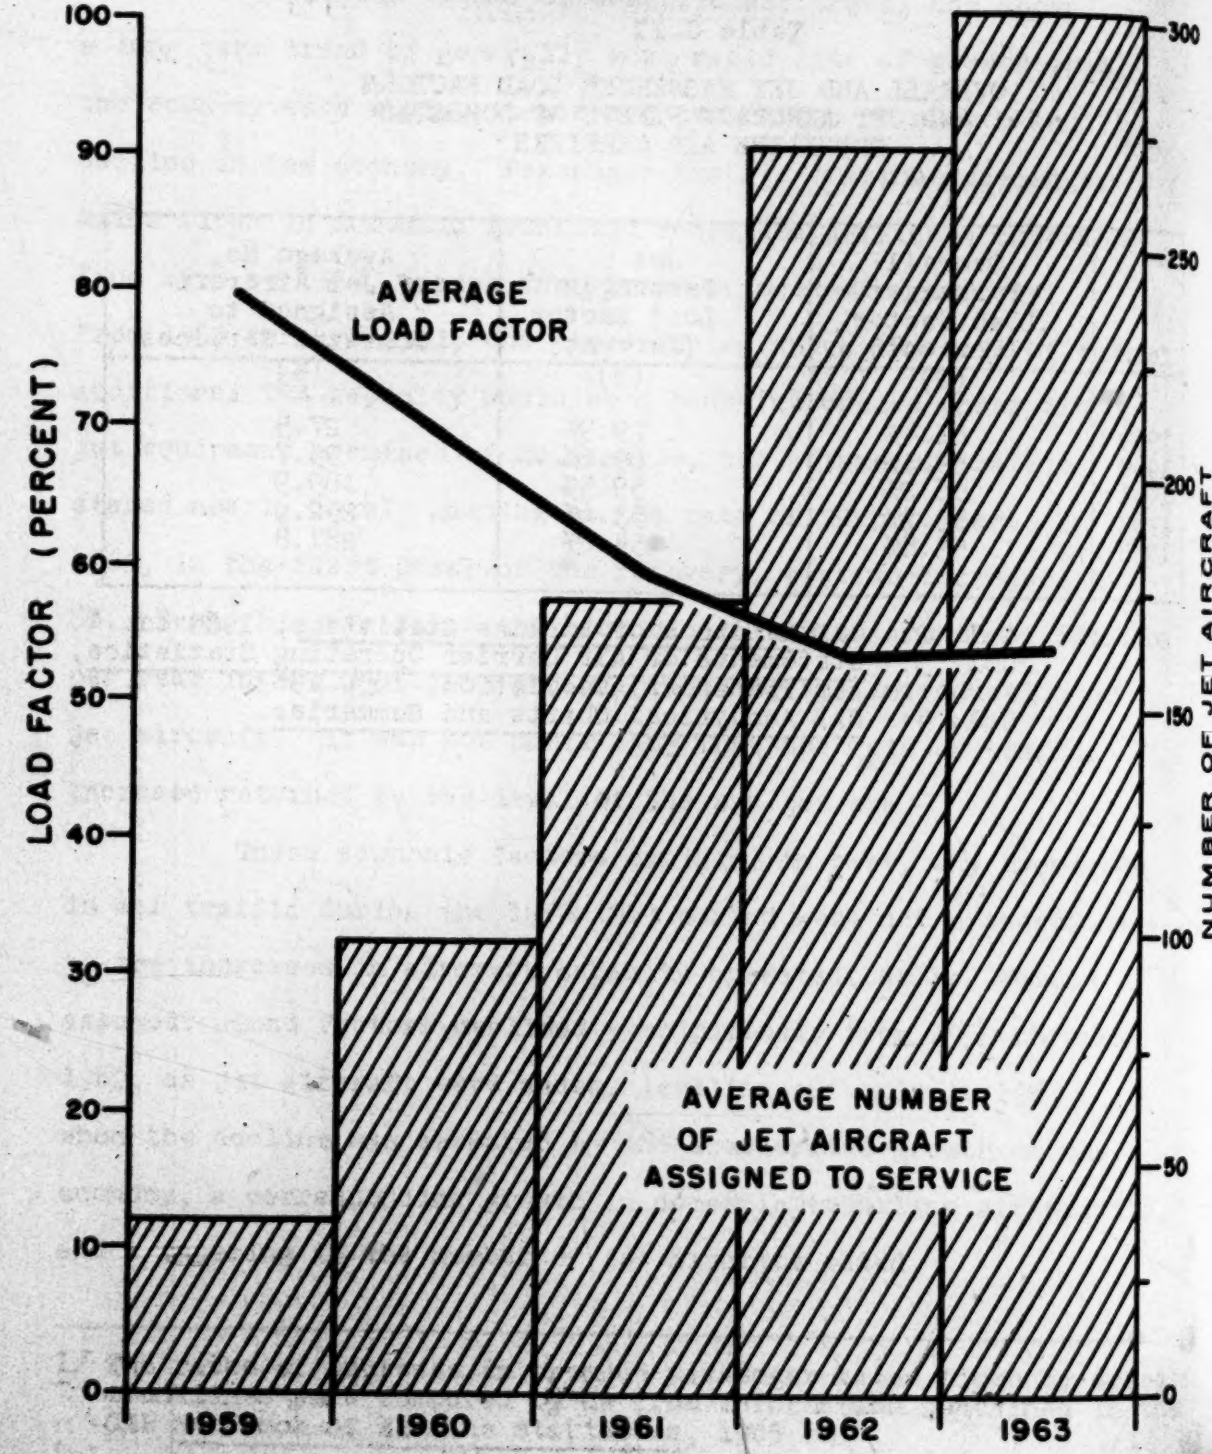
AS THE NUMBER OF JETS INCREASED LOAD FACTORS DECREASED

U.S. DOMESTIC TRUNKLINES 1959 - 1963



SOURCE: TABLE C-II

A further explanation is the condition of severe overcapacity which occurred as new jet equipment, the orders for which were placed several years earlier, was added in an air travel market whose growth was slowed by an unanticipated slowing of the pace of economic growth. The oversupply of capacity that prevailed throughout the U.S. domestic air transport industry had its roots in the general failure of air traffic forecasters, during the period when commitments for jet capacity were concluded, to foresee the taper in traffic growth that was encountered when the orders were filled. Representative forecasts of domestic passenger air traffic, made in the 1956-1958 period, show how consistently and substantially the actual traffic of the 1959-1963 period was overestimated.

Table C-III

(S.H.E. Report (Revised) - Volume Two)"

The decline in load factors - the result of adding capacity more rapidly than traffic or, put conversely, the failure of traffic to increase in proportion to the addition of capacity - was a matter of grave industry and governmental concern during the period because the added investment in jet capacity was unprofitable. Table C-IV and Chart C-II trace the almost catastrophic decline in airline earnings suffered by the U.S. trunkline industry during the introduction and build-up of jet services in the years 1959 through 1961 when, under Mr. Wemple's assumptions, TWA would have added 16 aircraft to its jet fleets. Also shown is the increasing spread between operating profit and net income, after interest charges, caused by the failure of added jet services during the period of traffic recovery to produce operating profits more than marginally in excess of the interest charges on debt.

Table C-IV

	Earnings of U.S. Trunkline Carriers*	
Year	Operating Profit (Millions)	Net Income After Special Items (Millions)

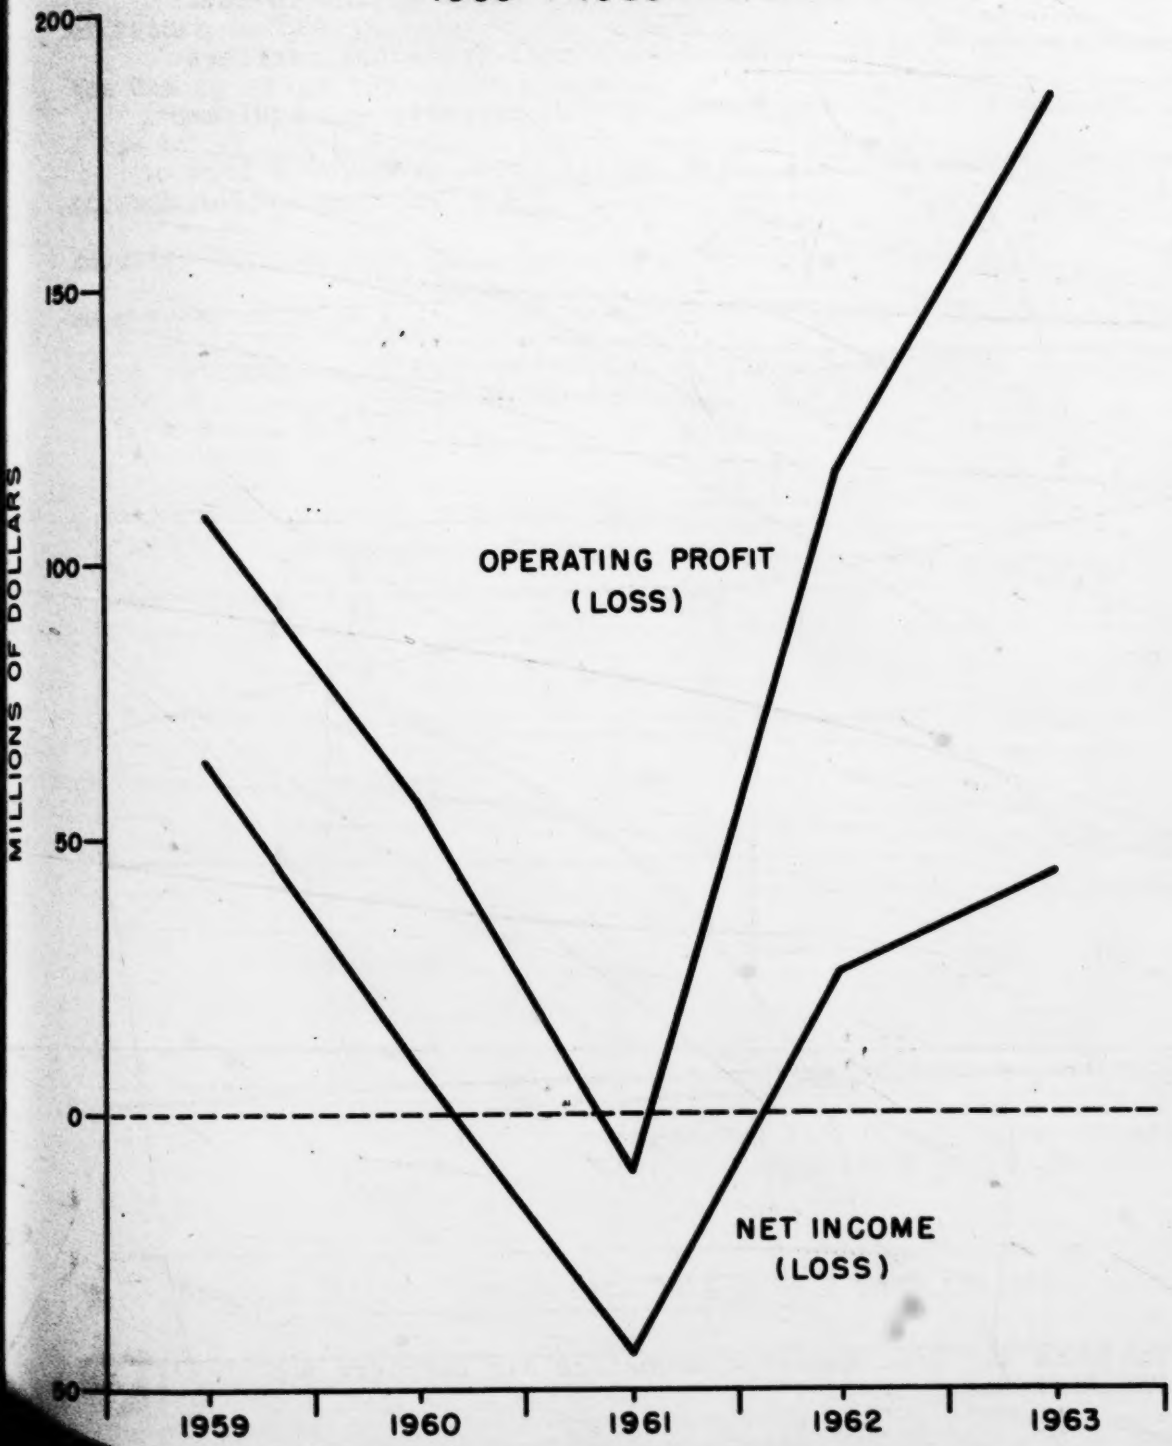
CHA

OPERATING PROFIT AND NET INCOME AFTER SPECIAL ITEMS

U. S. DOMESTIC TRUNKLINES
1959 - 1963



From the beginning of 1959 to the end of 1961 approximately one billion dollars were added to the investments of U.S. domestic and international trunkline carriers in additional flight equipment, ground property and equipment, and net working capital. Each dollar added produced a loss of 9 cents in operating profit:

Table C-V

TOTAL INVESTMENT AND OPERATING PROFIT OR LOSS OF U.S. TRUNKLINE CARRIERS 1/
1959-1961

Item	Amount (Millions)
(1)	(2)
Total Investment	
December 31, 1958	$ 1,587
December 31, 1961	2,574
Added Investment	$ 987
Operating Profit	
1958	$ 105
1961	13
Decrease	$ 92
Loss in Operating Profit for Each Dollar of Added Investment	$ 0.09

Source: Col. 2: CAB Handbook of Airline Statistics, 1965 ed.

1/ Includes all U.S. domestic trunkline air carriers and Pan American.

As a result of this decline in profitability, the rate of return before investment tax credit - a measure employed by the CAB to gauge the appropriateness of airline earnings - reached a low of 4% for U.S. certificated route air carriers from 1959 through 1963. This was the lowest average rate of return for the industry for any five consecutive postwar years. It compares with an average rate of return of 7% for the preceding 1955-1958 period and a rate of return of 11% for the following 1964-1966 period.

The general decline in average load factors from 1959 to 1962 signifies that each addition of capacity produced a less than proportionate increase in traffic. To put it another way, the marginal load factors - that is, the ratio of added traffic to added capacity - were below the average load factors.

It is the marginal load factor, the ratio of the net traffic added by an added flight to the capacity added by the flight, rather than the actual load factor of the added flight, which is the relevant consideration in determining whether the addition of the flight is profitable or unprofitable. The marginal load factor for added flights is generally less than the actual load factors experienced by the flights because added flights compete to some extent with existing flights of the same carrier and divert traffic from the existing flights. Thus, only part of the actual traffic carried on the added flight is new, or added, traffic; the remainder is diverted traffic which adds no new revenues.

The primary cause of the decline in overall domestic load factors during the period of jet introduction was the decline in jet aircraft load factors. A decline in the load factors of piston-engine and turbo-prop aircraft, while not so pronounced, also contributed. In Table C-VII the trends of annual average load factors in jet and non-jet aircraft services are shown for the domestic scheduled operations of trunkline air carriers. Also shown are the marginal load factors of jet and non-jet services computed by dividing the changes in seat miles flown from one year to another into the corresponding changes in passenger miles.

TABLE C-VII

TRENDS IN INDUSTRY LOAD FACTORS OF JET AND NON-JET AIRCRAFT SERVICES

Scheduled Domestic Operations of Trunkline Air Carriers 1959-1964

Year	Jet Aircraft Services: Revenue Passenger Miles (Millions)	Jet Aircraft Services: Available Seat Miles (Millions)	Jet Aircraft Services: Passenger Load Factor (Percent)	Non-Jet Aircraft Services: Revenue Passenger Miles (Millions)	Non-Jet Aircraft Services: Available Seat Miles (Millions)	Non-Jet Aircraft Services: Passenger Load Factor (Percent)
	Annual Data and Average Load Factors					
(1)	(2)	(3)	(4)	(5)	(6)	(7)
1959	3,066	3,839	79.9%	25,061	41,954	59.7%
1960	9,995	14,357	69.6	19,238	34,797	55.3
1961	15,596	26,207	59.5	13,939	26,318	53.0
1962	20,743	38,681	53.6	11,085	21,056	52.6
1963	25,539	47,265	54.0	10,345	20,337	53.3
1964	30,842	55,803	55.3	10,815	19,439	55.6

Col. 4: Col. 2 ÷ Col. 3

Col. 7: Col. 5 ÷ Col. 6

Since the marginal load factors for added jet services shown in Table C-VII were aided by the growth in traffic produced by forces in the economy, they are higher than they would have been in the absence of such traffic growth. Similarly, the marginal load factors for deleted non-jet services are lower than they would have been in the absence of traffic growth, because traffic growth operates to increase the availability of traffic to the non-jet services remaining after the deletions and thus reduces the decrease in non-jet passenger miles associated with the decrease in non-jet seat miles flown. In Table C-VIII following, we have decreased the revenue passenger miles reported as flown by the trunkline carriers in 1959-1964 in proportion to the increase in the DPI index and have computed marginal load factors for the added jet and deleted non-jet services using these adjusted passenger miles. The adjusted marginal load factors represent the experienced marginal load factors after removing the influence of the economic growth in this period.

TWA's domestic load factor experience paralleled the experience of the industry. From 1959 to 1963 overall average load factors in TWA's scheduled services declined from 71% to 53%. Marginal load factors for added jet services were likewise much lower than average load factors, even without adjustment for traffic changes due to changes in the economy, averaging 51.5% for the 1959-1963 period. Marginal load factors after adjustment for changes in the economy were even lower, comparing closely with the adjusted marginal load factors for added jet services throughout the industry.1/ Marginal load factors for TWA's deleted piston services were higher than average load factors for such services, both before and after traffic adjustment, also paralleling the industry experience. In Table C-IX following, we have computed marginal load factors for TWA's jet and piston aircraft operations, before and after adjustment of traffic for changes in the economy.

In adjusting traffic to eliminate from the year-to-year changes in volume the effects of year-to-year changes in the economic climate for travel, we have reduced annual traffic levels by 1% for each 1% growth in DPI, starting with the year 1959. Our adjustment is based on recent studies which have indicated that the market for air travel is, in economic terms, "income elastic,"

1/ An average of 40% for the 1959-1963 period, compared with an industry adjusted marginal load factor of 43%.

meaning that a 1% change in income produces a change of more than 1% in traffic.[1/] In using the change in DPI, rather than in GNP, as the basis for the adjustment and in decreasing annual traffic levels by only 1% for each 1% change in DPI, we have used a lower index of economic growth and attributed a lesser rate of response in traffic than indicated by the studies in the interests of assuring that the traffic adjustments are understated rather than overstated.

1/ See Forecasts of Passenger Traffic of Domestic Trunk Air Carriers, Domestic Operations, Scheduled Services, 1965-1975, Staff Report No. 5, Research and Statistics Division, Bureau of Accounts and Statistics, CAB, September 1965 and Economic Feasibility of Alternative Programs for Washington National Airport, prepared for the Federal Aviation Agency by Operations Research Incorporated, January 1966.

Although the average experienced marginal load factors for TWA's added jet services for the 1959-1963 period were 51.5% based on reported traffic and 40% based on traffic adjusted for economic growth, Mr. Wemple has estimated that TWA would have been able to absorb a further volume of jet capacity at marginal load factors averaging 62%. Mr. Wemple has also estimated that the piston aircraft services deleted by TWA as a result of the added jet capacity would have had an average marginal load factor of 61%. This compares with an average marginal load factor for TWA's deleted piston services of 67.5% before adjustment and 70.2% after adjustment. Obviously, the load factors used by Mr. Wemple bear little relation to reality and result in gross overstatements of the added jet traffic and gross understatements of the deleted piston aircraft traffic which would have resulted from the assumed changes in jet and piston capacity.

In the absence of more detailed data, TWA's experienced marginal load factors by year adjusted for economic growth, as set forth in Table C-IX, provide the most reliable basis for estimating the added and deleted passenger miles that would have resulted from the assumed changes in available seat miles operated.

We have used the average marginal load factors for the combined experience of all jet and all piston aircraft operations because our analyses of schedule changes during the period of the build-up of domestic jet services show the uses of different aircraft types among the two categories of aircraft to be heavily interrelated. Analysis of TWA domestic schedules disclosed a

distinct pattern of displacement in piston aircraft services--a ripple effect wherein aircraft of each type displaced in part aircraft services with the next smaller aircraft type and were displaced, in part, by services with the next larger aircraft type (See Part B). The same type of analysis further disclosed a high degree of intercorrelation among the changes in services with the various types of jet aircraft. We found the following degrees of correlation among the additions of services of one jet type and deletions of services of another jet type on segments where aircraft of the two types were operated:

Table C-XI

	CORRELATION BETWEEN FLIGHT SEGMENT ADDITIONS AND DELETIONS OF AIRCRAFT SERVICES (1.00 is perfect correlation)

Source: Computer Analysis of TWA Domestic Schedules

TWA's traffic during the 1959-1963 period was increased from year-to-year by a decrease in the real price of its services to the traveling public and by improvements in its operating authority and non-stop services, independently of the increase stimulated by economic growth. We have not adjusted annual traffic growth to remove from the traffic totals the effects of fare and service improvements not directly flowing from the availability of additional jet aircraft. Since our calculated marginal load factors are higher than they would be if we had adjusted for these factors, our estimates tend to overstate the traffic that would have been added by further jet services and lost by further deletion of piston aircraft services.

Even on this conservative basis, we have computed that Mr. Wemple's estimates of the increase in passenger traffic from the addition of jet services are overstated by 1.7 billion passenger miles, equal to 42.6% of his total estimate of added jet traffic in TWA domestic services. His estimates of deleted piston aircraft traffic are understated by 50.8 million passenger miles, equal to 28.9% of his total estimate. The resulting overstatement of added jet revenues aggregates $97.0 million in domestic passenger revenues and $101.8 million in total transportation revenues, applying Mr. Wemple's revenue estimating factors. His estimates of piston aircraft service passenger revenues deleted are understated to the extent of $2.9 million in passenger revenues and $3.0 million in total transportation revenues.

"DX271B, page C-28
(S.H.E. Report (Revised) - Volume Two)"

The effect of using incorrect load factors on Mr. Wemple's estimates of net change in TWA's Domestic Division operating profits is to overstate the estimated benefit to profits by $104.8 million ($101.8 million plus $3.0 million). Since the total estimated benefit is only $51.3 million, including the estimated benefits from added jet services in the International Division, it is clear that application of the appropriate marginal load factors wipes out any thought of benefits and establishes a detriment to TWA's operating profit from the assumed additions to jet services in the neighborhood of $40.8 million, before any correction of Mr. Wemple's inappropriate yields and costing.

E. INTERNATIONAL REVENUE ESTIMATES

In Chapters II and III of the C&C Report, Mr. Wemple has assumed that with added and earlier B-331 jets, TWA would have provided additional seats in scheduled transatlantic service, that it would thereby have increased its percentage of the total scheduled transatlantic (IATA) seats, and that the total number of TWA scheduled transatlantic (IATA) passengers would have increased in the same proportion as TWA's share of IATA seats. Having estimated TWA's annual increase in IATA passengers on the basis of these assumptions, Mr. Wemple then concludes that TWA's total International Division passenger revenues would have increased in the same percentage as the estimated increase in TWA's IATA passengers.

Mr. Wemple committed two major errors in his estimates. First, he overestimated the percentages of IATA seats and passengers that TWA would have obtained with the assumed additional jets. Second, he erred in assuming that all of TWA's International Division revenues would have increased in proportion to increases in those percentages, ignoring the fact that much of TWA's international revenue was produced by services that, in fact, decreased as its transatlantic services increased.

In this Part of our Report we estimate the percent-

ages of IATA seats and passengers TWA realistically would have obtained with the added and earlier B-331 jets and the revenues which, in fact, would be expected to increase in relation to the estimates of the increase in TWA's IATA passengers.

1. IATA Seats and Passengers

a. The relationship between seats and passengers.

Mr. Wemple assumes that TWA's percentage of IATA passengers would have increased at the same rate as its percentage of IATA seats. We have used the same assumption for purposes of our Report although share of available IATA seats is not, in our opinion, the exclusive guide to share of available IATA traffic.

The division of traffic among competing airlines and services presents difficult estimating problems because of the number and complexity of considerations involved. Differences exist in the capacity provided by individual carriers, in the fares to passengers, in the time of flights by day of week and hour of day and in passenger preferences resulting from national ties, currency restrictions or business and government policies. All of these differences contribute to differences in market shares. It is an obvious oversimplification to assume that any single consideration can be used as the sole basis for estimating how traffic would be

divided if TWA's share of transatlantic seats were altered. The division of traffic in proportion to the division of IATA seats does not, however, afford an unreasonable approximation in the absence of a specific plan for the operation of TWA's assumed additional international jet services.

b. Increase in TWA's percentage of IATA seats.

For 1959 and 1960, Mr. Wemple used the unchanged historical total of IATA seats as the basis for computing TWA's increased percentage with its estimated additional transatlantic seats. This results from his premise that the additional TWA seats would have been seats transferred from and not replaced by Pan Am, decreasing Pan Am's IATA seats in the same number as TWA's increased. For 1961 through 1963, he used historical IATA seat totals increased by the number of additional transatlantic seats estimated for TWA.

The additional transatlantic flights and seats calculated by Mr. Wemple for TWA with the added and earlier B-331 jets are as follows:

"DX271B, page E-4
(S.H.E. Report (Revised) - Volume Two)"

Table E-I

Year	C&C Report	Additional TWA Transatlantic Flights	Additional TWA Transatlantic Seats (Thousands)
(1)	(2)	(3)	(4)
1959	Chapt. II	None	1
	Chapt. III	None	17
	Total	None	18
1960	Chapt. II	228	89
	Chapt. III	208	27
	Total	436	116
1961	Chapt. II	987	154
1962	Chapt. II	1,793	251
1963	Chapt. II	311	44

Sources: Col. 3: C&C Report, pp. 19 & 47
Col. 4: C&C Report, pp. 20 & 47

Mr. Wemple's treatment of the IATA seat totals assumes that TWA could have added jet services over and above its historical levels in the 1959-1963 period without prompting a competitive response in the jet service levels of Pan Am and the IATA foreign air carriers. The history of transatlantic services contradicts this assumption. Additions to TWA's transatlantic services have always been met with increases in the transatlantic services of other carriers. The transatlantic market is the leading international air travel market in the world. It has been the object of vigorous competition throughout its history. It is inconceivable that unilateral competitive action could occur in this market without response from competing carriers.

Pan Am, in particular, has a long history of refusing to permit TWA to gain a capacity edge in the transatlantic market. It has never permitted TWA to schedule more seats annually than it has scheduled. The allocation of transatlantic seats between TWA and Pan Am has been as follows:

Table E-II

Year	TWA Seats (Thousands)	PAA Seats (Thousands)	TWA as a percentage of PAA
(1)	(2)	(3)	(4)
1953	149	195	77%
1954	172	223	78
1955	180	279	65
1956	217	343	63
1957	228	392	58
1958	276	443	62
1959	226	427	53
1960	386	537	72
1961	412	759	54
1962	529	906	58
1963	720	1,071	67
1964	825	1,186	70
1965	1,101	1,343	82
1966	1,162	1,455	80

Sources: Cols. 2 & 3: Annual Summaries of IATA statistics
Col. 4: Col. 2 ÷ Col. 3

The historical allocation is in striking contrast with the allocation resulting from Mr. Wemple's assumption which ignores competitive response.

Table E-III

Year	Historical IATA Seats - Transatlantic			IATA Seats Estimated by Mr. Wemple		
	TWA (Thousands)	PAA (Thousands)	TWA as a percentage of PAA	TWA (Thousands)	PAA (Thousands)	TWA as a percentage of PAA
(1)	(2)	(3)	(4)	(5)	(6)	(7)
1959	226	427	53%	244	409	60%
1960	386	537	72	502	421	119
1961	412	759	54	566	759	75
1962	529	906	58	780	906	86
1963	720	1,071	67	764	1,071	71
1964	825	1,186	70	-	-	-

Sources: Cols. 2 through 4: Table E-II
Col. 5: Col. 2 of Table E-III + Col. 4 of Table E-I
Col. 6: Col. 3 of Table E-III. For 1959 and 1960, the historical totals are reduced by the TWA additions (Col. 4 of Table E-I)
Col. 7: Col. 5 ÷ Col. 6

Under Mr. Wemple's assumption Pan Am would have behaved differently in 1960 than it ever did in fact, allowing TWA to outschedule it in seats by 19%. Furthermore, TWA would have scheduled more seats in relation to Pan Am in each of the four years 1960 through 1963 than it did in 1964, a year when transatlantic demand was heavy and TWA does not claim that it was under any equipment disadvantage.

Another strange result of Mr. Wemple's assumption is that TWA would have increased its capacity by over 100%

from 1959 to 1960, a time when the industry was facing tremendous overcapacity, and then decreased its capacity in 1963, a time when the traffic market was recovering and Pan Am was adding 18% more seats.

An examination of the peak second and third quarters of each year (omitting the first and fourth quarters when TWA, PAA and other airlines observed different policies in the seasonal reduction of weekly frequencies) establishes the typical pattern of competitive response. When TWA added, Pan Am added, and the foreign flags added more than Pan Am and TWA together.

The IATA flights added by TWA, Pan Am and foreign flag carriers during the second and third quarters of the years 1960-1963 are as follows:

Table E-IV

Carrier	Flights Added - Second Quarter			
	1960	1961	1962	1963
(1)	(2)	(3)	(4)	(5)
TWA	322	381	324	294
Pan Am	229	501	670	570
Foreign Flag	988	1,579	1,738	1,567
	Flights Added - Third Quarter			
TWA	257	232	284	182
Pan Am	439	415	720	485
Foreign Flag	1,190	1,158	1,237	1,172

Source: IATA monthly statistics

The above data demonstrate the following pattern of competitive response:

Table E-V

For each flight added by TWA:	Flights Added - Second Quarter			
	1960	1961	1962	1963
(1)	(2)	(3)	(4)	(5)
Pan Am added:	.7	1.3	2.1	1.9
Foreign flag carriers added:	3.1	4.1	5.4	5.3
	Flights Added - Third Quarter			
Pan Am added:	1.7	1.8	2.5	2.7
Foreign flag carriers added:	4.6	5.0	4.4	6.4

Source: Relationships among TWA, Pan Am and foreign flags from Table E-IV

(i) Competitive reaction: 1959

Since Mr. Wemple's addition of 18,000 transatlantic seats for TWA in 1959 does not result in the addition of any jet flights (Table E-I), we conservatively estimate that the foreign flag carriers would not have responded competitively with additional seats in 1959. We estimate that Pan Am would have operated the same total number of seats in 1959 which it historically operated.

The 18,000 seats which Mr. Wemple takes from Pan Am would in our opinion have been maintained by Pan Am through

(1) a transference to Pan Am's Atlantic Division of jet seats operated in other Pan Am divisions; (2) the retention of piston seats which were historically retired but which Pan Am would not have retired if it had not received additional B-331 seats; or (3) a combination of (1) and (2).

(1) To replace 18,000 seats with jet aircraft from its other divisions, Pan Am would have needed to transfer the equivalent of 0.4 aircraft.[1/] It is unreasonable to assume that Pan Am would not have given an equipment priority to the transatlantic market, the most important international market in the world and one where it faced intense competition. Pan Am had a reservoir of jet equipment available to it in non-transatlantic areas where it faced no jet competition. See Exhibit E-A. This reservoir was considerably greater than 0.4 aircraft.

1/ Our calculations are as follows:

$$\frac{\text{227,833,000 B-321 seat miles flown}}{\text{1,842,297 B-321 aircraft miles flown}} \quad \left(\begin{array}{l}\text{Pan Am} \\ \text{Atlantic Division} \\ \text{Sched. T-3, 1959}\end{array}\right)$$

= 123.7 seats per B-321

$$\frac{\text{18,000 seats}}{\text{123.7 seats per aircraft}} = 145.5 \text{ additional flights}$$

Assuming conservatively one flight per aircraft per day,

$$\frac{\text{145.5 flights}}{\text{365 days}} = 0.4 \text{ aircraft}$$

(2) If Pan Am had not received the B-331 jets which Mr. Wemple assumes went to TWA, it is also likely that it would have retired fewer piston seats in its Atlantic Division in 1959 than it historically did. Mr. Wemple's inherent assumption that Pan Am would have retired the same number of piston seats is completely unreasonable. Pan Am operated a considerable number of transatlantic piston flights throughout the period 1959-1963 in spite of the fact that TWA's transatlantic operation was wholly jet in and after 1961.

Table E-VI

Months/Year	Pan Am and TWA Weekly Transatlantic Round Trips			
	Pan Am		TWA	
	Piston	Jet	Piston	Jet
July, 1958	85	-	63	-
Dec., 1958	24	14	26	-
July, 1959	29	24	45	-
Dec., 1959	14	24	18	6
July, 1960	9	50	8	34
Dec., 1960	7	41	3	23
July, 1961	7	73	1	40
Dec., 1961	8	51	-	24
July, 1962	8	94	-	46
Dec., 1962	2	63	-	42
July, 1963	2	102	-	61

Source: Pan Am Ex. 188, Transatlantic Renewal Case, CAB Dkt. 13577

In July of 1958, when Pan Am operated no transatlantic jet flights, it operated 85 transatlantic piston round trips per week, or 170 weekly piston flights. In July of 1959 when it operated 48 weekly jet flights, its piston operations had declined to 58 flights per week. Thus, Pan Am deleted 2.3 piston flights for every jet flight added.[1/]

1/ $\frac{112 \text{ piston flights deleted}}{48 \text{ jet flights added}}$ = 2.3 piston flights deleted per jet flight added.

Assuming conservatively that the seating capacity of the jet aircraft was twice the seating capacity of the deleted piston aircraft, for each jet seat added, more than one piston seat was deleted. This is further borne out by the fact that Pan Am's IATA seats declined from 443,000 in 1958 to 427,000 in 1959 (Table E-II), when it was adding a substantial number of jet seats to its IATA totals. If Pan Am had not operated the 18,000 jet seats which Mr. Wemple transfers to TWA and if it had not chosen to shift at least 0.4 jet aircraft to the transatlantic from other areas, it is therefore reasonable to assume that it would have operated more transatlantic seats, not less, than it actually did.

Taking into account that Pan Am would have operated at least the number of seats it did historically, we compute TWA's percentage of IATA seats, if it had operated the additional number of transatlantic seats shown in Table E-1, as follows:

Table E-VII

1959

Actual Transatlantic Seats (Thousands)				
TWA	Pan Am	Other IATA Carriers	Total	TWA % of IATA
(1) 226	(2) 427	(3) 1,170	(4) 1,823	(5) 12.4%
Estimated Transatlantic Seats (Thousands)				
Added B-331 Aircraft (C & C Report, Chapter II)				
(6) 227	(7) 427	(8) 1,170	(9) 1,824	(10) 12.4%
Earlier Delivery of B-331 Aircraft (C & C Report, Chapter III)				
(11) 244	(12) 427	(13) 1,170	(14) 1,841	(15) 13.3%

Col. 14: Sum of Cols. 11, 12, and 13
Col. 15: Col. 11 ÷ Col. 14

(ii) Competitive reaction: 1960-1963

In 1960, Pan Am and the foreign carriers had more than sufficient jet equipment operating on non-transatlantic segments where they faced no jet competition to allow them to substitute piston aircraft services for the services operated with jets on these segments and to redistribute jet equipment into the transatlantic market to meet TWA's assumed additional flights. See Exhibits E-A and E-B.

In addition to jet equipment available in non-transatlantic service, the foreign carriers also had the option of increasing the low utilization at which they were operating their transatlantic jet equipment, producing more transatlantic flights and seats with their existing aircraft. In 1960, BOAC operated its B-707 equipment at an average utilization of four hours and 49 minutes per day and Air France operated its B-707 equipment an average four hours and 41 minutes per day.[1/] In contrast, TWA operated its B-331 aircraft in its International Division at an average utilization of nine hours and 44 minutes per day.[2/]

1/ Source: ICAO Fleet Statistics, 1960

2/ Source: TWA Ex. C & C-4(39)

For the 1961-1963 period, in addition to redistributing jet equipment available to them in their non-transatlantic services, Pan Am and the foreign carriers could have, and, in our opinion probably would have, acquired whatever new jet equipment was needed by the spring of 1961 to maintain their competitive positions in the transatlantic market. Although the history of competitive response in that market shows that the additional transatlantic flights offered by TWA were met by an addition of a greater number of flights by Pan Am and a still greater number of flights by the foreign carriers (Table E-V), we have conservatively estimated for purposes of our Report that for the years 1960-1963 Pan Am would have added only one flight over and above its historical flights for each assumed additional TWA flight. We have also estimated that the foreign carriers, taken as a group, would have responded competitively to TWA and Pan Am by adding only one additional flight for each two flights added by these carriers (one by TWA and one by Pan Am).

For the years 1960 and 1961, Mr. Wemple assumed that TWA would have added transatlantic seats through the replacement of existing piston flights with jet flights as well as seats generated by additional jet flights. We have not allowed for any competitive reaction to the assumed additional seats generated by replacement flights, although it is our opinion that any addition of transatlantic seats by TWA without a responding increase in the seats of competing carriers is unlikely.

Using the foregoing assumptions as to competitive reaction, we have estimated the number of additional transatlantic flights and seats which would have been operated by Pan American and the foreign carriers, if TWA had operated the additional transatlantic flights and seats shown in Table E-I.

Table E-VIII

Additional B-331 Aircraft
(C & C Report, Chapter II)

	Flights Added			Seats Added (Thousands)				Total Added	
				TWA					
Year	TWA	Pan Am	Other IATA Carriers	From Added Flights	From Replacement Flights	Pan Am	Other IATA Carriers	Flights	Seats (Thousands)
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)	(10)
1960	228	228	228	29.8	59.3	29.8	29.8	684	148.7
1961	987	987	987	134.4	19.9	134.4	134.4	2,961	423.1

c. Increase in TWA's transatlantic passengers

Quite apart from Mr. Wemple's error in assuming that Pan Am and the foreign carriers would have allowed TWA to increase its share of transatlantic capacity without a vigorous competitive reaction, he commits the more flagrant error of assuming that all of the available transatlantic traffic would be subject to redistribution on the sole basis of TWA's added share of seats. This is not so. At least one category of traffic which moved in volume on the services of U.S. flag carriers was not susceptible to redistribution on the basis of a change in TWA's share of IATA seats. This is the A and Z traffic -- military and dependent traffic which moves under special contractual arrangements and in accordance with the policies of the U.S. Department of Defense.

Category A and Z traffic is carried on scheduled transatlantic flights of the U.S. flag carriers only. Unlike charter traffic, which flies in nonscheduled traffic, is included in the reported IATA passenger totals for TWA and Pan Am in 1961, when it was initiated, and in subsequent years.

It is extremely doubtful that TWA could have increased its A and Z passengers in 1961-1963 no matter how many assumed additional seats it had because

(1) A and Z traffic did not move on foreign carriers and TWA could not have attracted additional A and Z traffic from them, and (2) the apparent policy of the Department of Defense was to divide Category A and Z traffic equally between TWA and Pan Am[1/] without regard to the relative volume of transatlantic seats operated by each.

By assuming that TWA would have increased its historical IATA passengers in relation to its assumed additional seats without considering the special arrangements and policies with respect to the division of Category A and Z traffic, Mr. Wemple has overstated his estimate of TWA's additional IATA passengers. In using TWA's estimated percentage share of available IATA seats as the guide to its percentage share of available IATA traffic, we have likewise overstated our estimate of its share of IATA traffic.

Using our estimates of TWA's increased share of IATA seats shown in Table E-IX as a guide, without adjustment for Category A and Z traffic, we have estimated the additional number of TWA's transatlantic passengers and the resulting percentage increase over its historical passengers as follows:

1/ In this connection see Pan Am Ex. 117 and 445, Transatlantic Renewal case, CAB Dkt. No. 13577.

2. International Division Revenues.

Mr. Wemple assumed that TWA's total International Division passenger revenues would have increased in the same percentage as the percentage increase he estimated for TWA's IATA passengers. This assumption is incorrect. TWA's International Division passenger revenues have not grown in the same proportion as TWA's IATA passengers, nor could they be reasonably expected to. The historical relationship between TWA's IATA passengers and its International Division revenues is as follows:

Table E-XII

Year	TWA Transatlantic Passengers (Thousands)	TWA International Division Passenger Revenues (Millions)
(1)	(2)	(3)
1958	160	$ 61.9
1959	146	59.5
1960	243	82.0
1961	208	63.9
1962	277	77.5
1963	359	105.0
1964	488	127.2
1965	638	158.5

Sources: Col. 2: C & C Report, p. 21 for 1958-1963; IATA Reports
Col. 3: C & C Report, p. 27 for 1959-1963; CAB Handbook of Airline Statistics, 1965 ed.

Contrary to Mr. Wemple's assumption that a percentage increase in TWA transatlantic passengers would have been matched by a like percentage increase in TWA International Division passenger revenues, TWA's actual experience, whether measured over the period 1958-1965 or over the period 1959-1963, shows that its International Division passenger revenues increased at only 52%[1/] of the rate of increase of its IATA passengers.

The source of the error in Mr. Wemple's assumption is that in increasing TWA's total International Division passenger revenues, he estimated that traffic using TWA's services abroad but not across the Atlantic (beyond-the-gateway passengers) and TWA's charter passengers would increase in the same percentage as TWA's transatlantic (IATA) passengers. He obviously did not test this assumption, since it is not difficult to ascertain that the behavior of TWA's beyond-the-gateway and charter traffic was independent of its transatlantic services and traffic.

1/ 1958-1965 calculations: 638 passengers - 160 passengers ÷ 160 passengers = 298.8%
$158.5 - $61.9 ÷ $61.9 = 156.1%
156.1% ÷ 298.8% = 52%

1959-1963 calculations: 359 passengers - 146 passengers ÷ 146 passengers = 145.9%
$105.0 - $59.5 ÷ 59.5 = 76.5%
76.5% ÷ 145.9% = 52%

It is our opinion, for the reasons developed below, that TWA's beyond-the-gateway charter passengers would not have been increased in the 1959-1963 period by addition of transatlantic seats.

a. Beyond-the-gateway

(1) Beyond-the-gateway passengers

The actual annual numbers of TWA's beyond-the-gateway passengers in the period 1958-1965 were as follows:

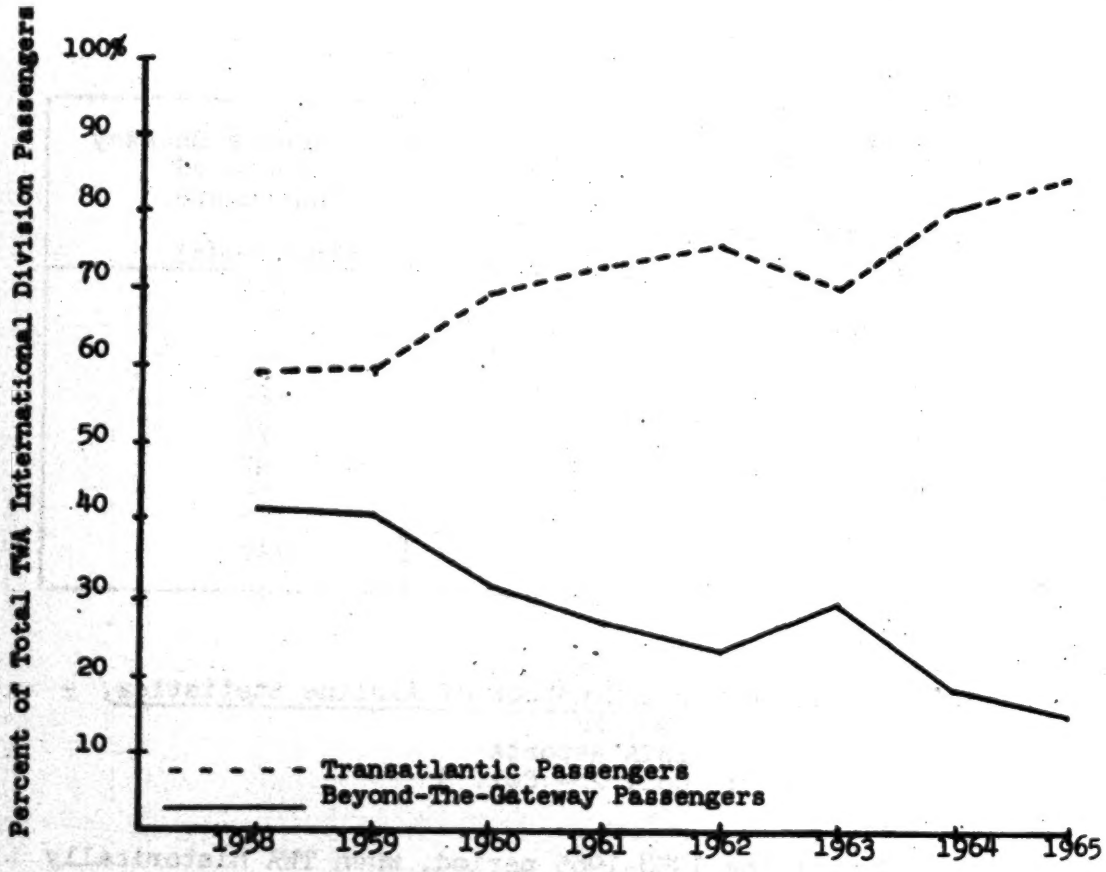
Table E-XIII

Year	Total International Division Scheduled Passenger Originations (Thousands)	Transatlantic Scheduled Passengers (Thousands)	Beyond-The-Gateway Scheduled Passengers (Thousands)
(1)	(2)	(3)	(4)
1958	274	160	114
1959	245	146	99
1960	348	243	105
1961	284	208	76
1962	365	277	88
1963	509	359	150
1964	596	488	108
1965	751	638	113

Sources: Col. 2: CAB Handbook of Airline Statistics, 1965 Ed.
Col. 3: IATA Reports
Col. 4: Col. 2 - Col. 3

During the 1958-1965 period, when TWA historically added a substantial number of jets to its international operations and its transatlantic traffic was steadily increasing, its beyond-the-gateway passengers represented a steadily declining share of its total International Division scheduled passengers.

Chart E-I

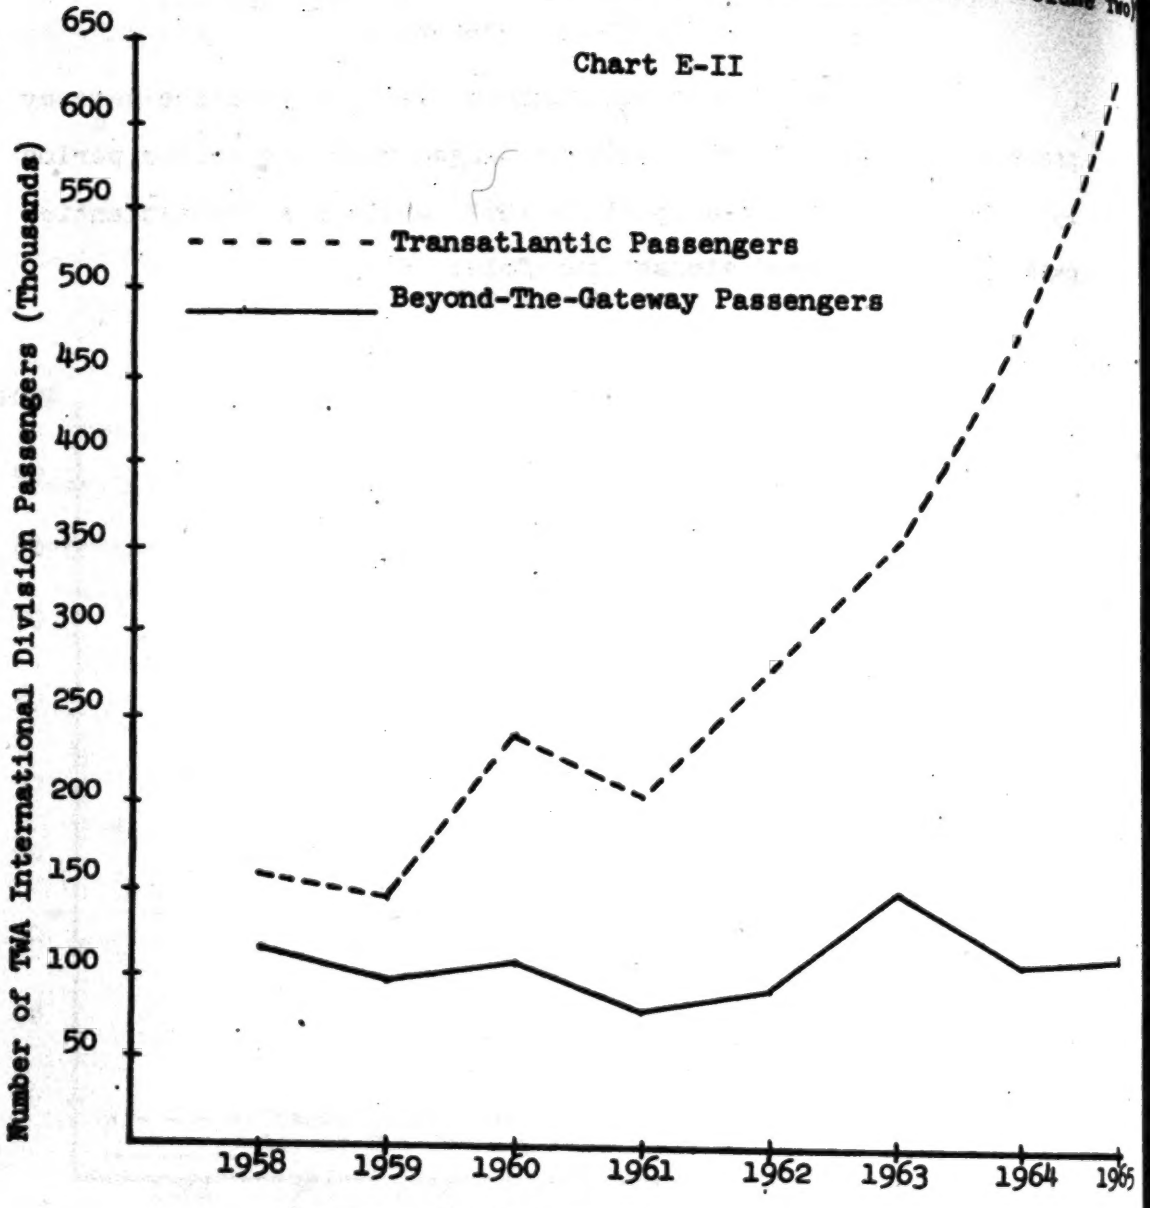


Percent of Total TWA International Division Passengers								
Category	1958	1959	1960	1961	1962	1963	1964	1965
Transatlantic Passengers	58.4%	59.6%	69.8%	73.2%	75.9%	70.5%	81.9%	85.0%
Beyond-The-Gateway Passengers	41.6	40.4	30.2	26.8	24.1	29.5	18.1	15.0
Total	100.0	100.0	100.0	100.0	100.0	100.0	100.0	100.0

Source: Table E-XIII

In terms of absolute numbers, TWA's beyond-the-gateway passengers remained relatively unchanged over the entire period 1958-1965, except for a spurt in 1963, while its transatlantic passengers increased almost four-fold:

Chart E-II



Source: Table E-XIII

In order to determine the cause of the rise in beyond-the-gateway passengers in 1963, we analyzed TWA's passenger originations, as reported to the CAB,[1/] at its foreign terminals during the period 1962-1964. We found that substantially all of the 1963 increase and the subsequent 1964 decrease in beyond-the-gateway passengers resulted from increases and decreases in originations at Rome and at cities linked to Rome by TWA single-plane services. In our opinion, the rise in beyond-the-gateway traffic in 1963 is attributable to the increase in Rome traffic occasioned by the funeral of Pope John XXIII and the election and coronation of Pope Paul VI. The downward trend in 1964 and the virtual stagnation of TWA's beyond-the-gateway traffic in 1965 -- both years in which its transatlantic traffic increased substantially -- confirm the trend from 1958 to 1962, indicating that beyond-the-gateway traffic did not change and could not be expected to change in proportion to transatlantic traffic.

The long-range trend in beyond-the-gateway passengers appears to have been material to TWA in its actual jet planning. Both TWA and C&C recognized that because of the limited traffic potential, TWA could not expect growth in that market comparable

---

1/ TWA Ex. C&C-4(40).

to that which would be possible in the TWA transatlantic market.[1]

(ii) Beyond-the-gateway passenger revenues

No CAB data, IATA data or TWA material available to us provides a breakdown, between transatlantic and beyond-the-gateway, of TWA's International Division scheduled passenger revenues. We therefore found it necessary to estimate the beyond-the-gateway passenger revenues by first determining the number of TWA beyond-the-gateway scheduled revenue passenger miles and then applying an appropriate beyond-the-gateway yield to these miles.

Although there are no published data available which directly shows TWA's beyond-the-gateway scheduled revenue passenger miles, we have estimated them from available data.

In the Transatlantic Renewal Case, TWA presented to the CAB a study, based on its internal records, showing that in 1962 it carried 278,436 transatlantic scheduled revenue passengers a total of 1,059,032,000 passenger miles.[2] Dividing passenger miles by passengers gives

---

DX 62, p. IV-14.

2/ TWA Ex. 2, 122, and 124, Transatlantic Renewal Case, CAB Dkt. 13577.

an average length of haul of 3,804 miles per transatlantic passenger. We applied this average length of haul to TWA's transatlantic passengers in 1959-1963 to determine the 1959-1963 transatlantic scheduled revenue passenger miles. By subtracting these revenue passenger miles from the total TWA International Division scheduled revenue passenger miles (as reported to the CAB), we have determined TWA's beyond-the-gateway scheduled revenue passenger miles, as follows:

Table E-XIV

Year	Int'l Division Revenue Passengers (Thousands)	Trans-atlantic Revenue Passengers (Thousands)	Beyond-the-Gateway Revenue Passengers (Thousands)	Int'l Div. Rev. Passenger Miles (Millions)	Trans-atlantic Rev. Passen-ger Miles (Millions)	Beyond-the-Gateway Rev. Passen-ger Miles (Millions)
(1)	(2)	(3)	(4)	(5)	(6)	(7)
1959	245	146	99	672.8	555.4	117.4
1960	348	243	105	1,039.2	924.4	114.8
1961	284	208	76	904.5	791.2	113.3
1962	365	277	88	1,194.1	1,059.0	135.1
1963	509	359	150	1,564.1	1,365.6	198.5

Sources:
Col. 2: CAB Handbook of Airline Statistics, 1965 Ed.

Col. 4: Col. 2 - Col. 3
Col. 5: CAB Handbook of Airline Statistics, 1965 Ed.
Col. 6: Col. 3 x 3,804 (average haul per passenger) (1962 figure from TWA Ex. 124, Transatlantic Renewal Case, CAB Dkt. No. 13577)
Col. 7: Col. 5 - Col. 6

We have analyzed fares for TWA's beyond-the-gateway segments and found that a substantially higher fare level per mile exists over these segments than in either TWA's transatlantic market or its domestic market. When fares in this market are averaged, a fare level of about 10¢ per passenger mile is indicated. Application of a discount of 10% to reflect experienced dilution in yields from reduced-fare passengers results in an average yield of about 9¢ per passenger mile in TWA's beyond-the-gateway services.

We have also examined the experience of European airlines during the 1959-1963 period and found that they realized an average yield of 8¢ per passenger mile of intra-European traffic.[1/] While European airlines specializing in local services would generally, in our opinion, experience lower yields than the more direct services of a trunkline carrier like TWA, we have applied the lower yield figure of 8¢ per passenger mile to estimate TWA's beyond-the-gateway passenger revenues, as follows:

1/ European Airline Research Bureau Statistics, Report RB-1, May 5, 1967; European Airline Research Bureau Report to the European Civil Aviation Conference, April 27, 1964 (kilometers converted to miles at the rate of 1.6093 kilometers per mile).

Table E-XV

Year	TWA Beyond-the-Gateway Passenger Revenues (Millions)
(1)	(2)
1959	$ 9.4
1960	9.2
1961	9.1
1962	10.8
1963	15.9

Source: Col. 7 of Table E-XIV multiplied by 8¢ average yield per revenue passenger mile

As an additional check on the appropriateness of the average yield of 8¢ applied to TWA's beyond-the-gateway traffic, we subtracted the beyond-the-gateway revenues determined on this basis from the total TWA International Division scheduled passenger revenues as reported to the CAB, giving TWA's imputed transatlantic passenger revenues. Dividing these revenues by TWA's transatlantic revenue passenger miles produced transatlantic yield ranging from 7.4¢ in 1960 down to 6.3¢ in 1962 and 1963:

Table E-XVI

Year	Total Int'l Div. Passenger Revenues (Millions)	Beyond-the-Gateway Passenger Revenues Based on 8¢ Yield (Millions)	Transatlantic Passenger Revenues (Millions)	Transatlantic Revenue Passenger Miles (Millions)	Yield Per Transatlantic Revenue Passenger Mile
(1)	(2)	(3)	(4)	(5)	(6)
1959	$ 50.2	$ 9.4	$ 40.8	$ 555.4	7.3¢
1960	77.6	9.2	68.4	924.4	7.4
1961	61.9	9.1	52.8	791.2	6.7
1962	77.0	10.8	66.2	1,059.0	6.3
1963	101.4	15.9	85.5	1,365.6	6.3

"DX271B, page E-38
(S.H.E. Report (Revised) - Volume Two)"

Mr. Wemple, by erroneously increasing TWA's beyond-the-gateway passenger revenues by his estimated percentage increase in TWA transatlantic passengers, has overstated TWA's additional International Division revenues by $10.4 million in C & C Report, Chapter II and by $1.4 million in C & C Report, Chapter III. This results in a total overstatement of $11.8 million even without correction of his overestimate of TWA's added transatlantic passengers. In our opinion, no increase in beyond-the-gateway revenues would have occurred.

b. Charter

The methodology adopted by Mr. Wemple assumes that an increase in TWA's scheduled transatlantic (IATA) passengers in the period 1959-1963 would have occasioned an increase by the same percentage in TWA's international charter passenger revenues. TWA's transatlantic and charter statistics for 1959-1963 show that this assumption is erroneous because historically its international charter operations during this period were not related to its scheduled transatlantic capacity or traffic.

The number of IATA and charter passengers flown in its International Division in 1959-1963 were as follows:

Table E-XVIII

Year	IATA Passengers (Thousands)	Charter Passengers (Thousands)
(1)	(2)	(3)
1959	146	103
1960	243	35

(S.H.E. Report (Revised) - Volume Two)"

It can be seen that during the period 1959-1963 when TWA historically added a substantial number of jets to its international operations and experienced a strong growth in its scheduled transatlantic services, its international charter passengers and revenues did not increase, as Mr. Wemple assumes in his estimating, but actually suffered a decline.

Mr. Wemple, by erroneously increasing TWA charter passenger revenues by the same percent of increase he estimated for TWA's IATA passengers, has overstated TWA's additional International Division revenues by $2.3 million in Chapter II of the C & C Report and by $1.1 million in Chapter III. This results in a total overstatement of $3.4 million, apart from his overstatement of beyond-the-gateway revenues and without correction of his overestimate of TWA's added transatlantic passengers. In our opinion, no increase in charter revenues would have occurred.

FOREIGN FLAG CARRIERS' JET AIRCRAFT

The foreign flag carriers which provided major jet competition in the transatlantic market during 1960 for TWA and Pan Am were BOAC and Air France. BOAC and Air France had the following jet aircraft available by the end of 1960:

BOAC		AIR FRANCE	
B-707	Comet	B-707	Caravelle
15	19	17	24

Source: ICAO Fleet Statistics, 1960.

During 1960, BOAC and Air France operated the following non-transatlantic flight segments with jet aircraft where they faced no competitive jet aircraft:

PROSPECTUS

381,916 Shares

Trans World Airlines, Inc.

Common Stock

(par value $5 per share)

THESE SECURITIES HAVE NOT BEEN APPROVED OR DISAPPROVED BY THE SECURITIES AND EXCHANGE COMMISSION NOR HAS THE COMMISSION PASSED UPON THE ACCURACY OR ADEQUACY OF THIS PROSPECTUS. ANY REPRESENTATION TO THE CONTRARY IS A CRIMINAL OFFENSE.

Under the subscription offer herein described, which *expires at 3:30 P. M., Eastern Standard Time, on December 5, 1952*, TWA offers 381,916 shares of Common Stock for subscription by stockholders at $16 per share, on the basis of one-seventh share for each share held.

	Subscription Price	Underwriting Discounts and Commissions	Proceeds to TWA(1)
Per Unit	$16	None	$16
Total	$6,110,656	None	$6,110,656

(1) Assuming that all shares are sold but before deducting expenses payable by TWA estimated at $95,000.

Hughes Tool Company, the holder of 1,937,500 shares of TWA's Common Stock, has agreed to buy sufficient shares of TWA's Common Stock (to the extent sufficient shares are not otherwise sold) to provide TWA with net proceeds from the sale of Common Stock, after deducting expenses of such issuance payable by TWA, of at least $5,000,000. If less than all the 381,916 shares of Common Stock offered hereby are subscribed for, TWA intends to sell all or a part of the shares not subscribed for to Hughes Tool Company, at the subscription price above mentioned, so that the net proceeds to it from the sale of the shares offered hereby will be at least $5,000,000.

TWA's outstanding Common Stock is listed on the New York, San Francisco, Los Angeles and Midwest Stock Exchanges and applications have been made to said Exchanges for listing the shares offered hereby. During the period from October 1, 1952 through November 18, 1952, the price of the Common Stock on the New York Stock Exchange ranged from a high of 18¼ to a low of 16¾, the last sale on November 18, 1952 having been 16¾.

The date of this prospectus is November 20, 1952.

No person has been authorized to give any information or to make any representations, other than those contained in this prospectus, in connection with the offer contained in this prospectus, and, if given or made, such information or representations must not be relied upon as having been authorized by TWA. This prospectus does not constitute an offer by TWA to sell the Common Stock in any state in which such offer may not lawfully be made.

REGISTRATION STATEMENT

Trans World Airlines, Inc. (herein sometimes called TWA) has filed with the Securities and Exchange Commission, Washington, D. C., a registration statement under the Securities Act of 1933, as amended, relating to the shares of Common Stock, par value $5 per share, offered hereby, and the subscription warrants evidencing the right to subscribe for such shares. For further information, reference is made to such registration statement, including the financial schedules therein and exhibits thereto.

THE COMPANY

TWA was incorporated as Transcontinental & Western Air, Inc. under the laws of the State of Delaware on December 27, 1934 by the consolidation of two Delaware corporations which had previously been engaged in air transportation. Its name was changed to Trans World Airlines, Inc. on May 17, 1950. TWA's principal business office is at 10 Richards Road, Kansas City, Missouri.

TWA has been engaged in the transportation of persons, property and mail by air since its organization. During that time it has operated a transcontinental system in the United States, and since 1946 it has operated an international system between the United States and points in Europe, Africa and Asia.

OFFERING TO STOCKHOLDERS

TWA is offering to holders of its outstanding Common Stock of record at the close of business on November 19, 1952, or on such later date as the above-mentioned registration statement becomes effective, the right to subscribe for an aggregate of 381,916 shares of Common Stock, at the rate of one-seventh share for each share then held, at the subscription price stated on the cover page of this prospectus. To evidence the rights to subscribe, TWA is issuing transferable subscription warrants to such stockholders. Seven rights are required to subscribe for each share of Common Stock. The rights to subscribe expire at 3:30 P. M., Eastern Standard Time, on December 5, 1952, after which unexercised subscription warrants will be void and of no value.

By Agreement dated January 16, 1951, Hughes Tool Company, the holder of 1,987,938 shares of TWA's Common Stock, agreed to buy sufficient shares of TWA's Common Stock (to the extent sufficient shares are not otherwise sold) to provide TWA with net proceeds from the sale of Common Stock, after deducting expenses of such issuance payable by TWA, of at least $5,000,000. Hughes Tool Company has the option to satisfy its obligation under the Agreement dated January 16, 1951, by lending TWA an equal amount of cash upon subordinated convertible notes, but TWA is advised that Hughes Tool Company will elect to purchase stock rather than exercise this option. If less than all the 381,916 shares of Common Stock offered hereby are subscribed for, TWA intends to sell all or a part of the shares not subscribed for to Hughes Tool Company at the subscription price above mentioned, so that the net proceeds to it from the sale of the shares offered hereby will be at least $5,000,000. Reference is hereby made to said Agreement dated January 16, 1951, which is filed as an exhibit to the registration statement, for the detailed provisions thereof and the foregoing statement is qualified in its entirety by such reference.

Exercise of Subscription Warrants. Subscription warrants may be exercised by surrender thereof, appropriately filled in and executed, to the Warrant Agent, The New York Trust Company, 100 Broadway, New York 15, N. Y., accompanied by payment for the shares subscribed. No subscription for a fraction of a share will be accepted.

Payment of the subscription price should be made in cash or by check or bank draft or postal or express money order, payable to the order of "The New York Trust Company, Agent". Certificates for shares of Common Stock will be issued as soon as practicable after subscription and payment of the subscription price.

Warrant holders unable to surrender their warrants in New York by the expiration date above mentioned may exercise their subscription rights by forwarding the subscription price by telegraph or otherwise so as to be received by the Warrant Agent at or before 3:30 P. M., Eastern Standard Time, on the expiration date, together with a guarantee in writing or by telegram from a bank, trust company or a member firm of the New York Stock Exchange that the subscription warrants with respect to the shares of Common Stock subscribed for have been transmitted by it, or are in its possession and will be transmitted immediately by it, to the Warrant Agent. Such subscriptions will be accepted subject to withholding of delivery of Common Stock subscribed for until receipt of the duly executed warrants.

Purchase and Sale of Rights to Subscribe. Rights may be bought or sold through banks or brokers. For the convenience of warrant holders TWA has made arrangements with the Warrant Agent so that a warrant holder, when forwarding his warrants to the Warrant Agent for exercise, may place an order to buy or to sell sufficient rights (not more than six) so as to enable him to subscribe for a whole number of shares. The execution of such order is subject to receipt of the order by the Warrant Agent not later than the close of business on the last full business day preceding the expiration date, and to the Warrant Agent's being able to find a seller or purchaser, as the case may be.

Foreign Stockholders. Subscription warrants will not be mailed to stockholders having registered addresses outside the United States and Canada, but are to be held for such stockholders by the Warrant

Agent, subject to satisfactory arrangements being made with the Warrant Agent for exercise or sale or other disposition thereof, until 10:00 A. M., Eastern Standard Time, on the last full business day preceding the day on which the subscription warrants will expire. The subscription warrants so held, as to which such other arrangements shall not have been made, are then to be sold, if possible, and, to the extent permitted by applicable laws and regulations, the pro rata share of the aggregate net proceeds, if any, therefrom is to be remitted to each stockholder on whose behalf such sale was made or, if such remittance is not permitted, held for the account of such stockholder subject to payment on receipt of lawful instructions.

PURPOSE OF ISSUE

The net proceeds from the sale of the Common Stock (assuming all shares are sold and after deducting expenses estimated at $95,000) will be at least $5,000,000. Such net proceeds will be added to and become part of the general funds of TWA and will be used for such corporate purposes as the management may determine.

Additional working capital is needed because of the payments made and to be made in 1952 as below stated. The need for additional working capital has increased because of the expansion of TWA's business and the introduction of new aircraft into service.

During the calendar year 1952 TWA estimates that it has made or will make expenditures from its general funds aggregating approximately $32,800,000, of which approximately $12,000,000 was paid on the purchase price of 56 aircraft and related parts and equipment, $17,300,000 is for principal, interest, regular and additional sinking fund payments and commitment fees with respect to long-term debt, and $3,500,000 is for hangar and other construction. During the same period TWA has added to its general funds approximately $5,000,000 from the sale of Common Stock in March, 1952, and estimates that depreciation will provide it with approximately $17,200,000, and that it will obtain $1,100,000 from the sale of Douglas DC-3 aircraft, leaving approximately $9,500,000 withdrawn from general funds during the year. At July 31, 1952, TWA's consolidated current assets were $40,940,561 and its consolidated current liabilities were $45,216,778. TWA's management presently has no definite plans for additional financing during 1953, but no representation is made that additional financing will not be necessary or desirable.

CAPITALIZATION

	As of November 5, 1952	
	Authorized	Outstanding
3¼% Sinking Fund Debentures (Series A) due June 1, 1956	$22,437,000.00	$22,437,000.00

3% notes (secured) maturing in monthly installments from November 30, 1952 to May 31, 1953 (1948 Notes)	$ 2,087,202.69	$ 2,087,202.69
3% notes (secured) maturing in monthly installments from November 30, 1952 to April 30, 1955 (1950 Notes)	$ 7,208,571.34	$ 7,208,571.34
3% note (secured) maturing in monthly installments from November 30, 1952 to May 31, 1956 (Martin Notes)	$11,571,200.44	$11,571,200.44
3¼% notes (secured) maturing in monthly installments from November 30, 1952 to May 31, 1956 (Martin Notes)	$ 389,583.32	$ 389,583.32
3¼% note (secured) maturing in monthly installments from November 30, 1952 to July 31, 1955 (Martin Notes)	$ 2,805,000.00	$ 2,805,000.00
3¼% notes (secured) maturing in monthly installments from November 30, 1952 to July 31, 1956 (1049 Notes)	$ 8,707,235.06	$ 8,707,235.06
Common Stock, par value $5 per share	4,000,000 shs.	2,673,418 shs.

If all Common Stock being registered is sold, 3,055,334 shares will be outstanding. At November 5, 1952, TWA had outstanding other long-term debt aggregating $3,814,105.43, including $3,247,636.22 under conditional sale contracts. The interest on the Series A and Series B Debentures was increased from 3½% to 3¼% effective March 1, 1951. For additional information concerning TWA's long-term debt, see "Long Term Debt".

DX 284

AX-1965

Other Recent Developments

In February, 1952, TWA offered to its stockholders 212,537 shares of its Common Stock at the price of $21.25 per share. 215,046 shares were subscribed for on this offering and an additional 25,728 shares were thereafter sold to Hughes Tool Company at the same price per share. After deducting expenses, TWA realized net proceeds from such sales of $5,000,018.64.

In connection with a program for additional financing for The Glenn L. Martin Company, TWA agreed to increase by $25,000 the price of each of the 40 Martin 404 aircraft it was purchasing, waived its rights to acquire additional Martin 404 aircraft, and purchased for $5,100,000 the twelve Martin 202A aircraft it previously leased from The Glenn L. Martin Company.

Operations at Newark Airport, which had been temporarily suspended early in 1952, were resumed in July, 1952.

In July, 1951, a flood halted all operations at TWA's main overhaul base at Kansas City, Kansas, for a considerable period. During 1951 provision for estimated uninsured flood losses was made through a charge of $2,000,000 to operating expense. As of September 30, 1952, $239,577 of this provision remained on the books to cover additional losses not processed as of that date.

The City of Kansas City, Missouri, proposes to build a new industrial airport, which, under present plans, will include a main overhaul base to be leased to TWA having substantially larger capacity than that presently available to it.

Following the outbreak of hostilities in Korea, TWA participated, by lease of aircraft to Northwest Airlines, Inc., in the Pacific airlift. Four Douglas C-54 aircraft were so leased at November 1, 1952. Such lease is subject to the Renegotiation Acts. TWA has received formal notice that renegotiation proceedings have commenced for the years 1950 and 1951, but no further steps have been taken in such proceedings. For some time, representatives of TWA and other air carriers have been engaged in studies with agencies of the United States government to determine the mobilization pattern for air transportation in the event of a greater national emergency. The subject matter of these discussions is classified information, but public statements of officers of the government indicate an understanding of the necessity for continued operation in wartime of a substantial amount of air transportation under private civilian management.

The program of production for defense being carried on by the United States government under the Defense Production Act of 1950 has not thus far interfered with TWA's operations to a material degree.

Since June 1, 1948, TWA and Delta Airlines, Inc. have interchanged aircraft at Cincinnati, Ohio, where one-plane service is provided between the TWA points Detroit, Toledo, Columbus and Dayton, and Delta points in the southeastern United States. TWA has applied to the Civil Aeronautics Board for approval of certain other similar interchange services with other air carriers.

TWA provides sky tourist service, without the deluxe accommodations of regular service and at lower rates, on heavily traveled segments of the transcontinental system by four-engine aircraft in which extra seats have been installed. In May, 1952, TWA inaugurated a similar tourist service on its international system between New York and London and Paris.

TWA sustained losses in 1946, 1947 and 1948. The factors contributing to the losses included the introduction of new and additional equipment (some of which was grounded for an extended period as a result of governmental orders), a very rapid expansion of the total air transport capacity in relation to the increase in demand for service, the cost of developing the international system, losses on other airline investments, and a pilot strike in 1946. Operations during 1949, 1950 and 1951 and the seven months ended July 31, 1952, were carried on at a profit. TWA's business has been and will continue to be affected by such matters as changes in the levels of general business activity and employment, costs and wages; competitive conditions; new developments in air and surface transportation; changes in taxation; Federal and State legislation; the national defense production program; orders of regulatory bodies; and political and economic conditions abroad.

At September 30, 1952, TWA had about 16,350 employees, nearly half of whom were represented by unions. Contracts recently negotiated with unions representing five groups of employees require approval of stabilization authorities before being put into effect.

Insurance

TWA maintains certain hull, public liability, passenger liability, property damage, baggage, air cargo, and various other types of insurance. Premiums for such insurance are in many cases on a negotiated basis. The management of TWA considers its insurance adequate as to coverage and amount.

PROPERTY

As of November 1, 1952, TWA had a fleet of 175 aircraft, of which 143 were assigned to its transcontinental system, 26 to its international system, four had been leased to Northwest Airlines, Inc. for use in the Pacific airlift and two Douglas DC-3 aircraft had been leased to another airline. All aircraft in use are maintained in airworthy condition in accordance with procedures approved by the Civil Aeronautics Administration. The aircraft above referred to are as follows:

Type	Owned	Leased	Total	Approximate Age in Years
Four Engine:				
Lockheed Constellation C-49	32	0	32	6 - 8
Lockheed Constellation 749	12	0	12	4 - 5
Lockheed Constellation 749A	24	0	24	1½- 3
Lockheed Constellation 1049	10	0	10	0 - ½
Douglas C-54	11	2	13	7 - 8
Two Engine:				
Martin 202A	12	0	12	2½
Martin 404	40	0	40	¼- 1
Douglas DC-3	32	0	32	8 -16
Total	173	2	175	

All these aircraft except Douglas C-54 and Douglas DC-3 aircraft and 16 Lockheed Constellation 049 aircraft are mortgaged or subject to conditional sale contracts referred to below under "Long-Term Debt".

For information as to the estimated service lives of aircraft, see Note 4(a) to the financial statements. Of the Douglas DC-3 aircraft above mentioned, TWA has made arrangements to sell 9 in the near future, and presently plans to withdraw most of its Douglas DC-3 aircraft from service before the end of 1953. No estimate can be given as to the date Douglas C-54 aircraft will be withdrawn from service.

TWA leases hangars, office space and similar property at various locations. For information as to obligations under leases and certain commitments for construction see Note 15 to financial statements.

RELATIONS WITH HUGHES TOOL COMPANY

Hughes Tool Company, a Delaware corporation (hereinafter sometimes called Hughes), all the outstanding stock of which is owned by Howard R. Hughes, well-known industrialist, motion picture producer, aviator and aeronautical engineer, owns 1,787,938 shares of the Common Stock of TWA which is approximately 75% of the Common Stock outstanding. In 1944 the Civil Aeronautics Board found Hughes' control of TWA consistent with the public interest and approved it on condition that commercial transactions between the two companies be limited to items not exceeding $200 in amount and totaling not more than $10,000 per year. By subsequent proceedings the condition has been modified to remove any limits on transportation purchased by Hughes from TWA at regularly published rates; to permit TWA to repair Hughes' aircraft and sell aviation fuel to Hughes at prices charged by TWA to others; and to permit TWA to purchase certain radar units from Hughes, provided the price did not exceed cost or the price of similar sales by Hughes to any other airline, whichever is lower. The Board has also permitted a number of other transactions, of which those entered into subsequent to November 1, 1949, are as follows:

(1) The sale by Hughes to TWA of six Constellation 049 aircraft at Hughes' cost, plus the cost of any modification agreed to by TWA, pursuant to a sales agreement dated February 2, 1950. The price (exclusive of modification costs) was $3,711,256.97.

(2) The financing by Hughes of $2,771,331 (approximately 75%) of the purchase price of four Constellation 749A aircraft ordered by TWA from Lockheed Aircraft Corporation pursuant to an agreement dated March 2, 1951.

(3) The sale by TWA to Hughes, at TWA's cost, of a Constellation 749A aircraft and a Martin 404 aircraft, pursuant to agreements dated, respectively, December 4, 1950 and March 2, 1951.

(4) The implementation of agreements dated April 5, 1950 and January 16, 1951 between Hughes, TWA and The Equitable Life Assurance Society of the United States. Pursuant to the agreement dated April 5, 1950, TWA realized net proceeds of approximately $5,000,000 through an offering of Common Stock to its stockholders, of which Hughes purchased 204,110 shares for $4,337,337.50. The agreement dated January 16, 1951 is described above under "Offering to Stockholders".

Transactions between TWA and Hughes and its subsidiaries (excluding purchase by Hughes of air transportation and the specific transactions referred to above) have not been substantial in amount in any year of the three year period ended November 1, 1952.

12/3/62

constituting a quorum.

Directors absent were: Messrs. Fred W. Ayers
John B. Blandforth
John A. Collings
Oscar F. Holcombe
Sidney Maestre
Loyd Wright

Mr. Gerald B. Brophy of Counsel and Mr. George H. Clay, Vice President and Secretary of the Corporation, were present by invitation.

Mr. Warren Lee Pierson, Chairman, called the meeting to order and thereafter presided.

The Secretary of the Corporation, Mr. George H. Clay, acted as Secretary of the meeting.

APPROVAL OF MINUTES

Minutes of the Board of Directors meeting of December 6, 1954, were approved.

PRESENTATION OF SERVICE BUTTONS TO MESSRS. POWEL CROSLEY, JR. AND GERALD B. BROPHY

The Chairman of the Board presented a 15-year service button to Mr. Powel Crosley, Jr., in recognition of his services to the Corporation since December 15, 1939.

DX 286

CONSIDERATION OF PURCHASE OF ADDITIONAL AIRCRAFT

Mr. Noah Dietrich pointed out to the Board that for many months the choice of the most modern equipment to facilitate the program of this Corporation has been a matter of which the Board has been aware and concerning which the officers of this Corporation have been in frequent discussion with the officers of Hughes Tool Company. It was made known to the Board that Hughes Tool Company after discussions with officers of this Corporation did during the month of December enter into a contract with Lockheed Aircraft Corporation for the purchase of twenty-five Model 14/94-01-120 airplanes of the Lockheed Constellation type and powered by turboprop engines of the latest type and design and that the purpose of such order by Hughes Tool Company was to assure to this Corporation the prior position in the purchase of these airplanes. Hughes Tool Company paid the sum of $16,817,603.25 to Lockheed Aircraft Corporation on account of the contract. It was explained that in order to assist this Corporation in its long range equipment program Hughes Tool Company will tender to this Corporation an option to acquire all of the aforesaid airplanes by virtue of the Hughes Tool Company contract. This Corporation in the event of the exercise of such option would be required only to make Hughes Tool Company whole and to pay interest upon funds advanced by Hughes Tool Company at a rate no greater than 3% per annum. A general discussion of the whole matter including the nature and specifications of the airplanes was held.

Upon motion duly made, seconded and unanimously carried, Mr. R. S. Damon not voting, it was resolved that since no financial risk of any kind on the part of this Corporation has been or prior to the exercise of the option (if exercised) will be involved in the negotiations, the action of the officers of the Corporation in the premises is hereby approved.

After explanation to the Board by company counsel of the nature of the contract of purchase entered into between Hughes Tool Company and Lockheed Aircraft Corporation and explanation of the fact that acceptance by this Corporation of an option to succeed to the interest of Hughes Tool Company in the purchase of such planes would create no obligation on the part of this Corporation but merely the acquisition of a valuable right, it was, upon motion duly made, seconded and unanimously carried, Mr. R. S. Damon not voting,

RESOLVED, that the executive officers of this Corporation be, and they hereby are, authorized and instructed to accept any option tendered to this Corporation by Hughes Tool Company to be subsequently exer-

XTCO2731

DX286

cised by this Board at its discretion which would vest in this Corporation the rights of Hughes Tool Company with respect to the acquisition of the new Lockheed equipment discussed at this meeting, provided that the acceptance of the option does not in any way bind this Corporation at this time to any financial responsibility or to take any future action of any kind in the premises.

DATES AND PLACES OF FEBRUARY, MARCH AND APRIL BOARD MEETINGS.

It was the consensus of the meeting that the regular meeting scheduled to be held Friday, February 25, 1955, should be held at 9:30 A.M., in New York City and that the regular meeting scheduled to be held Friday, March 25, 1955, should be held at 9:30 A.M., in Phoenix. The meeting was advised that the April meeting of the Board of Directors would be held on Thursday, April 28, 1955, at 20 West Ninth Street, Kansas City, Missouri, in connection with the Annual Meeting of Stockholders being held that same day.

ADJOURNMENT

There being no further business to come before the meeting, it was adjourned at 12:05 P.M.

constituting a quorum.

Directors absent were: Messrs. Powel Crosley, Jr.
Sidney Maestre

Mr. George A. Spater of Counsel and Mr. George H. Clay, Vice President and Secretary of the Corporation, were present by invitation.

Mr. Warren Lee Pierson, Chairman, called the meeting to order and thereafter presided.

The Secretary of the Corporation, Mr. George H. Clay, acted as Secretary of the meeting.

APPROVAL OF MINUTES

Minutes of the Board of Directors meeting of November 14, 1955, were approved.

REPORT OF THE CHAIRMAN OF THE BOARD

The Chairman of the Board reviewed the decision of the CAB in the additional Southwest-Northeast Service Case by which this Corporation was authorized to provide service at both Tulsa and Oklahoma City and he advised of the appointment of G. Joseph Minetti as a member of the CAB replacing Josh Lee.

DX 287

After discussion, upon motion duly made, seconded and carried, it was

RESOLVED, that the proper officers of this Corporation be, and they hereby are, authorized for and on behalf of this Corporation to execute and enter into an agreement covering the leasing by this Corporation, for a ten-year period, of space in Denver, Colorado, for CTO and district offices, at a monthly rental of not in excess of $1,000, and upon such further terms and conditions as are deemed to be in the best interests of this Corporation.

RECEIVED
OCT 22 1962
CHESTER C. DAVIS

The Board of Directors authorized an appropriation in the amount of $83,000 to cover alterations, improvements and furnishings, and $10,000 to cover air conditioning for CTO and district offices at Denver.

OPTION TO PURCHASE 8 MODEL 1049G CONSTELLATION AIRCRAFT UNDER LOCKHEED CONTRACT LD-147

It was called to the attention of the Board that officers of this Corporation recently advised Hughes Tool Company that additional Model 1049G airplanes of the Lockheed Constellation type would be needed in 1956. Upon being advised of such fact, and after further discussions with officers of this Corporation, the officers of Hughes Tool Company negotiated a contract with Lockheed Aircraft Corporation covering the purchase of five (5) Model 1049G's with an option for an additional three (3) such airplanes.

This contract (known as Lockheed Contract LD-147) was finally executed by Hughes Tool Company and Lockheed Aircraft Corporation on September 24, 1955; and the option to increase the number of airplanes from five (5) to eight (8), was exercised October 15, 1955, and is evidenced by Change Order No. 1 executed as of October 17, 1955. There was presented to the Board a copy of the executed agreement, together with a copy of Change Order No. 1, showing a basic price of $1,929,000.00 per airplane, subject to the usual Lockheed escalation provision, and calling for delivery of two airplanes in June, two in July, two in August, and two in September, 1956. The contract provides that the airplanes will incorporate all of the specification changes and improvements negotiated by this company in connection with its Contract LD-111 and will incorporate also any and all additional changes necessary to meet any new CAA regulations. The purchase price of the airplanes is payable in two installments -- 25% upon execution of the contract and the balance upon delivery. The remaining terms and conditions of the contract are substantially the same as those contained in LD-111.

The Board was advised that Hughes Tool Company has tendered to this Corporation an option agreement which will permit this Corporation to acquire, at any time on or before April 30, 1956, all of Hughes Tool Company's rights under Contract LD-147 by reimbursing Hughes Tool Company for its payments made to Lockheed and its other direct costs incurred in connection with the contract, and by paying to Hughes Tool Company an additional amount equal to interest at the rate of three (3%) per cent per annum on all funds advanced by Hughes Tool Company under the contract.

The executed option agreement was exhibited to the Board and there followed a general discussion of the terms of LD-147 and the tendered option. The Board was of the unanimous opinion that the terms of the contract and of the option were satisfactory and the Board expressed its appreciation for the action of Hughes Tool Company's Board and officers in making available to this Corporation the additional 1049G airplanes.

Upon motion duly made, seconded and carried, Messrs. Fred W. Ayers, Noah Dietrich and Harry Rogers not voting, the following resolution was adopted:

RESOLVED, that receipt of the option agreement submitted by Hughes Tool Company be, and the same hereby is, acknowledged and its form approved; that the officers of this Corporation hereby are authorized to assist Hughes Tool Company in the administration of Contract LD-147 and in the negotiation of specification changes in the Model 1049G airplanes covered by such contract; and that the proper officers of this Corporation hereby are authorized to exercise the option at such time as they deem appropriate.

OPTION TO PURCHASE 25 MODEL 1649 CONSTELLATION AIRCRAFT UNDER LOCKHEED CONTRACT LD-138

Corporation's counsel called to the attention of the Board that at its meeting of January 13, 1955, a resolution was adopted authorizing the executive officers of the Corporation to accept any option tendered to this Corporation by Hughes Tool Company, for subsequent exercise by this Board at its discretion, with respect to the acquisition of the new Lockheed equipment, described as Model 1449-01-120 of the Lockheed Constellation type. Counsel further reported that the contract of Hughes Tool Company for the acquisition of such aircraft had been amended to provide for the manufacture and delivery

of 25 new Model 1649 airplanes in lieu of the earlier type, and that Hughes Tool Company has now delivered an option, relating to such new aircraft, a copy of which was exhibited to the meeting. By such instrument this Corporation was given the option to acquire all of the rights of Hughes Tool Company under the purchase agreement with Lockheed described therein (being Purchase Agreement LD-138) covering twenty-five (25) new Model 1649 airplanes, Lockheed Constellation type. There followed a general discussion of the terms of LD-138 and the tendered option.

Upon motion duly made, seconded and carried, Messrs. Fred W. Ayers, Noah Dietrich and Harry Rogers not voting, the following resolution was adopted:

RESOLVED, that receipt of the option agreement submitted by Hughes Tool Company be, and the same hereby is, acknowledged and its form approved; and that the officers of this Corporation hereby are authorized to continue assisting Hughes Tool Company in the administration of Lockheed Contract LD-138 and in negotiation of specification changes in the Model 1649 airplanes covered by such contract; provided, however, that the option not be exercised until such date as may be fixed by subsequent action of this Board.

RECEIVED OCT 22 1964 CHESTER C. DAVIS

EXTENSION OF LEASE OF CTO SPACE IN ASTOR HOTEL - NEW YORK CITY

The meeting was advised that the Astor Estate had terminated its lease with the Hotel Astor corporation which in turn had terminated its sublease with this Corporation of CTO space in the Astor Hotel in New York City; that the 1515 Broadway, Inc., corporation had become the new lessee of the Astor Hotel with an option to purchase the hotel and that an agreement had been reached with the new lessee whereby, if the new lessee exercises its option to purchase the hotel, this Corporation's cancelled lease of CTO space in the Astor Hotel will be reinstated and extended to May 31, 1965, on substantially the same terms as contained in the original lease.

Upon motion duly made, seconded and carried, Mr. R. S. Damon not voting, it was

RESOLVED, that the proper officers of this Corporation be, and they hereby are, authorized for and on behalf of this Corporation to execute and enter into an agreement with 1515 Broadway, Inc., covering the

Loyd Wright

Mr. George A. Spater of counsel and Mr. George H. Clay, Vice President and Secretary of the Corporation, were present by invitation.

Mr. Warren Lee Pierson, Chairman, called the meeting to order and thereafter presided.

The Secretary of the Corporation, Mr. George H. Clay, acted as Secretary of the meeting.

APPROVAL OF MINUTES

Minutes of the Board of Directors meeting of March 24, 1956, were approved.

REPORT OF THE CHAIRMAN OF THE BOARD

The Chairman of the Board reported on his recent overseas trip, on conferences held in Italy concerning summer schedules, on the Egyptian situation and the cordial relations existing between this Corporation and that government, on his visit to Beirut, on the possibility that this Corporation might be asked to assist in the development of an airline for

RECEIVED
OCT 22 1962
CHESTER C. DAVIS

XT 502743

Yemen, on the outstanding job being performed by this Corporation in Spain and on the signing of the new Ethiopian Agreement, under which fees have been increased. He advised that CAB examiners had recommended that this Corporation's application for an extension of its route from Colombo to Manila be approved; that its route be extended from New York to Boston via Hartford-Springfield; that it be granted additional authority to conduct service between New York and Washington, D. C., via Philadelphia and Baltimore; and that Tucson be designated as an intermediate point on its Route #2.

He reported on the present status of the Phoenix-Denver Case, the St. Louis-New York Nonstop Case, the Great Lakes-Florida Case, the St. Louis-Southeast Case, the Dallas-West Coast Case, the Polar Route cases, the International Mail Rate Case, the Frankfurt-Zurich extension and the proposed General Fare Investigation. He reported generally on recent CAB appointments and on the Celler Committee investigation.

INVESTMENT IN LINEE AEREE ITALIANE (LAI)

The Chairman advised the Board that LAI had recently decided to increase its capital from the present figure of 1.5 billion Lire to 5.5 billion Lire, a materially greater increase than contemplated at the time this subject was discussed at the Board meeting of December 13, 1955. If the Corporation should maintain its full 40% interest in LAI, the new investment required would substantially exceed the expenditure of $1,605,000 authorized by the Board at its December 13, 1955 meeting.

The Chairman stated that an individual investor in Italy has indicated that he would be willing to acquire a 10% interest in LAI, in the event the Corporation did not desire to take up its full 40%. If the Corporation should maintain its interests in LAI at 30% of the total capital, it would be required to put up an additional 1,050,000,000 Lire, which is the equivalent of $1,680,000 at 625 Lire to the dollar.

After extended discussion, upon motion duly made, seconded and carried, the following resolutions were adopted:

RESOLVED, that in connection with the proposal of Linee Aeree Italiane to increase its capitalization to 5.5 billion Lire, the Corporation shall purchase from Linee Aeree Italiane such additional shares of its capital stock as may be needed for the Corporation to maintain an interest of 30% in the total capital stock of Linee Aeree Italiane after the proposed increase, for an amount not to exceed 1,050,000,000 Lire, and the proper officers of the Corporation be, and they hereby are, authorized to take such steps as may be necessary or desirable in their discretion to consummate such purchase.

DX189

RECEIVED OCT 22 1962 CHESTER C. DAVIS

modifications of the Agreement and Lease of premises, as amended, shall be made as the officer executing the same shall approve as being in the best interests of this Corporation, such approval to be conclusively evidenced by the signature of such officer.

RESOLVED, that the proper officers of this Corporation be, and they hereby are, authorized and empowered to do or cause to be done all such further acts and things as may be necessary or desirable and convenient and proper for the purpose of carrying out the intent of the foregoing resolution.

OPTIONS TO PURCHASE 8 MODEL 1049G CONSTELLATIONS AND 25 MODEL 1649A CONSTELLATIONS

Attention of the Board was called to the fact that Hughes Tool Company, by agreements dated November 10, 1955, had granted options to the Corporation for the purchase of (1) 8 new Model 1049G aircraft under Lockheed Contract LD-147 and (2) 25 new Model 1649A aircraft under Lockheed Contract LD-138, and that at the Directors' meeting of December 13, 1955, the Board had acknowledged receipt of such option agreements, had approved their form and had authorized the officers of the Corporation to assist Hughes Tool Company in the administration of the contracts and in the negotiation of specification changes in the airplanes covered by the contracts. In the case of the option on 1049G aircraft, the officers were authorized by the Board to exercise the option at such time as they deemed appropriate, but in the case of the option on the 1649A aircraft, the Board provided that the option should not be exercised until such date as may be fixed by subsequent action of the Board. The option for the 8 Model 1049G aircraft has not yet been exercised.

Subsequent to the Board meeting of December 13, 1955, officers of the Corporation requested Hughes Tool Company to expand the options so as to include spare engines and spare parts needed for the aircraft and also to make provision for the financing of the aircraft, engines and spare parts by Hughes Tool through conditional sale contracts. Hughes Tool Company acquiesced in those proposals and has submitted revised option agreements dated April 20, 1956, including the following terms, among others:

1. Option to purchase 8 Model 1049G Constellation aircraft under Lockheed Contract LD-147.

The revised option agreement grants the Corporation the right to acquire from Hughes Tool Company, in addition to the 8 Model 1049G airplanes covered in the original option agreement, all of the interest of Hughes Tool Company in any spare engines up to a maximum purchase price of $726,000 and all of the interest of Hughes Tool Company in any other spare parts up to a maximum purchase price of $1,524,000 which may be acquired by Hughes Tool Company for use in connection with the 1049G airplanes.

DX 289

XP 5027C1

In accordance with the terms of the revised option agreement, the Corporation will be required to make no payment at the time of exercise of the option. The aircraft, spare parts and spare engines will be sold to the Corporation by Hughes Tool Company under a conditional sale contract and payment therefor will be made in sixty equal monthly installments beginning with delivery of the first airplane. Interest on the unpaid balance will be the average interest rate payable by Hughes Tool Company on any indebtedness incurred by it for the purpose of financing the purchase of the airplanes, spare engines and spare parts, or if no such indebtedness is incurred, the prime commercial interest rate current in New York City at the time of the execution of the conditional sale contract.

The revised option provides for its exercise on or before May 31, 1956, instead of the April 30, 1956, date contained in the original option.

2. Option to purchase 25 Model 1649A Constellation aircraft under Lockheed Contract LD-138.

The revised option agreement grants to the Corporation the right to acquire from Hughes Tool Company, in addition to the 25 Model 1649A airplanes covered in the original option agreement, all the interest of Hughes Tool Company in any spare engines up to a maximum purchase price of $5,300,000 and all of the interest of Hughes Tool Company in any other spare parts up to a maximum purchase price of $5,700,000 which may be acquired by Hughes Tool Company to be used in connection with the 1649A airplanes.

The option agreement for the 1649A airplanes, like that for the 1049G airplanes, also provides for the financing of the aircraft, as well as the engines and spare parts, by Hughes Tool Company through a conditional sale contract permitting payments by the Corporation over a sixty-month period.

The date for the exercise of the option for the 1649A aircraft remains the same in the revised agreement as in the original agreement.

Copies of the revised option agreements were submitted to the Board. Thereafter there followed a general discussion of the terms of the revised options. It was unanimously agreed that the modifications of the options were in all respects favorable to the Corporation.

Upon motion duly made, seconded and carried, Messrs. Noah Dietrich, H. E. Montrose and Harry Rogers not voting, it was

RESOLVED, that receipt of the revised option agreements dated April 20, 1956, submitted by Hughes Tool Company be, and the same hereby are, acknowledged and their form approved; and that the officers of the Corporation hereby are authorized to continue assisting Hughes Tool Company in the administration of Lockheed Contracts LD-147 and 138, in the acquisition of spare engines and other spare parts and in the negotiation of specification changes

DX 289, page 11
(TWA Board Minutes-April 26, 1956)

RESOLVED, that the proper officers of the Corporation be, and they hereby are, authorized, subject to prior approval of the Civil Aeronautics Board, to exercise such options at such time as they deem appropriate, and to take such other steps, including the execution of the conditional sales contracts and such other agreements or documents as may be necessary or desirable in their discretion to consummate the acquisition and financing of the airplanes, spare engines and spare parts covered by such options.

LEASE OF HANGAR SPACE IN NATIONAL AIRLINES, INC. HANGAR - NEW YORK INTERNATIONAL AIRPORT

Upon motion duly made, seconded and carried, it was

RESOLVED, that the proper officers of this Corporation be, and they hereby are, authorized in the name and on behalf of this Corporation to execute and enter into an agreement with National Airlines, Inc., covering the leasing by this Corporation of one bay and 7,548 sq. ft. of shop space in National Airlines' hangar at New York International Airport and of related ramp space for the period May 1, 1956 to December 31, 1957, at an annual rental of $60,000 and upon such further terms and conditions as said officers may deem to be in the best interests of this Corporation.

CONDITIONAL SALE CONTRACT

Contract of Conditional Sale made as of the 6th day of June, 1956, between HUGHES TOOL COMPANY, a Delaware corporation (hereinafter sometimes called the "Seller"), with its principal place of business at Houston, Texas, and TRANS WORLD AIRLINES, INC., a Delaware corporation (hereinafter sometimes called the "Buyer"), with its principal place of business at Kansas City, Missouri,

THE INTEREST OF THE SELLER IN THE AIRCRAFT AND EQUIPMENT COVERED HEREBY IS THAT OF A CONDITIONAL SELLER AND THE INTEREST OF THE BUYER THEREIN IS THAT OF A CONDITIONAL BUYER.

W I T N E S S E T H :

WHEREAS, Hughes has contracted to purchase from Lockheed Aircraft Corporation (hereinafter called "Lockheed") the eight (8) Model L-1049G Lockheed Constellation Airplanes identified as follows:

C.A.A. Registration No.	Mfr. Serial No.
N7121C	4648
N7122C	4649
N7123C	4650
N7124C	4651
N7125C	4652
N7126C	4654
N7127C	4656
N7128C	4658

together with the airplane engines (each of which is of 750 or more rated take-off horsepower and will be later identified by manufacturer's serial number in a supplement to this Conditional Sale Contract) installed in each thereof on the date of delivery of such airplanes to Hughes and together with the propeller assemblies and all other equipment and accessories attached to such airplanes and engines on

called "the Airplanes");

WHEREAS, Hughes has also contracted to purchase from various vendors extra airplane engines (each of which is of 750 or more rated take-off horsepower and will be later identified by manufacturer's serial number in a supplement to this Conditional Sale Contract) and propeller assemblies and airframe spare parts, spare parts for airplane engines and for propeller assemblies, and other accessories, flight equipment and parts, for use on or in connection with the operation or maintenance of the Airplanes at, in or near repair or overhaul bases, airports, airfields, landing strips, hangars, warehouses, storehouses and buildings owned, operated, leased or used by Buyer at any one or more of the locations shown on Exhibit I annexed hereto (all of which engines, propeller assemblies, parts, accessories and equipment are hereinafter referred to as "Spares"); and

WHEREAS, Hughes desires to sell and TWA desires to buy the Airplanes and Spares pursuant to the conditional sale arrangements set forth herein.

NOW, THEREFORE, in consideration of the mutual covenants herein contained, the parties hereto agree as follows:

1. Seller agrees to sell to Buyer and Buyer agrees to purchase the Airplanes and Spares upon the terms and conditions hereinafter set forth.

2. (a) Simultaneously upon conveyance of title to each Airplane to Seller, such Airplane shall forthwith be delivered to Buyer and Buyer shall accept such delivery at Lockheed Air Terminal, Burbank, California, or at such other place to which the Airplane has been delivered to Seller.

them to be delivered, to Buyer at Kansas City, Missouri, or such other place as may be designated by Buyer, such deliveries to be made upon delivery of the first Airplane to Buyer, or as soon thereafter as practicable, and with respect to Spares not then delivered to Seller, upon delivery of such Spares to Seller, or as soon thereafter as practicable.

3. (a) The purchase price of each Airplane for purposes of this Contract shall be the aggregate of

(1) The amounts Seller shall have paid Lockheed for such Airplane at the time of its delivery to Buyer hereunder;

(2) All additional direct costs which have been paid or incurred by Seller at the time of the delivery of such Airplane to Buyer and are attributable to such Airplane, including, but not limited to, costs of "customer furnished equipment". To the extent that any such costs are not specifically attributable to a particular Airplane they shall be allocated equally among the Airplanes at the time not delivered to Buyer;

(3) An amount equal to interest at the rate of three per cent (3%) per annum on the average amount of the outstanding advance payments made by Seller applicable to such Airplane. The average amount of the outstanding advance payments applicable to each Airplane shall be computed by considering the payments made or costs incurred as set forth in subparagraphs (1) and (2) of this paragraph 3(a) as outstanding from the respective dates such payments were made or such costs were incurred by Seller and until the delivery of such Airplane to Buyer under this Contract.

of this Contract shall be the aggregate of

(1) the total payments made therefor by Seller to the vendors of such Spares at the time of the delivery of the first Airplane to Buyer hereunder;

(2) all additional direct costs which have been paid or incurred by Seller at the time of the delivery of the first Airplane to Buyer and are attributable to such Spares or to the purchase thereof;

(3) an amount equal to interest at the rate of three per cent (3%) per annum on the average amount of the outstanding advance payments made by Seller applicable to such Spares. The average amount of the outstanding advance payments applicable to Spares shall be computed by considering the payments made or costs incurred as set forth in subparagraphs (1) and (2) of this paragraph 3(b) as outstanding from the respective dates such payments were made or such costs were incurred by Seller and until the delivery of the first Airplane to Buyer under this contract;

(4) any additional amount which, at the time of the delivery of the first Airplane to Buyer hereunder, Seller is committed to pay to suppliers of Spares.

(c) The purchase price of each Airplane and the purchase price of Spares shall each be paid by Buyer to Seller in sixty (60) equal consecutive monthly installments, together with interest on the unpaid balance at the rate of 3-3/4 per cent per annum. The first of such payments relating to each Airplane shall be made at the time of delivery of such Airplane, and the first of such payments relating to

Spares shall be made at the time Airplane. As to each Airplane, and as to Spares, the second and succeeding payments shall be made monthly on the first day of the months succeeding the month in which the first payment is required to be paid, until the whole of each such purchase price shall have been paid. All payments shall be made to the Seller at the Hughes Tool Company, Houston, Texas.

(d) In the event that the purchase price of the Airplanes differs from the amount computed at the time of the delivery thereof to Buyer hereunder or in the event that the aggregate net amount which Seller is required to pay for the Spares in a final accounting with the suppliers thereof differs from the amount used in computing the purchase price thereof pursuant to subparagraph 3(b), separate and independent adjustments will be made by payment from one party to the other of such difference. Similarly, Seller will reimburse Buyer for any interest paid by Buyer with respect to any portion of the purchase price of the Spares which is unpaid at the time of delivery of the first Airplane hereunder, to the extent and for the period that Seller has not earned such interest by having made payments to the suppliers.

4. Title to the Airplanes and Spares shall not pass to Buyer by delivery, but shall remain in Seller until such time as the purchase price shall have been paid in full and Buyer shall have paid to Seller all other sums then due and payable to Seller hereunder, whereupon absolute title to the Airplanes and Spares shall pass to Buyer.

5. Upon the happening of any one or more of the following events, namely:

(a) [illegible] manner herein specified, of any monthly installment of the purchase price of the Airplanes or Spares and such default shall continue unremedied for five (5) days after written notice thereof shall have been delivered by Seller to Buyer; or

(b) default shall be made by the Buyer in the observance or performance by the Buyer of any other covenant or agreement contained herein, and such default shall continue unremedied for thirty (30) days after written notice thereof shall have been delivered by Seller to Buyer; or

(c) the Buyer shall become insolvent, or shall file a voluntary petition in bankruptcy, or shall file a voluntary petition or answer seeking or consenting to reorganization pursuant to or purporting to be pursuant to the Acts of Congress relating to bankruptcy or any other statute, state or Federal, for the relief of debtors, or shall be adjudicated a bankrupt, or shall make an assignment for the benefit of creditors, or shall consent to the appointment of a receiver or trustee of or for it or a substantial part of its property; or

(d) an order shall be entered pursuant to or purporting to be pursuant to the Acts of Congress relating to bankruptcy or any other statute, state or Federal, for the relief of debtors approving a petition seeking a reorganization of, or if an order shall be entered appointing a receiver or trustee of, or for any substantial part of the property of, or if a warrant of attachment shall be issued against any substantial part of the property of, the Buyer, and any such order is not dismissed or stayed within sixty (60) days from its entry or such attachment is not dismissed

(e) the Bonds outstanding under that certain Indenture, dated as of December 1, 1954, between Buyer and Irving Trust Company, as Trustee, as said Indenture may have heretofore been or may hereafter be amended, shall be declared and become due and payable, prior to the date of maturity of such Bonds as set forth therein, upon the occurrence of any of the "events of default" described in said Indenture, as amended (and the Buyer hereby agrees to notify the Seller of any declaration of default forthwith upon the receipt thereof); or

(f) the Notes at the time issued and outstanding under that certain Chattel Mortgage, dated as of December 20, 1954, between Buyer and Irving Trust Company, as Trustee, as said Chattel Mortgage may have heretofore been or may hereafter be amended, shall be declared and become due and payable, prior to the date of maturity of such Notes as set forth therein, upon the occurrence of any of the "events of default" described in said Chattel Mortgage, as amended (and the Buyer hereby agrees to notify the Seller of any declaration of default forthwith upon the receipt thereof);

then Seller may at once (or at any later time) proceed to take possession of the Airplanes and Spares in any manner provided by law, or Seller may at its option, and Seller is hereby empowered to, with or without legal process, and with or without demand, enter upon the premises where the Airplanes or Spares may be and take possession thereof and remove the same. Seller may resell the Airplanes and Spares, so retaken, at public or private sale, with or without having such Airplanes and Spares at the place of sale, and upon such terms and in such manner

to so sell the Airplanes and Spares shall be given by Seller to Buyer at least ten (10) days prior to the time of such sale. Seller may bid and purchase at any such public sale. From the proceeds of any such sale, Seller shall deduct all expenses for retaking, repairing, storing and selling the Airplanes and Spares, including any reasonable attorneys' fees incurred. The balance of such proceeds shall be applied to the payment of all sums owing to Seller under this agreement and any surplus of such proceeds remaining shall be paid to Buyer or to whoever may be lawfully entitled to receive the same. Buyer shall be under no obligation to Seller for any deficiency resulting from any such sale or to make any payments on account of the purchase price of any Airplane or Spares falling due after Seller has taken possession of such Airplane or Spares pursuant to this provision.

6. From and after delivery of the Airplanes and Spares to Buyer and until absolute title thereto is vested in Buyer or its nominee, or Seller repossesses the Airplanes,

(a) Buyer shall procure and maintain at its expense public liability, passenger liability and property damage insurance in such amounts and with such companies as shall be satisfactory to Seller, covering Seller's liability as holder of legal title to the Airplanes and Spares. The policies evidencing such insurance shall contain such provisions as shall be satisfactory to Seller and shall name Seller as assured.

(b) Buyer shall at its expense maintain all risk aircraft hull insurance in respect of the Airplanes in favor of Buyer and Seller, as their interests may appear, in such amounts and with such companies as shall be satis-

[illegible] damaged to such [illegible] practical, such insurance shall be paid to the Seller to the extent of the unpaid balance of the purchase price of such Airplane together with any accrued and unpaid interest thereon, plus all other amounts then due to Seller hereunder. Upon such payment to the Seller of insurance to the extent of the unpaid balance of the purchase price of any Airplane, absolute title to the Airplane so damaged or to any parts of an Airplane so destroyed shall vest in Buyer and Seller shall deliver to Buyer such proper documents of title with respect thereto as Buyer may reasonably require. Buyer shall be under no obligation to make any payments on account of the purchase price of such Airplane falling due after such loss, destruction or damage. Any insurance proceeds in excess of the amount payable to the Seller, and any insurance proceeds payable as a result of damage not rendering repair impractical, shall be payable to Buyer or its designee.

7. Buyer may at any time pay to Seller the unpaid balance of the purchase price of the Airplanes and Spares or any part thereof, without premium or penalty.

8. Upon the payment to Seller of the balance of the purchase price of the Airplanes and Spares together with all other amounts owing to Seller hereunder, Seller shall deliver to Buyer at such place in the United States as Buyer may designate,

(a) a bill of sale duly vesting in Buyer the title to the Airplanes and Spares free and clear of all liens, claims, charges and encumbrances attaching subsequent to the delivery of the Airplanes and Spares to Seller and not arising

and Spares by Buyer, and

(b) such other appropriate documents of title with respect thereto as Buyer may reasonably require.

9. In the event any sales tax or use tax is hereafter imposed upon or paid by Seller by reason of the sale or use of the Airplanes and Spares or the purchase thereof by Seller, then in addition to the sales price provided for in paragraph 3, Buyer shall pay to Seller the amount thereof, upon demand.

10. Buyer shall furnish Seller forthwith and from time to time thereafter at reasonable intervals, all such information concerning Buyer's financial condition, including balance sheets and forecasts of earnings, as is customarily furnished to a commercial bank holding or considering the acceptance of unsecured notes of a borrower.

11. The Buyer agrees that it will pay and discharge all taxes, assessments, governmental charges and all charges for keep, repairs, storage, maintenance or accessories, which if unpaid might become a lien, charge or encumbrance upon or against any of the Airplanes or Spares; and upon the failure of the Buyer so to do the Seller may make any such payment; provided, however, that nothing herein contained shall require the Buyer to pay such tax, assessment or charge so long as the Buyer shall in good faith contest the validity thereof and shall furnish the Seller such bond or indemnity as the Seller shall require, unless, in the judgment of the Seller, forfeiture is likely to result from any such failure to pay. Any sum or sums so paid by the Seller, together with interest thereon at the highest lawful contract rate, shall be and become a part of the sum which

Buyer to the Seller.

The Buyer will, upon written request from the Seller,

(a) reimburse the Seller for all filing or recording fees incurred in connection with filing or recording or refiling or re-recording this Contract and all supplements and additions hereto, if any;

(b) execute and deliver to the Seller all such further documents and instruments and do such further acts as may be necessary to perfect the rights of the Seller herein contemplated; and

(c) furnish to the Seller at reasonable intervals reports and certificates setting forth all the information necessary to inform the Seller as to the continued existence, location and condition of the Airplanes and Spares. The Seller shall also have the right to inspect the Airplanes and Spares at all times when the same are not in use and when such inspection can be had without undue inconvenience or expense to the Buyer.

12. Buyer agrees to maintain the Airplanes and Spares in good repair and working condition at its own expense, except any airplane lost, destroyed or so damaged that insurance with respect thereto is payable to the Seller pursuant to paragraph 6 hereof. Subject to the proper performance of such covenant, the Buyer may make repairs and replacements to the Airplanes and Spares and may substitute for engines, propellers and any other equipment installed in or attached to the Airplanes or Spares, engines, propellers or other equipment of substantially the same

kind and value; provided, however, that the removal of such engines, propellers, or equipment, and no replacement thereof, shall divest Seller of its superior title thereto, or render any such removed or replaced equipment subject to the lien or claim of any person other than Seller, UNLESS and UNTIL such equipment is replaced by equipment of substantially the same kind and value, the title to which, upon such equipment being installed in or attached to the Airplanes or Spares, may validly vest in Seller free and clear of the lien or claim of any other person, subject to the provisions of paragraph 14 hereof. In the case of any such permitted substitution, title to the substituted equipment shall immediately vest in Seller and become subject to the provisions of this Conditional Sale Contract and remain so vested and so subject unless and until substituted for in the manner hereinabove permitted; and title to the equipment substituted for shall vest in Buyer.

13. Until title to the Airplanes and Spares shall have passed to the Buyer hereunder, the Buyer shall have no right, power or authority to sell, transfer, assign, mortgage or encumber or in any other manner whatsoever dispose of the Airplanes and Spares or any part thereof (except as provided in paragraph 12 hereof) or any interest therein, and the Buyer hereby agrees that, except as permitted by paragraph 12 hereof, the Buyer will not (voluntarily or involuntarily) sell, transfer, mortgage, encumber or in any other manner whatsoever dispose of the Airplanes and Spares or any part thereof or any interest therein. Buyer agrees, except as provided herein, that the Airplanes and Spares will be used exclusively for its commercial air transport operations and related activities and that it

possessed by others. Buyer may use Airplanes and Spares by other airlines with which Buyer enters into interchange agreements provided that any such use by other airlines shall for the purposes of this agreement be considered to be use by the Buyer.

14. To the extent, if any, that there is a conflict between any of the provisions of this agreement and any of the provisions of the Indenture of Mortgage dated as of December 1, 1954 between the Buyer and Irving Trust Company, as Trustee, or of the Chattel Mortgage dated as of December 20, 1954 between the Buyer and Irving Trust Company, as Trustee, the provisions of said Indenture and said Chattel Mortgage shall prevail and the provisions of this agreement shall be deemed amended to the extent necessary to avoid such conflict. Seller recognizes the liens created by (a) Granting Clause VI of said Indenture and (b) Granting Clause III of said Chattel Mortgage as prior liens on the aircraft engines and on the propellers, appliances and spare parts relating to the Airplanes or Spares when and so long as they shall be installed in, attached to or incorporated in any of the aircraft or aircraft engines at any time subject to the lien of said Indenture or of said Chattel Mortgage, as the case may be.

Seller agrees that so long as all the Bonds issued under said Indenture at the time outstanding shall be held by the original purchaser thereof, (a) Seller will not repossess the Airplanes or Spares, in the event of a default by Buyer under this agreement, without affording such original purchaser reasonable notice of such default and a reasonable opportunity to remedy the same and (b) such

purchase at any time all the by paying to Seller the then remaining balance of the purchase price hereunder plus accrued interest.

Seller also agrees that in the event of a default by Buyer hereunder, the rights and remedies of Seller shall be limited to repossession of the Airplanes and Spares.

15. Before delivery of each Airplane to Buyer hereunder, Buyer will cause to be fastened thereon in a location reasonably adjacent to, and not less prominent than that of, the airworthiness certificate for such Airplane, a name plate no larger than four inches by seven inches (4" x 7") bearing the following legend:

"Hughes Tool Company holds legal title to this Airplane as Conditional Seller."

Buyer shall maintain such name plate in such location or in one of at least equal prominence and visibility at all times. Buyer may affix to the Airplanes Buyer's name, insignia or other legends customarily displayed by Buyer on its airplanes.

16. Buyer shall indemnify and hold harmless Seller, its agents and its employees from any and all liability for losses, expenses, damages, demands and claims in connection with or arising out of any death of, or injury or alleged injury or damage to, persons or property sustained, or alleged to have been sustained, in connection with or arising or alleged to have arisen out of Buyer's possession, use or operation of the Airplanes or Spares and Buyer agrees to handle any claim and defend any suit or action brought against Seller, its agents or its employees, or any of them, based on any such death, injury or damage, or alleged injury or damage, and to pay all damages, costs and expenses,

including attorneys' fees, resulting therefrom.

Buyer's liability to Seller under this paragraph 16 is conditioned upon Seller's promptly giving notice to Buyer of institution of such suit or action or of receipt of such claim or demand. Buyer shall have the option at any time to conduct negotiations with the party or parties making any such claim or demand, and may intervene in any such suit or action. Whether or not Buyer intervenes in any such suit or action, it shall be entitled to assume, conduct or control the defense thereof, and Seller shall not settle or discharge any such claim, demand, suit, action or judgment without prior notice to and the consent of Buyer.

IN WITNESS WHEREOF, the parties hereto have executed and delivered this agreement as of the day and year first above written.

(Toolco-TWA Conditional Sale Contract-
L-1649As, 4/19/57)

CONDITIONAL SALE CONTRACT

dated as of April 19, 1957,

between

HUGHES TOOL COMPANY
as Seller

and

TRANS WORLD AIRLINES, INC.
as Buyer

CONDITIONAL SALE CONTRACT

Contract of Conditional Sale made as of the 19th day of April, 1957, between HUGHES TOOL COMPANY, a Delaware corporation (hereinafter sometimes called the "Seller"), with its principal place of business at Houston, Texas, and TRANS WORLD AIRLINES, INC., a Delaware corporation (hereinafter sometimes called the "Buyer"), with its principal place of business at Kansas City, Missouri,

THE INTEREST OF THE SELLER IN THE AIRCRAFT AND EQUIPMENT COVERED HEREBY IS THAT OF A CONDITIONAL SELLER AND THE INTEREST OF THE BUYER THEREIN IS THAT OF A CONDITIONAL BUYER.

W I T N E S S E T H :

WHEREAS, Hughes has contracted to purchase from Lockheed Aircraft Corporation (hereinafter called "Lockheed") the twenty-five (25) Model L-1649A Lockheed Airplanes identified as follows:

C.A.A. Registration No.	Mfg. Serial No.
N7301C	1002
N7302C	1003
N7303C	1004
N7304C	1005

N7322C	1025
N7323C	1029
N7324C	1030
N7325C	1035

together with the airplane engines (each of which is of 750 or more rated take-off horsepower and will be later identified by manufacturer's serial number in a supplement to this Conditional Sale Contract) installed in each thereof on the date of delivery of such airplanes to Hughes and together with the propeller assemblies and all other equipment and accessories attached to such airplanes and engines on the date of delivery of such airplanes to Hughes (hereinafter called "the Airplanes");

WHEREAS, Hughes has also contracted to purchase from various vendors extra airplane engines (each of which is of 750 or more rated take-off horsepower and will be later identified by manufacturer's serial number in a supplement to this Conditional Sale Contract) and propeller assemblies and airframe spare parts, spare parts for airplane engines and for propeller assemblies, and other accessories, flight equipment and parts, for use on or in connection with the operation or maintenance of the Airplanes at, in or near repair or overhaul bases, airports, airfields, landing strips, hangars, warehouses, storehouses and buildings owned, operated, leased or used by Buyer at any one or more of the locations shown on Exhibit 1 annexed hereto (all of which engines, propeller assemblies, parts, accessories and equipment are hereinafter referred to as "Spares"); and

WHEREAS, Hughes desires to sell and TWA desires to buy the Airplanes and Spares pursuant to the conditional sale arrangements set forth herein.

NOW, THEREFORE, in consideration of the mutual covenants herein contained, the parties hereto agree as follows:

1. Seller agrees to sell to Buyer and Buyer agrees to purchase the Airplanes and Spares upon the terms and conditions hereinafter set forth.

2. (a) Simultaneously upon conveyance of title to each Airplane to Seller, such Airplane shall forthwith be delivered to Buyer and Buyer shall accept such delivery at Lockheed Air Terminal, Burbank, California, or at such other place to which the Airplane has been delivered to Seller.

(b) Seller shall deliver the Spares, or cause them to be delivered, to Buyer at Kansas City, Missouri, or such other place as may be designated by Buyer, such deliveries to be made upon delivery of the first Airplane to Buyer, or as soon thereafter as practicable, and with respect to Spares not then delivered to Seller, upon delivery of such Spares to Seller, or as soon thereafter as practicable.

3. (a) The purchase price of each Airplane for purposes of this Contract shall be the aggregate of

(1) The amounts Seller shall have paid Lockheed for such Airplane at the time of its delivery to Buyer hereunder;

(2) All additional direct costs which have been paid or incurred by Seller at the time of the delivery of such Airplane to Buyer and are attributable to such Airplane, including, but not limited to, costs of "customer furnished equipment".

To the extent that any such costs are not specifically attributable to a particular Airplane they shall be allocated equally among the Airplanes at the time not delivered to Buyer;

(3) An amount equal to interest at the rate of three per cent (3%) per annum on the average amount of the outstanding advance payments made by Seller applicable to such Airplanes; less, however, an amount equal to the sum of all interest payments received by Seller from Lockheed for advance payments made by Seller to Lockheed in connection with the purchase agreement between them covering the Airplanes. Said sum of interest payments received by Seller from Lockheed shall be credited only against that part of the purchase price provided for by this subparagraph (3), and shall in no event reduce that part of the purchase price represented by subparagraphs (1) and (2) of this paragraph. The average amount of the outstanding advance payments applicable to each Airplane shall be computed by considering the payments made or costs incurred as set forth in subparagraphs (1) and (2) of this paragraph 3(a) as outstanding from the respective dates such payments were made or such costs were incurred by Seller and until the delivery of such Airplane to Buyer under this Contract.

(b) The purchase price of Spares for purposes of this Contract shall be the aggregate of

(1) the total payments made therefor by Seller to the vendors of such Spares at the time of the delivery of the first Airplane to Buyer hereunder;

(2) all additional direct costs which have been paid or incurred by Seller at the time of the delivery of the first Airplane to Buyer and are attributable to such Spares or to the purchase thereof;

(3) an amount equal to interest at the rate of three per cent (3%) per annum on the average amount of the outstanding advance payments made by Seller applicable to such Spares. The average amount of the outstanding advance payments applicable to Spares shall be computed by considering the payments made or costs incurred as set forth in subparagraphs (1) and (2) of this paragraph 3(b) as outstanding from the respective dates such payments were made or such costs were incurred by Seller and until the delivery of the first Airplane to Buyer under this contract;

(4) any additional amount which, at the time of the delivery of the first Airplane to Buyer hereunder, Seller is committed to pay to suppliers of Spares.

(c) The purchase price of each Airplane and the purchase price of Spares shall each be paid by Buyer to Seller in sixty (60) equal consecutive monthly installments, together with interest on the unpaid balance at the rate of 4 per cent (4%) per annum. The first of such payments relating to each Airplane shall be made at the time of delivery of such Airplane, and the first of such payments relating to Spares shall be made at the time of delivery of the first Airplane. As to each Airplane, and as to Spares, the second and succeeding payments shall be made monthly on the first day of the months succeeding the month in which the first payment is required to be paid, until the

whole of each such purchase price shall have been paid. All payments shall be made to the Seller at the Hughes Tool Company, Houston, Texas.

(d) In the event that the purchase price of the Airplanes differs from the amount computed at the time of the delivery thereof to Buyer hereunder or in the event that the aggregate net amount which Seller is required to pay for the Spares in a final accounting with the suppliers thereof differs from the amount used in computing the purchase price thereof pursuant to subparagraph 3(b), separate and independent adjustments will be made by payment from one party to the other of such difference. Similarly, Seller will reimburse Buyer for any interest paid by Buyer with respect to any portion of the purchase price of the Spares which is unpaid at the time of delivery of the first Airplane hereunder, to the extent and for the period that Seller has not earned such interest by having made payments to the suppliers.

4. Title to the Airplanes and Spares shall not pass to Buyer by delivery, but shall remain in Seller until such time as the purchase price shall have been paid in full and Buyer shall have paid to Seller all other sums then due and payable to Seller hereunder, whereupon absolute title to the Airplanes and Spares shall pass to Buyer.

5. Upon the happening of any one or more of the following events, namely:

(a) default in making any payment, in the manner herein specified, of any monthly installment of the purchase price of the Airplanes or Spares and such default shall continue unremedied for five (5) days after written notice thereof shall have been delivered by Seller to Buyer; or

(b) default shall be made by the Buyer in the observance or performance by the Buyer of any other covenant or agreement contained herein, and such default shall continue unremedied for thirty (30) days after written notice thereof shall have been delivered by Seller to Buyer; or

(c) the Buyer shall become insolvent, or shall file a voluntary petition in bankruptcy, or shall file a voluntary petition or answer seeking or consenting to reorganization pursuant to or purporting to be pursuant to the Acts of Congress relating to bankruptcy or any other statute, state or Federal, for the relief of debtors, or shall be adjudicated a bankrupt, or shall make an assignment for the benefit of creditors, or shall consent to the appointment of a receiver or trustee of or for it or a substantial part of its property; or

(d) an order shall be entered pursuant to or purporting to be pursuant to the Acts of Congress relating to bankruptcy or any other statute, state or Federal, for the relief of debtors approving a petition seeking a reorganization of, or if an order shall be entered appointing a receiver or trustee of, or for any substantial part of the property of, or if a warrant of attachment shall be issued against any substantial part of the property of, the Buyer, and any such order is not dismissed or stayed within sixty (60) days from its entry or such attachment is not dismissed or bonded within thirty (30) days from its levy; or

(e) the Bonds at the time issued and outstanding under that certain Indenture, dated as of December 1, 1954, between Buyer and Irving Trust Company, as Trustee, as said Indenture may have heretofore been or may hereafter be amended, shall be declared and become due and payable,

prior to the date of maturity of such Bonds as set forth therein, upon the occurrence of any of the "events of default" described in said Indenture, as amended (and the Buyer hereby agrees to notify the Seller of any declaration of default forthwith upon the receipt thereof); or

(f) the Notes at the time issued and outstanding under that certain Chattel Mortgage, dated as of December 20, 1954, between Buyer and Irving Trust Company, as Trustee, as said Chattel Mortgage may have heretofore been or may hereafter be amended, shall be declared and become due and payable, prior to the date of maturity of such Notes as set forth therein, upon the occurrence of any of the "events of default" described in said Chattel Mortgage, as amended (and the Buyer hereby agrees to notify the Seller of any declaration of default forthwith upon the receipt thereof);

then Seller may at once (or at any later time) proceed to take possession of the Airplanes and Spares in any manner provided by law, or Seller may at its option, and Seller is hereby empowered to, with or without legal process, and with or without demand, enter upon the premises where the Airplanes or Spares may be and take possession thereof and remove the same. Seller may resell the Airplanes and Spares, so retaken, at public or private sale, with or without having such Airplanes and Spares at the place of sale, and upon such terms and in such manner as Seller may determine. Notice of the intention of Seller to so sell the Airplanes and Spares shall be given by Seller to Buyer at least ten (10) days prior to the time of such sale. Seller may bid and purchase at any such public sale. From the proceeds of any such sale,

Seller shall deduct all expenses for retaking, repairing, storing and selling the Airplanes and Spares, including any reasonable attorneys' fees incurred. The balance of such proceeds shall be applied to the payment of all sums owing to Seller under this agreement and any surplus of such proceeds remaining shall be paid to Buyer or to whoever may be lawfully entitled to receive the same. Buyer shall be under no obligation to Seller for any deficiency resulting from any such sale or to make any payments on account of the purchase price of any Airplane or Spares falling due after Seller has taken possession of such Airplane or Spares pursuant to this provision.

6. From and after delivery of the Airplanes and Spares to Buyer and until absolute title thereto is vested in Buyer or its nominee, or Seller repossesses the Airplanes,

(a) Buyer shall procure and maintain at its expense public liability, passenger liability and property damage insurance in such amounts and with such companies as shall be satisfactory to Seller, covering Seller's liability as holder of legal title to the Airplanes and Spares. The policies evidencing such insurance shall contain such provisions as shall be satisfactory to Seller and shall name Seller as assured.

(b) Buyer shall at its expense maintain all risk aircraft hull insurance in respect of the Airplanes in favor of Buyer and Seller, as their interests may appear, in such amounts and with such companies as shall be satisfactory to Seller. If any such Airplane shall be lost, destroyed or damaged to such an extent that repair thereof is impractical, such insurance shall be paid to the Seller to the extent of the unpaid balance of the purchase price of

such Airplane together with any accrued and unpaid interest thereon, plus all other amounts then due to Seller hereunder. Upon such payment to the Seller of insurance to the extent of the unpaid balance of the purchase price of any Airplane, absolute title to the Airplane so damaged or to any parts of an Airplane so destroyed shall vest in Buyer and Seller shall deliver to Buyer such proper documents of title with respect thereto as Buyer may reasonably require. Buyer shall be under no obligation to make any payments on account of the purchase price of such Airplane falling due after such loss, destruction or damage. Any insurance proceeds in excess of the amount payable to the Seller, and any insurance proceeds payable as a result of damage not rendering repair impractical, shall be payable to Buyer or its designee.

7. Buyer may at any time pay to Seller the unpaid balance of the purchase price of the Airplanes and Spares or any part thereof, without premium or penalty.

8. Upon the payment to Seller of the balance of the purchase price of the Airplanes and Spares together with all other amounts owing to Seller hereunder, Seller shall deliver to Buyer at such place in the United States as Buyer may designate:

(a) a bill of sale duly vesting in Buyer the title to the Airplanes and Spares free and clear of all liens, claims, charges and encumbrances attaching subsequent to the delivery of the Airplanes and Spares to Seller and not arising out of the possession, use or operation of the Airplanes and Spares by Buyer, and

(b) such other appropriate documents of title with respect thereto as Buyer may reasonably require.

9. In the event any sales tax or use tax is hereafter imposed upon or paid by Seller by reason of the sale or use of the Airplanes and Spares or the purchase thereof by Seller, then in addition to the sales price provided for in paragraph 3, Buyer shall pay to Seller the amount thereof, upon demand.

10. Buyer shall furnish Seller forthwith and from time to time thereafter at reasonable intervals, all such information concerning Buyer's financial condition, including balance sheets and forecasts of earnings, as is customarily furnished to a commercial bank holding or considering the acceptance of unsecured notes of a borrower.

11. The Buyer agrees that it will pay and discharge all taxes, assessments, governmental charges and all charges for keep, repairs, storage, maintenance or accessories, which if unpaid might become a lien, charge or encumbrance upon or against any of the Airplanes or Spares; and upon the failure of the Buyer so to do the Seller may make any such payment; provided, however, that nothing herein contained shall require the Buyer to pay such tax, assessment or charge so long as the Buyer shall in good faith contest the validity thereof and shall furnish the Seller such bond or indemnity as the Seller shall require, unless, in the judgment of the Seller, forfeiture is likely to result from any such failure to pay. Any sum or sums so paid by the Seller, together with interest thereon at the highest lawful contract rate, shall be and become a part of the sum which the Buyer is required to pay under this Contract, and shall immediately, without demand, be due and be repaid by the Buyer to the Seller.

The Buyer will, upon written request from the Seller,

(a) reimburse the Seller for all filing or recording fees incurred in connection with filing or recording or refiling or re-recording this Contract and all supplements and additions hereto, if any;

(b) execute and deliver to the Seller all such further documents and instruments and do such further acts as may be necessary to perfect the rights of the Seller herein contemplated; and

(c) furnish to the Seller at reasonable intervals reports and certificates setting forth all the information necessary to inform the Seller as to the continued existence, location and condition of the Airplanes and Spares. The Seller shall also have the right to inspect the Airplanes and Spares at all times when the same are not in use and when such inspection can be had without undue inconvenience or expense to the Buyer.

12. Buyer agrees to maintain the Airplanes and Spares in good repair and working condition at its own expense, except any airplane lost, destroyed or so damaged that insurance with respect thereto is payable to the Seller pursuant to paragraph 6 hereof. Subject to the proper performance of such covenant, the Buyer may make repairs and replacements to the Airplanes and Spares and may substitute for engines, propellers and any other equipment installed in or attached to the Airplanes or Spares, engines, propellers or other equipment of substantially the same kind and value; provided, however, that no removal of any such engines, propellers, or equipment, and no replacement thereof, shall divest Seller of its superior title thereto,

or render any such removed or replaced equipment subject to the lien or claim of any person other than Seller, UNLESS and UNTIL such equipment is replaced by equipment of substantially the same kind and value, the title to which, upon such equipment being installed in or attached to the Airplanes or Spares, may validly vest in Seller free and clear of the lien or claim of any other person, subject to the provisions of paragraph 14 hereof. In the case of any such permitted substitution, title to the substituted equipment shall immediately vest in Seller and become subject to the provisions of this Conditional Sale Contract and remain so vested and so subject unless and until substituted for in the manner hereinabove permitted; and title to the equipment substituted for shall vest in Buyer.

13. Until title to the Airplanes and Spares shall have passed to the Buyer hereunder, the Buyer shall have no right, power or authority to sell, transfer, assign, mortgage or encumber or in any other manner whatsoever dispose of the Airplanes and Spares or any part thereof (except as provided in paragraph 12 hereof) or any interest therein, and the Buyer hereby agrees that, except as permitted by paragraph 12 hereof, the Buyer will not (voluntarily or involuntarily) sell, transfer, mortgage, encumber or in any other manner whatsoever dispose of the Airplanes and Spares or any part thereof or any interest therein. Buyer agrees, except as provided herein, that the Airplanes and Spares will be used exclusively for its commercial air transport operations and related activities and that it will not permit the Airplanes and Spares to be used or possessed by others. Buyer may permit the use of the Airplanes and Spares by other airlines with which Buyer enters into interchange

agreements provided that any such use by other airlines shall for the purposes of this agreement be considered to be use by the Buyer.

14. To the extent, if any, that there is a conflict between any of the provisions of this agreement and any of the provisions of the Indenture of Mortgage dated as of December 1, 1954 between the Buyer and Irving Trust Company, as Trustee, or of the Chattel Mortgage dated as of December 20, 1954 between the Buyer and Irving Trust Company, as Trustee, the provisions of said Indenture and said Chattel Mortgage shall prevail and the provisions of this agreement shall be deemed amended to the extent necessary to avoid such conflict. Seller recognizes the liens created by (a) Granting Clause VI of said Indenture and (b) Granting Clause III of said Chattel Mortgage as prior liens on the aircraft engines and on the propellers, appliances and spare parts relating to the Airplanes or Spares when and so long as they shall be installed in, attached to or incorporated in any of the aircraft or aircraft engines at any time subject to the lien of said Indenture or of said Chattel Mortgage, as the case may be.

Seller agrees that so long as all the Bonds issued under said Indenture at the time outstanding shall be held by the original purchaser thereof, (a) Seller will not repossess the Airplanes or Spares, in the event of a default by Buyer under this agreement, without affording such original purchaser reasonable notice of such default and a reasonable opportunity to remedy the same and (b) such original purchaser shall have the right, at its option, to purchase at any time all the interest of Seller hereunder by paying to Seller the then remaining balance of the purchase price hereunder plus accrued interest.

Seller also agrees that in the event of a default by Buyer hereunder, the rights and remedies of Seller shall be limited to repossession of the Airplanes and Spares.

15. Before delivery of each Airplane to Buyer hereunder, Buyer will cause to be fastened thereon in a location reasonably adjacent to, and not less prominent than that of, the airworthiness certificate for such Airplane, a name plate no larger than four inches by seven inches (4" x 7") bearing the following legend:

"Hughes Tool Company holds legal title
to this Airplane as Conditional Seller."

Buyer shall maintain such name plate in such location or in one of at least equal prominence and visibility at all times. Buyer may affix to the Airplanes Buyer's name, insignia or other legends customarily displayed by Buyer on its airplanes.

16. Buyer shall indemnify and hold harmless Seller, its agents and its employees from any and all liability for losses, expenses, damages, demands and claims in connection with or arising out of any death of, or injury or alleged injury or damage to, persons or property sustained, or alleged to have been sustained, in connection with or arising or alleged to have arisen out of Buyer's possession, use or operation of the Airplanes or Spares and Buyer agrees to handle any claim and defend any suit or action brought against Seller, its agents or its employees, or any of them, based on any such death, injury or damage, or alleged injury or damage, and to pay all damages, costs and expenses, including attorneys' fees, in connection therewith or resulting therefrom.

Buyer's liability to Seller under this paragraph 16 is conditioned upon Seller's promptly giving notice to

Buyer of institution of such suit or action or of receipt of such claim or demand. Buyer shall have the option at any time to conduct negotiations with the party or parties making any such claim or demand, and may intervene in any such suit or action. Whether or not Buyer intervenes in any such suit or action, it shall be entitled to assume, conduct or control the defense thereof, and Seller shall not settle or discharge any such claim, demand, suit, action or judgment without prior notice to and the consent of Buyer.

IN WITNESS WHEREOF, the parties hereto have executed and delivered this agreement as of the day and year first above written.

Application

of

HUGHES TOOL COMPANY

a Delaware corporation, for approval by the Civil Aeronautics Board, if such approval is deemed necessary, of control of Transcontinental & Western Air, Inc., an air carrier, under Section 408 of the Civil Aeronautics Act of 1938.

TO THE HONORABLE, THE CIVIL AERONAUTICS BOARD:

The Applicant, Hughes Tool Company, a Delaware corporation, respectfully submits to the Board the following:

1. The name and address of the Applicant is Hughes Tool Company, Gulf Building, Houston, Texas. All the stock of Hughes Tool Company is owned by Mr. Howard R. Hughes, who is a resident of Houston, Texas, and a citizen of the United States.

2. Hughes Tool Company, as of July 31, 1943, owned 440,050 shares of the capital stock of Transcontinental & Western Air, Inc., being equal to 45.6 percent of a total of 965,083 shares outstanding on that date. Transcontinental & Western Air, Inc., also a Delaware corporation, is an air carrier under the Civil Aeronautics Act of 1938 as amended, holding certificates of convenience and necessity for the transportation of persons, property and mail for routes 2, 36,

287]

3. Hughes Tool Company is principally engaged in the manufacture of oil field equipment, and is also engaged in the development and manufacture of aircraft through a department operated under the name of "Hughes Aircraft Company", with its principal place of business at Florence Avenue and Teale, Culver City, California. This department is engaged entirely

288] in the development and manufacture of aircraft for the Government or for war purposes.

4. Applicant hereby seeks the approval by the Civil Aeronautics Board, if such approval is deemed necessary, of the control by the Applicant of Transcontinental & Western Air, Inc.

WHEREFORE, the Applicant prays that the Board acting pursuant to Section 408 of the Civil Aeronautics Act of 1938, as amended, enter an order granting the approval sought herein, if such approval is deemed necessary, and, if not necessary, enter an order to that effect; and that the Board grant the Applicant such other and different relief as it may deem proper.

Dated November 15, 1943.

Respectfully submitted,

HUGHES TOOL COMPANY

DOCKET NO. 1182

HUGHES TOOL COMPANY CONTROL OF TWA

Approval recommended of the acquisition of control by Hughes Tool Company of Transcontinental and Western Air, Inc., under section 408 of the Civil Aeronautics Act of 1938, as amended, subject to certain conditions.

Appearances:
George A. Spater for Hughes Tool Company
Sadie B. Arbuthnot for the Department of Justice
Louis A. Goeckind, Public Counsel.

REPORT OF P. A. LAW, JR., EXAMINER

Hughes Tool Company, an industrial corporation, by application duly filed, seeks approval by the Board "if such approval is deemed necessary" under section 408 of the Civil Aeronautics Act of 1938, as amended, of the acquisition by it of control through stock ownership of Transcontinental and Western Air, Inc., hereinafter called TWA, an air carrier within the meaning of section 1(2) of the Act. After notice, hearing was held and briefs have been filed. The Department of Justice was authorized to intervene.

Under section 408(a)(5) it is unlawful, unless approved by the Board, for any air carrier or person controlling an air carrier, any other common carrier or any person engaged in any other phase of aeronautics, to acquire control of any air carrier in any manner whatsoever. By the language of section 408(b) the Board is required to grant such approval subject to such reasonable terms and conditions as are required in the circumstances unless it is found that the acquisition will not be consistent with the public interest.

Hughes Tool is a Delaware Corporation, all the stock of which is owned by Howard R. Hughes. Its principal business, located at Houston, Tex., is and has been the manufacture of rock bits, tool joints, and high pressure valves for the oil well drilling industry. The company is a family enterprise, founded by the father of the present owner, who was engaged in the oil industry. In its own field Hughes Tool has been and

is highly successful. As of November 30, 1943, its capital and earned surplus aggregated nearly $21,500,000. Its current assets aggregated more than $22,000,000 against current liabilities of approximately $10,770,000.

Howard R. Hughes is a well known aviator and aeronautical engineer who until recent years was interested in aeronautics principally, if not wholly, as a hobby. As an aviator he has been the winner of various trophies and is the holder of various speed records. As an aeronautical engineer he has designed or collaborated in the design and construction of aircraft for speed tests and more lately for air transport.

Hughes Tool first became interested in TWA at the solicitation of the president of TWA, a personal friend of Howard R. Hughes. In March 1939, the first purchase of stock, amounting to 600 shares, was made. By the end of that year, Hughes Tool was the owner of 157,700 shares of common stock of TWA. This amount had grown to more than 400,000 shares, or 42.1 percent of the then outstanding total at the end of 1940. At the end of 1942 Hughes Tool owned 440,050 shares or 45.6 percent of a total of 965,173 shares outstanding. All of this stock except 119,154 shares purchased on March 2, 1940, directly from the TWA treasury, was acquired through open market or brokerage transactions. The total investment of Hughes Tool in the stock of TWA is approximately $5,535,000.

For the purpose of this proceeding applicant has stipulated that the stock now owned constitutes control of the carrier, but for practical purposes such control has existed since the end of 1940 at least, and the Hughes influence, had it been exercised, might have been effectively felt in 1939 when the ownership as stated reached 157,700 shares. Aside from the stipulation of counsel, very little discussion is required to demonstrate that control exists and has existed since 1940. Such a proportion of the outstanding stock as that then owned, when solidly held and consistently voted, represents such a dominating influence in the affairs of a corporation that control, either affirmative or negative, must follow. Much smaller interests have been found so to do. 1/

No individual holds or has held office in both Hughes Tool and TWA except for the employment in an advisory capacity by Hughes Tool of the president of TWA, Mr. Jack Frye.

Prior to 1939 the only activity of Hughes or of Hughes Tool associated with any phase of the aircraft industry was experimental and developmental work upon the privately owned and operated equipment of Mr. Hughes or the company. No commercial activities of any character existed. The first activity of Mr. Hughes in any phase of commercial

aeronautics followed the acquisition of an interest in TWA. In the late spring and early summer of 1939, Messrs. Hughes and Frye collaborated in the design of a 4-motored airplane developed for use by TWA in commercial air transportation. They began negotiations with several aircraft manufacturing concerns regarding construction, resulting in an agreement between Hughes Tool and Lockheed Aircraft Corporation on June 30, 1939, before control of TWA by Hughes Tool was obtained for the construction and delivery of five airplanes to be known as "Ex-Calibur-4". The name later was changed to Constellation and will be referred to hereinafter as such.

This contract restricted the manufacture and sale of the Constellation type aircraft to others than Hughes Tool or TWA. It was later modified to authorize their sale to the Governments of the United States and Great Britain, to Pan American Airways, Inc., and to Koninklijke Luchtvaart Maatschappij, known as "KLM", and the number to be purchased by Hughes Tool was increased to a total of 40. In 1941 the board of directors of TWA authorized the air carrier to accept assignment of the Hughes-Lockheed agreement, and in 1942 Hughes Tool, with the approval of Lockheed assigned to TWA all of its right, title, and interest therein. Under the agreement, TWA is to purchase 15 aircraft and Hughes Tool 25, the latter being purchaseable under an option through TWA. The option to purchase the 25 is subject to cancellation upon appropriate notice. At the present time all of the Constellation type aircraft built are deliverable for military use subject to an option to reacquire a total of 40 by repurchase from the Government. Restrictions against the manufacturer which would prevent the sale of Constellation type aircraft for domestic air transport use except by TWA continues under existing contracts. When made, the Constellation agreements were for the benefit, and at the request of TWA, and to evidence TWA's interest, it was given the option to be substituted for Hughes Tool as the direct contracting party. The obvious, if not the expressed, purpose of these arrangements was to give TWA the benefit of the credit and financial standing of Hughes Tool in a transaction involving substantial financial responsibility. As to the 25 airplanes subject to the option of Hughes Tool, the record indicates that these, if the option is exercised, will be held for resale and for experimental use. Should applicant not exercise its option, it is still party to contracts restricting distribution of the aircraft even by resale, so as to prevent their use in domestic air service except by TWA.

In addition to its interest in the purchase and sale of Constellation type aircraft, Hughes Tool in 1942 began production as a subcontractor of aircraft parts for use in aircraft built as weapons for or transport by the United States military forces. Since that beginning, either directly or through subsidiary or affiliated companies, applicant has expanded and diversified its production activities in furtherance of the war effort. There is no evidence, however, of an intention to continue the manufacture of aircraft or aircraft parts or to otherwise engage in a phase of aeronautics on a commercial basis after the war. There is evidence to indicate only that Hughes Tool may continue developmental and experimental work in aviation.

Jurisdiction of the Board in the proceeding is questioned by the application when it asks approval "if such approval is deemed necessary". Under the section of the act involved, there are three elements of jurisdiction: (1) there must be an acquisition of control; (2) the party sought to be controlled must be an air carrier; and (3) the acquirer must be engaged in a phase of aeronautics. As to the first two there is no doubt. There has been an acquisition of control, and TWA is an air carrier. As to none was any serious objection to the Board's jurisdiction interposed during the course of the proceeding subsequent to the filing of the application. As the case has proceeded, it has become quite clear that neither the applicant nor TWA oppose assumption of jurisdiction by the Board and the making of statutory finding required by the act. The pertinent question is whether Hughes Tool is engaged in a phase of aeronautics as contemplated by section 408 of the act. Particularly significant in this regard is the fact that Hughes Tool is at present obligated to purchase a substantial fleet of aircraft, at least a part of which may be held for resale for commercial airline operation. It thus may under its contracts, if it has not already, become a dealer in such equipment and thus engaged in a phase of aeronautics, which renders unlawful the acquisition of control of the air carrier without the consent of the Board. While some basis for reasonable doubt in the mind of the applicant may have existed at the time control of TWA was obtained, the fact that applicant is authorized to become a dealer in second hand air transport equipment supports jurisdiction of the Board herein as urged by Public Counsel. The consummation of its plan is not essential to this conclusion. 2/

Under the present and contemplated operations of Hughes Tool no adverse effect upon the public interest can be foreseen. Applicant is not now engaged in and has no plans contemplating production of aircraft, aircraft parts, or facilities for use in commercial air transportation. So far as the possibility of TWA acquiring from the applicant aircraft which the applicant is obligated to purchase under existing agreements is concerned, the price is firmly established so as not to exceed costs, and in view of what might be referred to as the paternalistic attitude of Hughes Tool up to the present, the likelihood that TWA might be forced to purchase more than the economic operations of TWA require is remote, but such a possibility exists. That no presently existing harm or unethical purpose is apparent is not conclusive as to the future. However, the possibility of wrong doing is no basis for the interruption of a relationship which has not proven harmful, but on the contrary has been and may continue to prove helpful to the air carrier. Remembering that the interest of applicant in the air carrier had its inception in an effort to be helpful in the consummation of plans conceived and initiated by the air carrier itself, it is not inconsistent with the public interest that the relationship continue, but because of the possibilities existing therein, it is proper that the Board in observance of the obligations imposed upon it by the act insure against any temptation which may later come to the applicant to take advantage of the relationship to its own profit and to the detriment of the public interest by

granting its approval subject to such reasonable conditions as will enable it in the future to adequately protect the public interest.

The Department of Justice urges that the restraint which has been placed upon the sale of Constellation type of aircraft for use in domestic air service, together with other facts in the case, be especially considered by the Board in determining the nature and scope of any order which may be entered. It urges further that the Board's approval, if granted be bottomed upon the fact that Hughes Tool is not now engaged in the manufacture of aircraft or aircraft parts for commercial use, and suggests that the Board reserve jurisdiction in the proceeding for the purpose of reconsideration in the event that this condition change in the future. Applicant in response asserts that the restraint referred to would exist whether or not Hughes Tool has control and, contending that the Constellation type of aircraft is primarily an engineering development of and for T.W.A., believes the restraint is usual, appropriate and reasonable. As an alternative it suggests that if any condition is attached to the Board's approval, applicant be required to return for further consideration only if Hughes Tool enters commercial production of aircraft or aircraft parts and T.W.A. undertakes to purchase them.

On brief Public Counsel recommends that the Board approve the acquisition of control herein upon elaborate conditions. He would provide that the approval terminate in the event that either Hughes Tool or Howard R. Hughes engage directly or indirectly in the production or disposition of aircraft or aircraft parts for use in interstate, overseas or foreign air transportation, excepting from this condition, however, the 25 Lockheed Constellation airplanes as to which Hughes Tool now holds the right of repurchase from the United States through T.W.A. He would also provide that no compensation shall be paid to Hughes by T.W.A. for any participation by him as aeronautical engineer in the development or design of aircraft or aircraft parts; and that Hughes shall not attempt directly or indirectly to influence the air carrier in its decision to purchase aircraft or aircraft parts in the development or design of which Hughes may have participated to a substantial degree. The apparent intent of the condition is to restrain Hughes or Hughes Tool directly, or by indirection through any associate or affiliate from engaging in any manner in the manufacture, production, or disposition of any item of property which goes or might go into the creation of aircraft susceptible of use for commercial air transport. On pain of forfeiture of the Board's approval subjecting applicant to the penalties of the Act, the condition as proposed conceivably could stifle research and development work even of the character of that which Hughes Tool has heretofore performed. Considering that the applicant took immediate exception to the proposal of the Department of Justice as being too restrictive, it is reasonable

It would hardly be consistent with the public interest for TWA to be prevented from taking reasonably limited advantage of the benefits which might result from the research and development work of the controlling industry, if that corporation should at some future time undertake to manufacture articles useful in commercial air transportation. Applicant suggests that any condition attached by the Board to its approval provide that if Hughes Tool Company should commence the manufacture of aircraft or aircraft parts suitable for commercial use and that if TWA should desire to acquire such aircraft or aircraft parts, then TWA and HughesTool should be required to return to the Board for further hearing upon continuation of the relations between TWA and Hughes Tool. It insists that such a condition would permit applicant to know exactly where it stands and yet provide all the protection of the public interest contemplated by section 408 in the case of relationships between the manufacturer and an air carrier.

Mr. Hughes is an acknowledged expert in some phases of aviation. Unreasonable restrictions might, and probably would, result in depriving the air carrier of the benefit of his advice. It is possible that the experimental and development work of the applicant in its behalf or in behalf of Mr. Hughes himself, if continued, may result in the development, and possibly manufacture of one or more parts of aircraft of major benefit not only to the applicant but to the entire air transport industry. Such a possibility should not be prevented by placing in jeopardy the large investment made in the air carrier. The object of any condition to the continued control of TWA by the air carrier inserted at this time in the authority granted by the Board should be to protect the public interest from infringement by any attempt either to give TWA an unfair competitive advantage or to subject it to unreasonable demands through the influence of the controlling industry. This can be accomplished by a reasonable limit upon commercial transactions between the acquirer and the acquired which may be had without further consideration in this proceeding by the Board.

It is recommended that the Board find that control of Transcontinental & Western Air, Inc., by Hughes Tool Company is not inconsistent with the public interest so long as commercial transactions between the or between TWA and any affiliate or subsidiary of Hughes Tool is limited to aircraft parts or accessories, the complete item price of which does not exceed $25 each, with the further limitation that the total annual expenditure therefor by either party shall not exceed $10,000. It should be provided further that the Board shall retain jurisdiction in this proceeding to take appropriate action, upon breach of this condition or upon petition for waiver thereof in any manner whatsoever, and that the restriction shall not affect the existing contractual right of applicant to reacquire Constellation aircraft through TWA.

before the

CIVIL AERONAUTICS BOARD

Washington, D. C.

In the Matter of the Application of	:	
HUGHES TOOL COMPANY	:	
for approval under Section 408 of the Civil Aeronautics Act of 1938, as amended, of the acquisition of control of	:	Docket No. 1182
TRANSCONTINENTAL & WESTERN AIR, INC.	:	

MOTION FOR APPROVAL OF PURCHASE OF TWO CONSTELLATION AIRPLANES

Transcontinental & Western Air, Inc., a Delaware corporation (herein referred to as "TWA"), respectfully moves the Board to enter an order herein approving the contemplated sale by Hughes Tool Company to TWA of two Lockheed Constellation airplanes bearing Manufacturer's Serial Nos. 049-1969 and 049-1970, which Hughes Tool Company now owns, and that the Board modify its order approving the acquisition by Hughes Tool Company of control of TWA, Order Serial No. 3210, issued October 17, 1944, as amended by Order Serial No. 4437, issued January 26, 1946 and Order Serial No. E 922, issued October 29, 1947, so as to permit the sale of such aircraft.

IN SUPPORT OF SUCH MOTION, TWA shows to the Board:

1. By agreement dated as of October 1, 1948, a copy of which is attached hereto as "Exhibit 1", Hughes Tool Company has agreed to sell and TWA has agreed to purchase, subject to the approval herein requested and to the other conditions set forth in such agreement, the two Constellation airplanes above referred to at the cost of said airplanes to Hughes Tool Company, which cost is not to exceed an aggregate price of $1,090,000, all as more particularly set forth in such agreement.

2. Hughes Tool Company acquired airplane Serial No. 049-1969 from the United States Government through TWA pursuant to rights reserved by TWA and Hughes Tool Company in connection with the sale by TWA of such airplane to the Army Air Force during the War. Hughes Tool Company purchased airplane Serial No. 049-1970 from Lockheed Aircraft Corporation. Airplane No. 049-1970 has been and No. 049-1969 is in the process of being converted by Lockheed Aircraft Corporation from military to commercial versions including complete overhaul and modification to meet current CAA requirements in the air transport category.

In support of the foregoing, the affidavit of Frank H. McDonnell is attached hereto as "Exhibit 2" and by this reference made a part hereof.

3. Said airplanes are to be used by TWA on a no-charge basis pending action of the Board on this motion, in accordance with the Board's letter of October 6, 1948, a copy of which is attached hereto as "Exhibit 3".

4. As will more particularly appear from the affidavit of Warren Lee Pierson attached hereto as "Exhibit 4" and by this reference made a part hereof, said airplanes are required by TWA for use in its domestic operations; the manufacture of airplanes of this model has been discontinued; TWA has recently purchased twelve Lockheed Model 749 Constellation airplanes for a price of approximately $910,000 per airplane; and the price to be paid by TWA to Hughes Tool Company for said airplanes is substantially below the price paid by TWA for airplanes of the same model purchased by it from Lockheed Aircraft Corporation in May of 1947.

WHEREFORE, TWA respectfully moves the Board to enter an order herein approving the sale by Hughes Tool Company to TWA of two Lockheed Constellation airplanes as hereinbefore set forth,

and for such other and further relief as may be appropriate.

Respectfully submitted,

TRANSCONTINENTAL & WESTERN AIR, INC.

SALES AGREEMENT

THIS AGREEMENT, made and executed in duplicate as of the first day of October, 1948, by and between HUGHES TOOL COMPANY, a Delaware corporation (hereinafter sometimes called "Seller"), with its principal place of business at Houston, Texas, and TRANS-CONTINENTAL & WESTERN AIR, INC., a Delaware corporation (hereinafter sometimes called "Buyer"), with its principal place of business at Kansas City, Missouri:

WITNESSETH:

WHEREAS, Seller desires to sell and Buyer desires to purchase two Lockheed Model 49 Constellation type airplanes which Seller now owns or has contracted to purchase;

NOW THEREFORE, in consideration of the mutual covenants hereinafter contained, the parties hereto agree as follows:

1. Seller shall sell and deliver to Buyer and Buyer shall purchase and accept delivery of two Lockheed Model 49 airplanes bearing Lockheed Serial Nos. 049-1969 and 049-1970. At the time of delivery said airplanes shall physically conform to the airplane description contained in the Lockheed Report No. E-5470-7 dated May 21, 1948, as modified by Contracts Nos. LD-45 and LD-46 dated February 3, 1948, between Seller and Lockheed Aircraft Corporation; copies of said Report and Contracts have been examined by and are in the possession of Buyer. It is understood that Seller makes no warranties whatsoever regarding said airplanes but that Buyer accepts in lieu thereof the obligations of Lockheed Aircraft Corporation as set forth in said Contracts, which obligations Lockheed Aircraft Corporation has agreed shall run in favor of Buyer as evidenced by instrument attached hereto, marked "Exhibit A", and hereby made a part hereof, and Seller hereby assigns to Buyer Seller's rights under said contracts after aircraft delivery thereunder.

2. Each of said airplanes shall be delivered to Buyer by Seller and Buyer shall accept delivery thereof at Los Angeles Municipal Airport, or such other place as may be mutually agreed upon, as soon as is practicable after the airplanes have been completed by Lockheed Aircraft Corporation and approval to this sale is granted by the Civil Aeronautics Board.

3. The sales price of each airplane shall be the cost thereof to Hughes Tool Company and for the purposes of this agreement shall be established at FIVE HUNDRED FORTY THOUSAND DOLLARS ($540,000.00), subject to the following provision: at such time as the total cost of both airplanes is finally determined, based on the books and records of the Hughes Aircraft Company Division of Hughes Tool Company, any variation from said established price shall be promptly paid by the Buyer or refunded by the Seller, as the case may be, provided that in no event shall said sales price exceed an average of FIVE HUNDRED FORTY-FIVE THOUSAND DOLLARS ($545,000.00) per airplane. Payment thereof shall be made by Buyer to Seller in consecutive monthly installments in the amount of NINE THOUSAND DOLLARS ($9,000.00) or more. The first of such payments relating to each airplane shall be made at the time of the delivery of such airplane, and one of the remaining payments shall be made each calendar month thereafter, in accordance with the promissory note hereinafter provided for, until the whole of the sales price shall have been paid. Buyer's obligation to make the payments, after the first payment, relating to each of said airplanes, shall be evidenced by a negotiable installment promissory note dated, at Los Angeles, California, as of the date of the delivery of such airplane, payable to Seller or order by Buyer and bearing interest on the principal thereof at the rate of Two Per Cent (2%) per annum, payable monthly. Such note shall provide for the payment of the principal in consecutive monthly payments of NINE THOUSAND DOLLARS ($9,000.00) or more, commencing one month after the delivery of such airplane.

Such promissory note shall be executed and delivered by Buyer to Seller at the time of the delivery of such airplane, and shall be in the form of "Exhibit B", attached hereto, and by this reference made a part hereof. The promissory note relating to each airplane shall be secured by a Chattel Mortgage, covering such airplane, which shall be a first lien on such airplane and shall be substantially in the form of the Chattel Mortgage entered into by and between Buyer and Lockheed Aircraft Corporation as of May 12, 1947, and the Supplemental Chattel Mortgage dated May 15, 1947, both relating to airplanes sold to Buyer under the terms of a certain Sales Agreement, designated as Contract No. LD-33, dated March 27, 1947, between Buyer and Lockheed Aircraft Corporation. Upon the happening of any one or more of the following events, namely:

(a) The breach on the part of the Buyer of any covenant or agreement of the Chattel Mortgage to be observed, done or performed by the Buyer;

(b) The occurrence of any event of default as provided in the Chattel Mortgage;

(c) Failure to make payment when due, and within five (5) days after demand in writing is made for payment, of the principal or of any interest of any promissory note hereinbefore referred to;

then the unpaid principal and accrued interest of both of such promissory notes shall become immediately due and payable without demand and without notice, and Buyer agrees forthwith to pay the same; or

(d) If Buyer shall divest itself, or be divested, in whatsoever manner, of title to either such airplane; or

(e) If either such airplane is lost, destroyed or damaged beyond repair;

then the unpaid principal, and accrued interest thereon, of the promissory note relating to such airplane shall become immediately due and payable without demand or notice and Buyer agrees forthwith

to pay the same. Each successive holder of each such promissory note shall have the benefit of, and may enforce the rights contained in, the foregoing provisions relating to the acceleration of maturity of such promissory note. The provisions hereof and any contained in the applicable Chattel Mortgage relating to the acceleration of the maturity of such note shall be deemed to be cumulative and not exclusive and the existence of such provisions in either instrument shall not preclude the exercise of any right set forth in the other. All payments made pursuant to this agreement shall be made in lawful money of the United States of America or by check drawn upon, and duly certified by, a member bank of the United States Federal Reserve System and payable in such money, and, unless otherwise provided, at Seller's office in Houston, Texas.

4. Buyer shall furnish Seller forthwith, and from time to time thereafter at reasonable intervals and in any event upon request at such time or times as Seller shall be engaged in offering to sell or discount either or both of said promissory notes to a bank or other prospective purchaser, all such information concerning Buyer's financial condition, including balance sheets and forecasts of earnings, as is customarily furnished to a commercial bank holding or considering the acceptance of unsecured notes of a borrower or prospective borrower therefrom. Seller shall hold such information in confidence except to the extent it reasonably deems it necessary to divulge the same to such bank or prospective purchaser in connection with the sale or discount of such note or notes.

5. In the event any sales tax or use tax is hereafter imposed upon or paid by Seller by reason of the sale or use of the airplanes or in connection with the modification thereof by Lockheed Aircraft Corporation under said Contracts LD-45 and LD-46, then in addition to the sales price provided for in section 3, Buyer shall pay to Seller the amount thereof, upon demand.

6. This agreement shall not be effective for any purpose

unless and until the Buyer has secured all consents and approvals to the extent required under or by reason of any prior commitment in order to avoid Buyer's execution of this instrument as constituting a default thereunder.

7. This agreement is entered into subject to the approval of the sale herein provided for by the Civil Aeronautics Board and in the event such approval is not granted within sixty (60) days from the date hereof, this agreement shall be deemed to be ineffective for any purpose.

8. Upon the securing of all the consents and approvals hereinbefore referred to, this agreement shall become binding and effective as of the day and year first above written.

IN WITNESS THEREOF the parties hereto have executed and delivered this Agreement as of the day and year first above written.

In the matter of the application of HUGHES TOOL COMPANY for approval under section 408 of the Civil Aeronautics Act of 1938, as amended, of the acquisition of control of TRANSCONTINENTAL & WESTERN AIR INC.	Docket No. 1182

ORDER MODIFYING ORDER APPROVING ACQUISITION

A motion having been filed by Hughes Tool Company for an order modifying Order Serial No. 3210 issued October 17, 1944 in this docket, as amended by Order Serial No. 4437 issued January 26, 1946, as modified by Order Serial No. E-922 issued October 29, 1947, so as to permit the sale of two Lockheed Constellation airplanes bearing manufacturer's Serial Nos. 049-1969 and 049-1970 by Hughes Tool Company to Transcontinental and Western Air, Inc. ("TWA") pursuant to the terms and conditions of the sales agreement dated October 1, 1948, as amended by agreement of December 1, 1948, between said parties; and

The Board, acting pursuant to the powers vested in it by the Civil Aeronautics Act of 1938, as amended, particularly 205(a), 408

and 1005(d) thereof, and finding that the further modification of its order in Docket No. 1182, as amended and modified, hereinafter provided for is just and reasonable and is in the public interest;

IT IS ORDERED THAT:

Order Serial No. 3210 issued October 17, 1944, as amended by Order Serial No. 4437 issued January 26, 1946, as modified by Order Serial No. E-922 issued October 29, 1947, be and it hereby is modified by adding thereto the following:

"5. That the terms of this order shall not restrict the right of Hughes Tool Company to sell to TWA or the right of TWA to purchase from Hughes Tool Company two Lockheed Constellation airplanes bearing manufacturer's Serial Nos. C49-1969 and C49-1970, pursuant to the terms and conditions of the sales agreement dated October 1, 1948, as amended by an agreement dated December 1, 1948, between said parties, provided that the sale shall be reported to the Board in the manner provided in paragraph 2 of the order, and provided further that nothing in the Board's action herein shall be construed as a determination that the equipment here involved is required by TWA in the interest of commerce, the postal service, or the national defense or that the cost thereof to TWA is appropriate for investment and/or rate-making purposes."

Before the

CIVIL AERONAUTICS BOARD

In the Matter of the Application of	:	
HUGHES TOOL COMPANY	:	
for approval under Section 408 of the Civil Aeronautics Act of 1938, as amended, of the acquisition of control of	:	Docket No. 1182
TRANSCONTINENTAL & WESTERN AIR, INC.	:	

MOTION FOR APPROVAL OF PURCHASE OF SIX CONSTELLATION AIRPLANES

Transcontinental & Western Air, Inc., a Delaware corporation (herein referred to as "TWA"), respectfully moves the Board to enter an order herein approving the contemplated sale by Hughes Tool Company to TWA of six Lockheed Constellation Model 049 airplanes bearing Manufacturer's Serial Nos. 2072, 2073, 2074, 2075, 2070 and 2084, which Hughes Tool Company now owns or has contracted to purchase and that the Board modify its order approving the acquisition by Hughes Tool Company of control of TWA, Order Serial No. 3210, issued October 17, 1944, as amended by Order Serial No. 4437, issued January 26, 1946, Order Serial No. E 922, issued October 29, 1947, and Order Serial No. E-2404, issued January 27, 1949, so as to permit the sale of such aircraft.

IN SUPPORT OF SUCH MOTION, TWA shows to the Board:

1. By agreement dated as of February 2, 1950, a copy of which is attached hereto as Exhibit 1", Hughes Tool Company has agreed to sell, on a conditional sale basis,

and TWA has agreed to purchase, subject to the approval herein requested and to the other conditions set forth in such agreement, the six Constellation airplanes above referred to at the cost of said airplanes to Hughes Tool Company less, in the case of one airplane to be used temporarily by Hughes Tool Company, depreciation at the rate of 1/84 per month, all as more particularly set forth in such agreement.

2. These airplanes are being acquired by Hughes Tool Company, four from Air France and two from Lockheed Aircraft Corporation, to assist TWA in increasing its fleet of aircraft. TWA has been endeavoring to purchase additional Constellation airplanes when the availability of these six aircraft was discovered by Hughes Tool Company while it was investigating the possibility of obtaining the use of one Constellation airplane for temporary use for test purposes. Hughes Tool Company immediately advised TWA that these six airplanes were available.

3. The contracts for the purchase of these airplanes were entered into directly by Hughes Tool Company to assist TWA in acquiring such airplanes. It is impossible for TWA to acquire aircraft without obtaining prior consents or waivers under various financial agreements it has entered into in the past. The Indenture of December 1, 1945, as amended, between TWA and The Commercial National Bank and Trust Company of New York, as Trustee, covering the Debentures held by The Equitable Life Assurance Society of the United States, prohibits, under present conditions, the acquisition by TWA of any new aircraft without the consent of the holders of the Debentures. The Chattel Mortgage of August 4, 1949 from TWA to Mellon National Bank and

Trust Company, as Trustee, prohibits borrowings, mortgaging of aircraft, or acquisition of aircraft by conditional sales agreement except after thirty days' written notice by TWA to, and negotiations with, the Lending Banks under such mortgage. Because it would be necessary for TWA to obtain additional financing to acquire these six airplanes, TWA could not have entered into arrangements for their purchase without complying with or obtaining consents or waivers under both of these agreements. By contracting to purchase these airplanes immediately Hughes Tool Company insures that they would be available to TWA upon the completion of the necessary clearances under these agreements.

4. In addition, by selling these airplanes to TWA on a conditional sale basis on the terms outlined in Exhibit 1, Hughes Tool Company is providing TWA with financial arrangements on better terms than would otherwise be available. Under the Bank Credit Agreement which TWA has arranged for the financing of the 20 Constellation Model 749A aircraft which it has contracted to purchase from Lockheed Aircraft Corporation, TWA will pay interest at the rate of 3% per annum and will pay over 35% of the purchase price of the Constellation 749A airplanes from its own funds. Interest payable to Hughes Tool Company is 2-1/2% per annum and the initial payment required is only 10% of the purchase price.

5. Five of the six airplanes are to be used by TWA on a no-charge basis after acquisition thereof by Hughes Tool Company, pending action of the Board on this motion. The sixth airplane, to be selected by TWA, is to be delivered to TWA by Hughes Tool Company on or before

August 31, 1950 after the completion of certain test flights by Hughes Tool Company.

6. The six airplanes are required by TWA for use in its domestic and international operations. The manufacture of Model 049 Airplanes has been discontinued and therefore no such airplanes are available from the manufacturer. TWA is to pay Hughes Tool Company only the price which Hughes Tool Company has paid Air France or Lockheed Aircraft Corporation, as the case may be, for such aircraft, plus such incidental expenses as Hughes Tool Company may incur in connection with purchasing these aircraft for TWA's account. With respect to the one aircraft that is to be used by Hughes Tool Company for a temporary period, the sales price to be paid by TWA is to be reduced by depreciation on the basis of a seven-year life. The purchase price of the 20 Lockheed Model 749A Constellation airplanes which TWA has recently contracted to purchase is approximately $930,000 per airplane.

7. The addition of these six airplanes to TWA's present fleet will permit increased Constellation service and increase revenue mileage and will thus improve TWA's service to the public. It will also enable TWA to increase its gross revenues, improve its cash position in the immediate future and improve TWA's earning position. Because the six airplanes being acquired are of the same model as TWA's present domestic Constellation fleet, such increased service and revenue can be achieved with relatively little increase in overhead expenses, maintenance equipment or spare parts inventories.

WHEREFORE, TWA respectfully moves the Board to

enter an order herein approving the sale by Hughes Tool Company to Pan of six Lockheed Constellation airplanes as hereinbefore set forth, and for such other and further relief as may be appropriate.

Respectfully submitted,

TRANSCONTINENTAL & WESTERN AIR, INC.

SALES AGREEMENT

This agreement, made and executed in duplicate as of the 2nd day of February, 1950, by and between HUGHES TOOL COMPANY, a Delaware corporation (hereinafter sometimes called "Seller"), with its principal place of business at Houston, Texas, and TRANSCONTINENTAL & WESTERN AIR, INC., a Delaware corporation (hereinafter sometimes called "Buyer"), with its principal place of business at Kansas City, Missouri.

W I T N E S S E T H :

1. Seller agrees to sell to Buyer and Buyer agrees to purchase the six Lockheed Model 049 Constellation airplanes described below (hereinafter sometimes referred to as the "Airplanes"), upon the terms and conditions hereinafter set forth:

(a) Four model 049 Lockheed Constellation airplanes, manufacturer's serial No. 2072, No. 2073, No. 2074 and No. 2075, including related conversion kits, complete and in the condition delivered to Seller pursuant to the agreement between Compagnie Nationale Air France and Seller dated January 11, 1950, a copy of which is attached hereto and by this reference made a part hereof, such airplanes being sometimes referred to as the Air France Airplanes and such agreement being referred to as the Air France Agreement.

(b) Two model 049 Lockheed Constellation airplanes, manufacturer's serial No. 2070 and No. 2084, including related conversion kits,

complete and in the condition delivered to Seller pursuant to the agreement between Lockheed Aircraft Corporation and Seller dated January 13, 1950, as amended, a copy of which agreement, as amended, is attached hereto and by this reference made a part hereof, such airplanes being sometimes referred to as the KLM Airplanes and such agreement, as so amended, being referred to as the Lockheed Agreement.

If Seller does not accept delivery from Lockheed Aircraft Corporation of the Airplane bearing Manufacturer's Serial No. 2034, this agreement shall be deemed to be cancelled with respect to such Airplane and neither party shall have any further obligation or liability to the other hereunder or otherwise with respect to such Airplane.

It is understood that Seller makes no warranties whatsoever regarding the Airplanes but will convey to Buyer all Seller's right and interest with respect to all manufacturers' warranties and guarantees acquired by Seller pursuant to the Air France Agreement.

2. Each of the Airplanes shall be delivered to Buyer by Seller and Buyer shall accept delivery thereof at Metara Airport, Newark, New Jersey, or such other airport as may be agreed upon. One of the Airplanes, to be designated by written notice from Buyer to Seller (herein sometimes referred to as the "Designated Airplane") shall be delivered by Seller to Buyer on or before August 31, 1950 upon five (5) days' prior written notice from Seller to Buyer, subject to the prior fulfillment of the conditions specified in paragraph 9 hereof. The

Airplanes, other than the Designated Airplane, shall be delivered by Seller to Buyer as soon as practicable after each such Airplane shall be delivered to Seller by Compagnie Nationale Air France or Lockheed Aircraft Corporation, as the case may be, and after all conditions specified in paragraph 9 hereof shall have been fulfilled.

3. The purchase price of each Airplane, other than the Designated Airplane, shall be the price therefor which Seller shall have paid Compagnie Nationale Air France, pursuant to the Air France Agreement, or Lockheed Aircraft Corporation, pursuant to the Lockheed Agreement, as the case may be, plus such direct out-of-pocket costs and expenses, if any, incurred by Seller in accepting delivery, storing and effecting delivery to Buyer (including insurance or ferry charges connected with any of the foregoing) and any costs incurred by Seller in modifying such Airplane pursuant to paragraph 8 hereof. The purchase price of the Designated Airplane shall be the price therefor which Seller shall have paid Compagnie Nationale Air France, pursuant to the Air France Agreement, or Lockheed Aircraft Corporation, pursuant to the Lockheed Agreement, as the case may be, plus such direct out-of-pocket costs and expenses, if any, incurred by Seller in accepting delivery and effecting delivery to Buyer (including insurance or ferry charges connected with either of the foregoing) and any costs incurred by Seller in modifying such Airplane pursuant to paragraph 8 hereof, less depreciation at the rate of one eighty-fourth of the sales price paid by Seller per month from the date of acquisition by Seller to the date of delivery by Seller to Buyer hereunder. Payment for each Airplane shall be

made in the following manner:

(a) $100,000, plus any modification costs paid by Seller pursuant to paragraph 8 hereof, in cash, upon the delivery of each Airplane to Buyer hereunder;

(b) the balance of the purchase price shall be paid by Buyer to Seller in sixty equal consecutive monthly installments, together with interest on the unpaid balance at the rate of two and one-half percent (2-1/2%) per annum. The first of such payments relating to each Airplane shall be made on the first day of the month following the delivery of said Airplane and one of the remaining payments shall be made on the first day of each month thereafter until the whole purchase price shall have been paid.

4. Title to the Airplanes shall not pass to Buyer by delivery, but shall remain in Seller until such time as the purchase price shall have been paid in full and Buyer shall have paid to Seller all other sums then due and payable to Seller hereunder, whereupon absolute title to the Airplanes shall pass to Buyer. The respective rights of Buyer and Seller to the Airplanes shall be more specifically set forth in one or more conditional sales agreements covering such Airplanes in form satisfactory to Buyer and Seller. Each such agreement shall include provisions that upon the happening of any one or more of the following events, namely:

(a) the breach on the part of the Buyer or any covenant or agreement contained herein or in such conditional sales agreement to be observed, done or performed by the Buyer;

(b) the occurrence of any event of default as provided in such conditional sales agreement;

(c) failure to make payment when due, and within five (5) days after demand in writing is made for payment, of any monthly installment of the purchase price of the Airplanes pursuant to paragraph 3;

then Seller may at once (or at any later time) proceed to take possession of the Airplanes in any manner provided by law, or Seller may at its option, and Seller is hereby empowered to, with or without legal process, and with or without demand, enter upon the premises where the Airplanes may be and take possession thereof and remove the same. Seller may resell the Airplanes, so retaken, at public or private sale, with or without having the Airplanes at the place of sale, and upon such terms and in such manner as Seller may determine. Notice of the intention of Seller to so sell the Airplanes shall be given by Seller to Buyer at least ten (10) days prior to the time of such sale. Seller may bid and purchase at any such public sale. From the proceeds of any such sale, Seller shall deduct all expenses for retaking, repairing, storing and selling the Airplanes, including any reasonable attorneys' fees incurred. The balance of such proceeds shall be applied to the payment of all sums owing to Seller under this agreement and any surplus of such proceeds remaining shall be paid to Buyer or to whoever may be lawfully entitled to receive the same. Buyer shall be under no obligation to Seller for any deficiency resulting from any such sale or to make any payments on account of the purchase price of any Airplane falling due

after Seller has taken possession of such Airplane pursuant to this provision.

From and after delivery of the Airplanes to Buyer and until absolute title thereto is vested in Buyer or its nominee, or Seller repossesses the Airplanes, Buyer shall procure and maintain at its expense public liability, passenger liability and property damage insurance in such amounts and with such companies as shall be satisfactory to Seller, covering Seller's liability as holder of legal title to the Airplanes. The policies evidencing such insurance shall contain such provisions as shall be satisfactory to Seller and shall name Seller as assured.

Buyer shall at its expense maintain all risk aircraft hull insurance in respect of the Airplanes in favor of Buyer and Seller, as their interests may appear, in an amount at least sufficient to cover the then unpaid portion of the purchase price of the Airplanes. If any such Airplane shall be lost, destroyed or damaged to such an extent that repair thereof is impractical, such insurance shall be paid to the Seller to the extent of the unpaid balance of the purchase price of such airplane together with any accrued and unpaid interest thereon, plus all other amounts then due to Seller hereunder. Buyer shall be under no obligation to make any payments on account of the purchase price of such Airplanes falling due after such loss, destruction or damage. Any insurance proceeds in excess of such amount, and any insurance proceeds payable as a result of damage not rendering repair impractical, shall be payable to Buyer or its designee.

Buyer may at any time pay to Seller the unpaid

balance of the purchase price of the Airplanes, or any part thereof, without premium or penalty.

Upon the payment to Seller of the balance of the purchase price of the Airplanes together with all other amounts owing to Seller hereunder, Seller shall deliver to Buyer at such place in the United States as Buyer may designate (1) a bill of sale duly vesting in Buyer the title to the Airplanes acquired by Seller under the Air France Agreement or the Lockheed Agreement, as the case may be, free and clear of all liens, claims, charges and encumbrances attaching subsequent to the delivery of such Airplanes to Seller and not arising out of the possession, use or operation of the Airplanes by Buyer, and (2) such other appropriate documents of title with respect thereto as Buyer may reasonably require.

5. Buyer shall furnish Seller forthwith and from time to time thereafter at reasonable intervals, all such information concerning Buyer's financial condition, including balance sheets and forecasts of earnings, as is customarily furnished to a commercial bank holding or considering the acceptance of unsecured notes of a borrower or prospective borrower therefrom.

6. In the event any sales tax or use tax is hereafter imposed upon or paid by Seller by reason of the sale or use of the Airplanes or the purchase thereof by Seller (other than the use by Seller of the Designated Airplane prior to delivery thereof to Buyer pursuant to paragraph 4 hereof), then in addition to the sales price provided for in paragraph 3, Buyer shall pay Seller the amount thereof, upon demand. Buyer agrees to indemnify

and hold harmless Seller from any liabilities, costs or expenses to which Seller may become subject because of paragraph 4 of the Air France Agreement or because of paragraph 3(b) of the Lockheed Agreement.

7. Upon the written request of Seller and the written consent of Buyer, either before or after the delivery to Seller of any of the Airplanes, pursuant to the Air France Agreement or the Lockheed Agreement, Buyer shall take physical custody thereof pending fulfillment of the conditions specified in paragraph 9 hereof and during such interim period Buyer may store, use or modify such Airplanes consistent with the terms of such request and consent, carrying such insurance coverage as may reasonably be specified in such request and consent.

8. Upon the written request of Buyer and the written consent of Seller, either before or after the delivery to Seller of any of the Airplanes, pursuant to the Air France Agreement or the Lockheed Agreement, and pending or subsequent to the fulfillment of the conditions specified in paragraph 9 hereof, modification of any of the Airplanes may be undertaken by either Buyer or Seller or through a contractor to the extent and in the manner specified in such request and consent to the end that upon completion thereof such Airplanes may be most appropriate for the use of Buyer.

9. This Agreement is subject to the fulfillment of each and all of the following conditions on or before April 1, 1950 or such extension of such date as may be agreed upon in writing:

(a) any approval, consent or clearance of the C.A.B. which may be required pursuant to the Civil Aeronautics Act of 1938, as amended;

(b) any approvals, consents, clearances or waivers which may be required under the existing agreements of Buyer with The Equitable Life Assurance Society of the United States and with various lending banks.

This Agreement shall not be effective for any purpose unless and until Buyer has secured all such approvals, consents, clearances or waivers. Buyer shall furnish evidence, satisfactory to Seller, of all approvals, consents, clearances or waivers required under subdivision (b) of this paragraph 9 within thirty (30) days from the date of the approval of the Civil Aeronautics Board pursuant to subdivision (a) of this paragraph 9.

10. Upon the securing of the approvals, consents, clearances and waivers required by paragraph 9 hereof, this Agreement shall become binding and effective as of the day and year first above written.

IN WITNESS WHEREOF, the parties hereto have executed and delivered this Agreement as of the day and year first above written.

UNITED STATES OF AMERICA
CIVIL AERONAUTICS BOARD
WASHINGTON, D. C.

Adopted by the Civil Aeronautics Board
at its office in Washington, D. C.
on the 12th day of May, 1950

In the matter of the application of HUGHES TOOL COMPANY for approval under section 408 of the Civil Aeronautics Act of 1938, as amended, of the acquisition of control of TRANSCONTINENTAL & WESTERN AIR, INC.	:	Docket No. 1182

ORDER MODIFYING ORDER APPROVING ACQUISITION

A motion having been filed by Hughes Tool Company for an order modifying Order Serial No. 3210 issued October 17, 1944 in this docket, as amended by subsequent orders, so as to permit the sale of six Lockheed Constellation airplanes bearing manufacturer's Serial Nos. 049-2072, 049-2073, 049-2074, 049-2075, 049-2070 and 049-2084 by Hughes Tool Company to Transcontinental & Western Air, Inc. ("TWA") pursuant to the terms and conditions of the sales agreement dated February 2, 1950; and

The Board, acting pursuant to the powers vested in it by the Civil Aeronautics Act of 1938, as amended, particularly sections 205(a) 408 and 1005 (d) thereof, and finding that the further modification of its order in Docket No. 1182, as amended and modified, hereinafter provided for is just and reasonable and is in the public interest;

IT IS ORDERED THAT:

Order Serial No. 3210 issued October 17, 1944, as amended by subsequent orders, be and it hereby is further amended by adding thereto the following:

"6. That the terms of this order shall not restrict the right of Hughes Tool Company to sell to TWA or the right of TWA to purchase from Hughes Tool Company six Lockheed Constellation airplanes bearing manufacturer's Serial Nos. 049-2072, 049-2073, 049-2074, 049-2075, 049-2070 and 049-2084, pursuant to the terms and conditions of the sales agreement dated February 2, 1950, between said parties, provided that the sale shall be reported to the Board in the manner provided in paragraph 2 of this order, and provided further that nothing in the Board's action herein shall be construed as a determination that the equipment here involved is required by TWA in the interest of commerce, the postal service, or the national defense or that the cost thereof to TWA is appropriate for investment and/or rate-making purposes."

BEFORE THE

CIVIL AERONAUTICS BOARD

In the Matter of the Application of	:	
HUGHES TOOL COMPANY	:	
for approval under Section 408 of the Civil Aeronautics Act of 1938, as amended, of the acquisition of control of	:	Docket No. 1182
TRANS WORLD AIRLINES, INC.	:	

MOTION FOR APPROVAL OF TRANSACTIONS

TRANS WORLD AIRLINES, INC., a Delaware corporation (herein referred to as "TWA"), respectfully moves that the Board enter an order herein approving (1) the proposed sale by TWA to Hughes Tool Company (herein referred to as "Hughes"), of one Martin Model 404 Airplane pursuant to an agreement dated December 4, 1950 between TWA and Hughes, a copy of which is attached hereto as Exhibit A, (2) the proposed financing by TWA through Hughes of the final instalment of the purchase price of four Lockheed Constellation Model 749A Airplanes by means of a conditional sales contract between TWA and Hughes pursuant to an agreement dated March 2, 1951 between TWA and Hughes, a copy of which is attached hereto as Exhibit B, and an agreement dated March 2, 1951 between TWA, Hughes and Lockheed Aircraft Corporation (herein referred to as "Lockheed"), a copy of which is attached hereto as Exhibit C, (3) the proposed sale by TWA to Hughes of one Lockheed Constellation Model 749A Airplane pursuant to the agreement dated March 2, 1951 between TWA and Hughes, attached hereto as Exhibit II to

Exhibit B, and (4) the agreements between TWA, Hughes and The Equitable Life Assurance Society of the United States (herein called "Equitable"), copies of which are attached hereto as Exhibits D and E; and that the Board modify its order approving the acquisition by Hughes of control of TWA, Order Serial No. 3210, issued October 17, 1944, as amended, so as to permit the performance of such transactions and agreements.

In support of such motion, TWA shows to the Board:

A. Sale of Martin Airplane

1. By contract dated February 22, 1950, TWA contracted to purchase from The Glenn L. Martin Company 30 Martin Model 404 Airplanes. This contract, referred to as Contract No. 1116, was amended by Contract Change Order No. 4 to provide for the purchase by TWA of an additional 11 Martin Model 404 Airplanes. One of such airplanes was ordered by TWA at the request of and for the account of Hughes. TWA has agreed to sell this airplane to Hughes, subject to approval of the Board, by agreement dated December [illegible], 1950, a copy of which is attached hereto as Exhibit A.

2. Under such agreement Hughes will pay to TWA all costs incurred by TWA in connection with the purchase of this airplane from The Glenn L. Martin Company and the sale thereof to Hughes.

3. This airplane was included in Contract No. 1116 for the convenience of all the parties to the transaction and so as not to complicate the arrangements under which The Glenn L. Martin Company obtained credit to finance the manufacture of the Model 404 Airplanes and under which TWA and Eastern Air Lines at the same time obtained security for their advance payments made to The Glenn L. Martin Company.

4. The purchase by Hughes of a Martin Model 404 Aircraft is of potential benefit to TWA in that under Contract

No. 1116 the purchase price of each airplane purchased by TWA is reduced by $12,500 if The Glenn L. Martin Company manufactures more than 100 of such airplanes in continuous production.

B. Financing of Four Lockheed Constellation Model 749A Airplanes

5. By contract dated March 2, 1951 between TWA and Hughes, a copy of which is attached hereto as Exhibit B, Hughes has agreed in effect to finance the final instalment of the purchase price of four Lockheed Constellation Model 749 Airplanes which TWA has agreed to purchase from Lockheed pursuant to Contract LD-60. Hughes has agreed to pay to Lockheed the second and final instalment of the purchase price of such airplanes and to sell such airplanes to TWA on a conditional sale basis, subject to the approval herein requested and to the other conditions set forth in such agreement. Lockheed has agreed to this transaction by an agreement dated March 2, 1951 between TWA, Hughes and Lockheed, a copy of which is attached hereto as Exhibit C.

6. Hughes is taking title to these four airplanes and selling them to TWA on a conditional sale basis solely for the purpose of enabling TWA to finance the acquisition of such airplanes. The terms and conditions of sale are substantially the same as those contained in the agreement dated as of February 2, 1950 between Hughes and TWA relating to the sale from Hughes to TWA of six Constellation Model 049 Airplanes on a conditional sale basis, which was approved by Board Order No. E-4160. The details of the arrangements between the parties are more specifically set forth in the conditional sale contract, a copy of which is attached as Exhibit I to Exhibit B.

7. TWA is to pay Hughes for these airplanes only the amounts which Hughes has paid to Lockheed, with interest

on the unpaid balance as provided in the conditional sale contract. Hughes is providing TWA with financing for the acquisition of these four airplanes on better terms than would otherwise be available to TWA.

8. These four airplanes are required by TWA for use in its domestic and international operations. The addition of these planes to TWA's present fleet will permit increased Constellation service and increased revenue mileage and will thus improve TWA's service to the public.

C. Sale of One Lockheed Constellation Model 749A Airplane

9. By contract dated May 31, 1949, referred to as Contract No. LD-6C, TWA contracted to purchase from Lockheed 20 Lockheed Constellation Model 749A Airplanes. Upon the exercise of options granted to TWA to purchase additional airplanes, Contract No. LD-6C was amended by Contract Change Order No. 9 to provide for the purchase by TWA of an additional six Lockheed Constellation Model 749A Airplanes. One of such airplanes was ordered by TWA at the request of and for the account of Hughes. TWA has agreed to sell this airplane to Hughes, subject to the approval of the Board, by agreement dated March 2, 1951, a copy of which is attached hereto as Exhibit B. The details of this transaction are set forth in the letter agreement dated March 2, 1951 attached thereto as Exhibit II.

10. Under such letter agreement Hughes will pay to TWA all costs incurred by TWA in connection with the purchase of this airplane from Lockheed and the sale thereof to Hughes.

11. This airplane was included in Contract No. LD-6C for the convenience of all the parties to the transaction. The purchase by Hughes of a Lockheed Constellation Model 749A Airplane is of substantial benefit to TWA in that under Contract No. LD-6C the purchase price of each airplane purchased

by TWA is reduced as the number of planes purchased thereunder is increased through the exercise by TWA of option rights.

D. Agreements for Sale of Capital Stock of TWA.

12. By contract dated April 5, 1950 between Hughes, TWA and Equitable, TWA agreed that on or before December 31, 1951, it would sell sufficient shares of its unissued capital stock so that the net proceeds to it from such sale, after deducting underwriting commissions and other expenses of such issuance payable by it, should be at least $5,000,000 and Hughes agreed that it would cause TWA to perform such agreement and that if such shares were not otherwise sold it would itself buy sufficient shares of the capital stock of TWA to provide such net proceeds or would lend to TWA $5,000,000 evidenced by a subordinated note, all as more fully provided in such agreement (herein referred to as the "1950 Agreement"), a copy of which is attached hereto as Exhibit D.

13. By contract dated January 16, 1951 between Hughes, TWA and Equitable, TWA agreed that on or before December 31, 1952 it would sell sufficient shares of its unissued capital stock (in addition to stock to be sold pursuant to the 1950 Agreement) so that the net proceeds to it from such sale, after deducting underwriting commissions and other expenses of such issuance payable by it, should be at least $5,000,000 and Hughes agreed that it would cause TWA to perform such agreement and that if such shares were not otherwise sold it would itself buy sufficient shares of the capital stock of TWA to provide such net proceeds or would lend to TWA $5,000,000, evidenced by a subordinated note, all as more fully provided in such agreement (herein referred to as the "1951 Agreement"), a copy of which is attached hereto as Exhibit E.

14. Both agreements provide that the obligations of Hughes under such agreements are subject to the approval of

the Civil Aeronautics Board.

15. The execution of both the 1950 Agreement and the 1951 Agreement were essential parts of the transactions pursuant to which TWA arranged to purchase and finance new fleets of Martin and Constellation aircraft. The execution of the 1950 Agreement was made a condition precedent by Equitable to its consent to the purchase by TWA of 30 Martin Model 404 aircraft and to the creation of indebtedness, secured by a chattel mortgage on such aircraft, required to finance such purchase. The execution of the 1951 Agreement was made a condition precedent by Equitable to its consent to the purchase by TWA of 10 Lockheed Model 1049 Constellation Aircraft and to the creation of indebtedness, secured by a chattel mortgage on such aircraft, required to finance such purchase.

16. The 1950 Agreement and the 1951 Agreement were entered into by Hughes to enable TWA to purchase aircraft required by TWA and essential to its future operations. Their purpose is to aid TWA by providing it with additional equity capital, whether by sale of stock to others, by sale of all such stock to Hughes, by the purchase by Hughes of its pro rata share of stock offered to others or by means of a subordinated loan. The execution and performance of both these agreements will be of substantial benefit to TWA.

WHEREFORE, TWA respectfully moves the Board to enter an order herein approving (1) the sale by TWA to Hughes of one Martin Model 404 Airplane; (2) the financing by Hughes of four Lockheed Constellation Model 749A Airplanes; (3) the sale by TWA to Hughes of one Lockheed Constellation Model 749A Airplane; and (4) the agreements relating to the sale of stock of TWA attached hereto as Exhibits D and E, all as hereinabove set forth; and that the Board modify its order approving the acquisition by Hughes of control of TWA, Order Serial No. 3210, issued October 17, 1944, as amended, so as to permit the

performance of such transactions and agreements, and for such other and further relief as may be appropriate.

Respectfully submitted,

Houston, Texas.

December 4, 1950

Trans World Airlines, Inc.,
101 West 11th St.,
Kansas City 6, Missouri.

Gentlemen:

We understand that you have entered into a contract, dated February 22, 1950, with The Glenn L. Martin Company, referred to as Contract No. 1116, relating originally to the purchase by you of thirty Martin Model 4-0-4 airplanes. We also understand that by amendment to Contract No. 1116, pursuant to Contract Change Order No. 4, you have contracted to purchase from The Glenn L. Martin Company eleven additional Martin Model 4-0-4 airplanes and that under Contract No. 1116, as presently amended, similar contractual terms and conditions are applicable to the eleven additional airplanes as to the thirty original airplanes except that the price of each of the eleven additional airplanes may be increased due to escalation. This will confirm our agreement with respect to one of the eleven additional Martin Model 4-0-4 airplanes, hereinafter referred to as "the Airplane", which you have contracted to purchase pursuant to Contract Change Order No. 4.

We agree to purchase, and you agree to sell and transfer, all your right, title and interest in and to the Airplane upon the following terms and conditions:

(1) The Airplane shall be the sixth of said eleven additional airplanes and scheduled for delivery on or before March 31, 1952; provided, however, that if you should subsequently wish to designate one of the eleven additional airplanes other than the sixth in substitution for the sixth, we will not unreasonably withhold our consent and agreement to such substitution. The Airplane shall be subject to change orders heretofore and hereafter agreed upon between yourselves and The Glenn L. Martin Company, it being agreed that the Airplane is to be substantially similar to the other 10 of said 11 additional Martin Model 4-0-4 Airplanes, but you shall use your best efforts to obtain the agreement of The Glenn L. Martin Company to any special changes we may reasonably request with respect to the Airplane.

(2) During manufacture of said eleven additional airplanes, you shall perform the same functions of inspection, plant representation, and general contract administration without distinction as among said eleven additional airplanes; i.e., on the same basis and to the same standards with respect to the Airplane as apply to the other ten airplanes which are for your own account.

(3) Upon your receipt of notice from The Glenn L. Martin Company of the date they expect the Airplane to be ready for flight tests, you shall notify us thereof, and as promptly as possible thereafter you shall advise us of the amount of the balance of purchase price due to The Glenn L. Martin Company upon delivery. We shall promptly put you in funds to pay such balance of purchase price, and we hereby authorize you to pay such balance of purchase price to The Glenn L. Martin Company against delivery of the Airplane, and in our name and on our behalf to accept delivery of the Airplane and execute all instruments and take all steps appropriate to the end that delivery of the Airplane for our account be effected at the point and upon the basis set out in your contract with The Glenn L. Martin Company, with title vesting in us and with all risk and expense for our account, and following delivery to ferry the Airplane to such other point within the United States as we may request.

(4) We shall pay the same purchase price for the Airplane as you are obligated to pay The Glenn L. Martin Company, such payment to be made as follows:

(a) Forthwith upon fulfillment of the conditions set forth at paragraph 8 hereof, we shall reimburse you for all installments of the purchase price of the Airplane which you have theretofore made to The Glenn L. Martin Company.

(b) Upon notice from you, we shall forthwith put you in funds to meet when due all installments of the purchase price of the Airplane which become due subsequent to fulfillment of the conditions set forth in paragraph 8 hereof.

(5) In addition to the purchase price of the Airplane we shall pay you, following fulfillment of the conditions set forth in paragraph 8 hereof and as the sums become ascertained in normal course:

(a) Such sums, if any, as you may be required to pay to The Glenn L. Martin Company with respect to the Airplane as an adjustment of the purchase price thereof, pursuant to the contract between yourselves and The Glenn L. Martin Company, including without limitation adjustments due to change orders.

(b) Such sums, if any, as are represented by any sales or use tax imposed upon or paid by you by reason of the sale or use of the Airplane or the purchase by us hereunder.

(c) Such sums as represent, under sound accounting principles, a proper allocation to the Airplane of its proportionate share of the general expenses heretofore and hereafter incurred by you in negotiating your general contractual arrangements with The Glenn L. Martin Company, and the performance of functions of inspection, plant representation, and general

contract termination, plus the total of such sums, if any, as represent direct out-of-pocket costs and expenses to you solely on account of, and attributable to, the Airplane and acceptance of delivery and ferrying thereof, including, without limitation, the cost and expenses incidental to your providing customer furnished equipment for the Airplane.

(6) In adjustment of the sums we are obligated to pay you, you shall credit or pay to us, as appropriate, any credits allowed or payments made to you by The Glenn L. Martin Company with respect to the Airplane pursuant to your contractual arrangements with The Glenn L. Martin Company, and you shall remit to us such interest as you receive from The Glenn L. Martin Company on account of installment payments with respect to the Airplane for the period subsequent to the date we have reimbursed you for such installment payments, and you shall remit to us any repaymentsby The Glenn L. Martin Company of installment payments with respect to the Airplane for which we have reimbursed you.

(7) Following our reimbursement to you of any installment payments you have made with respect to the Airplane, you shall, subject to any consents or waivers required by the provisions of any contractual arrangements to which you are a party, execute any instruments in the nature of assignment or to evidence subrogation which we may reasonably request in view of our interest in the Airplane and our rights and obligations hereunder. It is understood that you make no warranties whatsoever regarding the Airplane but will convey to us all your assignable rights and interests in all manufacturers' warranties and guarantees acquired by you pursuant to your agreement with The Glenn L. Martin Company.

(8) This agreement is subject to any approval, consent or clearance of the Civil Aeronautics Board which may be required pursuant to the Civil Aeronautics Act of 1938, as amended.

If the foregoing correctly sets forth the agreement between us, please execute and return the enclosed copy hereof, and this shall constitute the contract between us.

Very truly yours,

HUGHES TOOL COMPANY

Gentlemen:

This will confirm our agreement with respect to the last five (of the total twenty-six) Lockheed Model 749A airplanes which we have agreed to purchase from Lockheed Aircraft Corporation pursuant to Contract No. LD-60, as amended, such last five airplanes being hereinafter sometimes called the "Airplanes."

I. With respect to four of the Airplanes (which shall be the first four thereof delivered unless we designate an Airplane other than the fifth Airplane delivered pursuant to II below):

1. You shall pay to Lockheed Aircraft Corporation the second and final installment of purchase price with respect to each of such Airplanes upon notice from us, from time to time, stating the amount of such second and final installment and that the Airplane to whose purchase such payment is applicable is ready for delivery by Lockheed Aircraft Corporation.

2. Upon your making each such payment provided for by subparagraph 1., we shall:

a. accept delivery from Lockheed Aircraft Corporation of the Airplane to whose purchase such payment is applicable, and effect with Lockheed Aircraft Corporation the transfer of title to such Airplane to you; and

b. retain possession of such Airplane pursuant and subject to that certain "Conditional Sale Contract" of even date between us attached hereto and marked "Exhibit I".

II. With respect to one of the Airplanes (which shall be the fifth of the Airplanes delivered unless we designate a different Airplane in lieu of the fifth delivered):

1. You agree to purchase, and we agree to sell and transfer, all our right, title and interest in and to such Airplane upon your making payment therefor and upon all the other terms and conditions with respect thereto set out in that certain Letter Agreement of even date between us attached hereto and marked "Exhibit II".

III. This agreement and the "Conditional Sale Contract" and the Letter Agreement attached hereto are subject to there having been obtained, on or before March 31, 1951 or such extension of such date as may be agreed upon in writing, any approval, consent or clearance of the C.A.B. which may be required pursuant to the Civil Aeronautics Act of 1938, as amended, and neither this agreement nor such "Conditional Sale Contract"

nor such Letter Agreement shall be effective for any purpose unless and until such approval, consent or clearance shall have been obtained.

If the foregoing correctly sets forth our agreement, please execute and return the copy hereof enclosed for that purpose.

Very truly yours,

Exhibit I

CONDITIONAL SALE CONTRACT

Contract of Conditional Sale made as of the 2nd day of March, 1951, between HUGHES TOOL COMPANY, a Delaware corporation (hereinafter sometimes called the "Seller"), with its principal place of business at Houston, Texas, and TRANS WORLD AIRLINES, INC. (formerly Transcontinental & Western Air, Inc.), a Delaware corporation (hereinafter sometimes called the "Buyer"), with its principal place of business at Kansas City, Missouri,

THE INTEREST OF THE SELLER IN THE AIRCRAFT AND EQUIPMENT COVERED HEREBY IS THAT OF A CONDITIONAL SELLER AND THE INTEREST OF THE BUYER THEREIN IS THAT OF A CONDITIONAL BUYER.

WITNESSETH:

WHEREAS, TWA has contracted to purchase from Lockheed Aircraft Corporation (hereinafter sometimes called "Lockheed") certain Lockheed Model 749A Constellation airplanes, and, with respect to each of four of the last five thereof to be delivered (such four being hereinafter sometimes called the "Airplanes") TWA has paid to Lockheed a first installment of purchase price in the amount of $230,625; and

WHEREAS, Hughes has agreed to pay to Lockheed the second and final installment of purchase price with respect to each of the Airplanes and in consideration thereof will obtain title to the Airplanes as delivered by Lockheed; and

WHEREAS, Hughes desires to sell and TWA desires to buy the Airplanes pursuant to the conditional sale arrangements set forth herein,

NOW, THEREFORE, in consideration of the mutual covenants herein contained, the parties hereto agree as follows:

1. Seller agrees to sell to Buyer and Buyer agrees to purchase the Airplanes upon the terms and conditions hereinafter set forth. The serial numbers applicable to the respective Airplanes, as soon as determined, shall be set out in an amendment to this Contract.

2. Simultaneously upon conveyance of title to each Airplane from Lockheed to Seller, such Airplane shall forthwith be delivered to Buyer and Buyer shall accept such delivery at Burbank, California.

3. The purchase price of each Airplane for purposes of this Contract shall be the amount which Seller shall have paid Lockheed as the second and final installment of the purchase price under Contract No. LD-60, as amended, and such purchase price shall be paid by Buyer to Seller in sixty equal consecutive monthly installments, together with interest on the unpaid balance at the rate of three percent (3%) per annum. The first of such payments relating to each Airplane

shall be made on the first day of the month next following the month in which the Airplane is delivered and one of the remaining payments shall be made on the first day of each month thereafter until the whole of such purchase price shall have been paid. All payments shall be made to the Seller at the Hughes Tool Company, Houston, Texas.

4. Title to the Airplanes shall not pass to Buyer by delivery, but shall remain in Seller until such time as the purchase price shall have been paid in full and Buyer shall have paid to Seller all other sums then due and payable to Seller hereunder, whereupon absolute title to the Airplanes shall pass to Buyer.

5. Upon the happening of any one or more of the following events, namely:

(a) default in making any payment, in the manner herein specified, of any monthly installment of the purchase price of the Airplanes and such default shall continue unremedied for five (5) days after written notice thereof shall have been delivered by Seller to Buyer; or

(b) default shall be made by the Buyer in the observance or performance by the Buyer of any other covenant or agreement contained herein, and such default shall continue unremedied for thirty (30) days after written notice thereof shall have been delivered by Seller to Buyer; or

(c) the Buyer shall become insolvent, or shall file a voluntary petition in bankruptcy, or shall file a voluntary petition or answer seeking or consenting to reorganization pursuant to or purporting to be pursuant to the Acts of Congress relating to bankruptcy or any other statute, state or Federal, for the relief of debtors, or shall be adjudicated a bankrupt, or shall make an assignment for the benefit of creditors, or shall consent to the appointment of a receiver or trustee of or for it or a substantial part of its property; or

(d) an order shall be entered pursuant to or purporting to be pursuant to the Acts of Congress relating to bankruptcy or any other statute, state or Federal, for the relief of debtors approving a petition seeking a reorganization of, or if an order shall be entered appointing a receiver or trustee of, or for any substantial part of the property of, or if a warrant of attachment shall be issued against any substantial part of the property of, the Buyer, and any such order is not dismissed or stayed within sixty (60) days from its entry or such attachment is not dismissed or bonded within thirty (30) days from its levy; or

(e) the Debentures at the time issued and outstanding under that certain Indenture, dated as of December 1, 1945, between Buyer and The Commercial National Bank and Trust Company of New York, as Trustee, as said Indenture may have heretofore been or may hereafter be amended, shall be declared and become due and payable, prior to the date of maturity of such Debentures as set forth therein, upon the occurrence of any of the "events of default" described in said Indenture, as amended (and the Buyer hereby agrees to notify the Seller of any declaration of default forthwith upon the receipt thereof); then Seller may at once (or at

any later time) proceed to take possession of the Airplanes in any manner provided by law, or Seller may at its option, and Seller is hereby empowered to, with or without legal process, and with or without demand, enter upon the premises where the Airplanes may be and take possession thereof and remove the same. Seller may resell the Airplanes, so retaken, at public or private sale, with or without having the Airplanes at the place of sale, and upon such terms and in such manner as Seller may determine. Notice of the intention of Seller to so sell the Airplanes shall be given by Seller to Buyer at least ten (10) days prior to the time of such sale. Seller may bid and purchase at any such public sale. From the proceeds of any such sale, Seller shall deduct all expenses for retaking, repairing, storing and selling the Airplanes, including any reasonable attorneys' fees incurred. The balance of such proceeds shall be applied to the payment of all sums owing to Seller under this agreement and any surplus of such proceeds remaining shall be paid to Buyer or to whoever may be lawfully entitled to receive the same. Buyer shall be under no obligation to Seller for any deficiency resulting from any such sale or to make any payments on account of the purchase price of any Airplane falling due after Seller has taken possession of such Airplane pursuant to this provision.

6. From and after delivery of the Airplanes to Buyer and until absolute title thereto is vested in Buyer or its nominee, or Seller repossesses the Airplanes,

(1) Buyer shall procure and maintain at its expense public liability, passenger liability and property damage insurance in such amounts and with such companies as shall be satisfactory to Seller, covering Seller's liability as holder of legal title to the Airplanes. The policies evidencing such insurance shall contain such provisions as shall be satisfactory to Seller and shall name Seller as assured.

(2) Buyer shall at its expense maintain all risk aircraft hull insurance in respect of the Airplanes in favor of Buyer and Seller, as their interests may appear, in an amount at least sufficient to cover the then unpaid portion of the purchase price of the Airplanes. If any such Airplane shall be lost, destroyed or damaged to such an extent that repair thereof is impractical, such insurance shall be paid to the Seller to the extent of the unpaid balance of the purchase price of such Airplane together with any accrued and unpaid interest thereon, plus all other amounts then due to Seller hereunder. Upon such payment to the Seller of insurance to the extent of the unpaid balance of the purchase price of any Airplane, absolute title to the Airplane so damaged or to any parts of an Airplane so destroyed shall vest in Buyer and Seller shall deliver to Buyer such proper documents of title with respect thereto as Buyer may reasonably require. Buyer shall be under no obligation to make any payments on account of the purchase price of such Airplane falling due after such loss, destruction or damage. Any insurance proceeds in excess of the amount payable to the Seller, and any insurance proceeds payable as a result of damage not rendering repair impractical, shall be payable to Buyer or its designee.

7. Buyer may at any time pay to Seller the unpaid balance of the purchase price of the Airplanes, or any part thereof, without premium or penalty.

8. Upon the payment to Seller of the balance of the purchase price of the Airplanes together with all other amounts owing to Seller hereunder, Seller shall deliver to Buyer at such place in the United States as Buyer may designate (1) a bill of sale duly vesting in Buyer the title to the Airplanes free and clear of all liens, claims, charges and encumbrances attaching subsequent to the delivery of the Airplanes to Seller and not arising out of the possession, use or operation of the Airplanes by Buyer, and (2) such other appropriate documents of title with respect thereto as Buyer may reasonably require.

9. In the event any sales tax or use tax is hereafter imposed upon or paid by Seller by reason of the sale or use of the Airplanes or the purchase thereof by Seller, then in addition to the sales price provided for in paragraph 3, Buyer shall pay to Seller the amount thereof, upon demand.

10. Buyer shall furnish Seller forthwith and from time to time thereafter at reasonable intervals, all such information concerning Buyer's financial condition, including balance sheets and forecasts of earnings, as is customarily furnished to a commercial bank holding or considering the acceptance of unsecured notes of a borrower.

11. The Buyer agrees that it will pay and discharge all taxes, assessments, governmental charges and all charges for keep, repairs, storage, maintenance or accessories, which if unpaid might become a lien, charge or encumbrance upon or against any of the Airplanes; and upon the failure of the Buyer so to do the Seller may make any such payment; provided, however, that nothing herein contained shall require the Buyer to pay such tax, assessment or charge so long as the Buyer shall in good faith contest the validity thereof and shall furnish the Seller such bond or indemnity as the Seller shall require, unless, in the judgment of the Seller, forfeiture is likely to result from any such failure to pay. Any sum or sums so paid by the Seller, together with interest thereon at the highest lawful contract rate, shall be and become a part of the sum which the Buyer is required to pay under this contract, and shall immediately, without demand, be due and be repaid by the Buyer to the Seller.

The Buyer will, upon written request from the Seller, (1) reimburse the Seller for all filing or recording fees incurred in connection with filing or recording or refiling or re-recording this contract and all supplements and additions hereto, if any; (2) execute and deliver to the Seller all such further documents and instruments and do such further acts as may be necessary to perfect the rights of the Seller herein contemplated; and (3) furnish to the Seller at reasonable intervals reports and certificates setting forth all the information necessary to inform the Seller as to the continued existence, location and condition of the Airplanes. The Seller shall also have the right to inspect the Airplanes at all times when the same are not in use and when such inspection can be had without undue inconvenience or expense to the Buyer.

12. Buyer agrees to maintain the Airplanes in good repair and working condition at its own expense, except any airplane lost, destroyed or so damaged that insurance with respect thereto is payable to the Seller pursuant to paragraph 6 hereof. Subject to the proper performance of such covenant, the Buyer may make repairs and replacements to the Airplanes and may substitute for engines, propellers and any other equipment installed in or attached to the Airplanes, engines, propellers or other equipment of substantially the same kind and value. In case of any such substitution title to the equipment substituted shall immediately be vested in Seller and shall become subject to the provisions of this Conditional Sale Contract while title to the equipment for which such substitution has been made will immediately vest in Buyer.

13. Until title to the Airplanes shall have passed to the Buyer hereunder, the Buyer shall have no right, power of authority to sell, transfer, assign, mortgage or encumber or in any other manner whatsoever dispose of the Airplanes or any part thereof (except as provided in paragraph 12 hereof) or any interest therein, and the Buyer hereby agrees that, except as permitted by paragraph 12 hereof, the Buyer will not (voluntarily or involuntarily), sell, transfer, mortgage, encumber or in any other manner whatsoever dispose of the Airplanes or any part thereof or any interest therein. Buyer agrees, except as provided herein, that the Airplanes will be used exclusively for its commercial air transport operations and related activities and that it will not permit the Airplanes to be used or possessed by others. Buyer may permit the use of the Airplanes by other airlines with which Buyer enters into interchange agreements provided that any such use by other airlines shall for the purposes of this agreement be considered to be use by the Buyer.

14. To the extent, if any, that there is a conflict between any of the provisions of this agreement and any of the provisions of the Chattel Mortgage dated as of March 25, 1948 between the Buyer and Bankers Trust Company, as Trustee, or of the Chattel Mortgage dated as of August 4, 1949 between the Buyer and Mellon National Bank & Trust Company, as Trustee, or of the chattel mortgages conterplated by the 1950 Credit Agreement and the 1951 Credit Agreement between the Buyer and Mellon National Bank and Trust Company, as agent, and the Lending Banks named therein, the provisions of such chattel mortgages shall prevail and the provisions of this agreement shall be deemed amended to the extent necessary to avoid such conflict.

15. Before delivery of each Airplane to Buyer hereunder, Buyer will cause to be fastened thereon in a location reasonably adjacent to, and not less prominent than that of, the airworthiness certificate for such Airplane, a name plate no larger than four inches by seven inches bearing the following legend:

"Hughes Tool Company holds legal title
to this Airplane as Conditional Seller."

Buyer shall maintain such name plate in such location or in one of at least equal prominence and visibility at all times. Buyer may affix to the Airplanes Buyer's name, insignia or other legends customarily displayed by Buyer on its airplanes.

16. Buyer shall indemnify and hold harmless Seller, its agents and its employees from any and all liability for losses, expenses, damages, demands and claims in connection with or arising out of any death of, or injury or alleged injury or damage to, persons or property sustained, or alleged to have been sustained, in connection with or arising or alleged to have arisen out of Buyer's possession, use or operation of the Airplanes and Buyer agrees to handle any claim and defend any suit or action brought against Seller, its agents or its employees, or any of them, based on any such death, injury or damage, or alleged injury or damage, and to pay all damages, costs and expenses, including attorneys' fees, in connection therewith or resulting therefrom.

Buyer's liability to Seller under this paragraph 16 is conditioned upon Seller's promptly giving notice to Buyer of institution of such suit or action or of receipt of such claim or demand. Buyer shall have the option at any time to conduct negotiations with the party or parties making any such claim or demand, and may intervene in any such suit or action. Whether or not Buyer intervenes in any such suit or action, it shall be entitled to assume, conduct or control the defense thereof, and Seller shall not settle or discharge any such claim, demand, suit, action or judgment without prior notice to and the consent of Buyer.

IN WITNESS WHEREOF the parties hereto have executed and delivered this agreement as of the day and year first above written.

Exhibit C

SL/51624
March 2, 1951

Lockheed Aircraft Corporation
Burbank, California

Gentlemen:

The undersigned request your concurrence and agreement as hereafter set forth. For convenience, hereinafter you will sometimes be referred to as "Lockheed", Trans World Airlines, Inc. will sometimes be referred to as "TWA", and Hughes Tool Company will sometimes be referred to as "Hughes".

1. It is contemplated that TWA will finance through Hughes the final installment of the purchase price of four of the last five (of the total twenty-six) Lockheed Model 749A Airplanes which TWA has agreed to purchase from Lockheed pursuant to Contract No. LD-60, as amended. Incidental to such financing, it is contemplated that Hughes shall acquire title to four of said last five Airplanes for security purposes directly from Lockheed, and forthwith convey each of such four Airplanes to TWA subject and pursuant to conditional sale arrangements between Hughes and TWA. It is further contemplated that Hughes shall purchase full legal and beneficial ownership of the fifth of said last five airplanes, and TWA shall give Lockheed proper and timely notice designating such fifth airplane for this purpose.

2. It is therefore agreed, notwithstanding anything to the contrary in said Contract No. LD-60, as amended, but subject to the condition stated in paragraph 4 hereof, that with respect to each of said last five Airplanes:

a. Hughes shall pay Lockheed, in the form and at the place specified in said Contract No. LD-60, as amended, the final installment of purchase price applicable to each Airplane, payable upon Lockheed delivering each Airplane in accordance with said Contract No. LD-60, as amended; and payment by Hughes shall discharge the obligation of TWA to make such payment pursuant to said Contract.

b. Simultaneous with receipt of each such payment, Lockheed shall deliver to TWA, in the condition and at the place specified in said Contract (except that the fifth Airplane, referred to in paragraph 1 above, shall be delivered to Hughes, and at Las Vegas, Nevada upon proper amendment of said Contract pursuant to Article 3(b) thereof), the Airplane to whose purchase such payment is applicable, and a bill of sale duly vesting in Hughes good title to such Airplane free and clear of all encumbrances and such other appropriate documents of title as Hughes may reasonably require; and such delivery shall discharge the obligation of Lockheed to make delivery pursuant to said Contract.

c. Any representatives heretofore designated, or authorized, or who may hereafter be designated or authorized, by TWA to act or perform functions with

respect to said Airplanes, including without limitation functions of inspection, delivery of payment and receipt of delivery of Airplanes and bills of sale, execution and receipt of packing sheets, and other related matters, acts, and instruments, are hereby designated and authorized by Hughes to act and perform on its behalf similar functions with respect to said Airplanes.

3. It is further agreed, notwithstanding anything to the contrary in said Contract No. LD-60, as amended, but subject to the conditions stated in paragraph 4 hereof, that:

a. With respect to each of the four Airplanes whose title Hughes acquires for security purposes, all rights and obligations pursuant to said Contract No. LD-60, as amended, whether before or after delivery (except only those relating to payment of final installment of purchase price and delivery of Airplanes and title as in this agreement provided) shall remain rights and obligations solely between TWA and Lockheed, and shall not become rights and obligations between Hughes and Lockheed, all with the same full force and effect as would obtain but for this agreement; provided, however, that in event Hughes should repossess any or all of said four Airplanes pursuant to the conditional sale arrangements between Hughes and TWA, Hughes shall succeed to all the rights and assume all the obligations with respect to the Airplanes repossessed applicable under said Contract LD-60, as amended, and subsisting as of the date of such repossession; and all rights and obligations of Hughes in any event shall be limited and affected by all agreements, covenants, actions, consents, performances, and discharges between TWA and Lockheed with respect to said Airplanes prior to such repossession, whether before or after delivery of said Airplanes; and

b. With respect to the one of said last five Airplanes whose full legal and beneficial ownership is purchased by Hughes, all rights and obligations pursuant to said Contract No. LD-60, as amended subsisting as of the date Hughes acquires such ownership shall become rights and obligations solely between Hughes and Lockheed, and shall cease to be rights and obligations between TWA and Lockheed, provided that all rights and obligations of Hughes in any event shall be limited and affected by all agreements, covenants, actions, consents, performances, discharges between TWA and Lockheed with respect to said one Airplane prior to the date Hughes acquired such ownership.

4. TWA shall have the right to nullify the application of this agreement to any or all of said five Airplanes by written notice to that effect delivered to Lockheed and Hughes at least five days prior to delivery of the Airplane to which such notice relates.

If the foregoing correctly sets forth our understanding and agreement in the premises, kindly so indicate by dating and signing, as indicated, the two duplicates of this letter enclosed herewith and by returning one such duplicate

to each of the undersigned.

Very truly yours,

HUGHES TOOL COMPANY

The foregoing correctly sets forth our understanding and agreement in the premises.

Dated: March 21st, 1951

LOCKHEED AIRCRAFT CORPORATION

By Carl B. Squier
Vice President

Exhibit D

AGREEMENT dated April 5, 1950 between HUGHES TOOL COMPANY, a Delaware corporation (hereinafter called "Hughes"), TRANSCONTINENTAL & WESTERN AIR, INC., a Delaware corporation (hereinafter called "TWA"), and THE EQUITABLE LIFE ASSURANCE SOCIETY OF THE UNITED STATES, a New York corporation (hereinafter called "Equitable").

WHEREAS Hughes, as of the date hereof, is the owner of approximately 74% of the issued and outstanding capital stock of TWA; and

WHEREAS TWA proposes to borrow from banks not in excess of $10,000,000 to assist it in financing the purchase of 30 Martin 404 Airplanes (hereinafter referred to as the "Airplanes"); and

WHEREAS Equitable, as the owner of all the Debentures issued and outstanding under the Indenture dated as of December 1, 1945 entered into between TWA and The Commercial National Bank and Trust Company of New York, as Trustee, as from time to time amended (hereinafter referred to as the "Indenture"), deems it desirable that TWA acquire the Airplanes and has, co-incidentally herewith and in reliance hereon, given its consent under Section 4.26 of the Indenture to the waiver of the restrictions contained in the Indenture so as to permit TWA to purchase such Airplanes and to borrow money on the security thereof to assist it in financing such purchase;

NOW, THEREFORE, in consideration of the premises, it is hereby agreed as follows:

1. TWA agrees that on or before December 31, 1951 it will sell sufficient shares of its unissued capital stock so that the net proceeds to it from such sale, after deducting underwriting commissions and other expenses of such issuance payable by it, shall be at least $5,000,000.

2. Hughes agrees that it will cause TWA to perform the agreement contained in paragraph 1 hereof and that if other purchasers are not available, Hughes will, itself, buy on or before December 31, 1951, sufficient shares of the unissued capital stock of TWA to provide net proceeds to TWA from such sale, after deducting underwriting commissions and other expenses of such issuance payable by TWA, of at least $5,000,000, provided, however, that said purchase by Hughes shall be subject to the approval of the Civil Aeronautics Board, but Hughes agrees that it will and it will cause TWA to take such action as may be necessary to obtain such approval if such approval can be obtained.

3. Hughes agrees that if for any reason it is impossible for TWA to perform its obligation under paragraph 1 hereof, upon the request of Equitable, Hughes will lend to TWA said sum of $5,000,000 evidenced by a subordinated note or notes in substantially the same terms and subject to substantially the same conditions as were contained in the Subordinated Convertible 2-3/4% Notes issued by TWA, pursuant to the Three-Party Agreement dated January 31, 1947 between Hughes, TWA and Equitable, provided, however, that said loan

shall be subject to the approval of the Civil Aeronautics Board, but Hughes agrees that it will and it will cause TWA to take such action as may be necessary to obtain such approval if such approval can be obtained. TWA agrees that, upon the request of Equitable, it will borrow at least $5,000,000 upon such terms and conditions if such loan is made available to it. Equitable hereby agrees to waive the restrictions contained in the Indenture so as to permit such borrowing by TWA.

WITNESS the due execution hereof in several counterparts.

Exhibit E

AGREEMENT dated January 16, 1951 between HUGHES TOOL COMPANY, a Delaware corporation (hereinafter called "Hughes"), TRANS WORLD AIRLINES, INC., a Delaware corporation (hereinafter called "TWA") and THE EQUITABLE LIFE ASSURANCE SOCIETY OF THE UNITED STATES, a New York corporation (hereinafter called "Equitable").

WHEREAS Hughes, as of the date hereof, is the owner of approximately 74% of the issued and outstanding capital stock of TWA; and

WHEREAS TWA proposes to borrow from banks not in excess of Ten Million Dollars ($10,000,000) to assist it in financing the purchase of 10 Lockheed Model 1049 Constellation Airplanes and spare parts for use in connection therewith (hereinafter referred to as the "Airplanes"); and

WHEREAS Equitable, as the owner of all the Debentures issued and outstanding under the Indenture dated as of Dec. 1, 1945, entered into between TWA and The Commercial National Bank and Trust Company of New York, as Trustee, as from time to time amended (hereinafter referred to as the "Indenture"), deems it desirable that TWA acquire the Airplanes and has, co-incidentally herewith and in reliance hereon, given its consent to the execution of a supplemental Indenture to the Indenture so as to permit TWA to purchase such Airplanes and to borrow money on the security thereof to assist it in financing such purchase; and

WHEREAS the parties hereto have entered into an agreement dated Apr. 5, 1950, pursuant to which TWA agreed that on or before Dec. 31, 1951 it would sell sufficient shares of its unissued capital stock so that the net proceeds to it from such sale, after deducting underwriting commissions and other expenses of such issuance payable by it, should be at least $5,000,000 (hereinafter referred to as the "1950 Agreement");

NOW, THEREFORE, in consideration of the premises, it is hereby agreed as follows:

1. Without in any way affecting the obligations of TWA and Hughes under the 1950 Agreement, TWA agrees that on or before Dec. 31, 1952, it will sell sufficient shares of its unissued capital stock so that the net proceeds to it from such sale, after deducting underwriting commissions and other expenses of such sales payable by it, shall be at least $5,000,000.

2. Hughes agrees that it will cause TWA to perform the agreement contained in paragraph 1 hereof and that if such shares are not otherwise sold, it will, itself, buy on or before Dec. 31, 1952, sufficient shares of the unissued capital stock of TWA to provide net proceeds to TWA from such sale, after deducting underwriting commissions and other expenses of such issuance payable by TWA, which together with the net proceeds from any other sales of the unissued capital stock of TWA made subsequent to the date hereof (excluding net proceeds of $5,000,000 from sales made to satisfy the requirements of the 1950 agreement), shall aggregate at least $5,000,000.

3. The parties hereto agree that Hughes may satisfy its obligation hereunder by lending to TWA on or before Dec. 31, 1952, said sum of $5,000,000 (or if the obligation of TWA under paragraph 1 hereof has been performed in part, a sum equivalent to the net proceeds of the shares of stock which Hughes would otherwise be obligated to purchase pursuant to paragraph 2 hereof), evidenced by a subordinated note or notes in substantially the same terms and subject to substantially the same conditions as were contained in the Subordinated Convertible 2-3/4% Notes issued by TWA, pursuant to the Three-Party Agreement dated Jan. 31, 1947, between Hughes, TWA, and Equitable.

4. All obligations of Hughes herein set forth are subject to any approval of the Civil Aeronautics Board which may be required by law but Hughes and TWA agree to take all reasonable steps to obtain any such required approval.

WITNESS the due execution hereof in several counterparts.

Orders
Serial Number E-5324

UNITED STATES OF AMERICA
CIVIL AERONAUTICS BOARD
WASHINGTON, D. C.

Adopted by the Civil Aeronautics Board
at its office in Washington, D. C.
on the 25th day of April, 1951.

In the Matter of the Application of	
HUGHES TOOL COMPANY	
for approval under section [illegible] of the Civil Aeronautics Act of 1938, as amended, of the acquisition of control of	Docket No. 1182
TRANS WORLD AIRLINES, INC.	

ORDER MODIFYING ORDER APPROVING ACQUISITION

A motion having been filed by Hughes Tool Company for an order modifying Order Serial No. 3210 issued October 17, 1944, in this docket, as amended by subsequent orders, so as to permit the (1) sale to Hughes Tool Company by TWA of a Martin 404 aircraft ordered by TWA at the request of Hughes Tool Company pursuant to the terms and conditions of a sales contract dated December 4, 1950; (2) sale to Hughes Tool Company by TWA of a Lockheed Constellation Model 749A aircraft ordered by TWA at the request of Hughes Tool Company pursuant to a letter agreement dated March 2, 1951; (3) financing by Hughes Tool Company in favor of TWA of the final installment on four new Lockheed Constellation Model 749A aircraft on a conditional sales basis pursuant to the terms and conditions of an agreement dated March 2, 1951; and (4) implementation of certain stock agreements dated April 5, 1950, and January 16, 1951, between TWA, Hughes Tool Company, and The Equitable Life Assurance Company for the purpose of raising additional equity capital for the purchase of a fleet of aircraft deemed essential by the carrier for its future operations;

The Board, acting pursuant to the powers vested in it by the Civil Aeronautics Act of 1938, as amended, particularly sections 205(a), 408 and 1005(d) thereof, and finding that the further modification of its order in Docket No. 1182, as amended and modified, hereinafter provided for is just and reasonable and is in the public interest;

IT IS ORDERED THAT:

Order Serial No. 3210, issued October 17, 1944, as amended by subsequent orders, be and it hereby is further amended by adding thereto the following:

"7. That the terms of this order shall not restrict the right of Trans World Airlines, Inc., to sell and Hughes Tool Company to buy a Martin 404 aircraft and Lockheed Constellation Model 749A aircraft pursuant to the terms and conditions of sales contracts dated December 4, 1950, and March 2, 1951, between said parties respectively; the financing by Hughes Tool Company in favor of TWA of the final installment on four new Lockheed Constellations Model 749A aircraft under a conditional sales contract pursuant to the terms and conditions of an agreement between the parties dated March 2, 1951; the implementation of certain stock agreements dated April 5, 1950, and January 16, 1951, between Transcontinental & Western Air, Inc., Hughes Tool Company, and The Equitable Life Assurance Company for the purpose of raising additional equity capital for the purchase of a fleet of aircraft, provided that the sale shall be reported to the Board in the manner provided in paragraph 2 of this order, and provided further that nothing in the Board's action herein shall be construed as constituting an approval for rate-making purposes."

Before the

CIVIL AERONAUTICS BOARD

In the Matter of the Application of	
HUGHES TOOL COMPANY	
for approval under Section 408 of the Civil Aeronautics Act of 1938, as amended, of the acquisition of control of	Docket No. 1182
TRANS WORLD AIRLINES, INC.	

MOTION FOR APPROVAL OF PURCHASE OF THREE CONSTELLATION AIRPLANES

TRANS WORLD AIRLINES, INC., a Delaware corporation (herein referred to as "TWA"), respectfully moves that the Board enter an order herein approving the proposed financing by TWA through Hughes Tool Company (herein referred to as "Hughes"), of the purchase price of three Lockheed Constellation Airplanes (to be purchased from Delta Air Lines, Inc.) by means of a conditional sale contract to be dated as of April 1, 1954 between TWA and Hughes, in the form attached hereto as Exhibit A; and that the Board modify its order approving the acquisition by Hughes of control of TWA, Order Serial No. 3210, issued October 17, 1944, as amended, so as to permit the performance of such transactions and agreements.

In support of such motion, TWA shows to the Board:

1. By an agreement in the form attached hereto as Exhibit A, Hughes will agree to sell, on a conditional sale basis, and TWA will agree to purchase, subject to the

4045

approval herein requested and to the other conditions set forth in such agreement, the three Constellation airplanes above referred to at the cost of said airplanes to Hughes, all as more particularly set forth in such agreement.

2. These airplanes are to be acquired by Hughes from Delta Air Lines, Inc. (herein referred to as "Delta") pursuant to an agreement dated March 23, 1954, to be executed by Hughes and Delta, a copy of which is attached hereto as Exhibit B. Hughes will take title to these three airplanes and sell them to TWA on a conditional sale basis solely for the purpose of enabling TWA to finance the acquisition of such airplanes and thus to increase its fleet of Constellation aircraft.

3. The terms and conditions of sale by Hughes to TWA are substantially the same as those contained in the agreement dated as of February 2, 1950 between Hughes and TWA relating to the sale from Hughes to TWA of six Constellation Model 049 Airplanes on a conditional sale basis, which was approved by Board Order No. E-4160, and as those contained in the conditional sale contract dated as of March 2, 1951 between Hughes and TWA relating to the sale from Hughes to TWA of four Constellation Model 749A Airplanes on a conditional sale basis, which was approved by Board Order No. E-5324. The details of the arrangements between the parties are more specifically set forth in the form of conditional sale contract, a copy of which is attached as Exhibit A.

4. TWA is to pay Hughes for these airplanes only the amounts which Hughes pays to Delta, with interest on the unpaid balance as provided in the conditional sale contract. By selling these airplanes to TWA on a conditional sale basis on the terms outlined in Exhibit A, Hughes will provide TWA with financial arrangements on better terms than would otherwise be available. Under the bank Credit Agreement which TWA has arranged for the financing of the 20 Constellation Model 1049E aircraft and certain spare parts which it has contracted to purchase from Lockheed Aircraft Corporation, TWA will pay interest at the rate of 4% per annum and will pay at least 40% of the purchase price of the Constellation 1049E airplanes and spare parts from its own funds. Interest payable to Hughes is 3-3/4% per annum and the initial payment required is less than 2% of the purchase price.

5. These three airplanes are required by TWA for use in its domestic and international operations. The addition of these planes to TWA's present fleet will permit increased Constellation service and increased revenue mileage and will thus improve TWA's service to the public.

WHEREFORE, TWA respectfully moves the Board to enter an order herein approving the financing by Hughes of three Lockheed Constellation Airplanes, including the conditional sale of such Airplanes by Hughes to TWA, all as hereinabove set forth; and that the Board modify its order approving the acquisition by Hughes of control of TWA, Order Serial No. 3210, issued October

DX321 id., Item [illegible], P
(CAB Orders & Documen

17, 1944, as amended, so as to permit the performance of such transactions and agreements, and for such other and further relief as may be appropriate.

Exhibit A

CONDITIONAL SALE CONTRACT

Contract of Conditional Sale made as of the 1st day of April, 1954, between HUGHES TOOL COMPANY, a Delaware corporation (hereinafter sometimes called the "Seller"), with its principal place of business at Houston, Texas, and TRANS WORLD AIRLINES, INC., a Delaware corporation (hereinafter sometimes called the "Buyer"), with its principal place of business at Kansas City, Missouri,

THE INTEREST OF THE SELLER IN THE AIRCRAFT AND EQUIPMENT COVERED HEREBY IS THAT OF A CONDITIONAL SELLER AND THE INTEREST OF THE BUYER THEREIN IS THAT OF A CONDITIONAL BUYER.

W I T N E S S E T H :

WHEREAS, Hughes has contracted to purchase from Delta Air Lines, Inc. (hereinafter called "Delta") the three Lockheed Constellation airplanes (hereinafter called the "Airplanes"), identified as follows:

Type	C.A.A. Registration No.	Mfg. Serial No.
L-649A	N 86521	2642
L-649A	N 86522	2653
L-749A	N 86535	2673

; and

WHEREAS, Hughes desires to sell and TWA desires to buy the Airplanes pursuant to the conditional sale arrangements set forth herein,

NOW, THEREFORE, in consideration of the mutual covenants herein contained, the parties hereto agree as follows:

1. Seller agrees to sell to Buyer and Buyer agrees to purchase the Airplanes upon the terms and conditions hereinafter set forth.

2. Simultaneously upon conveyance of title to each Airplane from Delta to Seller, such Airplane shall forthwith be delivered to Buyer and Buyer shall accept such delivery at Midway Airport, Chicago, Illinois.

3. The purchase price of each Airplane for purposes of this Contract shall be the amount which Seller shall have paid Delta for such Airplane, and such purchase price shall be paid by Buyer to Seller in sixty equal consecutive monthly installments, together with

4149

interest on the unpaid balance at the rate of three and three-quarters percent (3 3/4%) per annum. The first of such payments relating to each Airplane shall be made at the time of delivery of such Airplane, the next payment shall be made on the first day of the month next following the month in which the Airplane is delivered and one of the remaining payments shall be made on the first day of each month thereafter until the whole of such purchase price shall have been paid. All payments shall be made to the Seller at the Hughes Tool Company, Houston, Texas.

4. Title to the Airplanes shall not pass to Buyer by delivery, but shall remain in Seller until such time as the purchase price shall have been paid in full and Buyer shall have paid to Seller all other sums then due and payable to Seller hereunder, whereupon absolute title to the Airplanes shall pass to Buyer.

5. Upon the happening of any one or more of the following events, namely:

(a) default in making any payment, in the manner herein specified, of any monthly installment of the purchase price of the Airplanes and such default shall continue unremedied for five (5) days after written notice thereof shall have been delivered by Seller to Buyer; or

(b) default shall be made by the Buyer in the observance or performance by the Buyer of any other covenant or agreement contained herein, and such default shall continue unremedied for thirty (30) days after written notice thereof shall have been delivered by Seller to Buyer; or

(c) the Buyer shall become insolvent, or shall file a voluntary petition in bankruptcy, or shall file a voluntary petition or answer seeking or consenting to reorganization pursuant to or purporting to be pursuant to the Acts of Congress relating to bankruptcy or any other statute, state or Federal, for the relief of debtors, or shall be adjudicated a bankrupt, or shall make an assignment for the benefit of creditors, or shall consent to the appointment of a receiver or trustee of or for it or a substantial part of its property; or

(d) an order shall be entered pursuant to or purporting to be pursuant to the Acts of Congress relating to bankruptcy or any other statute, state or Federal, for the relief of debtors approving a petition seeking a reorganization of, or if an order shall be entered appointing a receiver or trustee of, or for any substantial part of the property of, or if a warrant of attachment shall be issued against any substantial part of the property of, the Buyer, and any such order is not dismissed or stayed within sixty (60) days from its entry or such attachment is not dismissed or bonded within thirty (30) days from its levy; or

(e) the Debentures at the time issued and outstanding under that certain Indenture, dated as of December 1, 1945, between Buyer and Bankers Trust Company, as Successor Trustee, as said Indenture may have heretofore been or may hereafter be amended, shall be declared and become due and payable, prior to the date of maturity of such Debentures as set forth therein, upon the occurrence of any of the "events of default" described in said Indenture, as amended (and the Buyer hereby agrees to notify the Seller of any declaration of default forthwith upon the receipt thereof);

then Seller may at once (or at any later time) proceed to take possession of the Airplanes in any manner provided by law, or Seller may at its option, and Seller is hereby empowered to, with or without legal process, and with or without demand, enter upon the premises where the Airplanes may be and take possession thereof and remove the same. Seller may resell the Airplanes, so retaken, at public or private sale, with or without having the Airplanes at the place of sale, and upon such terms and in such manner as Seller may determine. Notice of the intention of Seller to so sell the Airplanes shall be given by Seller to Buyer at least ten (10) days prior to the time of such sale. Seller may bid and purchase at any such public sale. From the proceeds of any such sale, Seller shall deduct all expenses for retaking, repairing, storing and selling the Airplanes, including any reasonable attorneys' fees incurred. The balance of such proceeds shall be applied to the payment of all sums owing to Seller under this agreement and any surplus of such proceeds remaining shall be paid to Buyer or to whoever may be lawfully entitled to receive the same. Buyer shall be under no obligation to Seller for any deficiency resulting from any such sale or to make any payments on account of the purchase price of any Airplane falling due after Seller has taken possession of such Airplane pursuant to this provision.

6. From and after delivery of the Airplanes to Buyer and until absolute title thereto is vested in Buyer or its nominee, or Seller repossesses the Airplanes,

(1) Buyer shall procure and maintain at its expense public liability, passenger liability and property damage insurance in such amounts and with such companies as shall be satisfactory to Seller, covering Seller's liability as holder of legal title to the Airplanes. The policies evidencing such insurance shall contain such provisions as shall be satisfactory to Seller and shall name Seller as assured.

(2) Buyer shall at its expense maintain all risk aircraft hull insurance in respect of the Airplanes in favor of Buyer and Seller, as their interests may appear, in an amount at least sufficient to cover the then unpaid portion of the purchase price of the Airplanes. If any such Airplane shall be lost, destroyed or damaged to such an extent that

repair thereof is impractical, such insurance shall be paid to the Seller to the extent of the unpaid balance of the purchase price of such Airplane together with any accrued and unpaid interest thereon, plus all other amounts then due to Seller hereunder. Upon such payment to the Seller of insurance to the extent of the unpaid balance of the purchase price of any Airplane, absolute title to the Airplane so damaged or to any parts of an Airplane so destroyed shall vest in Buyer and Seller shall deliver to Buyer such proper documents of title with respect thereto as Buyer may reasonably require. Buyer shall be under no obligation to make any payments on account of the purchase price of such Airplane falling due after such loss, destruction or damage. Any insurance proceeds in excess of the amount payable to the Seller, and any insurance proceeds payable as a result of damage not rendering repair impractical, shall be payable to Buyer or its designee.

7. Buyer may at any time pay to Seller the unpaid balance of the purchase price of the Airplanes, or any part thereof, without premium or penalty.

8. Upon the payment to Seller of the balance of the purchase price of the Airplanes together with all other amounts due to Seller hereunder, Seller shall deliver to Buyer at such place in the United States as Buyer may designate (1) a bill of sale duly vesting in Buyer the title to the Airplanes free and clear of all liens, claims, charges and encumbrances attaching subsequent to the delivery of the Airplanes to Seller and not arising out of the possession, use or operation of the Airplanes by Buyer, and (2) such other appropriate documents of title with respect thereto as Buyer may reasonably require.

9. In the event any sales tax or use tax is hereafter imposed upon or paid by Seller by reason of the sale or use of the Airplanes or the purchase thereof by Seller, then in addition to the sales price provided for in paragraph 3, Buyer shall pay to Seller the amount thereof, upon demand.

10. Buyer shall furnish Seller forthwith and from time to time thereafter at reasonable intervals, all such information concerning Buyer's financial condition, including balance sheets and forecasts of earnings, as is customarily furnished to a commercial bank holding or considering the acceptance of unsecured notes of a borrower.

11. The Buyer agrees that it will pay and discharge all taxes, assessments, governmental charges and all charges for keep, repairs, storage, maintenance or accessories, which if unpaid might become a lien, charge or encumbrance upon or against any of the Airplanes; and upon the failure of the Buyer so to do the Seller may make any such payment; provided, however, that nothing herein contained shall require the Buyer to pay such tax, assessment or charge so long as the Buyer shall in good faith

contest the validity thereof and shall furnish the Seller such bond or indemnity as the Seller shall require, unless, in the judgment of the Seller, forfeiture is likely to result from any such failure to pay. Any sum or sums so paid by the Seller, together with interest thereon at the highest lawful contract rate, shall be and become a part of the sum which the Buyer is required to pay under this contract, and shall immediately, without demand, be due and be repaid by the Buyer to the Seller.

The Buyer will, upon written request from the Seller, (1) reimburse the Seller for all filing or recording fees incurred in connection with filing or recording or refiling or re-recording this contract and all supplements and additions hereto, if any; (2) execute and deliver to the Seller all such further documents and instruments and do such further acts as may be necessary to perfect the rights of the Seller herein contemplated; and (3) furnish to the Seller at reasonable intervals reports and certificates setting forth all the information necessary to inform the Seller as to the continued existence, location and condition of the Airplanes. The Seller shall also have the right to inspect the Airplanes at all times when the same are not in use and when such inspection can be had without undue inconvenience or expense to the Buyer.

12. Buyer agrees to maintain the Airplanes in good repair and working condition at its own expense, except [illegible] airplane lost, destroyed or so damaged that insurance with respect thereto is payable to the Seller pursuant to paragraph 6 hereof. Subject to the proper performance of such covenant, the Buyer may make repairs and replacements to the Airplanes and may substitute for engines, propellers and any other equipment installed in or attached to the Airplanes, engines, propellers or other equipment of substantially the same kind and value. In case of any such substitution title to the equipment substituted shall immediately be vested in Seller and shall become subject to the provisions of this Conditional Sale Contract while title to the equipment for which such substitution has been made will immediately vest in Buyer.

13. Until title to the Airplanes shall have passed to the Buyer hereunder, the Buyer shall have no right, power or authority to sell, transfer, assign, mortgage or encumber or in any other manner whatsoever dispose of the Airplanes or any part thereof (except as provided in paragraph 12 hereof) or any interest therein, and the Buyer hereby agrees that, except as permitted by paragraph 12 hereof, the Buyer will not (voluntarily or involuntarily), sell, transfer, mortgage, encumber or in any other manner whatsoever dispose of the Airplanes or any part thereof or any interest therein. Buyer agrees, except as provided herein, that the Airplanes will be used exclusively for its commercial air transport operations and related activities and that it will not permit the Airplanes to be used or possessed by others. Buyer may permit the use of the Airplanes by other airlines with which Buyer enters into interchange agreements provided that any such use by other airlines shall for the purposes of this agreement be considered to be use by the Buyer.

14. To the extent, if any, that there is a conflict between any of the provisions of this agreement and any of the provisions of the Chattel Mortgages dated as of August 4, 1949, October 29, 1951 and May 13, 1952 between the Buyer and Mellon National Bank & Trust Company, as Trustee, or of the chattel mortgage contemplated by the Credit Agreement dated as of September 25, 1953 between the Buyer and Mellon National Bank and Trust Company, as Agent, and the Lending Banks named therein, the provisions of such chattel mortgages shall prevail and the provisions of this agreement shall be deemed amended to the extent necessary to avoid such conflict.

15. Before delivery of each Airplane to Buyer hereunder, Buyer will cause to be fastened thereon in a location reasonably adjacent to, and not less prominent than that of, the airworthiness certificate for such Airplane, a name plate no larger than four inches by seven inches bearing the following legend:

"Hughes Tool Company holds legal title
to this Airplane as Conditional Seller."

Buyer shall maintain such name plate in such location or in one of at least equal prominence and visibility at all times. Buyer may affix to the Airplanes Buyer's name, insignia or other legends customarily displayed by Buyer on its airplanes.

16. Buyer shall indemnify and hold harmless Seller, its agents and its employees from any and all liability for losses, expenses, damages, demands and claims in connection with or arising out of any death of, or injury or alleged injury or damage to, persons or property sustained, or alleged to have been sustained, in connection with or arising or alleged to have arisen out of Buyer's possession, use or operation of the Airplanes and Buyer agrees to handle any claim and defend any suit or action brought against Seller, its agents or its employees, or any of them, based on any such death, injury or damage, or alleged injury or damage, and to pay all damages, costs and expenses, including attorneys' fees, in connection therewith or resulting therefrom.

Buyer's liability to Seller under this paragraph 16 is conditioned upon Seller's promptly giving notice to Buyer of institution of such suit or action or of receipt of such claim or demand. Buyer shall have the option at any time to conduct negotiations with the party or parties making any such claim or demand, and may intervene in any such suit or action. Whether or not Buyer intervenes in any such suit or action, it shall be entitled to assume, conduct or control the defense thereof, and Seller shall not settle or discharge any such claim, demand, suit, action or judgment without prior notice to and the consent of Buyer.

17. This Contract shall, without liability of either Buyer or Seller to the other, be and become null and void and of no force or effect if on or before

April 1, 1954, or such extension of said date as Buyer and Seller may hereafter mutually agree upon in writing, the Civil Aeronautics Board (1) shall not have authorized the transactions contemplated hereby and (2) shall not have granted any approval that may be required for the purchase of the Airplanes by Hughes from Delta.

IN WITNESS WHEREOF, the parties hereto have executed and delivered this agreement as of the day and year first above written.

Exhibit B

March 23, 1954

Hughes Tool Company,
Houston,
Texas.

Dear Sirs:

The following is in confirmation of our agreement with respect to the purchase by you (Hughes) from us (Delta) of three Lockheed Constellation airplanes powered with four Wright Model 749 CD-BD-1 type engines:

1. We agree to sell to you and you agree to purchase from us the following Lockheed Constellation airplanes:

Type	Delta Co. No.	C.A.A. Registration No.	Mfg. Serial No.
L-649A	521	N 86521	2642
L-649A	522	N 86522	2653
L-749A	535	N 86535	2673

All such airplanes shall be delivered to you, at Midway Airport, Chicago, Illinois. Delta will assume all risk of damage to or destruction of such aircraft prior to delivery to Hughes. Delivery of such airplanes shall be made in accordance with the following schedule:

Mfg. Serial No.	Date
2642	April 1, 1954
2673	April 25, 1954
2653	June 1, 1954

2. It is understood and agreed that each of said airplanes shall be delivered to Hughes in an "as is" condition, it being understood that each airplane when delivered shall be clean and in good operating condition, all in accordance with airline operating standards, but this shall not require any periodic overhaul work prior to the delivery of the airplane. Each airplane shall be licensed for commercial operations with the necessary Civil Aeronautics Authority certificate of airworthiness under transport category of the Civil Air Regulations immediately prior to the delivery of such airplane by Delta to Hughes. Each airplane shall have all necessary equipment (including auto-pilot, radio and galley but excluding emergency equipment for overseas operation) as shall have been standard on said airplane when operated by Delta in regularly scheduled passenger operations. Except as

specifically set forth in this paragraph, nothing herein contained shall be construed to warrant, impliedly or otherwise, any of the aircraft, engines or component parts thereof against any structural defects or mechanical malfunctioning. Should any of the airplanes to be sold hereunder have suffered any material damage since March 1, 1954 and prior to delivery thereof hereunder, then Delta will promptly advise Hughes whether it will repair such aircraft and tender it for delivery or whether it will cancel the agreement to deliver such aircraft pursuant to the provisions of paragraph 6 hereof. If delivery of such airplane shall, as a result of any such repair by Delta, be delayed more than 60 days beyond the scheduled delivery date set forth in paragraph 1 hereof, Hughes may cancel this agreement with respect to such airplane.

3. The purchase price of each airplane as above described shall be one million, fifty thousand dollars ($1,050,000.00), or a total price for the three (3) airplanes of three million one hundred fifty thousand dollars ($3,150,000.00). The purchase price of each airplane shall be paid in cash or by certified or cashier's check on delivery of each individual airplane to Hughes.

4. At the time of delivery of each of the said airplanes to Hughes, Delta agrees to turn over to Hughes all of the maintenance and overhaul logs and records in its possession with respect to each such airplane and the engines attached. Delta also agrees that at the time of delivery of each airplane Delta will execute and deliver to Hughes appropriate instruments of sale and assignment transferring good title to the airplane to Hughes free and clear of any mortgage or other encumbrance, in form sufficient to permit recordation of clear title thereto with the Civil Aeronautics Authority, together with all manufacturer's warranties and guarantees, expressed or implied, held by Delta in connection therewith and all rights based thereon or enuring to Delta as original purchaser of said airplanes.

5. Any sales, use, gross receipts or excise tax legally assessed against Delta, by reason of the transactions provided for under this agreement shall be paid by Hughes in addition to the purchase price specified herein. If claim is made against Delta for any such tax, Delta shall immediately notify Hughes.

If seasonably requested by Hughes, Delta shall not pay any such tax except under protest, and if payment be made, shall use all reasonable efforts to obtain a refund thereof. If all or any part of such tax be refunded, Delta shall repay to Hughes so much thereof as Hughes shall have paid. Hughes shall pay to Delta, upon demand, all expenses incurred by Delta in protesting payment of such tax and in endeavoring to obtain such refund.

6. Delta reserves the right to cancel this agreement with respect to any one or more of the aforesaid airplanes in the event that any governmental action, accident or force majeure occurrence or other cause beyond its reasonable control renders such airplane unavailable to Delta for delivery hereunder. In the event of a partial cancellation pursuant to the provisions of this paragraph, such partial cancellation will in no wise effect the obligation of Delta to sell and deliver and the obligation of Hughes to purchase the remaining airplanes covered by this agreement. In the event that Delta should exercise its right to a partial cancellation under this paragraph, Delta shall immediately notify Hughes of such cancellation and of the reasons therefor.

7. It is understood and agreed that wherever the word "Hughes" is used herein, that phrase shall be deemed to include the assigns of Hughes, if, but only if, such assignment shall have been consented to in writing by Delta in advance, and if, but only if, Hughes shall remain primarily liable and obligated for the prompt payment of monies due and performance of the covenants herein provided to be performed by it or its assigns. Other than as hereinbefore provided, this agreement and all of its provisions shall inure to and become binding upon the executors, administrators, successors and assigns of the parties hereto.

8. This agreement supersedes and replaces in its entirety any and all prior agreements, either written or verbal, between the parties hereto or their agents or representatives.

9. This agreement shall be construed in accordance with the laws of the State of New York.

10. This agreement is expressly conditioned upon the approval by the Civil Aeronautics Board of the sale by Delta to Hughes

of the three airplanes enumerated above, if such approval shall be required, and of the sale by Hughes to Trans World Airlines, Inc. of said airplanes.

If the foregoing conforms with our understanding, will you execute the original and duplicate original of this letter in the place indicated below and the same will constitute a contract between us.

Very truly yours,

DELTA AIR LINES, INC.

Order No. E-8214

UNITED STATES OF AMERICA
CIVIL AERONAUTICS BOARD
WASHINGTON, D. C.

Adopted by the Civil Aeronautics Board
at its office in Washington, D. C.
on the 1st day of April, 1954.

In the matter of the proposed sale by

DELTA AIR LINES, INC.

Docket No. 6607

of certain Constellation aircraft to
Hughes Tool Company.

In the matter of the application of

HUGHES TOOL COMPANY

for approval under section 408 of the
Civil Aeronautics Act of 1938, as
amended, of the acquisition and control
of

Docket No. 1132

TRANS WORLD AIRLINES, INC.

ORDER MODIFYING ORDER APPROVING ACQUISITION

A motion having been filed by Delta Air Lines, Inc. praying for (1) a finding that (a) the proposed sale of three Constellation aircraft by Delta to Hughes Tool Company, and (b) the acquisition by Trans World Airlines, Inc. (TWA) from Hughes Tool of the same aircraft are transactions which do not come within the provisions of section 408 of the Civil Aeronautics Act of 1938, as amended; (2) or, if section 408 is applicable, for an exemption from the provisions of said section 408 insofar as such provisions would otherwise prevent these transactions without Board approval; and

A separate application having been filed simultaneously by TWA for an order modifying Order Serial No. 3210 issued October 17, 1944 in Docket No. 1132, as amended by subsequent orders, so as to permit the acquisition by TWA of the three Constellations sold to Hughes Tool by Delta as described above in Docket No. 6607;

The Board, acting pursuant to the powers vested in it by the Civil Aeronautics Act of 1938, as amended, particularly sections 205(a), 408, and 1005(d) thereof, and finding that:

1. The proposed sale of three Constellation aircraft by Delta to Hughes Tool does not constitute purchase of a substantial part of Delta's properties within the meaning of section 408; and

2. The further modification of its order in Docket No. 1182, as amended and modified, hereinafter provided for is just and reasonable and is in the public interest;

IT IS [illegible]

1. Order Serial No. 3210 issued October 17, 1944, as amended by subsequent orders, be and it hereby is further amended by adding thereto the following:

> "7. That the terms of this order shall not restrict the rights of Trans World Airlines, Inc. to purchase, and Hughes Tool Company to sell, three Constellation aircraft pursuant to the terms and conditions of a sales agreement dated April 1, 1954 between said parties; Provided, That nothing in the Board's action herein shall be construed as constituting an approval for rate-making purposes."

2. The requests of Delta in Docket No. 6607 to the extent not granted herein be and they hereby are dismissed.

By the Civil Aeronautics Board:

BEFORE THE

CIVIL AERONAUTICS BOARD

In the Matter of the Application of	
HUGHES TOOL COMPANY	
for approval under Section 408 of the Civil Aeronautics Act of 1938, as amended, of the acquisition of control of	Docket No. 1182
TRANS WORLD AIRLINES, INC.	

MOTION OF TRANS WORLD AIRLINES, INC. FOR APPROVAL OF TRANSACTIONS WITH HUGHES TOOL COMPANY

TRANS WORLD AIRLINES, INC. (hereinafter referred to as "TWA") respectfully moves that the Board enter an order herein modifying its Order Serial No. 3210, issued October 17, 1944, as amended, approving the acquisition of control of TWA by Hughes Tool Company (hereinafter referred to as "Hughes"), so that the terms of such order will not restrict the right of TWA to exercise the following options for the purchase of aircraft, together with related engines and spare parts, and to engage in other transactions relating to the aircraft, engines and spare parts which are the subject matter of such options:

(1) An option from Hughes to TWA dated April 20, 1956, for the purchase of Lockheed 1049G aircraft, together with related engines and spare parts, a copy of which is attached hereto as Exhibit I, and which is hereinafter referred to as the "1049G option";

(2) A second option from Hughes to TWA dated April 20, 1956, for the purchase of Lockheed 1649A aircraft, together with related engines and spare parts, a copy of which is attached hereto as Exhibit II, and which is hereinafter referred to as the "1649A option".

In support of its motion, TWA shows to the Board the following:

1. The 10490 option offers TWA the right to acquire all of the interest of Hughes in eight new Model 10490 Constellation aircraft acquired by Hughes under a Purchase Agreement between it and Lockheed Aircraft Corporation (hereinafter referred to as "Lockheed") and in spare engines and spare parts acquired by Hughes therefor. The option may be exercised by TWA at any time on or before May 31, 1956 (subject to extension under certain stated conditions).

2. If the 10490 option is exercised, the aircraft, spare engines and spare parts will be purchased by TWA pursuant to a conditional sale contract. TWA will pay Hughes as the purchase price for such aircraft, spare engines and spare parts an amount equivalent to the payments made by Hughes to Lockheed and Hughes' other direct costs incurred in connection with the acquisition of such aircraft, spare engines and spare parts, plus interest at the rate of 3% per annum on advance payments made by Hughes thereon. Such purchase price would be paid by TWA in sixty equal monthly installments with interest on the unpaid balance.

3. The 1649A option offers TWA the right to acquire all of the interest of Hughes in twenty-five Model 1649A Constellation aircraft acquired by Hughes under a Purchase Agreement between it and Lockheed and in spare engines and spare parts acquired by Hughes therefor. The option may be exercised by TWA at any time on or before October 31, 1955 (subject to extension under certain stated conditions).

4. If the 1649A option is exercised, the aircraft, spare engines and spare parts will be purchased by TWA pursuant to a conditional sale contract. TWA will pay Hughes as the purchase price for such aircraft, spare engines and spare parts an amount equivalent to the payments made by Hughes to Lockheed and Hughes' other direct costs incurred in connection with the acquisition of such aircraft, spare engines and spare parts, plus interest at the rate of 3% per annum on advance payments made by Hughes thereon, except that these interest payments shall be reduced by an amount equal to all interest payments received by Hughes from Lockheed under the Purchase Agreement.* Such purchase price would be paid by TWA in sixty equal monthly installments with interest on the unpaid balance.

5. By the terms of both options their exercise is made subject to the approval of the Civil Aeronautics Board. Neither option has been exercised.

* No interest is payable to Hughes by Lockheed under the Purchase Agreement for 1049G aircraft.

6. Prior to the exercise of the options, TWA will undertake inspection functions and will participate in the negotiation of any change orders and the purchase of any customer-furnished equipment or spares to be paid for in the first instance by Hughes, as it would if it had contracted directly with the manufacturer for the purchase of the aircraft, engines and spare parts under option.

7. The eight 1049G aircraft and the twenty-five 1649A aircraft, together with related engines and spare parts, are required for use in TWA's domestic and international operations, and TWA requests modification of the Board's order herein so that it can take advantage of the options.

WHEREFORE, Trans World Airlines, Inc. respectfully prays that the Board enter an order herein modifying the Board's Order Serial No. 3210, as amended, so that the terms of such order will not restrict the right of TWA to exercise the options referred to above and to engage in other transactions relating to the aircraft, engines and spare parts which are the subject matter of such options, and providing such other and further relief as may be appropriate.

Respectfully submitted,
TRANS WORLD AIRLINES, INC.
By [signature]

Dated: May 1, 1956.

EXHIBIT I

THE STATE OF TEXAS :
COUNTY OF HARRIS :

OPTION

KNOW ALL MEN BY THESE PRESENTS:

1. That for and in consideration of the sum of Ten Dollars ($10.00) cash and other good and valuable considerations paid by Trans World Airlines, Inc., a Delaware corporation with a principal office and place of business in Kansas City, Missouri (hereinafter called "TWA"), to Hughes Tool Company, a Delaware corporation with its principal office and place of business in Houston, Texas (hereinafter called "Tool Company"), the receipt and sufficiency of all of which consideration is hereby acknowledged by Tool Company, Tool Company has this day given and granted, and does by these presents hereby give and grant, unto TWA the exclusive right and privilege (hereinafter referred to as the "Option") to acquire from Tool Company, at the price and on the terms and conditions hereinafter set out, (1) all the interest of Tool Company in eight (8) new Model 1049G Airplanes, Lockheed Constellation type, (hereinafter called "1049G Airplanes") which may be acquired by Tool Company pursuant to that certain Purchase Agreement dated September 28, 1955 (and Change Order No. 1 thereto, executed as of October 17, 1955) between Lockheed Aircraft Corporation (hereinafter called "Lockheed"), as Seller, and Tool Company, as Buyer, including all of the rights of Tool Company under such Purchase Agreement, as amended, and under all change orders and letter agreements incident

thereto (which with said Purchase Agreement, as amended, are hereinafter collectively referred to as "The Purchase Agreement"), a copy of The Purchase Agreement having been heretofore furnished to counsel for TWA; (2) all the interest of Tool Company in any spare engines (having a maximum purchase price as defined in paragraph 5 of up to $726,000) that may have been or may be acquired by Tool Company for use in the 10490 Airplanes, including Tool Company's interest in any purchase agreement relating thereto; and (3) all the interest of Tool Company in any other spare parts (having a maximum purchase price as defined in paragraph 5 of up to $1,524,000) which may have been or may be acquired by Tool Company for use in connection with the 10490 Airplanes, including Tool Company's interest in any purchase agreement relating thereto. For the purposes of this Option the term "spare parts" shall include extra propeller assemblies and airframe spare parts, spare parts for airplane engines and for propeller assemblies and other accessories, flight equipment and parts for use on or in connection with the operation or maintenance of aircraft.

2. If the Option is exercised, the 10490 Airplanes, the spare engines and spare parts purchased by Tool Company will be sold by Tool Company to TWA pursuant to a conditional sale contract in substantially the form attached hereto as Exhibit A. The interest rate on the unpaid balances payable by TWA under such conditional

sale contract shall be the average interest rate payable by Tool Company on any indebtedness incurred by it for the purpose of purchasing the 1049G Airplanes, the spare engines and spare parts therefor (including any indebtedness proposed to be secured by the assignment of Tool Company's interest in such conditional sale contract), or if no such indebtedness is incurred the prime commercial interest rate current in New York City at the time of the execution of such conditional sale contract.

3. TWA may exercise said Option by sending, by registered mail, a notice in writing to that effect to Tool Company addressed as follows:

Hughes Tool Company
2200 Gulf Building
Houston 2, Texas

Attention: Mr. C. H. Price

The Option may be exercised only as to all the 1049G Airplanes, spare engines and spare parts referred to in paragraph 1. Said Option may be exercised by TWA at any time on or before May 31, 1956; provided, however, that if prior to May 31, 1956, (or prior to such later option exercise date as may be authorized by this paragraph) the scheduled delivery date for the first airplane under The Purchase Agreement has been deferred for a period beyond June 30, 1956, by reason of a good faith written agreement between Tool Company and Lockheed or by reason of a claim of such deferment asserted in writing by Lockheed and not contested in good faith

by Tool Company, then in such event the option exercise date shall be deferred for an identical period of time. In the event this Option shall not have been exercised on or before the option exercise date as above determined, then this Option shall thereupon terminate, and subsequent deferments of the aforesaid delivery date shall not effect a revival of the lapsed Option.

4. The purchase price of each 1049G Airplane purchased by TWA pursuant to the option herein granted shall be the sum of the following:

(1) The amounts Tool Company shall have paid Lockheed for such airplane.

(2) All additional direct costs which are paid or incurred by Tool Company and are attributable to such airplane, including, but not limited to, costs of "customer furnished equipment" provided for in Article 18 of The Purchase Agreement. To the extent that any such costs are not specifically attributable to a particular airplane they shall be allocated equally among the airplanes at the time not delivered to TWA.

(3) An amount equal to interest at the rate of three per cent (3%) per annum on the average amount of the outstanding advance payments made by Tool Company applicable to such airplane. The average amount of the outstanding advance payments applicable to each airplane shall be computed by considering the payments made or costs incurred as set forth in subparagraphs (1) and (2) of this paragraph 4 as outstanding from the

respective dates such payments were made or such costs were incurred by Tool Company and until the delivery of such airplane to TWA under the conditional sale contract;

(4) The assumption by TWA of all liabilities and obligations of Tool Company to Lockheed arising out of The Purchase Agreement.

5. The purchase price of the spare engines and spare parts purchased by TWA pursuant to the Option herein granted shall be the sum of the following:

(1) the total payments made therefor by Tool Company to the vendors of such spare engines or spare parts;

(2) all additional direct costs which are paid or incurred by Tool Company and are attributable to such spare engines and spare parts or to the purchase thereof;

(3) an amount equal to interest at the rate of three per cent (3%) per annum on the average amount of the outstanding advance payments made by Tool Company applicable to such spare engines and spare parts. The average amount of the outstanding advance payments applicable to spare engines and spare parts shall be computed by considering the payments made or costs incurred as set forth in subparagraphs (1) and (2) of this paragraph 5 as outstanding from the respective dates such payments were made or such costs were incurred and until the delivery of the first 1049G Airplane to TWA under the conditional sale contract;

(4) any additional amount which, at the time of the delivery of the first 1049D Airplane to TWA, Tool Company is committed to pay to suppliers of spare engines and spare parts;

(5) the assumption by TWA of all other liabilities and obligations of Tool Company to the vendors of such spare engines and spare parts arising out of the purchase thereof.

6. In the event that the purchase price of the 1049D Airplanes differs from the amount computed at the time of the delivery thereof to TWA or in the event that the aggregate net amount which Tool Company is required to pay for the spare engines and spare parts in a final accounting with the suppliers thereof differs from the amount used in computing the purchase price thereof pursuant to paragraph 5, separate and independent adjustments will be made by payment from one party to the other of such difference. Similarly, Tool Company will reimburse TWA for any interest paid by TWA with respect to any portion of the purchase price of the spare engines and spare parts which is unpaid at the time of delivery of the first 1049D Airplane, to the extent and for the period that Tool Company has not earned such interest by having made payments to the suppliers.

7. The exercise of this Option by TWA shall be subject to the approval of the Civil Aeronautics Board or the receipt by Tool Company of an opinion of

counsel for TWA that such approval is not necessary.

8. The foregoing Option is subject to the right of Tool Company, at any time prior to the exercise by TWA of this Option, to exercise any and all of Tool Company's rights and privileges under The Purchase Agreement; and nothing herein shall be construed as in any wise limiting, restricting, prohibiting, or otherwise affecting the exercise by Tool Company of its rights under The Purchase Agreement.

9. This Option shall be binding upon and inure to the benefit of Tool Company and TWA and their respective successors and assigns; provided, however, that TWA may not assign this Option without the prior written consent of Tool Company, and any attempted assignment without such consent shall, at the option of Tool Company, effect a termination of this Option.

10. This Option shall supersede the option granted by Tool Company to TWA dated November 10, 1955 relating to the 1049G Airplanes, which option is hereby revoked.

EXECUTED this 20th day of April, A.D. 1956.

HUGHES TOOL COMPANY

Exhibit A

CONDITIONAL SALE CONTRACT

Contract of Conditional Sale made as of the day of , 1956, between HUGHES TOOL COMPANY, a Delaware corporation (hereinafter sometimes called the "Seller"), with its principal place of business at Houston, Texas, and TRANS WORLD AIRLINES, INC., a Delaware corporation (hereinafter sometimes called the "Buyer"), with its principal place of business at Kansas City, Missouri,

THE INTEREST OF THE SELLER IN THE AIRCRAFT AND EQUIPMENT COVERED HEREBY IS THAT OF A CONDITIONAL SELLER AND THE INTEREST OF THE BUYER THEREIN IS THAT OF A CONDITIONAL BUYER.

W I T N E S S E T H :

WHEREAS, Hughes has contracted to purchase from Lockheed Aircraft Corporation (hereinafter called "Lockheed") the eight (8) Model L-1049G Lockheed Constellation Airplanes identified as follows:

C.A.A. Registration No.	Mfg. Serial No.

together with the airplane engines (each of which is of 7[illegible] or more rated take-off horsepower and will be later identified by manufacturer's serial number in a supplement to this Conditional Sale Contract) installed in each thereof on the date of delivery of such airplanes to Hughes and together with the propeller assemblies and all other equipment

and accessories attached to such airplanes and engines on the date of delivery of such airplanes to Hughes (hereinafter called "the Airplanes");

WHEREAS, Hughes has also contracted to purchase from various vendors extra airplane engines (each of which is of 750 or more rated take-off horsepower and will be later identified by manufacturer's serial number in a supplement to this Conditional Sale Contract) and propeller assemblies and airframe spare parts, spare parts for airplane engines and for propeller assemblies, and other accessories, flight equipment and parts, for use on or in connection with the operation or maintenance of the Airplanes at, in or near repair or overhaul bases, airports, airfields, landing strips, hangars, warehouses, storehouses and buildings owned, operated, leased or used by Buyer at any one or more of the locations shown on Exhibit 1 annexed hereto (all of which engines, propeller assemblies, parts, accessories and equipment are hereinafter referred to as "Spares"); and

WHEREAS, Hughes desires to sell and TWA desires to buy the Airplanes and Spares pursuant to the conditional sale arrangements set forth herein.

NOW, THEREFORE, in consideration of the mutual covenants herein contained, the parties hereto agree as follows:

1. Seller agrees to sell to Buyer and Buyer agrees to purchase the Airplanes and Spares upon the terms and conditions hereinafter set forth.

2. (a) Simultaneously upon conveyance of title to each Airplane from Lockheed to Seller, such Airplane shall forthwith be delivered to Buyer and Buyer shall accept such delivery at Lockheed Air Terminal, Burbank, California, or at such other place to which the Airplane has been delivered to Seller by Lockheed.

DX321 id. Item
(CAB Orders & Doc

(b) Seller shall deliver the Spares, or cause them to be delivered, to Buyer at Kansas City, Missouri, or such other place as may be designated by Buyer, such deliveries to be made upon delivery of the first Airplane to Buyer, or as soon thereafter as practicable, and with respect to Spares not then delivered to Seller, upon delivery of such Spares to Seller, or as soon thereafter as practicable.

3. (a) The purchase price of each Airplane for purposes of this Contract shall be the aggregate of

(1) The amounts Seller shall have paid Lockheed for such Airplane at the time of its delivery to Buyer hereunder;

(2) All additional direct costs which have been paid or incurred by Seller at the time of the delivery of such Airplane to Buyer and are attributable to such Airplane, including, but not limited to, costs of "customer furnished equipment". To the extent that any such costs are not specifically attributable to a particular Airplane they shall be allocated equally among the Airplanes at the time not delivered to Buyer;

(3) An amount equal to interest at the rate of three per cent (3%) per annum on the average amount of the outstanding advance payments made by Seller applicable to such Airplane. The average amount of the outstanding advance payments applicable to each Airplane shall be computed by considering the payments made or costs incurred as set forth in subparagraphs (1) and (2) of this paragraph 3(a) as outstanding from the respective dates such payments were made or such costs were incurred by Seller and until the delivery of such Airplane to Buyer under this Contract.

(b) The purchase price of Spares for purposes of this Contract shall be the aggregate of

(1) the total payments made therefor by Seller to the vendors of such Spares at the time of the delivery of the first Airplane to Buyer hereunder;

(2) all additional direct costs which have been paid or incurred by Seller at the time of the delivery of the first Airplane to Buyer and are attributable to such Spares or to the purchase thereof;

(3) an amount equal to interest at the rate of three per cent (3%) per annum on the average amount of the outstanding advance payments made by Seller applicable to such Spares. The average amount of the outstanding advance payments applicable to Spares shall be computed by considering the payments made or costs incurred as set forth in subparagraphs (1) and (2) of this paragraph 3(b) as outstanding from the respective dates such payments were made or such costs were incurred by Seller and until the delivery of the first Airplane to Buyer under this contract;

(4) any additional amount which, at the time of the delivery of the first Airplane to Buyer hereunder, Seller is committed to pay to suppliers of Spares.

(c) The purchase price of each Airplane and the purchase price of Spares shall each be paid by Buyer to Seller in sixty (60) equal consecutive monthly installments, together with interest on the unpaid balance at the rate of per cent (%) per annum. The first of such payments relating to each Airplane shall be made at the time of delivery of such Airplane, and the first of such payments relating to

Spares shall be made at the time of delivery of the first Airplane. As to each Airplane, and as to Spares, the second and succeeding payments shall be made monthly on the first day of the months succeeding the month in which the first payment is required to be paid, until the whole of each such purchase price shall have been paid. All payments shall be made to the Seller at the Hughes Tool Company, Houston, Texas.

(d) In the event that the purchase price of the Airplanes differs from the amount computed at the time of the delivery thereof to Buyer hereunder or in the event that the aggregate net amount which Seller is required to pay for the Spares in a final accounting with the suppliers thereof differs from the amount used in computing the purchase price thereof pursuant to subparagraph 3(b), separate and independent adjustments will be made by payment from one party to the other of such difference. Similarly, Seller will reimburse Buyer for any interest paid by Buyer with respect to any portion of the purchase price of the Spares which is unpaid at the time of delivery of the first Airplane hereunder, to the extent and for the period that Seller has not earned such interest by having made payments to the suppliers.

4. Title to the Airplanes and Spares shall not pass to Buyer by delivery, but shall remain in Seller until such time as the purchase price shall have been paid in full and Buyer shall have paid to Seller all other sums then due and payable to Seller hereunder, whereupon absolute title to the Airplanes and Spares shall pass to Buyer.

5. Upon the happening of any one or more of the following events, namely:

(a) default in making any payment, in the manner herein specified, of any monthly installment of the purchase price of the Airplanes or Spares and such default shall continue unremedied for five (5) days after written notice thereof shall have been delivered by Seller to Buyer; or

(b) default shall be made by the Buyer in the observance or performance by the Buyer of any other covenant or agreement contained herein, and such default shall continue unremedied for thirty (30) days after written notice thereof shall have been delivered by Seller to Buyer; or

(c) the Buyer shall become insolvent, or shall file a voluntary petition in bankruptcy, or shall file a voluntary petition or answer seeking or consenting to reorganization pursuant to or purporting to be pursuant to the Acts of Congress relating to bankruptcy or any other statute, state or Federal, for the relief of debtors, or shall be adjudicated a bankrupt, or shall make an assignment for the benefit of creditors, or shall consent to the appointment of a receiver or trustee of or for it or a substantial part of its property; or

(d) an order shall be entered pursuant to or purporting to be pursuant to the Acts of Congress relating to bankruptcy or any other statute, state or Federal, for the relief of debtors approving a petition seeking a reorganization of, or if an order shall be entered appointing a receiver or trustee of, or for any substantial part of the property of, or if a warrant of attachment shall be issued against any substantial part of the property of, the Buyer, and any such order is not dismissed or stayed within sixty (60) days from its entry or such attachment is not dismissed

or bonded within thirty (30) days from its levy; or

(e) the Bonds at the time issued and outstanding under that certain Indenture, dated as of December 1, 1954, between Buyer and Irving Trust Company, as Trustee, as said Indenture may have heretofore been or may hereafter be amended, shall be declared and become due and payable, prior to the date of maturity of such Bonds as set forth therein, upon the occurrence of any of the "events of default" described in said Indenture, as amended (and the Buyer hereby agrees to notify the Seller of any declaration of default forthwith upon the receipt thereof); or

(f) the Notes at the time issued and outstanding under that certain Chattel Mortgage, dated as of December 20, 1954, between Buyer and Irving Trust Company, as Trustee, as said Chattel Mortgage may have heretofore been or may hereafter be amended, shall be declared and become due and payable, prior to the date of maturity of such Notes as set forth therein, upon the occurrence of any of the "events of default" described in said Chattel Mortgage, as amended (and the Buyer hereby agrees to notify the Seller of any declaration of default forthwith upon the receipt thereof);

then Seller may at once (or at any later time) proceed to take possession of the Airplanes and Spares in any manner provided by law, or Seller may at its option, and Seller is hereby empowered to, with or without legal process, and with or without demand, enter upon the premises where the Airplanes or Spares may be and take possession thereof and remove the same. Seller may resell the Airplanes and Spares, so retaken, at public or private sale, with or without having such Airplanes and Spares at the place of sale, and upon such terms and in such manner

as Seller may determine. Notice of the intention of Seller to so sell the Airplanes and Spares shall be given by Seller to Buyer at least ten (10) days prior to the time of such sale. Seller may bid and purchase at any such public sale. From the proceeds of any such sale, Seller shall deduct all expenses for retaking, repairing, storing and selling the Airplanes and Spares, including any reasonable attorneys' fees incurred. The balance of such proceeds shall be applied to the payment of all sums owing to Seller under this agreement and any surplus of such proceeds remaining shall be paid to Buyer or to whoever may be lawfully entitled to receive the same. Buyer shall be under no obligation to Seller for any deficiency resulting from any such sale or to make any payments on account of the purchase price of any Airplane or Spares falling due after Seller has taken possession of such Airplane or Spares pursuant to this provision.

6. From and after delivery of the Airplanes and Spares to Buyer and until absolute title thereto is vested in Buyer or its nominee, or Seller repossesses the Airplanes,

(a) Buyer shall procure and maintain at its expense public liability, passenger liability and property damage insurance in such amounts and with such companies as shall be satisfactory to Seller, covering Seller's liability as holder of legal title to the Airplanes and Spares. The policies evidencing such insurance shall contain such provisions as shall be satisfactory to Seller and shall name Seller as assured.

(b) Buyer shall at its expense maintain all risk aircraft hull insurance in respect of the Airplanes in favor of Buyer and Seller, as their interests may appear, in such amounts and with such companies as shall be satis-

factory to Seller. If any such Airplane shall be lost, destroyed or damaged to such an extent that repair thereof is impractical, such insurance shall be paid to the Seller to the extent of the unpaid balance of the purchase price of such Airplane together with any accrued and unpaid interest thereon, plus all other amounts then due to Seller hereunder. Upon such payment to the Seller of insurance to the extent of the unpaid balance of the purchase price of any Airplane, absolute title to the Airplane so damaged or to any parts of an Airplane so destroyed shall vest in Buyer and Seller shall deliver to Buyer such proper documents of title with respect thereto as Buyer may reasonably require. Buyer shall be under no obligation to make any payments on account of the purchase price of such Airplane falling due after such loss, destruction or damage. Any insurance proceeds in excess of the amount payable to the Seller, and any insurance proceeds payable as a result of damage not rendering repair impractical, shall be payable to Buyer or its designee.

7. Buyer may at any time pay to Seller the unpaid balance of the purchase price of the Airplanes and Spares or any part thereof, without premium or penalty.

8. Upon the payment to Seller of the balance of the purchase price of the Airplanes and Spares together with all other amounts owing to Seller hereunder, Seller shall deliver to Buyer at such place in the United States as Buyer may designate,

(a) a bill of sale duly vesting in Buyer the title to the Airplanes and Spares free and clear of all liens, claims, charges and encumbrances attaching subsequent to the delivery of the Airplanes and Spares to Seller and not arising

out of the possession, use or operation of the Airplanes and Spares by Buyer, and

(b) such other appropriate documents of title with respect thereto as Buyer may reasonably require.

9. In the event any sales tax or use tax is hereafter imposed upon or paid by Seller by reason of the sale or use of the Airplanes and Spares or the purchase thereof by Seller, then in addition to the sales price provided for in paragraph 3, Buyer shall pay to Seller the amount thereof, upon demand.

10. Buyer shall furnish Seller forthwith and from time to time thereafter at reasonable intervals, all such information concerning Buyer's financial condition, including balance sheets and statements of earnings, as is customarily furnished to a commercial bank holding or considering the acceptance of unsecured notes of a borrower.

11. The Buyer agrees that it will pay and discharge all taxes, assessments, governmental charges and all charges for keep, repairs, storage, maintenance or accessories, which if unpaid might become a lien, charge or encumbrance upon or against any of the Airplanes or Spares; and upon the failure of the Buyer so to do the Seller may make any such payment; provided, however, that nothing herein contained shall require the Buyer to pay such tax, assessment or charge so long as the Buyer shall in good faith contest the validity thereof and shall furnish the Seller such bond or indemnity as the Seller shall require, unless, in the judgment of the Seller, forfeiture is likely to result from any such failure to pay. Any sum or sums so paid by the Seller, together with interest thereon at the highest lawful contract rate, shall be and become a part of the sum which

the Buyer is required to pay under this Contract, and shall immediately, without demand, be due and be repaid by the Buyer to the Seller.

The Buyer will, upon written request from the Seller,

(a) reimburse the Seller for all filing or recording fees incurred in connection with filing or recording or refiling or re-recording this Contract and all supplements and additions hereto, if any;

(b) execute and deliver to the Seller all such further documents and instruments and do such further acts as may be necessary to perfect the rights of the Seller herein contemplated; and

(c) furnish to the Seller at reasonable intervals reports and certificates setting forth all the information necessary to inform the Seller as to the continued existence, location and condition of the Airplanes and Spares. The Seller shall also have the right to inspect the Airplanes and Spares at all times when the same are not in use and when such inspection can be had without undue inconvenience or expense to the Buyer.

12. Buyer agrees to maintain the Airplanes and Spares in good repair and working condition at its own expense, except any airplane lost, destroyed or so damaged that insurance with respect thereto is payable to the Seller pursuant to paragraph 6 hereof. Subject to the proper performance of such covenant, the Buyer may make repairs and replacements to the Airplanes and Spares and may substitute for engines, propellers and any other equipment installed in or attached to the Airplanes or Spares, engines, propellers or other equipment of substantially the same

kind and value; provided, however, that no removal of any such engines, propellers, or equipment, and no replacement thereof, shall divest Seller of its superior title thereto, or render any such removed or replaced equipment subject to the lien or claim of any person other than Seller, UNLESS and UNTIL such equipment is replaced by equipment of substantially the same kind and value, the title to which, upon such equipment being installed in or attached to the Airplanes or Spares, may validly vest in Seller free and clear of the lien or claim of any other person, subject to the provisions of paragraph 14 hereof. In the case of any such permitted substitution, title to the substituted equipment shall immediately vest in Seller and become subject to the provisions of this Conditional Sale Contract and remain so vested and so subject unless and until substituted for in the manner hereinabove permitted; and title to the equipment substituted for shall vest in Buyer.

13. Until title to the Airplanes and Spares shall have passed to the Buyer hereunder, the Buyer shall have no right, power or authority to sell, transfer, assign, mortgage or encumber or in any other manner whatsoever dispose of the Airplanes and Spares or any part thereof (except as provided in paragraph 12 hereof) or any interest therein, and the Buyer hereby agrees that, except as permitted by paragraph 12 hereof, the Buyer will not (voluntarily or involuntarily) sell, transfer, mortgage, encumber or in any other manner whatsoever dispose of the Airplanes and Spares or any part thereof or any interest therein. Buyer agrees, except as provided herein, that the Airplanes and Spares will be used exclusively for its commercial air transport operations and related activities and that it

will not permit the Airplanes and Spares to be used or possessed by others. Buyer may permit the use of the Airplanes and Spares by other airlines with which Buyer enters into interchange agreements provided that any such use by other airlines shall for the purposes of this agreement be considered to be use by the Buyer.

14. To the extent, if any, that there is a conflict between any of the provisions of this agreement and any of the provisions of the Indenture of Mortgage dated as of December 1, 1954 between the Buyer and Irving Trust Company, as Trustee, or of the Chattel Mortgage dated as of December 20, 1954 between the Buyer and Irving Trust Company, as Trustee, the provisions of said Indenture and said Chattel Mortgage shall prevail and the provisions of this agreement shall be deemed amended to the extent necessary to avoid such conflict. Seller recognizes the liens created by (a) Granting Clause VI of said Indenture and (b) Granting Clause III of said Chattel Mortgage as prior liens on the aircraft engines and on the propellers, appliances and spare parts relating to the Airplanes or Spares when and so long as they shall be installed in, attached to or incorporated in any of the aircraft or aircraft engines at any time subject to the lien of said Indenture or of said Chattel Mortgage, as the case may be.

Seller agrees that so long as all the Bonds issued under said Indenture at the time outstanding shall be held by the original purchaser thereof, (a) Seller will not repossess the Airplanes or Spares, in the event of a default by Buyer under this agreement, without affording such original purchaser reasonable notice of such default and a reasonable opportunity to remedy the same and (b) such

original purchaser shall have the right, at its option, to purchase at any time all the interest of Seller hereunder by paying to Seller the then remaining balance of the purchase price hereunder plus accrued interest.

Seller also agrees that in the event of a default by Buyer hereunder, the rights and remedies of Seller shall be limited to repossession of the Airplanes and Spares.

15. Before delivery of each Airplane to Buyer hereunder, Buyer will cause to be fastened thereon in a location reasonably adjacent to, and not less prominent than that of, the airworthiness certificate for such Airplane, a plate no larger than four inches by seven inches (4" x 7") bearing the following legend:

"Hughes Tool Company holds legal title to this Airplane as Conditional Seller."

Buyer shall maintain such name plate in such location or in one of at least equal prominence and visibility at all times. Buyer may affix to the Airplanes Buyer's name, insignia or other legends customarily displayed by Buyer on its airplanes.

16. Buyer shall indemnify and hold harmless Seller, its agents and its employees from any and all liability for losses, expenses, damages, demands and claims in connection with or arising out of any death of, or injury or alleged injury or damage to, persons or property sustained, or alleged to have been sustained, in connection with or arising or alleged to have arisen out of Buyer's possession, use or operation of the Airplanes or Spares and Buyer agrees to handle any claim and defend any suit or action brought against Seller, its agents or its employees, or any of them, based on any such death, injury or damage, or alleged injury or damage, and to pay all damages, costs and expenses,

including attorneys' fees, in connection therewith or resulting therefrom.

Buyer's liability to Seller under this paragraph 16 is conditioned upon Seller's promptly giving notice to Buyer of institution of such suit or action or of receipt of such claim or demand. Buyer shall have the option at any time to conduct negotiations with the party or parties making any such claim or demand, and may intervene in any such suit or action. Whether or not Buyer intervenes in any such suit or action, it shall be entitled to assume, conduct or control the defense thereof, and Seller shall not settle or discharge any such claim, demand, suit, action or judgment without prior notice to and the consent of Buyer.

IN WITNESS WHEREOF, the parties hereto have executed and delivered this agreement as of the day and year first above written.

EXHIBIT II

THE STATE OF TEXAS :
COUNTY OF HARRIS :

OPTION

KNOW ALL MEN BY THESE PRESENTS:

1. That for and in consideration of the sum of Ten Dollars ($10.00) cash and other good and valuable considerations paid by Trans World Airlines, Inc., a Delaware corporation with a principal office and place of business in Kansas City, Missouri (hereinafter called "TWA"), to Hughes Tool Company, a Delaware corporation with its principal office and place of business in Houston, Texas (hereinafter called "Tool Company"), the receipt and sufficiency of all of which consideration is hereby acknowledged by Tool Company, Tool Company has this day given and granted, and does by these presents hereby give and grant, unto TWA the exclusive right and privilege (hereinafter referred to as the "Option") to acquire from Tool Company, at the price and on the terms and conditions hereinafter set out, (1) all the interest of Tool Company in twenty-five (25) new Model 1649A Airplanes, Lockheed Constellation type, (hereinafter called "1649A Airplanes") which may be acquired by Tool Company pursuant to that certain Purchase Agreement dated December 23, 1954 between Lockheed Aircraft Corporation (hereinafter called "Lockheed"), as Seller, and Tool Company, as Buyer, including all of the rights of Tool Company under such Purchase Agreement, as amended, and under all change orders and letter agreements incident thereto (which with said Purchase Agreement, as amended,

are hereinafter collectively referred to as "The Purchase Agreement"), a copy of The Purchase Agreement having been heretofore furnished to counsel for TWA; (2) all the interest of Tool Company in any spare engines (having a maximum purchase price as defined in paragraph 5 of up to $5,300,000) that may have been or may be acquired by Tool Company for use in the 1649A Airplanes, including Tool Company's interest in any purchase agreement relating thereto; and (3) all the interest of Tool Company in any other spare parts (having a maximum purchase price as defined in paragraph 5 of up to $5,700,000) which may have been or may be acquired by Tool Company for use in connection with the 1649A Airplanes, including Tool Company's interest in any purchase agreement relating thereto. For the purposes of this Option the term "spare parts" shall include extra propeller assemblies and airframe spare parts, spare parts for airplane engines and for propeller assemblies and other accessories, flight equipment and parts for use on or in connection with the operation or maintenance of aircraft.

2. If the Option is exercised, the 1649A Airplanes, the spare engines and spare parts purchased by Tool Company will be sold by Tool Company to TWA pursuant to a conditional sale contract in substantially the form attached hereto as Exhibit A. The interest rate on the unpaid balances payable by TWA under such conditional sale contract shall be the average interest rate payable by Tool Company on any indebtedness incurred

by it for the purpose of purchasing 1649A Airplanes, the spare engines and spare parts therefor (including any indebtedness proposed to be secured by the assignment of Tool Company's interest in such conditional sale contract), or if no such indebtedness is incurred, the prime commercial interest rate current in New York City at the time of the execution of such conditional sale contract.

3. TWA may exercise said Option by sending, by registered mail, a notice in writing to that effect to Tool Company addressed as follows:

Hughes Tool Company
2200 Gulf Building
Houston 2, Texas

Attention: Mr. C. H. Price

The Option may be exercised only as to all the 1649A Airplanes, spare engines and spare parts referred to in paragraph 1. Said Option may be exercised by TWA at any time on or before October 31, 1956; provided, however, that if prior to October 31, 1956, (or prior to such later option exercise date as may be authorized by this paragraph) the scheduled delivery date for the first airplane under The Purchase Agreement has been deferred for a period beyond April 30, 1957, by reason of a good faith written agreement between Tool Company and Lockheed or by reason of a claim of such deferment asserted in writing by Lockheed and not contested in good faith by Tool Company, then in such event the option exercise date shall be deferred for an identical period of time. In the event this

Option shall not have been exercised on or before the option exercise date as above determined, then this Option shall thereupon terminate, and subsequent deferments of the aforesaid delivery date shall not effect a revival of the lapsed Option.

4. The purchase price of each 1649A Airplane purchased by TWA pursuant to the option herein granted shall be the sum of the following:

(1) The amounts Tool Company shall have paid Lockheed for such airplane.

(2) All additional direct costs which are paid or incurred by Tool Company and are attributable to such airplane, including, but not limited to, costs of "customer supplied equipment" provided for in Article 18 of The Purchase Agreement. To the extent that any such costs are not specifically attributable to a particular airplane they shall be allocated equally among the airplanes at the time not delivered to TWA.

(3) An amount equal to interest at the rate of three per cent (3%) per annum on the average amount of the outstanding advance payments made by Tool Company applicable to such airplane; less, however, an amount equal to the sum of all interest payments received by Tool Company from Lockheed under Letter Agreement No. 3 (SL/98053) of The Purchase Agreement. Said sum of interest payments received by Tool Company from Lockheed, shall be credited only against that part of the purchase price provided for by this subparagraph (3), and shall in no event reduce that part of the purchase price represented by subparagraphs (1), (2) or (4) of this

paragraph. The average amount of the outstanding advance payments applicable to each airplane shall be computed by considering the payments made or costs incurred as set forth in subparagraphs (1) and (2) of this paragraph 4 as outstanding from the respective dates such payments were made or such costs were incurred by Tool Company and until the delivery of such airplane to TWA under the conditional sale contract;

(4) The assumption by TWA of all liabilities and obligations of Tool Company to Lockheed arising out of The Purchase Agreement.

5. The purchase price of the spare engines and spare parts purchased by TWA pursuant to the Option herein granted shall be the sum of the following:

(1) the total payments made therefor by Tool Company to the vendors of such spare engines or spare parts;

(2) all additional direct costs which are paid or incurred by Tool Company and are attributable to such spare engines and spare parts or to the purchase thereof;

(3) an amount equal to interest at the rate of three per cent (3%) per annum on the average amount of the outstanding advance payments made by Tool Company applicable to such spare engines and spare parts. The average amount of the outstanding advance payments applicable to spare engines and spare parts shall be computed by considering the payments made or costs incurred as set forth in subparagraphs (1) and (2) of this paragraph 5 as outstanding from the respective dates such

payments were made or such costs were incurred and until the delivery of the first 1649A Airplane to TWA under the conditional sale contract;

(4) any additional amount which, at the time of the delivery of the first 1649A Airplane to TWA, Tool Company is committed to pay to suppliers of spare engines and spare parts;

(5) the assumption by TWA of all other liabilities and obligations of Tool Company to the vendors of such spare engines and spare parts arising out of the purchase thereof.

6. In the event that the purchase price of the 1649A Airplanes differs from the amount computed at the time of the delivery thereof to TWA or in the event that the aggregate net amount which Tool Company is required to pay for the spare engines and spare parts in a final accounting with the suppliers thereof differs from the amount used in computing the purchase price thereof pursuant to paragraph 5, separate and independent adjustments will be made by payment from one party to the other of such difference. Similarly, Tool Company will reimburse TWA for any interest paid by TWA with respect to any portion of the purchase price of the spare engines and spare parts which is unpaid at the time of delivery of the first 1649A Airplane, to the extent and for the period that Tool Company has not earned such interest by having made payments to the suppliers.

7. The exercise of this Option by TWA shall be subject to the approval of the Civil Aeronautics Board

or the receipt by Tool Company of an opinion of counsel for TWA that such approval is not necessary.

8. The foregoing Option is subject to the right of Tool Company, at any time prior to the exercise by TWA of this Option, to exercise any and all of Tool Company's rights and privileges under The Purchase Agreement; and nothing herein shall be construed as in any wise limiting, restricting, prohibiting, or otherwise affecting the exercise by Tool Company of its rights under The Purchase Agreement.

9. This Option shall be binding upon and inure to the benefit of Tool Company and TWA and their respective successors and assigns; provided, however, that TWA may not assign this Option without the prior written consent of Tool Company, and any attempted assignment without such consent shall, at the option of Tool Company, effect a termination of this Option.

10. This Option shall supersede the option granted by Tool Company to TWA dated November 10, 1955 relating to the 1649A Airplanes, which option is hereby revoked.

EXECUTED this 20th day of April, A.D. 1956.

HUGHES TOOL COMPANY

Exhibit A

CONDITIONAL SALE CONTRACT

Contract of Conditional Sale made as of the day of , 195 , between HUGHES TOOL COMPANY, a Delaware corporation (hereinafter sometimes called the "Seller"), with its principal place of business at Houston, Texas, and TRANS WORLD AIRLINES, INC., a Delaware corporation (hereinafter sometimes called the "Buyer"), with its principal place of business at Kansas City, Missouri,

THE INTEREST OF THE SELLER IN THE AIRCRAFT AND EQUIPMENT COVERED HEREBY IS THAT OF A CONDITIONAL SELLER AND THE INTEREST OF THE BUYER THEREIN IS THAT OF A CONDITIONAL BUYER.

W I T N E S S E T H :

WHEREAS, Hughes has contracted to purchase from Lockheed Aircraft Corporation (hereinafter called "Lockheed") the twenty-five (25) Model L-1649A Lockheed Constellation Airplanes identified as follows:

C.A.A. Registration No.	Mfg. Serial No.

together with the airplane engines (each of which is of 750 or more rated take-off horsepower and will be later identified by manufacturer's serial number in a supplement to this Conditional Sale Contract) installed in each thereof on the date of delivery of such airplanes to Hughes and together with the propeller assemblies and all other equipment

and accessories attached to such airplanes and engines on the date of delivery of such airplanes to Hughes (hereinafter called "the Airplanes");

WHEREAS, Hughes has also contracted to purchase from various vendors extra airplane engines (each of which is of 750 or more rated take-off horsepower and will be later identified by manufacturer's serial number in a supplement to this Conditional Sale Contract) and propeller assemblies and airframe spare parts, spare parts for airplane engines and for propeller assemblies, and other accessories, flight equipment and parts, for use on or in connection with the operation or maintenance of the Airplanes at, in or near repair or overhaul bases, airports, airfields, landing strips, hangars, warehouses, storehouses and buildings owned, operated, leased or used by Buyer at any one or more of the locations shown on Exhibit 1 annexed hereto (all of which engines, propeller assemblies, parts, accessories and equipment are hereinafter referred to as "Spares"); and

WHEREAS, Hughes desires to sell and TWA desires to buy the Airplanes and Spares pursuant to the conditional sale arrangements set forth herein.

NOW, THEREFORE, in consideration of the mutual covenants herein contained, the parties hereto agree as follows:

1. Seller agrees to sell to Buyer and Buyer agrees to purchase the Airplanes and Spares upon the terms and conditions hereinafter set forth.

2. (a) Simultaneously upon conveyance of title to each Airplane from Lockheed to Seller, such Airplane shall forthwith be delivered to Buyer and Buyer shall accept such delivery at Lockheed Air Terminal, Burbank, California, or at such other place to which the Airplane has been delivered [illegible] by Lockheed.

(b) Seller shall deliver the Spares, or cause them to be delivered, to Buyer at Kansas City, Missouri, or such other place as may be designated by Buyer, such deliveries to be made upon delivery of the first Airplane to Buyer, or as soon thereafter as practicable, and with respect to Spares not then delivered to Seller, upon delivery of such Spares to Seller, or as soon thereafter as practicable.

3. (a) The purchase price of each Airplane for purposes of this Contract shall be the aggregate of

(1) The amounts Seller shall have paid Lockheed for such Airplane at the time of its delivery to Buyer hereunder;

(2) All additional direct costs which have been paid or incurred by Seller at the time of the delivery of such Airplane to Buyer and are attributable to such Airplane, including, but not limited to, costs of "customer furnished equipment". To the extent that any such costs are not specifically attributable to a particular Airplane they shall be allocated equally among the Airplanes at the time not delivered to Buyer;

(3) An amount equal to interest at the rate of three per cent (3%) per annum on the average amount of the outstanding advance payments made by Seller applicable to such Airplanes; less, however, an amount equal to the sum of all interest payments received by Seller from Lockheed for advance payments made by Seller to Lockheed in connection with the purchase agreement between them covering the Airplanes. Said sum of interest payments received by Seller from Lockheed shall be credited only against that part of the purchase price provided for by this subparagraph (3), and shall in no event reduce that part of the purchase price represented by subparagraphs (1) and (2) of this paragraph.

applicable to each Airplane shall be computed by considering the payments made or costs incurred as set forth in subparagraphs (1) and (2) of this paragraph 3(a) as outstanding from the respective dates such payments were made or such costs were incurred by Seller and until the delivery of such Airplane to Buyer under this Contract.

(b) The purchase price of Spares for purposes of this Contract shall be the aggregate of

(1) the total payments made therefor by Seller to the vendors of such Spares at the time of the delivery of the first Airplane to Buyer hereunder;

(2) all additional direct costs which have been paid or incurred by Seller at the time of the delivery of the first Airplane to Buyer and are attributable to such Spares or to the purchase thereof;

(3) an amount equal to interest at the rate of three per cent (3%) per annum on the average amount of the outstanding advance payments made by Seller applicable to such Spares. The average amount of the outstanding advance payments applicable to Spares shall be computed by considering the payments made or costs incurred as set forth in subparagraphs (1) and (2) of this paragraph 3(b) as outstanding from the respective dates such payments were made or such costs were incurred by Seller and until the delivery of the first Airplane to Buyer under this contract;

(4) any additional amount which, at the time of the delivery of the first Airplane to Buyer hereunder, Seller is committed to pay to suppliers of Spares.

(c) The purchase price of each Airplane and the purchase price of Spares shall each be paid by Buyer to Seller in sixty (60) equal consecutive monthly installments, together with interest on the unpaid balance at the rate of per cent (%) per annum. The first of such payments

relating to each Airplane shall be made at the time of delivery of such Airplane, and the first of such payments relating to Spares shall be made at the time of delivery of the first Airplane. As to each Airplane, and as to Spares, the second and succeeding payments shall be made monthly on the first day of the months succeeding the month in which the first payment is required to be paid, until the whole of each such purchase price shall have been paid. All payments shall be made to the Seller at the Hughes Tool Company, Houston, Texas.

(d) In the event that the purchase price of the Airplanes differs from the amount computed at the time of the delivery thereof to Buyer hereunder or in the event that the aggregate net amount which Seller is required to pay for the Spares in a final accounting with the suppliers thereof differs from the amount used in computing the purchase price thereof pursuant to subparagraph 3(b), separate and independent adjustments will be made by payment from one party to the other of such difference. Similarly, Seller will reimburse Buyer for any interest paid by Buyer with respect to any portion of the purchase price of the Spares which is unpaid at the time of delivery of the first Airplane hereunder, to the extent and for the period that Seller has not earned such interest by having made payments to the suppliers.

4. Title to the Airplanes and Spares shall not pass to Buyer by delivery, but shall remain in Seller until such time as the purchase price shall have been paid in full and Buyer shall have paid to Seller all other sums then due and payable to Seller hereunder, whereupon absolute title to the Airplanes and Spares shall pass to Buyer.

5. Upon the happening of any one or more of the following events, namely:

(a) default in making any payment, in the manner herein specified, of any monthly installment of the purchase price of the Airplanes or Spares and such default shall continue unremedied for five (5) days after written notice thereof shall have been delivered by Seller to Buyer; or

(b) default shall be made by the Buyer in the observance or performance by the Buyer of any other covenant or agreement contained herein, and such default shall continue unremedied for thirty (30) days after written notice thereof shall have been delivered by Seller to Buyer; or

(c) the Buyer shall become insolvent, or shall file a voluntary petition in bankruptcy, or shall file a voluntary petition or answer seeking or consenting to reorganization pursuant to or purporting to be pursuant to the Acts of Congress relating to bankruptcy or any other statute, state or Federal, for the relief of debtors, or shall be adjudicated a bankrupt, or shall make an assignment for the benefit of creditors, or shall consent to the appointment of a receiver or trustee of or for it or a substantial part of its property; or

(d) an order shall be entered pursuant to or purporting to be pursuant to the Acts of Congress relating to bankruptcy or any other statute, state or Federal, for the relief of debtors approving a petition seeking a reorganization of, or if an order shall be entered appointing a receiver or trustee of, or for any substantial part of the property of, or if a warrant of attachment shall be issued against any substantial part of the property of, the Buyer, and any such order is not dismissed or stayed within sixty (60) days from its entry or such attachment is not dismissed

or bonded within thirty (30) days from its levy; or

(e) the Bonds at the time issued and outstanding under that certain Indenture, dated as of December 1, 1954, between Buyer and Irving Trust Company, as Trustee, as said Indenture may have heretofore been or may hereafter be amended, shall be declared and become due and payable, prior to the date of maturity of such Bonds as set forth therein, upon the occurrence of any of the "events of default" described in said Indenture, as amended (and the Buyer hereby agrees to notify the Seller of any declaration of default forthwith upon the receipt thereof); or

(f) the Notes at the time issued and outstanding under that certain Chattel Mortgage, dated as of December 20, 1954, between Buyer and Irving Trust Company, as Trustee, as said Chattel Mortgage may have heretofore been or may hereafter be amended, shall be declared and become due and payable, prior to the date of maturity of such Notes as set forth therein, upon the occurrence of any of the "events of default" described in said Chattel Mortgage, as amended (and the Buyer hereby agrees to notify the Seller of any declaration of default forthwith upon the receipt thereof);

then Seller may at once (or at any later time) proceed to take possession of the Airplanes and Spares in any manner provided by law, or Seller may at its option, and Seller is hereby empowered to, with or without legal process, and with or without demand, enter upon the premises where the Airplanes or Spares may be and take possession thereof and remove the same. Seller may resell the Airplanes and Spares, so retaken, at public or private sale, with or without having such Airplanes and Spares at the place of sale, and upon such terms and in such manner

as Seller may determine. Notice of the intention of Seller to so sell the Airplanes and Spares shall be given by Seller to Buyer at least ten (10) days prior to the time of such sale. Seller may bid and purchase at any such public sale. From the proceeds of any such sale, Seller shall deduct all expenses for retaking, repairing, storing and selling the Airplanes and Spares, including any reasonable attorneys' fees incurred. The balance of such proceeds shall be applied to the payment of all sums owing to Seller under this agreement and any surplus of such proceeds remaining shall be paid to Buyer or to whoever may be lawfully entitled to receive the same. Buyer shall be under no obligation to Seller for any deficiency resulting from any such sale or to make any payments on account of the purchase price of any Airplane or Spares falling due after Seller has taken possession of such Airplane or Spares pursuant to this provision.

6. From and after delivery of the Airplanes and Spares to Buyer and until absolute title thereto is vested in Buyer or its nominee, or Seller repossesses the Airplanes,

(a) Buyer shall procure and maintain at its expense public liability, passenger liability and property damage insurance in such amounts and with such companies as shall be satisfactory to Seller, covering Seller's liability as holder of legal title to the Airplanes and Spares. The policies evidencing such insurance shall contain such provisions as shall be satisfactory to Seller and shall name Seller as assured.

(b) Buyer shall at its expense maintain all risk aircraft hull insurance in respect of the Airplanes in favor of Buyer and Seller, as their interests may appear, in such amounts and with such companies as shall be satis-

factory to Seller. If any such Airplane shall be lost, destroyed or damaged to such an extent that repair thereof is impractical, such insurance shall be paid to the Seller to the extent of the unpaid balance of the purchase price of such Airplane together with any accrued and unpaid interest thereon, plus all other amounts then due to Seller hereunder. Upon such payment to the Seller of insurance to the extent of the unpaid balance of the purchase price of any Airplane, absolute title to the Airplane so damaged or to any parts of an Airplane so destroyed shall vest in Buyer and Seller shall deliver to Buyer such proper documents of title with respect thereto as Buyer may reasonably require. Buyer shall be under no obligation to make any payments on account of the purchase price of such Airplane falling due after such loss, destruction or damage. Any insurance proceeds in excess of the amount payable to the Seller, and any insurance proceeds payable as a result of damage not rendering repair impractical, shall be payable to Buyer or its designee.

7. Buyer may at any time pay to Seller the unpaid balance of the purchase price of the Airplanes and Spares or any part thereof, without premium or penalty.

8. Upon the payment to Seller of the balance of the purchase price of the Airplanes and Spares together with all other amounts owing to Seller hereunder, Seller shall deliver to Buyer at such place in the United States as Buyer may designate.

(a) a bill of sale duly vesting in Buyer the title to the Airplanes and Spares free and clear of all liens, claims, charges and encumbrances attaching subsequent to the delivery of the Airplanes and Spares to Seller and not arising

out of the possession, use or operation of the Airplanes and Spares by Buyer, and

(b) such other appropriate documents of title with respect thereto as Buyer may reasonably require.

9. In the event any sales tax or use tax is hereafter imposed upon or paid by Seller by reason of the sale or use of the Airplanes and Spares or the purchase thereof by Seller, then in addition to the sales price provided for in paragraph 3, Buyer shall pay to Seller the amount thereof, upon demand.

10. Buyer shall furnish Seller forthwith and from time to time thereafter at reasonable intervals, all such information concerning Buyer's financial condition, including balance sheets and forecasts of earnings, as is customarily furnished to a commercial bank holding or considering the acceptance of unsecured notes of a borrower.

11. The Buyer agrees that it will pay and discharge all taxes, assessments, governmental charges and all charges for keep, repairs, storage, maintenance or accessories, which if unpaid might become a lien, charge or encumbrance upon or against any of the Airplanes or Spares; and upon the failure of the Buyer so to do the Seller may make any such payment; provided, however, that nothing herein contained shall require the Buyer to pay such tax, assessment or charge so long as the Buyer shall in good faith contest the validity thereof and shall furnish the Seller such bond or indemnity as the Seller shall require, unless, in the Judgment of the Seller, forfeiture is likely to result from any such failure to pay. Any sum or sums so paid by the Seller, together with interest thereon at the highest lawful contract rate, shall be and become a part of the sum which

the Buyer is required to pay under this Contract, and shall immediately, without demand, be due and be repaid by the Buyer to the Seller.

The Buyer will, upon written request from the Seller,

(a) reimburse the Seller for all filing or recording fees incurred in connection with filing or recording or refiling or re-recording this Contract and all supplements and additions hereto, if any;

(b) execute and deliver to the Seller all such further documents and instruments and do such further acts as may be necessary to perfect the rights of the Seller herein contemplated; and

(c) furnish to the Seller at reasonable intervals reports and certificates setting forth all the information necessary to inform the Seller as to the continued existence, location and condition of the Airplanes and Spares. The Seller shall also have the right to inspect the Airplanes and Spares at all times when the same are not in use and when such inspection can be had without undue inconvenience or expense to the Buyer.

12. Buyer agrees to maintain the Airplanes and Spares in good repair and working condition at its own expense, except any airplane lost, destroyed or so damaged that insurance with respect thereto is payable to the Seller pursuant to paragraph 6 hereof. Subject to the proper performance of such covenant, the Buyer may make repairs and replacements to the Airplanes and Spares and may substitute for engines, propellers and any other equipment installed in or attached to the Airplanes or Spares, engines, propellers or other equipment of substantially the same

kind and value; provided, however, that no removal of any such engines, propellers, or equipment, and no replacement thereof, shall divest Seller of its superior title thereto, or render any such removed or replaced equipment subject to the lien or claim of any person other than Seller, UNLESS and UNTIL such equipment is replaced by equipment of substantially the same kind and value, the title to which, upon such equipment being installed in or attached to the Airplanes or Spares, may validly vest in Seller free and clear of the lien or claim of any other person, subject to the provisions of paragraph 14 hereof. In the case of any such permitted substitution, title to the substituted equipment shall immediately vest in Seller and become subject to the provisions of this Conditional Sale Contract and remain so vested and so subject unless and until substituted for in the manner hereinabove permitted; and title to the equipment substituted for shall vest in Buyer.

13. Until title to the Airplanes and Spares shall have passed to the Buyer hereunder, the Buyer shall have no right, power or authority to sell, transfer, assign, mortgage or encumber or in any other manner whatsoever dispose of the Airplanes and Spares or any part thereof (except as provided in paragraph 12 hereof) or any interest therein, and the Buyer hereby agrees that, except as permitted by paragraph 12 hereof, the Buyer will not (voluntarily or involuntarily) sell, transfer, mortgage, encumber or in any other manner whatsoever dispose of the Airplanes and Spares or any part thereof or any interest therein. Buyer agrees, except as provided herein, that the Airplanes and Spares will be used exclusively for its commercial air transport operations and related activities and that it

will not permit the Airplanes and Spares to be used or possessed by others. Buyer may permit the use of the Airplanes and Spares by other airlines with which Buyer enters into interchange agreements provided that any such use by other airlines shall for the purposes of this agreement be considered to be use by the Buyer.

14. To the extent, if any, that there is a conflict between any of the provisions of this agreement and any of the provisions of the Indenture of Mortgage dated as of December 1, 1954 between the Buyer and Irving Trust Company, as Trustee, or of the Chattel Mortgage dated as of December 20, 1954 between the Buyer and Irving Trust Company, as Trustee, the provisions of said Indenture and said Chattel Mortgage shall prevail and the provisions of this agreement shall be deemed amended to the extent necessary to avoid such conflict. Seller recognizes the liens created by (a) Granting Clause VI of said Indenture and (b) Granting Clause III of said Chattel Mortgage as prior liens on the aircraft engines and on the propellers, appliances and spare parts relating to the Airplanes or Spares when and so long as they shall be installed in, attached to or incorporated in any of the aircraft or aircraft engines at any time subject to the lien of said Indenture or of said Chattel Mortgage, as the case may be.

Seller agrees that so long as all the Bonds issued under said Indenture at the time outstanding shall be held by the original purchaser thereof, (a) Seller will not repossess the Airplanes or Spares, in the event of a default by Buyer under this agreement, without affording such original purchaser reasonable notice of such default and a reasonable opportunity to remedy the same and (b) such

original purchaser shall have the right, at its option, to purchase at any time all the interest of Seller hereunder by paying to Seller the then remaining balance of the purchase price hereunder plus accrued interest.

Seller also agrees that in the event of a default by Buyer hereunder, the rights and remedies of Seller shall be limited to repossession of the Airplanes and Spares.

15. Before delivery of each Airplane to Buyer hereunder, Buyer will cause to be fastened thereon in a location reasonably adjacent to, and not less prominent than that of, the airworthiness certificate for such Airplane, a name plate no larger than four inches by seven inches (4" x 7") bearing the following legend:

"Hughes Tool Company holds legal title to this Airplane as Conditional Seller."

Buyer shall maintain such name plate in such location or in one of at least equal prominence and visibility at all times. Buyer may affix to the Airplanes Buyer's name, insignia or other legends customarily displayed by Buyer on its airplanes.

16. Buyer shall indemnify and hold harmless Seller, its agents and its employees from any and all liability for losses, expenses, damages, demands and claims in connection with or arising out of any death of, or injury or alleged injury or damage to, persons or property sustained, or alleged to have been sustained, in connection with or arising or alleged to have arisen out of Buyer's possession, use or operation of the Airplanes or Spares and Buyer agrees to handle any claim and defend any suit or action brought against Seller, its agents or its employees, or any of them, based on any such death, injury or damage, or alleged injury or damage, and to pay all damages, costs and expenses,

including attorneys' fees, in connection therewith or resulting therefrom.

Buyer's liability to Seller under this paragraph 16 is conditioned upon Seller's promptly giving notice to Buyer of institution of such suit or action or of receipt of such claim or demand. Buyer shall have the option at any time to conduct negotiations with the party or parties making any such claim or demand, and may intervene in any such suit or action. Whether or not Buyer intervenes in any such suit or action, it shall be entitled to assume, conduct or control the defense thereof, and Seller shall not settle or discharge any such claim, demand, suit, action or judgment without prior notice to and the consent of Buyer.

IN WITNESS WHEREOF, the parties hereto have executed and delivered this agreement as of the day and year first above written.

(CAB Orders & Documents)

BEFORE THE

CIVIL AERONAUTICS BOARD

In the Matter of the Application of	:
HUGHES TOOL COMPANY	:
for approval under Section 408 of the Civil Aeronautics Act of 1938, as amended, of the acquisition of control of	: Docket No. 1182
TRANS WORLD AIRLINES, INC.	:

MOTION OF TRANS WORLD AIRLINES, INC.
FOR APPROVAL OF TRANSACTIONS WITH
HUGHES TOOL COMPANY

TRANS WORLD AIRLINES, INC. (hereinafter referred to as "TWA") respectfully moves that the Board enter an order herein modifying its Order Serial No. 3210, issued October 17, 1944, as amended, approving the acquisition of control of TWA by Hughes Tool Company (hereinafter referred to as "Hughes"), so that the terms of such order will not restrict the right of TWA to purchase from Hughes Tool Company up to 25 jet powered aircraft suitable for operation by TWA on both its domestic and international routes.

1. Thorough studies have been made by TWA of the characteristics of all jet aircraft available in this country and abroad. None of these aircraft has the range desirable for all-year around operations across the Atlantic so as to permit non-stop services in both directions under the extreme conditions frequently encountered on that route.

2. During the past few years important new

developments have occurred affecting jet aircraft which make it possible to design aircraft at this time that are superior in performance, safety and economy to the commercial aircraft now being constructed, the designs for which were initially laid down four or five years ago.

3. Hughes Tool Company has indicated to TWA that, subject to approval of the Board, it is willing to construct jet transport aircraft for TWA's use, taking into account the most recent design developments, on terms that are at least as favorable in every respect as those that can be secured from any manufacturer for a similar aircraft. Deliveries of such aircraft will commence in 1961. The aircraft will be used interchangeably on TWA's international and domestic routes.

4. Hughes Tool Company has advised TWA that it is willing to sell such aircraft to any other airline at the same price as sold to TWA.

5. Hughes Tool Company has also advised TWA that the aircraft would be constructed by the Aircraft Division of Hughes Tool Company in a new factory to be located in accordance with the recently announced policy of the Air Force to insure the widest possible dispersal of aircraft production facilities.

WHEREFORE, Trans World Airlines, Inc. respectfully prays that the Board enter an order herein modifying the Board's Order Serial No. 3210, as amended, so that the terms of such order will not restrict the right of TWA to acquire from Hughes Tool Company the aircraft as referred to above, and providing such other and further relief as may be appropriate.

Respectfully submitted,

TRANS WORLD AIRLINES, INC.

Order No. E-10300

UNITED STATES OF AMERICA
CIVIL AERONAUTICS BOARD
WASHINGTON, D. C.

Adopted by the Civil Aeronautics Board
at its office in Washington, D. C.
on the 17th day of May, 1956

In the matter of the application of	
HUGHES TOOL COMPANY	
for approval under section 408 of the Civil Aeronautics Act of 1938, as amended, of the acquisition and control of	Docket No. 1182
TRANS WORLD AIRLINES, INC.	

ORDER MODIFYING ORDER APPROVING ACQUISITION

By motion filed May 2, 1956, Trans World Airlines, Inc. (TWA) requests an order modifying Order No. E-3210, Docket No. 1182, issued October 17, 1955, as amended by subsequent orders, so that the terms of such order will not restrict the right of TWA to exercise certain options dated April 20, 1956 for the purchase of eight Lockheed 1049G and twenty-five Lockheed 1049A aircraft, and spare engines and parts from the Hughes Tool Company pursuant to conditional sale contracts.

We have considered all of the circumstances surrounding the proposal and find it in the public interest to relax the restrictions in the aforementioned Order No. E-3210. The Board has recently awarded TWA several new route segments and it appears that additional aircraft are required to implement such services. Furthermore, it appears that the new equipment is being made available to TWA at cost with the advantage of earlier delivery than would be possible if purchases of like equipment had to be made in the open market. In any event, it should be made clear that in determining that the proposed transaction is in the public interest we are not making any finding as to the reasonableness of the cost of the aircraft and related components for rate making purposes.

The Board, acting pursuant to the powers vested in it by the Civil Aeronautics Act of 1938, as amended, particularly sections 205(a), 408, and 1005(d) thereof, and finding that the further modification of Order No. E-3210 as hereinafter provided is just and reasonable and is in the public interest;

IT IS ORDERED, THAT Order No. 3210 issued October 17, 1944, as amended by subsequent orders, be and it hereby is further amended by adding thereto the following:

"8. That the terms of this order shall not restrict the right of Trans World Airlines, Inc. to purchase, and Hughes Tool Company to sell, eight Lockheed 1049 and twenty-five Lockheed 1649A aircraft and related spare parts and engines pursuant to the terms and conditions of certain options dated April 20, 1956 and conditional sales contracts between said parties; Provided, That nothing in the Board's action herein shall be construed as constituting an approval for rate-making purposes."

Order No. E-10360

(1)

UNITED STATES OF AMERICA
CIVIL AERONAUTICS BOARD
WASHINGTON, D. C.

Adopted by the Civil Aeronautics Board
at its office in Washington, D. C.
on the 8th day of June, 1956

In the matter of an investigation of proposed transactions between	:	
HUGHES TOOL COMPANY	:	Docket No. 8061, et al. 1182
and	:	
TRANS WORLD AIRLINES, INC.	:	

ORDER INSTITUTING INVESTIGATION

In Trans World Airlines, Control by Hughes Tool, Docket No. 1182, 6 CAB 153 (1944), we approved the acquisition of control of Trans World Airlines, Inc. (then known as Transcontinental and Western Air, Inc., hereinafter TWA) by Hughes Tool Company (hereinafter Toolco) under section 408 of the Act subject to the condition, inter alia, that approval should be effective so long as commercial transactions between the two companies were limited to items the price of which did not exceed $200.00 each with a total aggregate annual limitation of $10,000.00. We found (p. 156) that "Applicant (Toolco) is not now engaged in, and has no plans contemplating, production of aircraft, aircraft parts, or facilities for use in commercial air transportation." We also found that there was no evidence in the record of an intention on the part of Toolco to engage in any phase of supply for commercial aviation (p. 155). In further proceedings in 9 CAB 381 (1948) we held that a certain letter agreement between Toolco and TWA resulted in further control of TWA for which Board approval was required pursuant to section 408 of the Act. One of the questions in the case was whether any change in the activities of Toolco in the field of aeronautics since the date of the Board's approval in 6 CAB 153 had affected or altered the character of the control approved therein. We stated that (p. 382) "It is clear that a substantial change in the activities of Toolco in the field of aeronautics would result in a transaction subject to the Board's jurisdiction under section 408 by reason of the fact that the character and priority of control originally approved might be altered or changed as a result thereof." We then found that the principal activity of Toolco at that time consisted of experimental work on aircraft accessories and armament for the Army and Navy. We concluded, therefore, that there had been no substantial change in Toolco's operations in the field of aeronautics since the original order of approval which required further Board consideration, under section 408, of Toolco's control of TWA. In 12 CAB 192 (1950) we approved, on the merits, the further acquisition of control of TWA by Toolco subject to the terms and conditions attached to the Board's approval in 6 CAB 153.

3114

On May 10, 1956, TWA filed a motion in Docket No. 1182 that the Board modify its Order in 6 CAB 153 so as not to restrict the right of TWA to purchase from Toolco up to 25 jet-powered aircraft suitable for operation by TWA on both its domestic and international routes.

As noted above, the aeronautical activities of Toolco considered heretofore in 6 CAB 153 and 9 CAB 381 did not involve manufacture or sale of aircraft for commercial use. It appears, therefore, that the manufacture of jet aircraft for use of TWA and other airlines by Toolco may result in a substantial change in the activities of Toolco in the field of aeronautics which would require our further consideration, under section 408, of Toolco's control of TWA. However, Toolco has not filed an application for such approval under section 408. Accordingly, we will institute an investigation to determine whether the proposed change in Toolco's activities in the field of aeronautics will result in a transaction subject to the Board's jurisdiction under section 408 and if so, whether we should approve such transaction. We will consolidate therewith TWA's motion in Docket No. 1182 for amendment of the Board's order in 6 CAB 153 since we find that such consolidation will be conducive to the proper dispatch of the Board's business and to the ends of justice and will not unduly delay the proceeding.

ACCORDINGLY, IT IS ORDERED THAT:

1. An investigation, assigned Docket No. 2061, be and it hereby is instituted to determine (a) whether the proposal of Hughes Tool Company to manufacture and sell up to 25 jet-powered aircraft for TWA and other air lines will result in a transaction requiring further Board consideration, under section 408, of the control of TWA by Hughes Tool Company; (b) if so, whether the Board should approve or disapprove such transaction under section 408(b) of the Act;

2. TWA's motion in Docket No. 1182 for an amendment of the Board's order in 6 CAB 153, as amended, be consolidated with the investigation instituted by ordering paragraph No. 1;

3. Said consolidated proceeding be set down for expeditious hearing before an examiner of the Board at a time and place hereafter to be designated.

BEFORE THE

CIVIL AERONAUTICS BOARD

In the Matter of the Application of :	
HUGHES TOOL COMPANY :	
for approval under Section 408 of the Civil Aeronautics Act of 1938, as amended, of the acquisition of control of :	Docket No. 1182
TRANS WORLD AIRLINES, INC. :	

MOTION OF TRANS WORLD AIRLINES, INC.
FOR APPROVAL OF TRANSACTIONS WITH
HUGHES TOOL COMPANY

TRANS WORLD AIRLINES, INC. (hereinafter referred to as "TWA") respectfully moves that the Board enter an order herein modifying its Order Serial No. 3210, issued October 17, 1944, as amended, approving the acquisition of control of TWA by Hughes Tool Company (hereinafter referred to as "Hughes"), so that the terms of such order will not restrict the right of TWA to borrow from Hughes up to $10,000,000 under the terms and conditions hereinafter described.

1. The terms and conditions upon which TWA proposes to borrow up to $10,000,000 from Hughes and upon which Hughes will extend credit in such amount to TWA are as follows:

(a) All loans will be upon unsecured notes of TWA in substantially the form attached as Exhibit A.

(b) The initial amount of the credit will not exceed $10,000,000. On August 1, 1957, the maximum

amount of the credit shall be reduced to $7,500,000; on November 1, 1957, to $5,000.000; on February 1, 1958, to $2,500,000;

(c) The credit shall terminate on April 30, 1958, or at such earlier time as the Treasurer of Hughes deems necessary because of other cash requirements or contractual limitations;

(d) Borrowings and repayments shall be in multiples of $100,000 and upon reasonable notice to Hughes;

(e) All loans shall bear interest for each day at a rate equivalent to the then prevailing prime rate for commercial loans in New York, New York, computed on the basis of 365 days;

(f) No commitment fee shall be required;

(g) Before each borrowing Hughes shall have received a signed opinion from TWA's counsel that the promissory note, when executed and delivered, will be a valid and binding obligation of TWA according to its tenor and effect and that its issuance will not violate any obligation or restriction imposed upon TWA by any law or governmental regulation or by any contract, indenture or other document to which TWA is a party.

2. The arrangement described above will operate as a standby credit to be utilized as and when required by TWA, thus providing TWA with reserve funds in the event additional cash is needed during the period of the credit.

WHEREFORE, Trans World Airlines, Inc. respectfully prays that the Board enter an order herein modifying the Board's Order Serial No. 3210, as amended, so that the terms of such order will not restrict the right

of TWA to borrow up to $10,000,000 from Hughes Tool Company on the above terms and conditions, and providing such other and further relief as may be appropriate.

Respectfully submitted,

TRANS WORLD AIRLINES, INC.

By T. F. Wells
Vice President

September 11, 1956

EXHIBIT A

New York, New York
, 195_

$

FOR VALUE RECEIVED, the undersigned TRANS WORLD AIRLINES, INC., a Delaware corporation (hereinafter sometimes called "TWA"), promises to pay fifteen (15) days after demand the sum of

Dollars ($) to the order of HUGHES TOOL COMPANY at the office of Irving Trust Company, One Wall Street, New York 15, New York, together with interest from date on the unpaid principal hereof at a rate for each day equivalent to the then prevailing prime rate for commercial loans in New York, New York, computed on the basis of 365 days.

Demand for payment, protest and notice of dishonor are hereby waived by the undersigned.

The indebtedness represented by this promissory note, including both principal and interest, is subordinated and subject in right of payment to the prior payment in full of all the principal of, premium, if any, and interest on the 3-3/4% Equipment Mortgage Sinking Fund Bonds due December 1, 1969 of TWA now or hereafter issued under the Indenture of Mortgage dated as of December 1, 1954, between TWA and Irving Trust Company, as Trustee, as said Indenture has heretofore been or from time to time hereafter may be amended, modified or supplemented, and any renewal, extension, refunding, amendment and modification of any such Bonds (all of such principal of, premium, if any, and interest on all of such Bonds together with any such renewal, extension, refunding, amendment and modification of any thereof being hereinafter called "Bond

Indebtedness"). Upon any distribution of all or substantially all of the assets of TWA or upon any dissolution, winding up or liquidation of TWA, whether voluntary or involuntary, or upon any reorganization, readjustment, arrangement or similar proceeding relating to TWA or any of its creditors as such property, whether in bankruptcy, insolvency, receivership proceedings or otherwise, or upon any assignment by TWA for the benefit of creditors or upon any other marshalling of the assets or liabilities of TWA,

(a) all the Bond Indebtedness shall first be paid in full in cash or provision made for such payment by deposit of the requisite cash in trust with a bank or banks (either theretofore acting as Trustee under the aforementioned Indenture, or duly appointed paying agents for the purpose) before any payment or distribution is made on account of the principal or interest on the indebtedness under this promissory note;

(b) any payment or distribution (whether in cash, property or securities) to which the holder of this promissory note would be entitled except for the provisions of this subordination clause shall be paid or delivered by the trustee, receiver, assignee for the benefit of creditors, or other liquidating agents making such payment or distribution, directly and ratably to the holders of the Bond Indebtedness (or to their representatives or to the Trustee under the aforementioned Indenture) to the extent necessary to pay off the Bond Indebtedness in full after giving effect to any concurrent payment or distribution or provision therefor as aforesaid to the holders of the Bond Indebtedness; and

(c) in the event that notwithstanding the foregoing, any payment or distribution (whether in cash, property or securities) shall be received by the holder of this promissory note before all such Bond Indebtedness is paid in full, or provision is made as aforesaid for its payment, such payment or distribution shall be ratably held in trust for the benefit of, and shall be ratably paid over or delivered to the holders of, the Bond Indebtedness or their representatives (or to the Trustee under the aforementioned Indenture), for application to or payment of all the Bond Indebtedness remaining unpaid to the extent necessary to pay the Bond Indebtness in full after giving effect to any concurrent payment or distribution or provision therefor as aforesaid to the holders of such Bond Indebtedness.

In the event and during the continuation of any default under any instrument constituting Bond Indebtedness or pursuant to which any Bond Indebtedness shall have been issued, continuing during the period of grace, if any, specified in such instru-

ment, no payment of principal or interest shall be made on this promissory note and no holder of this promissory note shall be entitled to receive any such payment. Nothing contained in this promissory note shall affect the obligation of TWA to make, or prevent TWA from making, at any time, except during the pendency of any of the proceedings or upon the happening of any of the events referred to in the foregoing provisions of this promissory note or during the continuation of any such default, payments of principal of, or interest on, this promissory note.

The above subordination clause defines solely the relative rights as between the holder of this promissory note and the holders of the Bond Indebtedness; and nothing in such clause shall be deemed to impair the obligations under this promissory note as between the holder of this promissory note and TWA.

TRANS WORLD AIRLINES, INC.

Order No. E-10971

UNITED STATES OF AMERICA
CIVIL AERONAUTICS BOARD
WASHINGTON, D. C.

Adopted by the Civil Aeronautics Board
at its office in Washington, D. C.
on the 13th day of December, 1956

In the matter of the application of	:	
	:	
HUGHES TOOL COMPANY	:	
	:	
for approval under section 408 of the Civil Aeronautics Act of 1938, as amended, of the acquisition of control of	:	Docket No. 1182
	:	
TRANS WORLD AIRLINES, INC.	:	

ORDER

By motion filed with the Board on September 13, 1956 Trans World Airlines, Inc. (TWA) requests modification of the Board's order in Docket No. 1182, Order No. 3210 1/, as amended and modified, which restricts commercial transactions between TWA and Hughes Tool Company (Toolco) and between TWA and any affiliate or subsidiary of Toolco to a maximum of $200 each with the further limitation that the total annual expenditure involved in such commercial transactions by either party shall not exceed $10,000.

The modification is desired to permit TWA to borrow from Toolco up to $10,000,000. Briefly, the transaction is subject to the following terms and conditions: (1) all loans will be made upon unsecured notes of TWA; (2) the initial amount of the credit will not exceed $10,000,000 and will be reduced by $2,500,000 August 11, 1957, November 1, 1957 and February 1, 1958; (3) the credit shall terminate April 30, 1958, or at such earlier time as the treasurer of Toolco deems necessary because of other cash requirements or contractual limitations; (4) borrowings and repayments shall be in multiples of $100,000 and upon reasonable notice to Toolco; (5) all loans shall bear interest for each day at a rate equivalent to the then prevailing rate for commercial loans in New York; (6) no commitment fee shall be required; and (7) before each borrowing TWA's counsel shall give Toolco a signed opinion that the promissory note when executed and delivered will be a valid and binding obligation upon TWA. The carrier states that the loan arrangement will operate as a standby credit to be utilized as and when required by TWA, thus providing it with reserve funds in the event additional cash is needed during the

1/ 6 CAB 191.

period of credit.

The Board has previously approved the control of TWA by Toolco 2/ under section 408 of the Act, and the proposed transaction raises no new question under section 408 of control by Toolco. The Board finds that the proposed transaction does not violate the original intent of the restriction imposed upon transactions between TWA and Toolco; and further modification as ordered herein of the Board's order in Docket No. 1182, as amended and modified, is just and reasonable and is in the public interest.

IT IS ORDERED THAT:

1. Order Serial No. 3210, issued October 17, 1944, as amended by subsequent orders, be and it hereby is further amended to the extent necessary to permit TWA to borrow from Toolco up to $10,000,000 to be utilized as and when required by TWA as reserve funds in the event additional cash is needed during the period commencing with the date of this order and terminating April 30, 1958, or at such earlier time as the Treasurer of Toolco deems necessary because of other cash requirements or contractual limitations;

2. Such action shall not be a determination for rate-making purposes of the reasonableness of the financial provisions of the transaction;

3. The motion, except to the extent granted herein, be and it hereby is denied; and

4. This order may be amended or revoked at any time in the discretion of the Board without hearing.

By the Civil Aeronautics Board:

2/ 6 CAB 153 and 12 CAB 192.

BEFORE THE

CIVIL AERONAUTICS BOARD

In the Matter of the Application of	
HUGHES TOOL COMPANY	
for approval under Section 408 of the Civil Aeronautics Act of 1938, as amended, of the acquisition of control of	Docket No. 1182
TRANS WORLD AIRLINES, INC.	

AMENDED MOTION OF TRANS WORLD AIRLINES, INC.
FOR APPROVAL OF TRANSACTIONS WITH
HUGHES TOOL COMPANY

TRANS WORLD AIRLINES, INC. (hereinafter called TWA) filed with the Board on or about April 1, 1957 its motion requesting the issuance of an order which would permit TWA to sell convertible debentures to Hughes Tool Company (hereinafter called Hughes) as a part of a general offering to all stockholders of TWA, and to enter into a commitment with Hughes insuring the purchase of at least $34,000,000 of such debentures pursuant to a refinancing program described in said motion.

Since the filing of the motion, the Board of Directors of TWA has determined that the refinancing program could not be carried out satisfactorily by the issuance of convertible debentures and that it would be advisable to make an offering to its stockholders of additional shares of common stock, in lieu of debentures, at the rate of one new share for each share now held.

The proposal to offer common stock instead of debentures was announced at the annual meeting of stockholders held in Kansas City on April 25, 1957, at which the stockholders voted to increase the number of authorized shares of common stock from 4,000,000 to 10,000,000.

TWA accordingly files this amended motion for an order by the Board modifying its Order Serial No.3210, issued October 17, 1944, as amended (which approved the acquisition of control of TWA by Hughes) so as to permit TWA to sell to Hughes, and Hughes to buy from TWA (1) Hughes' pro rata share of an issue of common stock of TWA to be offered to TWA's stockholders as hereinafter described, and (2) any of such stock offered to TWA stockholders and not subscribed for upon such offering and so as to permit TWA and Hughes to enter into and perform a commitment agreement relating to such offering as hereinafter described.

1. As explained in its original motion, TWA wishes to refinance its obligations under existing and contemplated conditional sale contracts with Hughes covering the 8 Lockheed 1049G and 25 Lockheed 1649A aircraft, spare parts and engines, referred to in paragraph 8 of Order Serial No. 3210, as amended by Order Serial No. E-10300, issued May 17, 1956.

Present plans contemplate that such refinancing would be accomplished in part by loans from the banks and/or insurance companies and in part by the sale of additional shares of common stock of TWA. The proceeds of the loans and stock sales will be applied toward the payment of TWA's obligations to Hughes with respect to the above-mentioned aircraft, spare parts and engines.

As a result of the sale of common stock instead of debentures, the refinancing would effect the

reduction of TWA's debt by at least $34,000,000, with a corresponding reduction in interest payments.

2. The offering of additional shares of common stock to TWA's stockholders would be made by means of transferable subscription warrants permitting the purchase of one new share for each share now held. At the present time there are 3,337,036 shares outstanding, so that this would result in an offering of 3,337,036 additional shares. The price at which such shares are to be offered depends on the market at the time the offering is made, which is expected to be in June, and will be determined at that time.

TWA and Hughes propose to enter into an agreement providing, among other things, that Hughes would have the right to acquire any shares offered to stockholders not subscribed for upon the offering, and that if Hughes took less than all such unsubscribed shares, they would be obligated to take enough shares to provide TWA with net proceeds of $34,000,000 from the shares acquired by Hughes from TWA. A copy of the proposed form of commitment agreement is attached as Annex A.

Discussions have been initiated with insurance companies for long-term debt financing of the 1049G and 1649A aircraft, but it does not appear possible that such loans can be consummated before September or October of this year. In the meantime, TWA has completed arrangements by which it will borrow $35,000,000 from banks secured by chattel mortgages on the 1049G and 1649A aircraft and engines. This bank loan will provide for repayment as follows: $10,000,000 on December 1, 1957 with interest at

5% and the balance payable in 36 equal monthly instalments beginning January 1, 1958 with interest at 5-1/4%.

The commitment agreement attached as Annex A provides that if TWA does not secure an additional $15,000,000 from common stock and debt on or before December 1, 1957, Hughes will establish a revolving credit in favor of TWA for the amount by which the additional proceeds from stock and loans fall short of $15,000,000. This revolving credit, which terminates December 1, 1960, provides for interest at the prime commercial rate.

3. The proposed refinancing on the terms hereinabove described is of substantial advantage to TWA for the following reasons, among others:

(a) The transaction will enable TWA to reduce its indebtedness by at least $34,000,000, and possibly more than this amount, depending on the market price of the shares at the time of the offering, the subscription price and the interest of the other stockholders in the offering.

This will improve the financial strength of TWA, decreasing the ratio of debt to equity. It would also reduce the amount of debt on which interest would be payable.

(b) As a consequence of the financing, as above described, the requirements for cash to meet interest payments and debt reduction on the new 1049G and 1649A aircraft will be reduced by approximately 40 per cent, leaving TWA in a much more flexible position for future financing of jet equipment and facilities.

4. On or about May 28, 1957 TWA will file with

the Securities and Exchange Commission a Registration Statement under the Securities Act of 1933, covering the proposed offering of additional shares of common stock to TWA stockholders. In accordance with normal SEC practice the Registration Statement will become effective at 5:30 P.M. on the 19th day after the date of filing. On the day following the date it becomes effective, TWA will mail to stockholders subscription warrants permitting the purchase of new shares, accompanied by a copy of the prospectus which is a part of the SEC Registration Statement. In order to make the offering to stockholders attractive, it is essential that the prospectus state that Hughes has agreed to purchase at least $34,000,000 of the stock as above referred to.

For this reason, action by the Civil Aeronautics Board on the transaction between TWA and Hughes, as above described, is urgently needed on or before June 11, 1957, to meet the requirement of the New York Stock Exchange that conditions precedent to the offering be removed at least four trading days before the Registration Statement becomes effective.

WHEREFORE, TRANS WORLD AIRLINES, INC. respectfully prays that the Board enter an order herein modifying the Board's Order Serial No. 3210, as amended, so that its order will permit TWA to sell to Hughes, and Hughes to buy from TWA, (1) Hughes' pro rata share of an issue of common stock to be offered to TWA's stockholders as above described and (2) any of such stock offered to TWA's stockholders and not subscribed for upon such offering; and will also permit TWA and Hughes to enter into and perform an agreement relating to such offering substantially in the form attached hereto

as Annex A, and providing for such other and further relief as may be appropriate.

Respectfully submitted,

TRANS WORLD AIRLINES, INC.

By A. V. Lewis
Senior Vice President-Finance

ANNEX A

May , 1957

Trans World Airlines, Inc.
380 Madison Avenue
New York 17, N. Y.

Dear Sirs:

Referring to the registration statement, which you have filed under the Securities Act of 1933, covering an offering of Common Stock to stockholders at the rate of one share for each share of Common Stock held, we confirm the following agreement between us which shall become effective when said registration statement shall have become effective and the Civil Aeronautics Board shall have entered an order approving in substance the transactions contemplated hereby:

1. You shall make the offering of the Common Stock described in said registration statement.

2. If you make such offering, we shall acquire from you, and you shall issue and sell to us, all or any part of the shares of Common Stock so offered to stockholders and not subscribed for upon such offering, the number of shares of Common Stock to be so acquired by us to be determined by us; provided, however, that if we purchase less than all said unsubscribed shares, we shall be obligated to purchase such number thereof as will, with the shares acquired by us on the exercise of subscription warrants, provide you with aggregate net proceeds of at least $34,000,000 from the shares acquired by us.

3. All acquisitions of Common Stock by us pursuant to paragraph 2 above shall be at the price at which the Common Stock is offered to your stockholders, pursuant to the above mentioned registration statement, and we shall notify you, not later than three business days after the expiration of the subscription period, of the number of shares to be acquired by us in the event we desire to acquire more than the shares which we are obligated to purchase pursuant to paragraph 2. Payment to you for shares acquired by us pursuant to paragraph 2 shall be at such times and in such amounts as you may request.

4. Nothing in this agreement shall impair our rights as one of your stockholders to receive subscription warrants for Common Stock in connection with such offering to stockholders, to purchase subscription warrants on the

open market, and to purchase Common Stock upon the exercise of subscription warrants received from you or purchased from others. We will not sell any subscription warrants acquired by us.

5. You shall apply the net proceeds from the sale of Common Stock and from any loans hereafter made by you from banks or other institutional investors, to the payment or prepayment of amounts owed by you to us in connection with the purchase of the eight Lockheed Constellation 1049C aircraft and the twenty-five Lockheed 1649A aircraft and related spare parts and engines.

6. In the event that, as a result of our purchase of Common Stock, we become the owner of 80% or more of your outstanding Common Stock, you will permit us to file consolidated income tax returns for you and ourselves, upon the condition that we agree to indemnify you, in a manner satisfactory to you and your counsel, against all loss or liability arising out of your having paid greater taxes on income in the aggregate than you would have been required to pay if your income tax returns had not been consolidated with ours and to secure our indemnity by bond or otherwise, in a manner satisfactory to you.

7. If on or before December 1, 1957 you have not received an aggregate of $15,000,000 or more in net proceeds from the sale of (a) Common Stock in excess of $34,000,000 and (b) bonds, notes or other indebtedness in addition to the contemplated bank loans of $35,000,000 referred to in your registration statement above mentioned, then, in such event, we will enter into a revolving credit agreement in the form attached hereto as APPENDIX I for the amount by which such net proceeds aggregate less than $15,000,000. You shall apply the proceeds of any loans from us under such revolving credit, up to a maximum of $10,000,000, to the payment of the $10,000,000 of such contemplated bank loans maturing December 1, 1957.

If the foregoing correctly states the agreement between us, kindly so confirm by signing in the place indicated and returning the copy of this letter enclosed for the purpose, whereupon this letter and said copy will constitute the agreement between us, to become effective as

above provided.

Very truly yours,

HUGHES TOOL COMPANY

APPENDIX I

REVOLVING CREDIT AGREEMENT

THIS AGREEMENT, dated as of December 1, 1957, between TRANS WORLD AIRLINES, INC., a Delaware corporation (herein called TWA) and HUGHES TOOL COMPANY, a Delaware corporation (herein called Hughes).

W I T N E S S E T H :

WHEREAS, Hughes is willing to establish a revolving credit on the terms hereinafter set forth,

NOW, THEREFORE, in consideration of the premises and the mutual agreements herein contained, the parties hereto agree as follows:

1. Hughes hereby establishes a revolving credit in favor of TWA in the amount of $, for the period from December 1, 1957 to December 1, 1960, when the credit shall expire and terminate.

2. Whenever TWA desires to obtain a loan hereunder, TWA shall give Hughes written notice at least five business days prior to the expected borrowing, and to deliver to Hughes on or before the borrowing date, a note, in substantially the form of EXHIBIT A attached hereto, bearing the date on which such loan is to be made, payable to Hughes in the amount of the borrowing and executed by a duly authorized officer of TWA.

3. TWA may at any time prepay any loan or portion thereof with accrued interest to the date of prepayment, provided that any partial prepayment of principal shall be in the amount of $100,000 or any multiple thereof.

IN WITNESS WHEREOF, this agreement has been executed by the parties hereto as of the day and year first above

written.

DX321 id., Item 8b, [illegible]
(CAB Orders & Documents)

EXHIBIT A

New York, New York
, 195_

$

FOR VALUE RECEIVED, the undersigned TRANS WORLD AIRLINES, INC., a Delaware corporation (hereinafter sometimes called "TWA"), promises to pay on December 1, 1960 the sum of Dollars ($) to the order of HUGHES TOOL COMPANY at the office of Irving Trust Company, One Wall Street, New York 15, New York, together with interest from date on the unpaid principal hereof at a rate for each day equivalent to the then prevailing prime rate for commercial loans in New York, New York, computed on the basis of 365 days.

Demand for payment, protest and notice of dishonor are hereby waived by the undersigned.

The indebtedness represented by this promissory note, including both principal and interest, is subordinated and subject in right of payment to the prior payment in full of (a) all the principal of, premium, if any, and interest on the 3-3/4% Equipment Mortgage Sinking Fund Bonds due December 1, 1969 of TWA (hereinafter sometimes called the "Bonds") now or hereafter issued under the Indenture of Mortgage dated as of December 1, 1954, between TWA and Irving Trust Company, as Trustee, as said Indenture has heretofore been or from time to time hereafter may be amended, modified or supplemented, (b) all the principal of, premium, if any, and interest on indebtedness of TWA not in excess of $50,000,000 (hereinafter sometimes called the "Indebtedness") now or hereafter issued under an Indenture of Mortgage, dated as of , 1957, between TWA and as Trustee, providing a lien upon 8 Lockheed Constellation 1049G aircraft, up to 25 Lockheed 1649A aircraft, and related engines, as said Indenture may hereafter be amended, modified or supplemented, and (c) any renewal, extension, refunding, amendment and modification of any Bonds or Indebtedness (all of such principal of, premium, if any, and interest on all Bonds and Indebtedness together with any such renewal, extension, refunding, amendment and modification of any thereof being hereinafter called "Senior Indebtedness"); provided, however, that neither this note nor any note of TWA of similar tenor shall be deemed to be a refunding of any Senior Indebtedness. Upon any distribution of all or substantially all of the assets of TWA or upon any dissolution, winding up or liquidation of TWA, whether voluntary or involuntary, or upon any reorganization, readjustment, arrangement

or similar proceeding relating to TWA or any of its creditors as such or property, whether in bankruptcy, insolvency, receivership proceedings or otherwise, or upon any assignment by TWA for the benefit of creditors or upon any other marshalling of the assets or liabilities of TWA,

(a) all the Senior Indebtedness shall first be paid in full in cash or provision made for such payment by deposit of the requisite cash in trust with a bank or banks (either theretofore acting as the respective Trustees under the respective Indentures above mentioned, or duly appointed paying agents for the purpose) before any payment or distribution is made on account of the principal or interest on the indebtedness under this promissory note;

(b) any payment or distribution (whether in cash, property or securities) to which the holder of this promissory note would be entitled except for the provisions of this subordination clause shall be paid or delivered by the trustee, receiver, assignee for the benefit of creditors, or other liquidating agents making such payment or distribution, directly and ratably to the holders of the Senior Indebtedness (or to their representatives or to the respective Trustees under the respective Indentures above mentioned,) to the extent necessary to pay off the Senior Indebtedness in full after giving effect to any concurrent payment or distribution or provision therefor as aforesaid to the holders of the Senior Indebtedness; and

(c) in the event that notwithstanding the foregoing, any payment or distribution (whether in cash, property or securities) shall be received by the holder of this promissory note before all such Senior Indebtedness is paid in full, or provision is made as aforesaid for its payment, such payment or distribution shall be ratably held in trust for the benefit of, and shall be ratably paid over or delivered to the holders of, the Senior Indebtedness or their representatives (or to the respective Trustees under the respective Indentures above mentioned,) for application to or payment of all the Senior Indebtedness remaining unpaid to the extent necessary to pay the Senior Indebtedness in full after giving effect to any concurrent payment or distribution or provision therefor as aforesaid to the holders of such Senior Indebtedness.

In the event and during the continuation of any default under any instrument constituting Senior Indebtedness or pursuant to which any Senior Indebtedness shall have been issued, continuing during the period of grace, if any, specified in

such instrument, no payment of principal or interest shall be made on this promissory note and no holder of this promissory note shall be entitled to receive any such payment. Nothing contained in this promissory note shall affect the obligation of TWA to make, or prevent TWA from making, at any time, except during the pendency of any of the proceedings or upon the happening of any of the events referred to in the foregoing provisions of this promissory note or during the continuation of any such default, payments of principal of, or interest on, this promissory note.

The above subordination clause defines solely the relative rights as between the holder of this promissory note and the holders of the Senior Indebtedness; and nothing in such clause shall be deemed to impair the obligations under this promissory note as between the holder of this promissory note and TWA.

TRANS WORLD AIRLINES, INC.

By_____

Order No. E-11432

UNITED STATES OF AMERICA
CIVIL AERONAUTICS BOARD
WASHINGTON, D. C.

Adopted by the Civil Aeronautics Board
at its office in Washington, D. C.
on the 11th day of June, 1957

In the matter of the application of HUGHES TOOL COMPANY for approval under section 408 of the Civil Aeronautics Act of 1938, as amended, of the acquisition of control of TRANS WORLD AIRLINES, INC.	Docket No. 7282

ORDER

By motion amended May 28, 1957, Trans World Airlines, Inc. (TWA) requests modification of Order No. 3210,1/ as amended and modified by subsequent orders, which restricts commercial transactions between TWA and Hughes Tool Company (Toolco) and between TWA and any affiliate or subsidiary of Toolco to a maximum of $200 each, with the further limitation that the total annual expenditure involved in such commercial transactions by either party shall not exceed $10,000.

The further modification is desired to permit TWA to refinance its obligations under existing and contemplated conditional sales contracts with respect to the acquisition 2/ of 8 Lockheed 1049G's and 25 Lockheed 1649A's and related spare parts and engines. Briefly, the refinancing program would be accomplished in four segments: (1) the issuance by TWA to stockholders and pro rata acquisition by Toolco of new common stock which would net TWA at least $34,000,000; (2) equipment loans from banks and/or insurance companies in the amount of at least $35,000,000; (3) a revolving credit arrangement established by Toolco in favor of TWA up to an amount of $15,000,000, and (4) the balance, if any, from TWA's general funds.

The carrier alleges that the proposed financial program will (1) enable it to reduce its indebtedness by at least $34,000,000 with a corresponding reduction in interest payments; (2) improve its financial structure by decreasing the ratio of debt to equity; (3) ease TWA's monthly debt burden by

1/ 8 CAB 153 (Docket No. 1102).
2/ Previously approved by Order No. E-10300, dated May 17, 1956.

extending equipment payments over a longer period; and (4) leave TWA in a much more flexible financial position for future financing of jet equipment and facilities.

The Board has previously approved the control of TWA by Toolco [1] under section 408 of the Act and the proposed refinancing program, including the possible increased percentage of stock held by Toolco in TWA, raises no new questions under section 408 in respect thereto. The Board finds that the proposed transaction does not violate the original intent of the restriction imposed upon transactions between TWA and Toolco; and further modification as ordered herein of Order No. 3210 as amended and modified, is just and reasonable and is in the public interest.

IT IS ORDERED THAT:

1. Any additional acquisition of control of TWA by Toolco as may result from the agreement presented herein, be and is hereby approved, provided that such additional control, if any, shall be exercised in accordance with the terms and conditions of the Board's order in 6 CAB 153, as amended, approving the original acquisition of control of TWA by Toolco.

2. Order No. 3210, issued October 17, 1944, as amended by subsequent orders, be and it hereby is further amended so as to permit TWA to sell to Toolco and the latter to buy its pro rata share of an issue of common stock to be offered to TWA's stockholders, as well as related transactions as set forth in the motion as amended;

3. Such action shall not be a determination for rate-making purposes of the reasonableness of the financial provisions of the transactions;

4. The motion, as amended, except to the extent granted herein be and it hereby is denied; and

5. The order may be amended or revoked at any time in the discretion of the Board without hearing.

By the Civil Aeronautics Board:

/s/ M. C. Mulligan

M. C. Mulligan
Secretary

(SEAL)

1/ 6 CAB 153 and 12 CAB 192.

BEFORE THE

CIVIL AERONAUTICS BOARD

WASHINGTON, D. C.

In the Matter of the Application of	:	
HUGHES TOOL COMPANY	:	
for approval under Section 408 of the Civil Aeronautics Act of 1938, as amended, of the acquisition of control of	:	Docket No. 1182
TRANS WORLD AIRLINES, INC.	:	

MOTION OF TRANS WORLD AIRLINES, INC.
FOR APPROVAL OF TRANSACTIONS WITH
HUGHES TOOL COMPANY

TRANS WORLD AIRLINES, INC. (herein referred to as "TWA") respectfully requests the Board to enter an order herein modifying its Order Serial No. 3210, issued October 17, 1944, as amended, approving the acquisition and control of TWA by Hughes Tool Company (herein referred to as "Hughes") so that the terms of said order will not restrict the right of TWA to enter into the transactions with Hughes more fully described below.

These transactions arise out of commitments made by Hughes to third parties in order to assist TWA in connection with the procurement of aircraft, the purchase of spare parts and the raising of funds.

1. In order to provide TWA with the aircraft needed by it to operate transatlantic economy schedules and to meet the demand for charter and cargo services as well as for high density flights on domestic routes,

Hughes has made arrangements by which TWA can lease and purchase a total of nine Lockheed 1049H aircraft on terms favorable to TWA.

Hughes has leased from third parties for the purpose of making them available to TWA, the following five aircrafts.

(a) By an agreement dated July 26, 1957 Hughes leased two Lockheed 1049H Constellation aircraft and related spare parts from Resort Airlines, Inc., (herein referred to as "Resort") for a term ending April 30, 1958, a transaction approved by the Board on August 15, 1957 in Order E-11698. TWA has used these airplanes and spares but has paid no rent for them.

(These aircraft and spares leased from Resort have recently been sold to California-Eastern Aviation, Inc. and are the subject of the contract described in subparagraph (b) below).

(b) By an agreement between Hughes and California-Eastern Aviation, Inc. (herein referred to as "Cal-Eastern"), dated April 2, 1958, filed with the Civil Aeronautics Board in Docket No. 9407, Hughes has agreed to lease from Cal-Eastern two Lockheed 1049H Constellation aircraft and related spare parts beginning May 1, 1958, if approval of the Civil Aeronautics Board has been obtained by that date. The lease is for thirty-six months subject to termination by Cal-Eastern at any time on or after February 1, 1959 on 90 days' notice.

(c) By an agreement between Hughes and Cal-

Eastern dated December 18, 1957, Hughes has also leased from Cal-Eastern three additional Lockheed 1049H Constellation aircraft and related spare parts for thirty-six months. This lease was approved by the Civil Aeronautics Board on January 15, 1958, Order No. E-12111.

The three aircraft and parts were delivered by Cal-Eastern directly to TWA following the commencement of the term of the lease and have been in TWA's sole possession and control since then, but it has paid no rent for them.

2. Hughes proposes to sublet the five aircraft and parts referred to in paragraph 1 hereof to TWA at the same rental price as provided in Hughes' agreements with Resort and Cal-Eastern, subject to the following conditions:

(a) TWA agrees to sublease these five aircraft during at least a portion of each calendar year 1958, 1959 and 1960. TWA also agrees to lease the aircraft during 1961 until the expiration of the leases from Cal-Eastern to Hughes. TWA may terminate the sublease in respect of the year 1958, 1959 or 1960 by giving written notice to Hughes, in which event the termination shall become effective after the expiration of a period following such notice during which the net rental obligations of TWA with respect to such aircraft shall aggregate $1,000,000 in such calendar year (the maximum rental obligations allowable under TWA's existing indentures).

(b) If TWA exercises its right to terminate the sublease in any calendar year, Hughes shall have the right to terminate the sublease as to all future calendar years by giving TWA written notice to that effect 90 days prior to the beginning of the next

Dec. 1182

calendar year. A copy of the form of sublease is attached as Exhibit A.

3. TWA has contracted to purchase from Lockheed four 1049H aircraft which were originally ordered by Hughes from Lockheed. Hughes cancelled its agreement with Lockheed simultaneously with the execution of the purchase agreement between TWA and Lockheed. In connection therewith, TWA and Hughes agreed, subject to the approval of the Civil Aeronautics Board, that if by June 1, 1958 the sublease of the five 1049H aircraft has not been consummated, Hughes would at TWA's request acquire the four 1049H aircraft or TWA would at Hughes' request sell such aircraft to Hughes. On any such transfer of the aircraft, TWA would receive from Hughes an amount equal to TWA's book value at that time and Hughes would assume any remaining liabilities of TWA to Lockheed in respect thereof.

A copy of the above agreement is attached as Exhibit B.

4. In December 1957 Hughes bought $1,155,143 of the spare parts originally ordered by Linee Aeree Italiane in connection with the four Lockheed 1649A aircraft LAI had contracted to purchase from the manufacturer. TWA agreed to buy the remainder of the spare parts, and on December 31, 1957 entered into a contract for the purchase of the four aircraft from Lockheed. TWA now proposes to purchase the $1,155,143 of spare parts for these aircraft from Hughes at Hughes' cost.

5. Hughes has guaranteed obligations of TWA to third parties in the following instances:

(a) Pursuant to loan agreement dated December 27, 1957 TWA has borrowed $12,000,000 from Irving Trust Company and Bank of America repayable in 90 days with a 90-day extension period. Hughes guaranteed the loan without any consideration from TWA.

(b) As mentioned in paragraph 4, TWA has contracted to buy from Lockheed the four 1649A aircraft originally ordered by Linee Aeree Italiane. These aircraft are to be sold under conditional sales agreements which provide that when payments required thereunder cannot be made because of the cash requirements of TWA's indentures, such payments shall be deferred to the end of the contract. Hughes has agreed with Lockheed that if TWA is required to defer any payment, Hughes will itself make the payment at the time it becomes due, and will be reimbursed by Lockheed only when the final deferred payments are collected by Lockheed from TWA. Thus, in a sense, Hughes may receive payments from TWA if TWA finds it necessary to defer any of the instalments under its conditional sales agreements with Lockheed.

(In the event of a default by TWA under the conditional sales contract, Hughes has agreed with Lockheed to buy the airplanes from Lockheed at an amount equal to the unpaid purchase price, but neither Lockheed nor Hughes has any recourse against TWA).

(c) As set forth in paragraph 3 TWA has also contracted to buy from Lockheed four 1049H aircraft. The contractual arrangements are in substance the same as those outlined in (b) above.

6. TWA respectfully requests the Board to modify its Order Serial No. 3210 so as to allow TWA

(a) to pay Hughes for the rent incurred by Hughes (plus payments or minus credits made or received by Hughes on account of differences in airframe or engine overhaul hours) to Resort and Cal-Eastern for the Lockheed 1049H aircraft referred to in paragraph 1, in accordance with the terms of the sublease set forth in Exhibit A; and to enter into a sublease of the five Lockheed 1049H aircraft and related parts in substantially the form set forth in Exhibit A;

(b) to sell to Hughes the four Lockheed 1049H aircraft under the conditions outlined in paragraph 3; and

(c) to buy at Hughes' cost, new spare parts for Lockheed 1649A aircraft in an aggregate amount not to exceed $1,155,143, referred to in paragraph 4.

The commitments made by Hughes to third parties on TWA's behalf, referred to in paragraph 5, would make Hughes a creditor of TWA if TWA defaults on its bank loans or would make Hughes the indirect recipient of equipment purchase payments made by TWA if TWA is required to defer instalments on its conditional sales contracts with Lockheed. In either of these events TWA would pay Hughes directly or indirectly the amount due on obligations contracted by TWA with a third party. While TWA believes that payments of this nature are not restricted by the CAB order approving Hughes' control of TWA, TWA nevertheless respectfully prays that the

Board either (i) clarify the order by excluding from its terms any payments by TWA to Hughes of obligations incurred by TWA to third parties which have been assumed by Hughes as guarantor, or (ii) approve, to the extent such approval is required, payment by TWA to Hughes of the $12,000,000 TWA borrowed from banks under its loan agreement of December 27, 1957, in the event Hughes should be required to pay such loans as guarantor and payment by TWA of instalments on its conditional sales contracts with Lockheed which would indirectly go to Hughes, in the event Hughes has been required to take up instalments deferred by TWA.

7. The aircraft and spare parts involved in the transactions described above are all needed in the performance of TWA's certificated services, and the terms and conditions on which TWA is receiving them from Hughes involve the payment of no consideration to Hughes other than the rent incurred by Hughes in the case of the leased airplanes and reimbursement of Hughes' actual cost of the 1649A spares. The guarantees by Hughes of the TWA bank loan and of TWA's instalment obligations under conditional sales contracts, were of substantial advantage to TWA, were purely for TWA's convenience and entailed no cost whatever to TWA.

WHEREFORE, TRANS WORLD AIRLINES, INC. respectfully prays that the Board enter an order herein modifying its Order Serial No. 3210, as amended, so that its order will permit TWA to enter into the transactions with Hughes Tool Company described above to the extent such modification may be deemed necessary.

Respectfully submitted

Warren Lee Pierson
Chairman of the Board

April 18, 1958

Exhibit A

AIRPLANE SUBLEASE AGREEMENT

1. Hughes Tool Company (hereinafter called "Hughes") hereby agrees to sublet and grant to Trans World Airlines, Inc. (hereinafter called "TWA") and TWA agrees to hire and take, during the term of this agreement, those certain five (5) Lockheed L-1049H Constellation airplanes bearing CAA numbers N 101R, N 102R, N 6931C, N 6932C and N 6933C (Manufacturer's Serial Nos. 4818, 4824, 4813, 4823 and 4826, respectively) and related spare parts, leased to Hughes by California Eastern Aviation, Inc. (hereinafter called "Cal-Eastern") except that the two airplanes bearing [illegible] numbers N 101R and N 102R were leased to Hughes by Resort Airlines, Inc. (hereinafter called "Resort") for a term ending April 30, 1958 and thereafter by Cal-Eastern.

2. Hughes shall remain obligated to Resort and Cal-Eastern for rental payments and other obligations under the leases from Resort and Cal-Eastern to Hughes. TWA will be responsible to Hughes for performance of the obligations of Hughes under the leases of the airplanes and spare parts from Resort and Cal-Eastern to Hughes except for the rental payments, and except for the payments measured by the differences in hours since last overhaul on the engines and airframes.

3. TWA shall pay Hughes for the rent incurred by Hughes to Resort and Cal-Eastern for the airplanes and spare parts referred to in paragraph 1

hereof, except for any period during which the airplanes and spare parts were not available to TWA. The amounts so to be paid by TWA shall be payable monthly in advance on the first day of each month, except that rental for periods prior to the date of approval of the Civil Aeronautics Board, as provided in paragraph 5 below, shall be due and payable on the first of the month next succeeding such approval. The rent for any fraction of a month for which TWA is obligated to make payments herein shall be pro-rated according to the number of calendar days in such month.

4. TWA shall also reimburse Hughes for payments made by Hughes on account of differences in airframe and engine overhaul hours for the periods of TWA's use of the airplanes. In the event that the differences in airframe or engine overhaul hours results in a credit to Hughes for the periods of TWA's use of the airplanes, then Hughes shall pay to TWA an amount equal to that credit.

5. This agreement is subject to approval by the Civil Aeronautics Board. The sublease of airplanes shall become effective upon entry of an order of the Board permitting TWA to perform this agreement and it shall remain in effect as to the respective airplanes for the period of the present leases from Cal-Eastern to Hughes or until terminated as to all or a part of the remaining term of said leases in accordance with the following provisions:

(a) Upon termination of Hughes' lease of any of the airplanes, TWA's sublease shall terminate as to those airplanes and continue as to the remainder. Hughes shall notify TWA of receipt of any notice of termination under Hughes' lease of the airplanes.

(b) TWA may terminate the sublease in respect of the calendar year 1958 by giving written notice to Hughes, in which event the termination shall become effective as to the remainder of the calendar year 1958 only, but not as to calendar years 1959, 1960 or 1961, upon the expiration of a period following the giving of such notice during which the net rental obligations of TWA with respect to such aircraft shall aggregate $1,000,000 in 1958. TWA shall have the same right of termination in respect of each of the years 1959 and 1960.

(c) If TWA exercises its right to terminate the sublease as to any calendar year pursuant to subparagraph (b), Hughes shall have the right to terminate the sublease in respect of all future calendar years by giving TWA written notice to that effect 90 days prior to the beginning of the next calendar year.

HUGHES TOOL COMPANY

By_____
Vice President

AGREED:

TRANS WORLD AIRLINES, INC.

By_____
Vice President

Exhibit B

Trans World Airlines, Inc.
380 Madison Avenue
New York 17, N.Y.

Dear Sirs:

This is to evidence our understanding concerning the four Lockheed 1049H aircraft which Hughes Tool Company had contracted to purchase from Lockheed Aircraft Corporation and which we have today released so the aircraft would be available for acquisition directly by TWA.

These four aircraft, together with five aircraft of the same type leased by Hughes Tool Company from California Eastern Aviation, Inc., and proposed to be sublet by TWA, represent all the aircraft of this type being acquired by TWA. The sublease of the five aircraft is subject to the approval of the Civil Aeronautics Board and in the event such sublease is not approved, the use by TWA of only four airplanes of the 1049H type may not be desirable. Accordingly, it is agreed that in the event such sublease of the five aircraft is not consummated on or before June 1, 1958, then (1) Hughes Tool Company, at TWA's request, will acquire the four 1049H aircraft purchased by TWA from Lockheed or (2) TWA, at Hughes Tool Company's request, will sell such aircraft to Hughes Tool Company. Any such request must be made in writing and delivered to the other party on or before June 10, 1958. On transfer of the aircraft, TWA would receive from Hughes Tool Company an amount equal to TWA's book value at that time, and Hughes will assume any remaining liabilities of TWA to Lockheed in respect thereof.

This agreement is subject to the approval of the Civil Aeronautics Board.

Your signature at the place indicated below shall constitute an acceptance of the terms above set forth.

Yours truly,

HUGHES TOOL COMPANY

DL 1182

Civil Aeronautics Board
Washington 25, D. C.

Re: Dockets 1182 and 8061

Gentlemen:

On May 10, 1956, Trans World Airlines, Inc. filed a motion in Docket 1182 for approval of certain transactions with Hughes Tool Company; specifically, the purchase by TWA from Hughes Tool of up to 25 jet-powered aircraft. Subsequently the Board instituted an investigation of the proposed transaction in Docket 8061, consolidating therein TWA's motion referred to above.

Pursuant to a request by counsel for Hughes Tool and TWA, all procedural steps in this proceeding were indefinitely postponed on July 31, 1956, and the matter has remained dormant since that date.

We hereby formally withdraw our motion of May 10, 1956, in Docket 1182 and respectfully request that the proceedings thereon and in Docket 8061 be dismissed without prejudice.

Yours very truly,

TRANS WORLD AIRLINES, INC.

Order No. E-13334

UNITED STATES OF AMERICA
CIVIL AERONAUTICS BOARD
WASHINGTON, D. C.

Adopted by the Civil Aeronautics Board
at its office in Washington, D. C.
on the 30th day of December, 1958

In the matter of the application of	:	
	:	
HUGHES TOOL COMPANY	:	
	:	Docket No. 1182
for approval under section 408 of	:	
the Civil Aeronautics Act of 1938,	:	
as amended, of the acquisition of	:	
control of Trans World Airlines, Inc.	:	

ORDER

By motion filed with the Board on April 18, 1958, Trans World Airlines, Inc. (TWA) requests modification of Order No. 3210 1/, as amended and modified by subsequent orders, which restricts commercial transactions between TWA and Hughes Tool Company (Hughes) and between TWA and any affiliate or subsidiary of Hughes to "transactions involving complete items of property, the price of which does not exceed $200 each, with the further limitation that the total annual expenditure involved in such commercial transactions by either party shall not exceed $10,000."

The modification is desired to permit the following transactions between the two companies: (1) sublease by TWA of five L-1049H aircraft from Hughes; (2) sale by TWA to Hughes, upon the happening of certain contingencies, of four L-1649H aircraft which TWA has contracted to purchase from Lockheed; (3) purchase by TWA of $1,155,143 worth of spare parts for L-1649A aircraft from Hughes; (4) guarantee by Hughes of certain TWA obligations under a bank loan and under conditional sales contracts.

In support of its motion TWA alleges, inter alia, that the aircraft and spare parts involved in these transactions are needed in the performance of its certificated services; that the terms under which TWA is receiving them involve the payment of no consideration to Hughes other than the rent incurred by Hughes in the case of the leased aircraft and reimbursement of Hughes' actual cost in the case of the L-1649A spare parts; and that the

1/ 6 C.A.B. 153 (1944)

guarantees by Hughes of TWA's obligations were of substantial advantage to the carrier, were purely for TWA's convenience and entailed no cost whatever to TWA. The carrier states further that, while it believes that payments by TWA to Hughes of the amounts due on TWA's obligations to third parties which may be assumed by Hughes as guarantor are not restricted by Order No. 3210, it would like the Board to clarify the order by eliminating any restrictions on such payments or modify the order to the extent necessary to allow the payments to be made in this instance.

The Board has previously approved the control of TWA by Hughes under section 408 of the Act 2/ and the proposed transactions raise no new issues with respect thereto. All of the transactions, including those involving guarantees by Hughes of TWA's obligations to third parties with the resultant possibility that TWA may, directly or indirectly, make payments to Hughes as guarantor of these obligations, are outside of the scope of the permissible class of transactions stated in Order No. 3210. Accordingly, modification of this order so as to permit such transactions is required. The Board finds that the proposed transactions as set forth in the motion, do not violate the original intent of the restriction imposed upon transactions between TWA and Hughes, and further modification as ordered herein of Order No. 3210, as amended and modified, is just and reasonable and is in the public interest. However, such action shall not be deemed to be a determination for rate-making purposes of the reasonableness of the transactions.

ACCORDINGLY, IT IS ORDERED:

1. That any additional control of TWA by Hughes as may result from the transactions presented herein, be and it hereby is approved, provided that such additional control, if any, shall be exercised in accordance with the terms and conditions of Order No. 3210, issued October 17, 1944, as amended, approving the original acquisition of control of TWA by Hughes;

2. That Order No. 3210, issued October 17, 1944, as amended by subsequent orders, be and it hereby is further amended so as to permit the transactions between TWA and Hughes, as set forth in the motion, to take place;

3. That such action shall not be a determination for rate-making purposes of the reasonableness of the transactions;

2/ 6 C.A.B. 153 (1944) and 12 C.A.B. 192 (1950).

4. That the motion, except to the extent granted herein, be and it hereby is denied;

5. That this order may be amended or revoked at any time in the discretion of the Board without hearing.

By the Civil Aeronautics Board:

/s/ Mabel McCart

BEFORE THE

CIVIL AERONAUTICS BOARD

WASHINGTON, D. C.

In the Matter of the Application of	:	
HUGHES TOOL COMPANY	:	
for approval under Section 408 of the Civil Aeronautics Act of 1938, as amended, of the acquisition of control of	:	Docket No. 1182
TRANS WORLD AIRLINES, INC.	:	

MOTION OF TRANS WORLD AIRLINES, INC.
FOR APPROVAL OF TRANSACTIONS WITH
HUGHES TOOL COMPANY

TRANS WORLD AIRLINES, INC. (herein referred to as "TWA") respectfully requests the Board to enter an order herein modifying its Order Serial No. 3210, issued October 17, 1944, as amended, approving the acquisition and control of TWA by Hughes Tool Company (herein referred to as "Hughes") so that the terms of said order will not restrict the right of TWA to enter into the transactions with Hughes more fully described below.

1. Hughes has on order from Boeing Airplane Company, 15 Boeing Model 707-131 jet aircraft at a purchase price of approximately $4,700,000 per aircraft. Although TWA has entered into no specific commitment to acquire such aircraft, it nevertheless contemplates that certain of these aircraft will be made available to it, on terms not yet determined, for use in TWA's certificated operations. The first of these aircraft (herein referred to as the "Leased Aircraft") has been delivered to Hughes by Boeing Airplane Company and TWA desires to make use of such aircraft in its jet training program.

2. Promptly after the filing of this application Hughes proposes to deliver the Leased Aircraft to TWA under a lease agreement, providing for its lease by TWA on a day-to-day basis, subject to the right of either party to terminate the lease on 24 hours written notice and subject to the approval of the Civil Aeronautics Board. A copy of the proposed form of lease is attached as Exhibit A.

3. Hughes has also acquired a stock of spare parts and provisioning for such Boeing Model 707-131 jet aircraft and proposes to make these available to TWA to the extent needed by TWA in the operation of the Leased Aircraft. Hughes will sell to TWA such of these spare parts and provisioning as TWA will request for use on the Leased Aircraft during the term of the lease, at Hughes' cost but not in excess of a total of $100,000. A copy of the proposed form of letter agreement relative to this transaction is attached as Exhibit B.

4. TWA believes that use by it of the Leased Aircraft, and the spare parts therefor as set forth in paragraph 3 hereof, is necessary to enable TWA to carry forward its jet training program so that it will be in a position to conduct certificated service with jet equipment when such equipment is delivered to it.

WHEREFORE, TRANS WORLD AIRLINES, INC. respectfully prays that the Board enter an order herein modifying its Order Serial No. 3210, as amended, so that its order will permit TWA to enter into the transactions with Hughes Tool Company described above.

Respectfully submitted,

Thomas K. Taylor
Vice President

January 29, 1959

Exhibit A

THIS AGREEMENT entered into as of the 27th day of January 1959 by and between Hughes Tool Company, a Delaware corporation ("Lessor") and Trans World Airlines, Inc., a Delaware corporation ("Lessee"):

W I T N E S S E T H :

1.

Lessor hereby agrees to lease to Lessee and Lessee hereby agrees to hire and take from Lessor, subject to the terms and conditions herein provided, one Boeing Model 707-131 aircraft bearing FAA No. N731-TW (Manufacturer's Serial No. 17658), including four Pratt and Whitney JT3C-6 Engines (Serial Nos. SNP 629419B, SNP 629201B, SNP 629202B, and SNP 629203B), herein sometimes referred to as "the Aircraft."

2.

The lease of the Aircraft shall commence on delivery of the Aircraft to Lessee and shall continue from day-to-day until terminated by either of the parties. The lease shall terminate upon twenty-four hours written notice to such effect from one party to the other. The Aircraft shall be delivered to Lessee hereunder at Kansas City, Missouri, on January 29, 1959 or on the delivery of the Aircraft to Lessor by Boeing Airplane Company, whichever is later.

3.

(a) At the time of commencement of this lease the Aircraft shall have a current provisional Certificate of Airworthiness issued under Special Civil Air Regulation No. 425, adopted by the Civil Aeronautics Board on June 20, 1958, permitting crew training, service testing and simulated carrier operations but not permitting carriage of passengers for hire. Lessee agrees to accept the Aircraft in its present

condition and Lessor makes no warranties or representations whatsoever as to condition of the Aircraft, and none shall be implied in law.

Such warranties and guarantees from manufacturers and suppliers of the Aircraft and its equipment as can be effectively assigned for the term of this lease are hereby assigned by Lessor to Lessee for the term of this lease to the extent of Lessee's interest accruing during the term of such lease.

(b) Upon the termination of this lease, Lessee agrees to return the Aircraft to Lessor (at Mid-Continent International Airport, Kansas City, Missouri, or such other place as may be mutually agreed) in the same condition and equipped with the same equipment as it was at the commencement of the lease, except for reasonable wear and tear from ordinary use.

During the term of the lease Lessee may at its own expense remove from the Aircraft such items of equipment, and may install on the Aircraft such additional items of equipment, as Lessee may consider reasonably necessary to fit such Aircraft for use by Lessee; provided, however, that no such removal or installation which shall cause permanent change in the structure of the Aircraft shall be made without the prior written consent of Lessor unless such removal or installation is made pursuant to a mandatory FAA requirement. Such items as shall be so removed may be either retained in the custody of Lessee, or returned to Lessor, but in either event they shall be reinstalled on the Aircraft prior to the return of the Aircraft to Lessor. Items of non-mandatory nature that shall have been installed in the Aircraft shall be removed prior to the return of the Aircraft to Lessor.

3.

5.

Lessee shall perform all necessary maintenance, overhaul and servicing on the Aircraft during the term of the lease in accordance with the requirements of the Federal Aviation Agency.

6.

If, during the term of the lease of Aircraft pursuant to this agreement, the Federal Aviation Agency or any other governmental agency having jurisdiction shall make mandatory the installation, removal or modification (other than mere inspection) of items on the Aircraft, then compliance shall be effected promptly at Lessor's expense.

7.

Lessee shall be liable for any loss of, or damage to, any Aircraft while leased from Lessor hereunder. During all times that the Aircraft is leased hereunder, Lessee shall, at its own cost and expense, keep the Aircraft, insured against loss or damage from crash, fire, wind storm, collision, strike, riots, insurrection, civil commotion or other accident or casualty (except war risk) with Lessor named as a co-insured and shall furnish Lessor with a certificate of insurance therefor. The amount of such insurance shall not be less than $4,700,000 per Aircraft, with flight deductible and ground deductible clauses substantially equivalent to those currently in force in Lessee's other insurance policies. In the event of damage to the Aircraft, during the term of the lease, from a risk required to be covered by such insurance, Lessee will repair the damage at its own expense. Upon complying with the foregoing provision, Lessee shall be entitled to retain (or, in the case of receipt by Lessor, to receive from Lessor) all proceeds of insurance with respect to such damage. In the

4.

repair, Lessee will pay to Lessor, as their interests may appear, for such Aircraft the sum of $4,700,000 (U.S. currency), less any amounts that might have been paid to and retained by Lessor as proceeds from the insurance, which shall constitute payment for all right, title and interest of Lessor in the Aircraft which shall thereupon pass to Lessee. The policies providing the insurance required by this agreement shall include customary provisions that Lessor shall not be responsible for the representations and warranties of Lessee and that Lessor shall receive notice prior to cancellation or expiration (unless the policy is being renewed) of any policy.

8.

Lessee agrees to defend, indemnify and hold harmless Lessor from and against all losses, including cost and expenses by reason of claims for injury or death of persons and loss or damage to property arising out of or in any manner connected with possession, use or operation by Lessee of the Aircraft leased hereunder during the term of such lease. During such term the Lessee shall keep in force and effect liability insurance in the amounts recommended by Lessee's Senior Vice-President-Finance.

9.

Lessee agrees that no Aircraft leased pursuant hereto will be used during the term of the lease in any manner which shall violate any law or regulation of any government or governmental agency having jurisdiction and that any fine, penalty or forfeiture resulting from any such violation shall be the sole responsibility of Lessee.

5.

10.

(a) As rent for the Aircraft leased hereunder Lessee shall pay to Lessor the sum of $2500.00 for each full day during the term of the lease. The rental shall be paid on the last day of each month.

(b) Lessee shall also pay to Lessor in respect of each of the engines on the Aircraft $31.00 per hour for each hour since the last overhaul on such engine at the time returned to Lessor on the termination of the lease less the number of hours since manufacture or overhaul on such engine on the delivery of the Aircraft to Lessee.

If the hours since last overhaul on any engine at the time it is returned to Lessor on termination of the lease are less than the number of hours since manufacture or overhaul on such engine on delivery of the Aircraft to Lessee, Lessor shall pay to Lessee $31.00 for each hour of difference between the two figures.

Settlement under this subparagraph (b) shall be made within 15 days after the end of the term of the lease.

11.

Lessee shall have no right to consent to any lien or liens on the Aircraft. Any liens incurred by Lessee shall be discharged at the cost and expense of Lessee, who shall indemnify and save Lessor harmless against any such lien or liens. Lessee shall pay all operating taxes and licenses applicable to the Aircraft or the operation thereof, and also shall pay all property taxes assessed against Lessee or Lessor with respect to the Aircraft by any state, county, or other political subdivision to which Lessor would not ordinarily pay property taxes, except for the use of the Aircraft by

6.

Lessee hereunder. Lessee also shall pay any and all state, federal, county and local sales and use taxes assessed against either Lessee or Lessor resulting from the lease or use hereunder of the Aircraft.

12.

Notwithstanding any of the above provisions it is further agreed that

(a) This lease agreement is entered into subject to approval of the Civil Aeronautics Board and until an order has been entered by the Civil Aeronautics Board permitting the transaction covered by this agreement no rental shall be paid hereunder;

(b) This lease is subject to the necessary consents of the holders of obligations issued by Trans World Airlines, Inc. under its outstanding indentures, chattel mortgages and loan agreements. In the absence of such consents no rental shall be paid hereunder.

IN WITNESS WHEREOF, each of the parties hereto has caused this agreement to be executed in its name and in its behalf by its officer or agent thereunto duly authorized.

New York 17, New York

Attention: Mr. A. V. Leslie

Re: Purchase of Spare Parts

Dear Sirs:

This letter will set forth our agreement and understanding concerning the purchase by TWA from Hughes Tool Company of spare parts and provisioning (herein called "Spares") for use in connection with the operation by TWA of the Boeing Model 707-131 Aircraft being leased to TWA from Hughes Tool Company under a lease agreement entered into simultaneously herewith.

From the stock of Spares owned by Hughes Tool Company and stored at Kansas City, Kansas and at other places known to TWA, TWA is hereby authorized to withdraw a supply of Spares and to store such Spares in TWA's custody at such places as it may select. From time to time TWA may purchase any of such spares as TWA may consider to be required in the operation of the aforementioned leased Aircraft, payment to be in cash and at Hughes Tool Company's actual cost. Upon the termination of the aforementioned lease agreement any Spares which are then in the custody of TWA and have not been purchased by it will promptly be returned to Hughes Tool Company at the place or places where originally withdrawn.

In no event shall the aggregate dollar amount of Spares purchased by TWA under this agreement exceed the sum of $100,000.

Appropriate accounting procedures should be established for the accurate and prompt recordation of all transactions involving the withdrawing and purchase of Spares.

This agreement and arrangement are subject to approval of the Civil Aeronautics Board, and until an order has been entered by the Civil Aeronautics Board permitting the transactions covered by this agreement no payments shall be made hereunder.

If the foregoing is acceptable to TWA please so acknowledge by executing and returning the enclosed copy of this letter.

Very truly yours,

Accepted this
day of _____, 1959

Order No. E-13542

UNITED STATES OF AMERICA
CIVIL AERONAUTICS BOARD
WASHINGTON, D. C.

Adopted by the Civil Aeronautics Board
at its office in Washington, D. C.
on the 24th day of February, 1959

In the matter of the application of	:	
	:	
HUGHES TOOL COMPANY	:	Docket No. 1182
	:	
for approval of the acquisition of control of Trans World Airlines, Inc.	:	

ORDER

By motion filed with the Board on January 30, 1959, Trans World Airlines, Inc. (TWA) requests modification of Order No. 3210, 1/ as amended and modified by subsequent orders, which restricts commercial transactions between TWA and Hughes Tool Company (Hughes) to those involving items of property the price of which does not exceed $200 and which restricts the total annual expenditure involved in such transactions by either party to a sum not to exceed $10,000. The modification is desired to permit TWA to lease one Boeing 707-131 aircraft from Hughes as well as to acquire from Hughes a supply of spare parts, not to exceed $100,000 in value, which are needed for the operation of this aircraft.

In support of its motion, TWA states that the aircraft and the spare parts therefor are necessary to enable it to carry forward its jet training program so that it will be in a position to conduct certificated jet service as soon as sufficient jet equipment is delivered.

The Board has previously approved the control of TWA by Hughes under section 408 of the Act, 2/ and the proposed transactions raise no new issues with respect thereto. However, the transactions are outside of the scope of the permissible class of transactions stated in Order No. 3210 and modification of that order to permit such transactions is therefore required. The Board finds that the proposed transactions, as set forth in the motion, do not violate the original purpose of the Board in imposing the restrictions contained in Order No. 3210, and further finds that modification as ordered herein is just

1/ 6 C.A.B. 153, 158 (1945)

2/ 6 C.A.B. 153 (1945) and 12 C.A.B. 192 (1950)

and reasonable and in the public interest. However, such action shall not be deemed to be a determination for rate-making purposes of the reasonableness of the transactions.

ACCORDINGLY, IT IS ORDERED:

1. That, subject to the conditions hereinafter set forth, Order No. 3210, issued October 17, 1944, as amended by subsequent orders, be and it hereby is further amended to permit the transactions between TWA and Hughes, as set forth in the motion, to take place;

2. That such action shall not be a determination for rate-making purposes of the reasonableness of the transactions;

3. That this order may be amended or revoked at any time in the discretion of the Board without hearing.

By the Civil Aeronautics Board:

BEFORE THE

CIVIL AERONAUTICS BOARD

In the Matter of the Application of	:	
HUGHES TOOL COMPANY	:	
for approval under Section 408 of the Civil Aeronautics Act of 1938, as amended, of the acquisition of control of	:	Docket No. 1182
TRANS WORLD AIRLINES, INC.	:	

MOTION OF TRANS WORLD AIRLINES, INC. FOR APPROVAL OF TRANSACTIONS WITH HUGHES TOOL COMPANY

TRANS WORLD AIRLINES, INC. (herein referred to as "TWA") respectfully requests the Board to enter an order herein modifying its Order Serial No. 3210, issued October 17, 1944, as amended, approving the acquisition and control of TWA by Hughes Tool Company (herein referred to as "Hughes") so that the terms of said order will not restrict the right of TWA to enter into the transactions with Hughes more fully described below.

1. Hughes has on order from Boeing Airplane Company, 14 Boeing Model 707-131 jet aircraft at a purchase price of approximately $4,700,000 per aircraft. Although, save as hereinafter set forth, TWA has entered into no specific commitment to acquire such aircraft, it nevertheless contemplates that certain of these aircraft will be made available to it, on terms

not yet determined, for use in TWA's certificated operations. The first Boeing 707-131 jet aircraft has already been delivered to Hughes by Boeing Airplane Company. Hughes has delivered said aircraft to TWA under a day-to-day lease subject to the approval of the Civil Aeronautics Board, all as more fully set forth in TWA's motion dated January 29, 1959 requesting that the Board enter an order herein modifying its Order Serial No. 3210, as amended, so that its order will permit TWA to enter into such transaction. By its Order Serial No. 13542 adopted February 26, 1959 the Board has permitted this transaction between TWA and Hughes.

2. In order to make additional such aircraft available to TWA, Hughes proposes to deliver up to eleven additional Boeing Model 707-131 jet aircraft (herein referred to as the "Leased Aircraft") to TWA under a lease agreement or agreements, providing for the lease of each such aircraft by TWA on a day-to-day basis at a rate not to exceed $2,500 per day, subject to the right of either party to terminate the lease on 24 hours written notice and subject to the approval of the Civil Aeronautics Board. Such leases would in any event terminate no later than June 30, 1959. The proposed lease or leases will be in form substantially similar to the form attached as Exhibit A to TWA's motion herein dated January 29, 1959.

3. Hughes has also acquired a stock of spare parts and provisioning for such Boeing Model 707-131 jet aircraft and proposes to make these available to TWA to the extent needed by TWA in the operation of the Leased Aircraft. Hughes will sell to TWA such of these spare

parts and provisioning as TWA will request for use on the Leased Aircraft during the term of the lease or leases thereof, at Hughes' cost, provided that the total amount of spare parts and provisioning so acquired by TWA for the Leased Aircraft and for the airplane leased pursuant to Board Order No. 13542 shall not be in excess of $3,500,000. A copy of the proposed form of letter agreement relative to this transaction is attached as Exhibit A.

4. Hughes will also deliver to TWA up to 30 spare aircraft engines for the Leased Aircraft under a lease agreement or agreements to be negotiated on terms comparable to those applicable to the Leased Aircraft. A copy of such lease agreement, when negotiated, will be filed with the Board as a supplement to this motion.

5. Use by TWA of the Leased Aircraft, and the spare engines, spare parts and provisioning therefor referred to in paragraphs 3 and 4 hereof, is necessary to enable TWA to carry forward its jet training program and to permit TWA to commence the operation of jet service on its certificated routes.

WHEREFORE, TRANS WORLD AIRLINES, INC. respectfully prays that the Board enter an order herein modifying its Order Serial No. 3210, as amended, so that its order will permit TWA to enter into the transactions with Hughes Tool Company described above.

Respectfully submitted,

CARRIER RELATIONS DIV.

Mr. J. W. Rosenthal
Bureau of Air Operations
Civil Aeronautics Board
Washington 25, D. C.

Dear Mr. Rosenthal:

Enclosed for your information is a copy of an Agreement of Lease entered into on March 17, 1959 by Hughes Tool Company and TWA, covering the lease by TWA from Hughes Tool Company on a day-to-day basis of Boeing Model 707-131 aircraft, FAA No. N732TW. This covers the second Boeing 707-131 leased by Hughes to TWA and the first such aircraft covered by TWA's Motion of March 13, 1959 in Docket No. 1182. As indicated in the Motion, this lease was entered into subject to the approval of the Civil Aeronautics Board.

Except for changes in the plane and engine numbers, the addition of a clause at the end of the second sentence of paragraph 2 and the addition of a sentence at the end of paragraph 11, the enclosed lease is in the same form as the lease executed in connection with TWA's Motion of January 29, 1959, in Docket No. 1182, which was approved by the Board's Order Serial No. 13542 of February 26, 1959.

Very truly yours,

Carl S. Rowe

Enclosure

THIS AGREEMENT entered into as of the 17th day of March 1959 by and between Hughes Tool Company, a Delaware corporation ("Lessor") and Trans World Airlines, Inc., a Delaware corporation ("Lessee"):

W I T N E S S E T H :

1.

Lessor hereby agrees to lease to Lessee and Lessee hereby agrees to hire and take from Lessor, subject to the terms and conditions herein provided, one Boeing Model 707-131 aircraft bearing FAA No. N732TW (Manufacturer's serial No. 17659), including four Pratt and Whitney JT3C-6 Engines (Serial Nos. SNP629074B , SNP628855B , SNP628852B , and SNP628844B), herein sometimes referred to as "the Aircraft."

2.

The lease of the Aircraft shall commence on delivery of the Aircraft to Lessee and shall continue from day-to-day until terminated by either of the parties. The lease shall terminate upon twenty-four hour written notice to such effect from one party to the other and shall in any event terminate no later than June 30, 1959. The Aircraft shall be delivered to Lessee hereunder at Kansas City, Missouri, or such other place as may be mutually agreed.

3.

(a) Lessee agrees to accept the Aircraft in its present condition and Lessor makes no warranties or representations whatsoever as to condition of the Aircraft, and none shall be implied in law.

Such warranties and guarantees from manufacturers and suppliers of the Aircraft and its equipment as can be effectively assigned for the term of this lease are hereby assigned by Lessor to Lessee for the term of this lease to the extent of Lessee's interest accruing during the term of such lease.

(b) Upon the termination of this lease, Lessee agrees to return the Aircraft to Lessor (at Mid-Continent International Airport, Kansas City, Missouri, or such other place as may be mutually agreed) in the same condition and equipped with the same equipment as it was at the commencement of the lease, except for reasonable wear and tear from ordinary use.

4.

During the term of the lease Lessee may at its own expense remove from the Aircraft such items of equipment, and may install on the Aircraft such additional items of equipment, as Lessee may consider reasonably necessary to fit such Aircraft for use by Lessee; provided, however, that no such removal or installation which shall cause permanent change in the structure of the Aircraft shall be made without the prior written consent of Lessor unless such removal or installation is made pursuant to a mandatory FAA requirement. Such items as shall be so removed may be either retained in the custody of Lessee, or returned to Lessor, but in either event they shall be reinstalled on the Aircraft prior to the return of the Aircraft to Lessor. Items of non-mandatory nature that shall have been installed in the Aircraft shall be removed prior to the return of the Aircraft to Lessor.

5.

Lessee shall perform all necessary maintenance, overhaul and servicing on the Aircraft during the term of the lease in accordance with the requirements of the Federal Aviation Agency.

6.

If, during the term of the lease of Aircraft pursuant to this agreement, the Federal Aviation Agency or any other governmental agency having jurisdiction shall make mandatory the installation, removal or modification (other than mere inspection) of items on the Aircraft, then compliance shall be effected promptly at Lessor's expense.

7.

Lessee shall be liable for any loss of, or damage to, any Aircraft while leased from Lessor hereunder. During all times that the Aircraft is leased hereunder, Lessee shall, at its own cost and expense, keep the Aircraft, insured against loss or damage from crash, fire, wind storm, collision, strike, riots, insurrection, civil commotion or other accident or casualty (except war risk and engine ingestion) with Lessor named as a co-insured and shall furnish Lessor with a certificate of insurance therefor. The amount of such insurance shall not be less than $4,700,000 per Aircraft, with flight deductible and ground deductible clauses substantially equivalent to those currently in force in Lessee's other insurance policies. In the event of damage to the Aircraft, during the term of the lease, from a risk required to be covered

by such insurance, Lessee will repair the damage at its own expense. Upon complying with the foregoing provision, Lessee shall be entitled to retain (or, in the case of receipt by Lessor, to receive from Lessor) all proceeds of insurance with respect to such damage. In the event the Aircraft is lost, destroyed or damaged beyond repair, Lessee will pay to Lessor, as their interests may appear, for such Aircraft the sum of $4,700,000 (U.S. currency), less any amounts that might have been paid to and retained by Lessor as proceeds from the insurance, which shall constitute payment for all right, title and interest of Lessor in the Aircraft which shall thereupon pass to Lessee. The policies providing the insurance required by this agreement shall include customary provisions that Lessor shall not be responsible for the representations and warranties of Lessee and that Lessor shall receive notice prior to cancellation or expiration (unless the policy is being renewed) of any policy.

8.

Lessee agrees to defend, indemnify and hold harmless Lessor from and against all losses, including cost and expenses by reason of claims for injury or death of persons and loss or damage to property arising out of or in any manner connected with possession, use or operation by Lessee of the Aircraft leased hereunder during the term of such lease. During such term the Lessee shall keep in force and effect liability insurance in the amounts recommended by Lessee's Senior Vice-President-Finance.

9.

Lessee agrees that no Aircraft leased pursuant hereto will be used during the term of the lease in any manner which shall violate any law or regulation of any government or governmental agency having jurisdiction and that any fine, penalty or forfeiture resulting from any such violation shall be the sole responsibility of Lessee.

10.

(a) As rent for the Aircraft leased hereunder Lessee shall pay to Lessor the sum of $ 2,500.00 for each full day during the term of the lease. The rental shall be paid on the last day of each month.

(b) Lessee shall also pay to Lessor in respect of each of the engines on the Aircraft $31.00 per hour for each hour since the last overhaul on such engine at the time returned to Lessor on the termination of the lease less the number of hours since manufacture or overhaul on such engine on the delivery of the Aircraft to Lessee.

If the hours since last overhaul on any engine at the time it is returned to Lessor on termination of the lease are less than the number of hours since manufacture or overhaul on such engine on delivery of the Aircraft to Lessee, Lessor shall pay to Lessee $31.00 for each hour of difference between the two figures.

Settlement under this subparagraph (b) shall be made within 15 days after the end of the term of the lease.

11.

Lessee shall have no right to consent to any

lien or liens on the Aircraft. Any liens incurred by Lessee shall be discharged at the cost and expense of Lessee, who shall indemnify and save Lessor harmless against any such lien or liens. Lessee shall pay all operating taxes and licenses applicable to the Aircraft or the operation thereof, and also shall pay all property taxes assessed against Lessee or Lessor with respect to the Aircraft by any state, county, or other political subdivision to which Lessor would not ordinarily pay property taxes, except for the use of the Aircraft by Lessee hereunder. Lessee also shall pay any and all state federal, county and local sales and use taxes assessed against either Lessee or Lessor resulting from the lease or use hereunder of the Aircraft.

The title of Lessor (whether as trustee or otherwise), to the Aircraft and any right of Lessor (whether as trustee or otherwise) to take possession of the Aircraft in compliance with the provisions of this lease shall not be affected by the provisions of Chapter X of the Federal Bankruptcy Act as amended from time to time.

12.

Notwithstanding any of the above provisions it is further agreed that

(a) This lease agreement is entered into subject to approval of the Civil Aeronautics Board and until an order has been entered by the Civil Aeronautics Board permitting the transaction covered by this agreement no rental shall be paid hereunder;

(b) This lease is subject to the necessary consents of the holders of obligations issued by Trans World Airlines, Inc. under its outstanding

indentures, chattel mortgages and loan agreements. In the absence of such consents no rental shall be paid hereunder.

IN WITNESS WHEREOF, each of the parties hereto has caused this agreement to be executed in its name and in its behalf by its officer or agent thereunto duly authorized.

Dear Mr. Rosenthal:

Enclosed for your information is a copy of an Agreement of Lease entered into on March 30, 1959 by Hughes Tool Company and TWA, covering the lease by TWA from Hughes Tool Company on a day-to-day basis of Boeing Model 707-131 aircraft, FAA No. N733TW.

This lease covers the third Boeing 707-131 leased by Hughes to TWA and the second such aircraft covered by TWA's Motion of March 13, 1959 in Docket No. 1182. As indicated in the Motion this lease was entered into subject to the approval of the Civil Aeronautics Board.

The enclosed lease is in form identical to the lease covering aircraft FAA No. N732TW, a copy of which was forwarded to you by Mr. Rowe on March 19, 1959.

Very truly yours,

Harold L. Warner Jr.

Re: Motion dated March 13, 1959 of Trans World Airlines, Inc. for approval of Transactions with Hughes Tool Company, Docket No. 1182

Gentlemen:

Pursuant to Order Serial No. E 13873 issued May 15, 1959, enclosed for filing on behalf of TWA in the above matter are a copy of agreement of lease entered into as of May 10, 1959 and copy of agreement of lease entered into as of May 13, 1959 by Hughes Tool Company and TWA covering the lease by TWA from Hughes Tool Company on a day-to-day basis of Boeing Model 707-131 aircraft, FAA No. N737TW and N738TW respectively.

These leases cover the seventh and eighth Boeing 707-131 leased by Hughes to TWA and the sixth and seventh such aircraft covered by TWA's Motion of March 13, 1959 in the above docket. As indicated in the Motion these leases were entered into subject to the approval of the Civil Aeronautics Board. The lease of aircraft FAA No. N737TW commenced on May 10, 1959 and the lease of aircraft FAA No. N738TW commenced on May 13, 1959, the respective dates the aircraft were delivered to TWA.

The enclosed leases are in form identical to the five preceding leases filed by TWA in connection with its Motion of March 13, 1959 in the above matter.

Very truly yours,

Order No. E-13873

UNITED STATES OF AMERICA
CIVIL AERONAUTICS BOARD
WASHINGTON, D. C.

Adopted by the Civil Aeronautics Board
at its office in Washington, D. C.
on the 15th day of May, 1959

In the matter of the application of	:	
HUGHES TOOL COMPANY	:	Docket No. 1182
for approval of the acquisition of control of Trans World Airlines, Inc.	:	

ORDER

By notice filed with the Board on March 16, 1959, Trans World Airlines, Inc. (TWA) requests modification of Order No. 3210 1/, as amended and modified by subsequent orders, which restricts commercial transactions between TWA and Hughes Tool Company (Hughes) to those involving items of property the price of which does not exceed $200 and which restricts the total annual expenditure involved in such transactions by either party to a sum not to exceed $10,000. The modification is desired to permit TWA to lease on an individual basis up to eleven Boeing 707-131 aircraft from Hughes as they become available, as well as to acquire from Hughes at Hughes' actual cost a supply of spare parts, not to exceed $3,500,000 in value, which are needed for the operation of these aircraft. In addition, modification is requested to permit the lease by Hughes of up to thirty spare jet engines to TWA. The rental charges and other terms of the spare engine leases have not as yet been negotiated.

In support of its notion, TWA states that the aircraft and the spare parts and engines therefor are necessary to enable it to carry forward its jet training program and to commence jet service on its certificated routes. The Board recently authorized a similar transaction between TWA and Hughes involving a single Boeing 707-131 aircraft. 2/ The additional aircraft involved in the present transaction will be leased under substantially the same terms as those approved in the prior transaction.

The Board has previously approved the control of TWA by Hughes under section 408 of the Act. 3/ However, the transactions are outside the scope of the permissible class of transactions stated in Order No. 3210 and modification of that order to permit such transactions is therefore required. Upon review of the application and all subsequent filings the Board finds that the proposed aircraft lease transactions, and the agreement for the purchase of spare parts

1/ 6 C.A.B. 153, 158 (1946).
2/ Order No. E-13542, February 26, 1959
3/ 6 C.A.B. 153 (1944) and 12 C.A.B. 192 (1950).

do not violate the original purpose of the Board in imposing the restrictions contained in Order No. 3210 and further finds that modification as ordered herein is just and reasonable and in the public interest. However, inasmuch as the terms of the spare engine leases have not been filed, the Board cannot at this time determine whether modification of Order No. 3210 is justified with regard to the spare engine lease transactions. Therefore, the Board will defer action on TWA's motion insofar as it requests authorization for the lease of thirty spare jet engines to TWA.

Under the agreement, a separate lease will be executed for each aircraft. However, since only four of these leases have been filed, the Board will condition its approval of the instant aircraft lease transactions upon the filing, within ten days of the execution thereof, of each aircraft lease. The Board's action herein shall not be deemed a determination for rate-making purposes of the reasonableness of the transactions.

ACCORDINGLY, IT IS ORDERED:

1. That, subject to the conditions hereinafter set forth, Order No. 3210, issued October 17, 1944, as amended by subsequent orders, be and it hereby is further amended to permit the aircraft lease transactions between TWA and Hughes, and the agreement for the acquisition of up to $3,500,000 worth of spare parts as set forth in the motion to take place;

2. That TWA shall file within ten days of the execution thereof a copy of each aircraft lease;

3. That action on TWA's motion insofar as it requests authorization for the lease of thirty spare jet engines by Hughes to TWA be and it hereby is deferred;

4. That such action shall not be a determination for rate-making purposes of the reasonableness of the transactions;

5. That this order may be amended or revoked at any time in the discretion of the Board without hearings;

6. That the motion, except to the extent granted or deferred herein, be and it hereby is denied.

By the Civil Aeronautics Board:

/s/ Mabel McCart

Mabel McCart
Acting Secretary

BEFORE THE

CIVIL AERONAUTICS BOARD

In the matter of the application of	:	
HUGHES TOOL COMPANY	:	Docket No. 1182
for approval of the acquisition of control of Trans World Airlines, Inc.	:	

MOTION OF TRANS WORLD AIRLINES, INC. FOR APPROVAL OF TRANSACTIONS WITH HUGHES TOOL COMPANY

TRANS WORLD AIRLINES, INC. (herein referred to as "TWA") respectfully requests the Board to enter an order herein modifying its Order Serial No. 3210, issued October 17, 1944, as amended, approving the acquisition of control of TWA by Hughes Tool Company (herein referred to as "Hughes") so that the terms of said order will not restrict the right of TWA to enter into the transactions with Hughes more fully described below.

1. By motion filed with the Board on January 30, 1959 TWA requested a modification of Order No. 3210 issued October 17, 1944, as amended, so as to permit TWA to lease one Boeing 707-131 jet aircraft from Hughes as well as to acquire from Hughes a supply of spare parts, not to exceed $100,000 in value, which were needed for the operation of said aircraft.

On February 26, 1959 the Board by its Order No. 13542 amended Order No. 3210 so as to permit the transactions between TWA and Hughes, as set forth in said motion, to take place.

2. Thereafter, as set forth in TWA's motion filed with the Board on March 16, 1959, subject to the approval of the Board Hughes proposed to lease to TWA up to eleven additional Boeing Model 707-131 jet aircraft (herein referred to as the "Leased Aircraft") on a day-to-day basis at a rate of $2,500 per day, subject to the right of either party to terminate the lease agreement on twenty-four hour written notice, such leases in any event to terminate no later than June 30, 1959. As a part of this transaction Hughes also agreed to sell to TWA at Hughes' actual cost certain spare parts and provisioning, not to exceed $3,500,000 in value, needed for the operation of the Leased Aircraft.

On May 15, 1959 the Board by its Order No. 13873 amended Order No. 3210, issued October 17, 1944, as amended by subsequent orders, so as to permit the aforesaid aircraft lease transactions between TWA and Hughes and the agreement for the acquisition of up to $3,500,000 worth of spare parts to take place.

3. TWA and Hughes had anticipated that definitive financing arrangements permitting TWA to operate the Leased Aircraft on a permanent basis would be finalized on or about June 30, 1959. However, arrangements for such financing have not as yet been completed and accordingly the parties desire to extend the date of latest termination provided for in the leases of the Leased Aircraft (including the proposed lease of the aircraft not yet delivered to TWA referred to in paragraph 4) from June 30, 1959 to September 30, 1959. A proposed form of amendment so extending said leases already executed is attached hereto as Exhibit A.

4. Aircraft FAA No. N731TW, covered by Board Order No. 13542, was leased to TWA under date of January 29, 1959. Ten of the eleven Leased Aircraft covered by the Board's Order No. 13873 have been delivered to TWA and the one remaining Leased Aircraft is scheduled for delivery in the near future.

Hughes has remaining on order from Boeing Airplane Company three additional Boeing Model 707-131 jet aircraft at a purchase price of approximately $4,700,000 per aircraft. In order to make additional such aircraft available to TWA, Hughes proposes to deliver up to three Boeing Model 707-131 jet aircraft in addition to the "Leased Aircraft" and aircraft FAA No. N731TW. The three additional Boeing Model 707-131 jet aircraft would be delivered to TWA under a lease agreement or agreements, providing for the lease of each such aircraft by TWA on a day-to-day basis at a rate not to exceed $2500 per day, subject to the right of either party to terminate the lease on twenty-four hours written notice and subject to the approval of the Civil Aeronautics Board. Such leases would in any event terminate no later than September 30, 1959. The proposed lease or leases will be in form substantially similar to the form attached as Exhibit A to TWA's motion herein dated January 29, 1959.

5. Hughes has further agreed to sell to TWA at Hughes' cost when and if requested by TWA such spare parts and provisioning as are owned by Hughes or are on order and are available for use in the operation of the Leased

Aircraft and the four other Boeing Model 707-131 jet aircraft referred to in paragraph 4. A copy of the proposed form of letter agreement relative to this transaction is attached as Exhibit B.

6. In its motion dated March 13, 1959 in the above matter, TWA requested that the Board's Order permit TWA to lease from Hughes Tool Company "up to 30 spare aircraft engines for the Leased Aircraft under a lease agreement or agreements to be negotiated on terms comparable to those applicable to the Leased Aircraft." The motion further stated "A copy of such lease agreement, when negotiated, will be filed with the Board as a supplement to this motion."

In its Order No. E-13873 the Board deferred action on TWA's motion insofar as it requests authorization for the lease of 30 spare jet engines by Hughes Tool Company to TWA.

Since the filing of the motion, TWA has tentatively decided to defer the question of how TWA should handle the acquisition of its total spare aircraft engine requirements until definitive financing has been worked out for jet equipment and as a result TWA has purchased directly from the manufacturer certain additional spare engines in order to satisfy interim requirements. Consequently, no further action is requested of the Board at this time on TWA's motion of March 13, 1959.

7. Use by TWA of the Leased Aircraft, the four additional Boeing Model 707-131 jet aircraft and

the spare parts and provisioning is necessary to enable TWA to continue the operation of jet service on its certificated routes.

WHEREFORE, TRANS WORLD AIRLINES, INC. respectfully prays that the Board enter an order herein modifying its Order Serial No. 3210, as amended, so that its order will permit TWA to enter into the transactions with Hughes Tool Company described above.

Respectfully submitted,

Senior Vice President-
Finance and Treasurer

EXHIBIT A

THIS AGREEMENT entered into as of the day of , 1959 by and between Hughes Tool Company, a Delaware corporation ("Lessor") and Trans World Airlines, Inc., a Delaware corporation ("Lessee"):

WITNESSETH:

WHEREAS, Lessor and Lessee have heretofore entered into lease agreements covering the day-to-day leasing by Lessor to Lessee of Boeing Model 707-131 aircraft as follows:

Aircraft FAA No.	Date of Lease
N732TW	March 17, 1959
N733TW	March 30, 1959
N734TW	April 3, 1959
N735TW	April 18, 1959
N736TW	April 29, 1959
N737TW	May 10, 1959
N738TW	May 13, 1959
N740TW	May 26, 1959
N739TW	May 28, 1959
N741TW	June 13, 1959

and

WHEREAS, said leases contemplate that they shall in any event terminate no later than June 30, 1959, and

WHEREAS, the parties desire to amend said leases so as to extend the date of latest termination from June 30, 1959 to September 30, 1959.

NOW, THEREFORE, the parties hereto agree as follows:

1. Effective June 30, 1959, the second sentence of paragraph 2 of each of the leases above

specified is hereby amended to read as follows:

"The lease shall terminate upon twenty-four hour written notice to such effect from one party to the other and shall in any event terminate no later than September 30, 1959."

2. (a) This lease amendment is entered into subject to approval of the Civil Aeronautics Board and until an order has been entered by the Civil Aeronautics Board permitting the transaction covered by this agreement no rental shall be paid hereunder;

(b) This lease amendment is subject to the necessary consents of the holders of obligations issued by Trans World Airlines, Inc. under its outstanding indentures, chattel mortgages and loan agreements. In the absence of such consents no rental shall be paid hereunder.

IN WITNESS WHEREOF, each of the parties hereto has caused this agreement to be executed in its name and in its behalf by its officer or agent thereunto duly authorized.

Attention: Mr. A. V. Leslie

Re: Purchase of Spare Parts

Dear Sirs:

The letter agreement between us dated March 25, 1959 provides that TWA may purchase at Hughes Tool Company's actual cost such Boeing 707-131 aircraft spare parts and provisioning owned by Hughes Tool Company as TWA may request, not to exceed however in aggregate dollar amount the sum of $3,500,000.

To permit the continued operation of the Boeing 707 aircraft by TWA Hughes Tool Company hereby agrees, when and if requested by TWA, to sell to TWA on the same terms and conditions as outlined in our letter of March 25, 1959, such additional 707-131 spare parts and provisioning as are owned by Hughes or are on order and are available for use in connection with the operation of said aircraft.

This amendment to our agreement is subject to the approval of the Civil Aeronautics Board and until an order has been entered by the Civil Aeronautics Board permitting the additional transactions covered by this amendment no payments shall be made under said amendment.

If the foregoing is acceptable to TWA please so acknowledge by executing and returning the enclosed copy of this letter.

Very truly yours,

Accepted this

Order No. E-14169

UNITED STATES OF AMERICA
CIVIL AERONAUTICS BOARD
WASHINGTON, D. C.

Adopted by the Civil Aeronautics Board
at its office in Washington, D. C.
on the 1st day of July, 1959

In the matter of the application of	:	
HUGHES TOOL COMPANY	:	Docket No. 1182
for approval of the acquisition of control of Trans World Airlines, Inc.	:	

ORDER

On May 15, 1959, by Order No. E-13873, the Board modified its order approving the acquisition of control of Trans World Airlines, Inc. (TWA) by Hughes Tool Company (Hughes) 1/ so as to permit TWA to lease on an individual basis, as they became available, up to eleven Boeing 707-131 aircraft from Hughes and to acquire, when and as needed in the operation of these aircraft, a stock of not to exceed $3,500,000 worth of spare parts from Hughes at Hughes' actual cost. These leases were to be on a day-to-day basis and were to expire no later than June 30, 1959. Ten of these leases have been executed. By motion filed June 29, 1959, TWA requests modification of Order No. 3210 so as to permit the extension of these ten leases under the same rental and other terms until no later than September 30, 1959, as well as to permit the lease, under identical terms, of four additional Boeing 707-131 aircraft, and the purchase from Hughes at Hughes' actual cost of additional spare parts necessary for the operation of the leased jet aircraft.

TWA states that it had anticipated that definitive financing arrangements permitting it to operate these jet aircraft on a permanent basis would have been finalized by June 30, 1959, but that since arrangements for such financing have not as yet been completed the parties to the leases now desire to extend them until September 30, 1959, and to lease additional aircraft during this same period.

1/ Order No. 3210, issued October 17, 1944. This order, as amended by subsequent orders, restricts commercial transactions between TWA and Hughes to items not exceeding $200 each and totaling not more than $10,000 per year.

The Board has previously approved the control of TWA by Hughes under section 408 of the Act. 2/. However, the proposed transactions are outside the scope of the permissible class of transactions stated in Order No. 3210, and modification of that order to permit such transactions is therefore required. Upon review of the motion, the Board finds that the extension of the aircraft leases, the leasing of four additional aircraft, and the agreement for the purchase of additional spare parts at Hughes' actual cost do not violate the original purpose of the Board in imposing the restrictions contained in Order No. 3210, and further finds that modification as ordered herein is just and reasonable and in the public interest. The Board will condition its approval of the four additional aircraft lease transactions upon the filing, within ten days of the execution thereof, of each of those aircraft leases. The Board's action herein shall not be deemed a determination for rate-making purposes of the reasonableness of the transactions.

ACCORDINGLY, IT IS ORDERED:

1. That, subject to the conditions hereinafter set forth, Order No. 3210, issued October 17, 1944, as amended by subsequent orders, be and it hereby is further amended to permit the extension of the currently existing aircraft leases which were approved by Order No. E-13873 and the leasing of additional aircraft by TWA from Hughes and the agreement for the acquisition of additional spare parts as set forth in the motion, to take place;

2. That TWA shall file within ten days of the execution thereof a copy of the heretofore unexecuted aircraft leases;

3. That such action shall not be a determination for rate-making purposes of the reasonableness of the transactions;

4. That this order may be amended or revoked at any time in the discretion of the Board without hearing;

By the Civil Aeronautics Board.

BEFORE THE

CIVIL AERONAUTICS BOARD

In the matter of the application of	:	
HUGHES TOOL COMPANY	:	Docket No. 1182
for approval of the acquisition of control of Trans World Airlines, Inc.	:	
	:	

MOTION OF TRANS WORLD AIRLINES, INC. FOR APPROVAL OF TRANSACTIONS WITH HUGHES TOOL COMPANY

TRANS WORLD AIRLINES, INC. (herein referred to as "TWA") respectfully requests the Board to enter an order herein modifying its Order Serial No. 3210, issued October 17, 1944, as amended, approving the acquisition of control of TWA by Hughes Tool Company (herein referred to as "Hughes") so that the terms of said order will not restrict the right of TWA to enter into the transactions with Hughes more fully described below.

1. By motion filed with the Board on January 30, 1959, TWA requested a modification of Order No. 3210 issued October 17, 1944, as amended, so as to permit TWA to lease one Boeing 707-131 jet aircraft from Hughes.

On February 26, 1959 the Board by its Order No. 13542 amended Order No. 3210 so as to permit the aforesaid transaction between TWA and Hughes to take place.

2. Thereafter on May 15, 1959 the Board by its Order No. 13873 approved the leasing by Hughes to

TWA of up to 11 additional Boeing Model 707-131 jet aircraft as set forth in TWA's motion filed with the Board on March 16, 1959. Said leases were on a day-to-day basis and were to expire no later than June 30, 1959. Ten such leases were executed.

3. By motion filed June 29, 1959 TWA requested modification of Order No. 3210 so as to permit the extension of the ten leases referred to in paragraph 2 under the same rental and other terms until no later than September 30, 1959, as well as to permit the lease, under identical terms, of four additional Boeing Model 707-131 aircraft.

On July 1, 1959, the Board by its Order No. 14169 amended Order No. 3210, issued October 17, 1944, as amended by subsequent orders, so as to permit the aforesaid aircraft lease transactions between TWA and Hughes to take place. The ten Boeing Model 707-131 jet aircraft leased by Hughes to TWA as set forth in paragraph 2, together with the four additional Boeing Model 707-131 jet aircraft leased to TWA as authorized by Order No. 14169, are herein referred to as the "Leased Aircraft".

4. TWA and Hughes had anticipated that definitive financing arrangements permitting TWA to operate the Leased Aircraft on a permanent basis would have heretofore been finalized. However, since arrangements for such financing have not as yet been completed the parties accordingly desire to extend the date of termination provided for in the leases of the Leased Aircraft beyond September 30, 1959 and until terminated by either party upon twenty-four hours written notice by one party to the other. A proposed form of amendment so extending said

leases is attached hereto as Exhibit A.

5. Use by TWA of the Leased Aircraft is necessary to enable TWA to continue the operation of jet service on its certificated routes.

WHEREFORE, TRANS WORLD AIRLINES, INC. respectfully prays that the Board enter an order herein modifying its Order Serial No. 3210, as amended, so that its order will permit TWA to enter into the transactions with Hughes Tool Company described above.

Respectfully submitted,

Senior Vice President -
Finance and Treasurer

September 22, 1959

EXHIBIT A

THIS AGREEMENT entered into as of the day of , 1959 by and between Hughes Tool Company, a Delaware corporation ("Lessor") and Trans World Airlines, Inc., a Delaware corporation ("Lessee"):

W I T N E S S E T H :

WHEREAS, Lessor and Lessee have heretofore entered into lease agreements covering the day-to-day leasing by Lessor to Lessee of Boeing Model 707-131 aircraft as follows:

AIRCRAFT FAA NO.	DATE OF LEASE
N732TW	March 17, 1959
N733TW	March 30, 1959
N734TW	April 3, 1959
N735TW	April 18, 1959

N739TW	May 28, 1959
N741TW	June 13, 1959
N742TW	July 1, 1959
N743TW	July 10, 1959
N744TW	July 14, 1959
N745TW	August 1, 1959

and

WHEREAS, said leases, as amended, contemplate that they shall in any event terminate no later than September 30, 1959, and

WHEREAS, the parties desire to amend said leases so as to extend the date of termination beyond September 30, 1959 and until terminated by either party upon twenty-four hours written notice by one party to the other.

NOW, THEREFORE, the parties hereto agree as follows:

1. Effective September 30, 1959, the second sentence of paragraph 2 of each of the leases above specified is hereby amended to read as follows:

"The lease shall terminate upon twenty-four hour written notice to such effect from one party to the other".

2. (a) This lease amendment is entered into subject to approval of the Civil Aeronautics Board and until an order has been entered by the Civil Aeronautics Board permitting the transaction covered by this agreement no rental shall be paid hereunder;

(b) This lease amendment is subject to the necessary consents of the holders of obligations issued by Trans World Airlines, Inc. under its outstanding indentures, chattel mortgages and loan agreements. In the absence of such consents no rental shall be paid hereunder.

IN WITNESS WHEREOF, each of the parties hereto has caused this agreement to be executed in its name and in its behalf by its officer or agent thereunto duly authorized.

Order No. E-14504

UNITED STATES OF AMERICA
CIVIL AERONAUTICS BOARD
WASHINGTON, D. C.

Adopted by the Civil Aeronautics Board
at its office in Washington, D. C.
on the 30th day of September, 1959

In the matter of the application of	:	
	:	
HUGHES TOOL COMPANY	:	Docket No. 1182
	:	
for approval of the acquisition of control of Trans World Airlines, Inc.	:	

ORDER

On July 1, 1959, by Order No. E-14169, the Board modified its order approving the acquisition of control of Trans World Airlines, Inc. (TWA) by Hughes Tool Company (Hughes) 1/ so as to permit, among other things, the extension of ten leases of Boeing 707-131 aircraft by TWA from Hughes 2/ until September 30, 1959, and to permit the lease of four additional Boeing 707-131 aircraft. By motion filed September 23, 1959, TWA requests modification of Order No. 3210 so as to permit the extension of these leases, under identical terms, until such time as they are terminated by either party upon 24 hours' written notice.

TWA states that it had anticipated that definitive financing arrangements permitting it to operate these jet aircraft on a permanent basis would have been finalized by September 30, 1959, but that since arrangements for such financing have not as yet been completed, the parties to the leases now desire to extend them until such time as these arrangements are completed.

The Board has previously approved the control of TWA by Hughes under section 408 of the Act. 3/ However, the proposed lease extensions are outside the scope of the permissible class of transactions stated in Order No. 3210,

1/ Order No. 3210, issued October 17, 1944. This order, as amended by subsequent orders, restricts commercial transactions between TWA and Hughes to items not exceeding $200 each and totaling not more than $10,000 per year.

2/ By Order No. E-13973, May 15, 1959, the Board modified Order No. 3210 so as to permit the original lease of these aircraft.

3/ 6 CAB 153 (1944) and 12 CAB 192 (1950).

and modification of that order to permit such transactions is therefore required. Upon review of the motion, the Board finds that the extension of these aircraft leases does not violate the original purpose of the Board in imposing the restrictions contained in Order No. 3210, and further finds that, under the circumstances described above, modification as ordered herein is just and reasonable and in the public interest. The Board's action herein shall not be deemed a determination for rate-making purposes of the reasonableness of the transactions.

ACCORDINGLY, IT IS ORDERED:

1. That, subject to the conditions hereinafter set forth, Order No. 3210, issued October 17, 1944, as amended by subsequent orders, be and it hereby is further amended to permit the extension of the aircraft leases as set forth in TWA's motion;

2. That such action shall not be a determination for rate-making purposes of the reasonableness of the transactions;

3. That this order may be amended or revoked at any time in the discretion of the Board without hearing.

By the Civil Aeronautics Board.

/s/ Mabel McCart

November 6, 1959

BEFORE THE

CIVIL AERONAUTICS BOARD

In the matter of the application of	
HUGHES TOOL COMPANY	
for approval of the acquisition of control of Trans World Airlines, Inc.	Docket No. 1182

MOTION OF TRANS WORLD AIRLINES, INC.
FOR APPROVAL OF TRANSACTIONS WITH
HUGHES TOOL COMPANY

TRANS WORLD AIRLINES, INC. (herein referred to as "TWA") respectfully requests the Board to enter an order herein modifying its Order Serial No. 3210, issued October 17, 1944, as amended, approving the acquisition of control of TWA by Hughes Tool Company (herein referred to as "Hughes") so that the terms of said order will not restrict the right of TWA to enter into the transactions with Hughes more fully described below.

1. Hughes has on order from Boeing Airplane Company 12 Boeing Model 707-331 jet aircraft at a purchase price of approximately $5,600,000 per aircraft. In addition Hughes has on order 30 Convair Model 880 jet aircraft at a purchase price of approximately $3,930,000 per aircraft.

2. Although TWA has entered into no specific commitment to acquire such aircraft, it nevertheless contemplates that certain of these aircraft will be made available to it, on terms not yet determined, for use in

TWA's certificated operations. Current estimates indicate that the first Boeing Model 707-331 aircraft will be ready for delivery in November, 1959 and that the first Convair 880 aircraft will be ready for delivery approximately one month thereafter. TWA desires to make use of the first aircraft to be delivered in its jet training program and subsequently to make use of these and other such aircraft in the operation of jet service on its certificated routes.

3. As TWA has advised the Board in connection with the temporary extension of its leases from Hughes Tool Company of Boeing Model 707-131 aircraft, approved by CAB Order No. 14504, definitive financing plans for TWA's jet aircraft program have not yet been completed. Pending the completion of these definitive plans, it is desirable that interim arrangements be made covering TWA's use of the jet aircraft in its operation.

4. In order to make certain of such aircraft available to TWA, Hughes proposes to deliver Boeing Model 707-331 jet aircraft and Convair Model 880 jet aircraft (said Boeing and Convair jet aircraft being hereinafter referred to as the "Leased Aircraft") to TWA under a lease agreement or agreements, providing for the lease of each such aircraft by TWA on a day-to-day basis at a rate not to exceed $2,940 per day with respect to the Boeing Model 707-331 jet aircraft and $2,070 per day with respect to the Convair Model 880 jet aircraft, subject to the right of either party to terminate the lease on twenty-four hours written notice and subject to the approval of the Civil Aeronautics Board. Such lease will be in substantially the same form as the present leases by

TWA from Hughes of Boeing Model 707-131 aircraft, the subject of CAB Orders Nos. 13542, 13873 and 14169. A copy of the proposed form of lease is attached as Exhibit A. No more than eight of each type of aircraft would be leased by TWA without the submission to the Board of a supplemental motion requesting approval of such additional leases.

5. Hughes has also acquired or has on order certain spare parts and provisioning for the Boeing Model 707-331 aircraft and for the Convair Model 880 aircraft. Hughes will sell to TWA at Hughes' cost when and if requested by TWA such spare parts and provisioning as are owned by Hughes or are on order. A copy of the proposed form of letter agreement relative to this transaction is attached as Exhibit B.

6. TWA believes that use by it of the Leased Aircraft, and the spare parts and provisioning therefor, as set forth in paragraph 5, is necessary to enable TWA to carry forward its jet training program and to enable TWA to conduct certificated service with Boeing Model 707-331 and Convair Model 880 jet aircraft when such aircraft are delivered to it.

WHEREFORE, TRANS WORLD AIRLINES, INC. respectfully prays that the Board enter an order herein modifying its Order Serial No. 3210, as amended, so that its order will permit TWA to enter into transactions with Hughes Tool Company described above.

Respectfully submitted,

Charles S. Thomas

C. S. Thomas
President

November 6, 1959

EXHIBIT A

THIS AGREEMENT entered into as of the day of , 1959 by and between Hughes Tool Company, a Delaware corporation ("Lessor") and Trans World Airlines, Inc., a Delaware corporation ("Lessee"):

WITNESSETH:

1.

Lessor hereby agrees to lease to Lessee and Lessee hereby agrees to hire and take from Lessor, subject to the terms and conditions herein provided, one Model aircraft bearing FAA No. (Manufacturer's Serial No.), including four Engines (Serial Nos. , , , and), herein sometimes referred to as "the Aircraft."

2.

The lease of the Aircraft shall commence on delivery of the Aircraft to Lessee and shall continue from day-to-day until terminated by either of the parties. The lease shall terminate upon twenty-four hour written notice to such effect from one party to the other. The Aircraft shall be delivered to Lessee hereunder at , or such other place as may be mutually agreed.

3.

(a) Lessee agrees to accept the Aircraft in its present condition and Lessor makes no warranties or representations whatsoever as to condition of the Aircraft, [illegible] shall be implied in law

Such warranties and guarantees from manufacturers and suppliers of the Aircraft and its equipment as can be effectively assigned for the term of this lease are hereby assigned by Lessor to Lessee for the term of this lease to the extent of Lessee's interest accruing during the term of such lease.

(b) Upon the termination of this lease, Lessee agrees to return the Aircraft to Lessor (at Mid-Continent International Airport, Kansas City, Missouri, or such other place as may be mutually agreed) in the same condition and equipped with the same equipment as it was at the commencement of the lease, except for reasonable wear and tear from ordinary use.

During the term of the lease Lessee may at its own expense remove from the Aircraft such items of equipment, and may install on the Aircraft such additional items of equipment, as Lessee may consider reasonably necessary to fit such Aircraft for use by Lessee; provided, however, that no such removal or installation which shall cause permanent change in the structure of the Aircraft shall be made without the prior written consent of Lessor unless such removal or installation is made pursuant to a mandatory FAA requirement. Such items as shall be so removed may be either retained in the custody of Lessee, or returned to Lessor, but in either event they shall be reinstalled on the Aircraft prior to the return of the Aircraft to Lessor. Items of non-mandatory nature that shall have been installed in the Aircraft shall be removed prior to the return of the Aircraft to Lessor.

5.

Lessee shall perform all necessary maintenance, overhaul and servicing on the Aircraft during the term of the lease in accordance with the requirements of the Federal Aviation Agency.

6.

If, during the term of the lease of Aircraft pursuant to this agreement, the Federal Aviation Agency or any other governmental agency having jurisdiction shall make mandatory the installation, removal or modification (other than mere inspection) of items on the Aircraft, then compliance shall be effected promptly at Lessor's expense.

7.

Lessee shall be liable for any loss of, or damage to, any Aircraft while leased from Lessor hereunder. During all times that the Aircraft is leased hereunder, Lessee shall, at its own cost and expense, keep the Aircraft, insured against loss or damage from crash, fire, wind storm, collision, strike, riots, insurrection, civil commotion or other accident or casualty (except war risk and engine ingestion) with Lessor named as a co-insured and shall furnish Lessor with a certificate of insurance therefor. The amount of such insurance shall not be less than $ per Aircraft, with flight deductible and ground deductible clauses substantially equivalent to those currently in force in Lessee's other insurance policies. In the event of damage to the Aircraft, during the term of the lease, from a risk required to be covered

by such insurance, Lessee will repair the damage at its own expense. Upon complying with the foregoing provision, Lessee shall be entitled to retain (or, in the case of receipt by Lessor, to receive from Lessor) all proceeds of insurance with respect to such damage. In the event the Aircraft is lost, destroyed or damaged beyond repair, Lessee will pay to Lessor, as their interests may appear, for such Aircraft the sum of $ (U. S. currency), less any amounts that might have been paid to and retained by Lessor as proceeds from the insurance, which shall constitute payment for all right, title and interest of Lessor in the Aircraft which shall thereupon pass to Lessee. The policies providing the insurance required by this agreement shall include customary provisions that Lessor shall not be responsible for the representations and warranties of Lessee and that Lessor shall receive notice prior to cancellation or expiration (unless the policy is being renewed) of any policy.

8.

Lessee agrees to defend, indemnify and hold harmless Lessor from and against all losses, including cost and expenses by reason of claims for injury or death of persons and loss or damage to property arising out of or in any manner connected with possession, use or operation by Lessee of the Aircraft leased hereunder during the term of such lease. During such term the Lessee shall keep in force and effect liability insurance in the amounts recommended by Lessee's Senior Vice-President-Finance.

9.

Lessee agrees that no Aircraft leased pursuant hereto will be used during the term of the lease in any manner which shall violate any law or regulation of any government or governmental agency having jurisdiction and that any fine, penalty or forfeiture resulting from any such violation shall be the sole responsibility of Lessee.

10.

(a) As rent for the Aircraft leased hereunder Lessee shall pay to Lessor the sum of $ for each full day during the term of the lease. The rental shall be paid on the last day of each month.

(b) Lessee shall also pay to Lessor in respect of each of the engines on the Aircraft $ per hour for each hour since the last overhaul on such engine at the time returned to Lessor on the termination of the lease less the number of hours since manufacture or overhaul on such engine on the delivery of the Aircraft to Lessee.

If the hours since last overhaul on any engine at the time it is returned to Lessor on termination of the lease are less than the number of hours since manufacture or overhaul on such engine on delivery of the Aircraft to Lessee, Lessor shall pay to Lessee $ for each hour of difference between the two figures.

Settlement under this subparagraph (b) shall be made within 15 days after the end of the term of the lease.

11.

Lessee shall have no right to consent to any

lien or liens on the Aircraft. Any liens incurred by Lessee shall be discharged at the cost and expense of Lessee, who shall indemnify and save Lessor harmless against any such lien or liens. Lessee may sublease the Aircraft to any scheduled airline operating in the United States, provided such sublease is made expressly subject to the terms and conditions hereof. Lessee shall pay all operating taxes and licenses applicable to the Aircraft or the operation thereof, and also shall pay all property taxes assessed against Lessee or Lessor with respect to the Aircraft by any state, county, or other political subdivision to which Lessor would not ordinarily pay property taxes, except for the use of the Aircraft by Lessee hereunder. Lessee also shall pay any and all state, federal, county and local sales and use taxes assessed against either Lessee or Lessor resulting from the lease or use hereunder of the Aircraft.

The title of Lessor (whether as trustee or otherwise), to the Aircraft and any right of Lessor (whether as trustee or otherwise) to take possession of the Aircraft in compliance with the provisions of this lease shall not be affected by the provisions of Chapter X of the Federal Bankruptcy Act as amended from time to time.

12.

Notwithstanding any of the above provisions it is further agreed that

(a) This lease agreement is entered into subject to approval of the Civil Aeronautics Board and until an order has been entered by the Civil Aeronautics Board permitting the transaction covered by this agreement no rental shall be paid hereunder;

(b) This lease is subject to the necessary consents of the holders of obligations issued by

indentures, chattel mortgages and loan agreements. In the absence of such consents no rental shall be paid hereunder.

IN WITNESS WHEREOF, each of the parties hereto has caused this agreement to be executed in its name and in its behalf by its officer or agent thereunto duly authorized.

Attention: Mr. A. V. Leslie

Re: Purchase of Spare Parts.

Dear Sirs:

This letter will set forth our agreement and understanding concerning the purchase by TWA from Hughes Tool Company of spare parts and provisioning (herein called "Spares") for use in connection with the operation by TWA of the Boeing Model 707-331 jet aircraft and Convair Model 880 jet aircraft leased by TWA from Hughes Tool Company.

Hughes Tool Company hereby agrees to sell to TWA at Hughes Tool Company's actual cost such Spares as are owned by Hughes Tool Company or are on order by it as TWA may from time to time elect to purchase.

Appropriate accounting procedures should be established for the accurate and prompt recordation of all transactions involving the withdrawing and purchase of Spares.

This agreement and arrangement are subject to approval of the Civil Aeronautics Board, and until an order has been entered by the Civil Aeronautics Board permitting the transactions covered by this agreement no payments shall be made hereunder.

If the foregoing is acceptable to TWA please so acknowledge by executing and returning the enclosed copy of this letter.

Very truly yours,

Accepted this
day of , 1959

Trans World Airlines, Inc.

Order No. E-11877

UNITED STATES OF AMERICA
CIVIL AERONAUTICS BOARD
WASHINGTON, D. C.

Adopted by the Civil Aeronautics Board
at its office in Washington, D. C.
on the 29th day of January, 1960

In the matter of the application of

HUGHES TOOL COMPANY

for approval of the acquisition of control of Trans World Airlines, Inc.

Docket 1182

ORDER

By motion filed with the Board on November 6, 1959, Trans World Airlines, Inc. (TWA) requests modification of Order 3210, 1/ as amended and modified by subsequent orders, which restricts commercial transactions between TWA and Hughes Tool Company (Hughes) and between TWA and any affiliate or subsidiary of Hughes to "transactions involving complete items of property, the price of which does not exceed $200 each, with the further limitation that the total annual expenditure involved in such commercial transactions by either party shall not exceed $10,000." The modification is desired to permit TWA to lease from Hughes on an individual, day-to-day basis up to eight Boeing 707-331 aircraft and up to eight Convair 880 aircraft, and to purchase from Hughes at Hughes' actual cost such spare parts and provisioning for these aircraft as TWA may require.

In support of its motion, TWA states that the aircraft and the spare parts therefor are necessary to enable it to carry forward its jet training program and to provide additional jet service over its certificated routes pending completion of definitive financing arrangements permitting it to operate these aircraft on a permanent basis.

The Board has previously approved the control of TWA by Hughes under section 408 of the Act, 2/ and the proposed transactions raise no new issues with respect thereto. However, the transactions are outside of the scope of the permissible class of transactions stated in Order 3210, and modification of that order to permit such transactions is therefore required.

1/ 6 C.A.B. 153, 158 (1944).

2/ 6 C.A.B. 153 (1944) and 12 C.A.B. 192 (1950).

The Board finds that the proposed transactions, as set forth in the motion, do not violate the original purpose of the Board in imposing the restrictions contained in Order 3210, and further finds that modification as ordered herein is just and reasonable and in the public interest. However, such action shall not be deemed to be a determination for rate-making purposes of the reasonableness of the transactions. The Board will condition its authorization herein upon the filing of each of the aircraft leases within ten days after the execution thereof.

ACCORDINGLY, IT IS ORDERED:

1. That, subject to the conditions hereinafter set forth, Order 3210, issued October 17, 1944, as amended by subsequent orders, be and it hereby is further amended to permit the transactions between TWA and Hughes, as set forth in the motion, to take place;

2. That TWA shall file a copy of each aircraft lease within ten days after the execution thereof;

3. That this action shall not be deemed a determination for rate-making purposes of the reasonableness of the transactions;

4. That this order may be amended or revoked at any time in the discretion of the Board without hearing.

By the Civil Aeronautics Board:

/s/ Mabel McCart

BEFORE THE

CIVIL AERONAUTICS BOARD

In the matter of the application of	
HUGHES TOOL COMPANY	
for approval of the acquisition of control of Trans World Airlines, Inc.	Docket No. 1182

MOTION OF TRANS WORLD AIRLINES, INC. FOR APPROVAL OF TRANSACTIONS WITH HUGHES TOOL COMPANY

TRANS WORLD AIRLINES, INC. (herein referred to as "TWA") respectfully requests the Board to enter an order herein modifying its Order Serial No. 3210, issued October 17, 1944, as amended, approving the acquisition of control of TWA by Hughes Tool Company (herein referred to as "Hughes") so that the terms of said order will not restrict the right of TWA to enter into the transactions with Hughes more fully described below.

1. Hughes has on order from Boeing Airplane Company seven Boeing Model 707-331 jet aircraft at a purchase price of approximately $5,600,000 per aircraft. In addition Hughes has on order thirty Convair Model 880 jet aircraft at a purchase price of approximately $3,930,000 per aircraft.

2. As TWA has previously advised the Board in connection with the leases from Hughes Tool Company

of Boeing Model 707-131 aircraft, approved by CAB Order No. 14504, and in connection with the leasing from Hughes Tool Company of Boeing Model 707-331 jet aircraft and Convair Model 880 jet aircraft, approved by CAB Order No. 14877, definitive financing plans for TWA's jet aircraft program are being completed.

3. The definitive financing plans contemplate that TWA will acquire title to the jet aircraft heretofore leased by Hughes to TWA as well as to additional Boeing Model 707-331 jet aircraft and Convair Model 880 jet aircraft.

4. The Board in its Order E-14877 approved the leasing by Hughes to TWA of up to eight Boeing Model 707-331 jet aircraft. Five such aircraft have been leased pursuant to Order E-14877. In lieu of leasing additional Boeing Model 707-331 jet aircraft and in order to make such aircraft immediately available to TWA on a permanent basis, Hughes proposes to assign to TWA Hughes' right to acquire two Boeing Model 707-331 jet aircraft and the customer-furnished equipment thereon from the vendor. TWA would acquire such right at Hughes' cost, including advance payments made by Hughes with respect to such aircraft and customer-furnished equipment and interest on advance payments made by Hughes to the vendor with respect thereto. Following such assignment and subject to TWA's acceptance of the aircraft on delivery, TWA proposes to purchase the aircraft from the vendor by payment to the vendor of the balance of the purchase price applicable to such aircraft. Payment to Hughes of its down payments made thereon and

interest applicable thereto will be made only following approval thereof by the Board.

5. TWA believes that the acquisition of the two Boeing Model 707-331 jet aircraft referred to herein is necessary and desirable for use in TWA's domestic and international operations and that such acquisition is reasonable and in the best interest of TWA.

WHEREFORE, Trans World Airlines, Inc. respectfully prays that the Board enter an order herein modifying its Order Serial No. 3210, as amended, so that its order will permit TWA to enter into transactions with Hughes Tool Company described above.

Respectfully submitted,

C. S. Thomas

April 14, 1960

BEFORE THE

CIVIL AERONAUTICS BOARD

In the matter of the application of	:	
HUGHES TOOL COMPANY	:	Docket No. 1182
for approval of the acquisition of control of Trans World Airlines, Inc.	:	

MOTION OF TRANS WORLD AIRLINES, INC.
FOR APPROVAL OF TRANSACTIONS WITH
HUGHES TOOL COMPANY

TRANS WORLD AIRLINES, INC. (herein referred to as "TWA") respectfully requests the Board to enter an order herein modifying its Order Serial No. 3210, issued October 17, 1944, as amended, approving the acquisition of control of TWA by Hughes Tool Company (herein referred to as "Hughes") so that the terms of said order will not restrict the right of TWA to enter into the transactions with Hughes more fully described below.

1. As TWA has previously advised the Board definitive financing plans for the TWA jet aircraft program are now being completed. It is anticipated that full details of this program will be worked out shortly. Pending the completion of the details of such program and in order to make an additional Boeing Model 707-331 jet aircraft immediately available to TWA on a permanent basis, Hughes proposes to assign to TWA Hughes' right to acquire a third Boeing Model 707-331 jet aircraft and the

customer-furnished equipment thereon from the vendor.

As in the case of the two Boeing Model 707-331 jet aircraft covered by TWA's motion to the Board of March 30, 1960, TWA would acquire such right with respect to the third aircraft at Hughes' cost, including advance payments made by Hughes with respect to such aircraft and customer-furnished equipment and interest on advance payments made by Hughes to the vendor with respect thereto. Following such assignment and subject to TWA's acceptance of the aircraft on delivery, TWA proposes to purchase the aircraft from the vendor by payment to the vendor of the balance of the purchase price applicable to such aircraft. Payment to Hughes of its down payments made thereon and interest applicable thereto will be made only following approval thereof by the Board.

2. Pending completion of the definitive financing program TWA may arrange temporary financing for the third Boeing Model 707-331 jet aircraft on a letter of credit basis, TWA's obligations thereunder to be guaranteed by Hughes.

3. The definitive financing plans for TWA's jet aircraft program contemplate that TWA will acquire title to certain of the Convair Model 880 jet aircraft on order by Hughes. In order to use the Convair Model 880 jet aircraft in its jet training program and subsequently to make use of these aircraft on its certificated routes, it is desirable that TWA have the use of a flight simulator to train its flight crews in the

operation of the Convair Model 880 jet aircraft.

4. Hughes has on order from Link Aviation, Inc. a flight simulator for the Convair Model 880 jet aircraft at a purchase price of approximately $1,018,550.

5. So that this simulator may be made immediately available to TWA Hughes proposes to assign to TWA Hughes' interest therein upon TWA's agreement to pay Hughes' cost and to assume all liabilities and obligations of Hughes to the vendor, including the payment of the balance of the purchase price.

Following such assignment and subject to TWA's acceptance of the simulator on delivery, TWA proposes to purchase the simulator from the vendor by payment to the vendor of the balance of the purchase price applicable to such simulator. Payment to Hughes of its costs, including down payments made thereon and interest applicable thereto, will be made only following approval thereof by the Board.

6. Hughes is willing to make said Boeing Model 707-331 jet aircraft and said flight simulator available to TWA on the above basis.

7. The foregoing program is subject to the necessary approvals of the holders of obligations issued by TWA under its outstanding indentures, chattel mortgages and loan agreements.

8. TWA believes that the acquisition of the Boeing Model 707-331 jet aircraft and the flight simulator for the Convair Model 880 jet aircraft is necessary

and desirable for use in TWA's operations and that such acquisition is reasonable and in the best interests of TWA.

WHEREFORE, Trans World Airlines, Inc. respectfully prays that the Board enter an order herein modifying its Order Serial No. 3210, as amended, so that its order will permit TWA to enter into transactions with Hughes Tool Company described above.

Respectfully submitted,

Thomas K. Taylor

May 6, 1960

BEFORE THE

CIVIL AERONAUTICS BOARD

In the matter of the application of HUGHES TOOL COMPANY for approval of the acquisition of control of Trans World Airlines, Inc.	Docket No. 1182

MOTION OF TRANS WORLD AIRLINES, INC.
FOR APPROVAL OF TRANSACTIONS WITH
HUGHES TOOL COMPANY

TRANS WORLD AIRLINES, INC. (herein referred to as "TWA") respectfully requests the Board to enter an order herein modifying its Order Serial No. 3210, issued October 17, 1944, as amended, approving the acquisition of control of TWA by Hughes Tool Company (herein referred to as "Hughes") so that the terms of said order will not restrict the right of TWA to enter into the transactions with Hughes more fully described below.

1. Hughes now has on order from Boeing Airplane Company four Boeing Model 707-331 jet aircraft at a purchase price of approximately $5,600,000 per aircraft. In addition Hughes has on order thirty Convair Model 880 jet aircraft at a purchase price of approximately $3,930,000 per aircraft.

2. TWA has previously leased from Hughes, on a day-to-day basis, fifteen Boeing Model 707-131 aircraft and five Boeing Model 707-331 aircraft and such leases have been approved by orders of the Board. TWA has also acquired from Hughes three additional Boeing Model 707-331 aircraft, as set forth in the motions dated March 30, 1960 and April 14, 1960 in this proceeding. TWA, by motions

also requested approval of leasing from Hughes additional Boeing Model 707-331 aircraft and certain Convair Model 880 jet aircraft.

As TWA has advised the Board in such motions, definitive financing plans for the TWA jet aircraft program are now being completed. As a part of these plans it is proposed that TWA acquire title to the fifteen Boeing Model 707-131 aircraft and the five Boeing Model 707-331 aircraft now leased by TWA from Hughes. It is also proposed that as a part of such plans Hughes will assign to TWA Hughes' rights in the contracts covering two additional Boeing Model 707-331 jet aircraft and 20 Convair Model 880 jet aircraft and customer-furnished equipment therefor. TWA would also acquire Hughes' interest in, or contract rights covering, the spare parts, equipment and provisioning for such aircraft owned or on order by Hughes.

3. TWA would purchase from Hughes the nineteen jet aircraft under lease to TWA on December 31, 1959 at Hughes' net book value, including interest on Hughes' payments and other costs applicable to such nineteen aircraft. TWA would purchase the jet aircraft leased to TWA after December 31, 1959, Hughes' contract rights in the additional twenty-two jet aircraft and Hughes' interest or contract rights in the spare parts, provisioning and equipment therefor at Hughes' cost, including interest thereon. The existing leases of jet aircraft from Hughes to TWA would be cancelled as of the acquisition of title by TWA, with rental on the jet aircraft leased after December 31, 1959, cancelled from the beginning.

4. The proposed transactions described in paragraphs 2 and 3 hereof are more fully set forth in the form of

agreement between TWA and Hughes attached hereto as Exhibit A. Such transactions would be in addition to the purchase by TWA from Hughes of the three additional Model 707-331 jet aircraft and the flight simulator for the Convair Model 880 aircraft referred to in TWA's motions dated March 30, 1960 and April 14, 1960 and the purchase by TWA from Hughes of spare parts and provisioning for jet aircraft previously approved by order of the Board.

5. Following assignment of Hughes' contract rights referred to in paragraph 2, and subject to completion of financing arrangements satisfactory to TWA and to TWA's acceptance on delivery, TWA proposes to purchase such aircraft, spare parts, equipment and provisioning from the vendors by payment to the vendors of the balance of the purchase price applicable thereto. Payment to Hughes of its costs therefor, including interest applicable thereto, will be made only following the approval thereof by the Board. It is presently contemplated that one additional Boeing Model 707-331 aircraft, five Convair 880 aircraft, twenty-six spare jet engines and a substantial part of the other spare parts, equipment and provisioning would be thus acquired before June 30, 1960, and that the balance of such purchases would, in large part, be completed prior to November 30, 1960.

6. It is proposed that TWA's acquisition of the jet aircraft, spare parts, provisioning and equipment would be financed by the sale by TWA of $260,000,000 of its securities. Of this $160,000,000 would be senior debt sold to banks and institutional investors and approximately $100,000,000 would be junior securities sold through a rights offering to TWA's stockholders, of which Hughes would agree to purchase a sufficient amount (to the extent such securities are not otherwise sold) to provide TWA with net proceeds of $100,000,000. The junior securities would be either in the form of subordinated debentures convertible

into common stock, subordinated debentures with detachable common stock purchase warrants, or common stock, or a combination thereof. Any debentures would be subordinated to the senior debt and all other borrowings of TWA, with interest payable only if earned, but cumulative. TWA's note in the principal amount of $5,811,000, due on December 1, 1960, plus interest, held by Hughes, will be applied by Hughes as part payment on its share of the junior securities, as will a portion of the payments that will be payable by TWA to Hughes for jet aircraft, spare parts, equipment and provisioning, as set forth in paragraph 3 hereof. In addition, Hughes will, if needed, advance to TWA on a subordinated basis not to exceed $50,000,000 to enable TWA to carry out the permanent financing plan and to maintain TWA's net working capital at not less than $10,000,000 until completion of TWA's acquisition of the jet equipment referred to in paragraph 2 hereof.

7. Pending completion of the definitive financing program, referred to in paragraph 6, which is proposed to be accomplished by June 1, 1960, TWA would borrow approximately $50,000,000 from banks on a short term basis payable upon completion of the permanent financing, secured by mortgages on certain of the jet aircraft which TWA would acquire from Hughes and the manufacturers. These temporary loans would be guaranteed by Hughes. They would be paid out of the proceeds of the long term financing. In connection with the temporary financing TWA would acquire from Hughes three of the twenty jet aircraft now leased by TWA from Hughes. During this interim period payments to Hughes with respect to jet aircraft, spare parts, equipment and provisioning

would be made by means of subordinated obligations of TWA, payable upon completion of the permanent financing. As a part of this program Hughes will guarantee TWA's 3-3/4% Equipment Mortgage Sinking Fund Bonds, due December 1, 1969, as they may be amended in connection with this temporary financing.

8. This program is subject to any necessary approvals of the holders of obligations issued by TWA under its outstanding indentures, chattel mortgages and loan agreements.

9. TWA believes that the acquisition of the aircraft, spare parts, provisioning and equipment referred to herein are necessary and desirable for use in TWA's domestic and international operations, and that their acquisition on the terms here set forth, the financing program therefor and the proposed transactions with Hughes to carry out these programs are reasonable and in the best interest of TWA.

WHEREFORE, Trans World Airlines, Inc. respectfully prays that the Board enter an order herein modifying its Order Serial No. 3210, as amended, so that its order will permit TWA to enter into transactions with Hughes Tool Company described above.

Respectfully submitted,

Thomas K Taylor

Attention: Mr. A. V. Leslie

Re: Purchase of Boeing Model 707-131 and 707-331 Jet Aircraft and Convair Model 880 Jet Aircraft

Dear Sirs:

If accepted by you this proposal will state our agreement and understanding concerning the conditions under which Trans World Airlines, Inc. (hereinafter called "TWA") may acquire from Hughes Tool Company (hereinafter called "Hughes") Hughes' interest in Boeing Model 707-131 and Boeing Model 707-331 jet aircraft, Convair Model 880 jet aircraft and spare parts, equipment and provisioning therefor.

1. Hughes hereby agrees to sell to TWA and, subject to the provisions of paragraph 9(c) hereof, TWA agrees to purchase from Hughes two Boeing Model 707-131 jet aircraft, Manufacturer's Serial Nos. 17671 and 17672, FAA Nos. N744TW and N745TW respectively, manufactured by Boeing Airplane Company and one Boeing Model 707-331 jet aircraft, Manufacturer's Serial No. 17679, FAA No. N765TW, manufactured by Boeing Airplane Company under Purchase Agreement No. 9 dated March 19, 1956, as amended, between Boeing Airplane Company and Hughes (hereinafter called the "331 Purchase Agreement").

Upon notice from TWA prior to June 30, 1960, Hughes shall transfer good title to such three aircraft to TWA free

and clear of all liens and encumbrances. TWA shall pay to Hughes Hughes' net book value of aircraft FAA Nos. N744TW and N745TW on the date title thereto is transferred from Hughes to TWA. As to aircraft FAA No. N765TW, TWA shall pay Hughes Hughes' undepreciated cost with respect to such aircraft.

As used herein and elsewhere in this agreement Hughes' net book value with respect to any aircraft shall mean the sum of

(i) The amounts Hughes shall have paid Boeing Airplane Company for such aircraft;

(ii) The amounts Hughes shall have paid vendors of customer-furnished equipment thereon;

(iii) All other costs of Hughes, including expenses, in connection with such aircraft, and

(iv) An amount representing interest on items (i), (ii) and (iii), at a rate per annum to be negotiated between the parties prior to the closing of TWA's long-term financing plan (computed on the average amount of the outstanding payments applicable to such aircraft by considering the payments made as outstanding from the respective dates such payments were made and until delivery of such aircraft to TWA under the respective day-to-day leases of such aircraft from Hughes to TWA);

such cost to Hughes to be depreciated (a) as to airframes, over a 10-year life with a 10% residual value, (b) as to JT-3 engines, over a 5-year life with a 10% residual value and (c) as to JT-4 engines, over a 7-year life with a 10% residual value.

As used herein and elsewhere in this agreement Hughes' undepreciated cost with respect to any aircraft, equipment, spare parts or provisioning shall mean the sum of

(i) The amounts Hughes shall have paid the vendors with respect thereto (including the amounts paid the vendors of customer-furnished equipment with respect to an aircraft);

(ii) All other costs, including expenses, in connection with the aircraft or other property, and

(iii) An amount representing interest on items (i) and (ii) at a rate per annum to be negotiated between the parties prior to the closing of TWA's long-term financing plan (computed on the average amount of the outstanding payments applicable to such aircraft or other property by considering the payments made as outstanding from the respective dates such payments were made and until the acquisition of such aircraft or property by TWA under this agreement).

2. Hughes hereby assigns to TWA the rights of Hughes to acquire from Boeing Airplane Company 2 Boeing Model 707-331 jet aircraft (Manufacturer's Serial Numbers 17685 and 17690) currently being manufactured by Boeing Airplane Company under the 331 Purchase Agreement. Subject to the provisions of paragraph 9(c) hereof, TWA agrees to purchase from the manufacturer pursuant to the 331 Purchase Agreement each such aircraft when manufactured in accordance with the terms of the 331 Purchase Agreement and tendered for delivery pursuant thereto. In exercising such rights to acquire each aircraft TWA shall pay Boeing Airplane Company the balance of the purchase price of said aircraft and shall agree to pay to the

vendors involved the balance due for customer-furnished equipment installed on such aircraft. In addition, TWA shall pay Hughes Hughes' undepreciated cost with respect to such aircraft.

3. Hughes hereby assigns to TWA the rights of Hughes to acquire from General Dynamics Corporation 20 Convair Model 880 jet aircraft currently being manufactured by General Dynamics Corporation under Purchase Agreement, dated as of September 10, 1956, as amended, between General Dynamics Corporation and Hughes (hereinafter called the "880 Purchase Agreement"). The 20 Convair Model 880 jet aircraft covered by such assignment are more specifically described in Exhibit 1 hereto.

Subject to the provisions of paragraph 9(c) hereof, TWA agrees to purchase from the manufacturer pursuant to the 880 Purchase Agreement each such aircraft when manufactured in accordance with the terms of the 880 Purchase Agreement and tendered for delivery pursuant thereto. In exercising such rights to acquire each aircraft TWA shall pay General Dynamics Corporation the balance of the purchase price of said aircraft and shall agree to pay to the vendors involved the balance due for customer-furnished equipment installed on such aircraft. In addition, TWA shall pay Hughes Hughes' undepreciated cost with respect to such aircraft.

4. Hughes hereby confirms that TWA has the exclusive right and privilege to acquire from Hughes the 13 Boeing Model 707-131 jet aircraft and 4 Boeing Model 707-331 jet aircraft heretofore leased to TWA on a day-to-day basis and not covered by paragraph 1 hereof, said aircraft being more specifically described in Exhibit 2 attached hereto. Subject to the provisions of paragraph 9(c) hereof, Hughes will sell

conditions outlined in paragraph 5 hereof.

5. TWA may purchase the aircraft referred to in paragraph 4 hereof by at least two days' notice to Hughes given on or prior to June 30, 1960 and upon payment to Hughes of Hughes' net book value thereof. Hughes agrees that upon such payment by TWA it will transfer to TWA good title to such aircraft, free and clear of all liens and encumbrances.

6. Hughes hereby confirms that TWA has the exclusive right and privilege to acquire from Hughes Hughes' right to acquire from the manufacturers, or Hughes' interest in, as the case may be, the spare engines for the Boeing 331 and Convair 880 jet aircraft, more specifically described in Exhibit 3, and all other spare parts, equipment and provisioning owned or on order by Hughes for the Boeing or Convair jet aircraft (such engines, spare parts, equipment and provisioning hereinafter referred to as the "Spares").

7. Subject to the provisions of paragraph 9(c) hereof, TWA agrees to purchase the Spares from time to time, from the vendors or Hughes, as the case may be, (a) as to Spares of which title has vested in Hughes upon payment to Hughes of Hughes' undepreciated cost and (b) as to the remainder, upon payment of Hughes' undepreciated cost and TWA's agreement to assume all liabilities and obligations of Hughes to the manufacturers applicable to the Spares acquired by TWA, including the payment of any balance of the purchase price. Upon notice from TWA to Hughes, specifying such Spares, Hughes will transfer to TWA good title, free and clear of all liens and encumbrances, to such Spares that are owned by Hughes and all Hughes' rights as to other Spares specified in such notice.

8. Payments from TWA to Hughes pursuant to this agreement up to a total of $100,000,000 (less the principal amount of $5,811,000 on TWA's note, due December 1, 1960,

held by Hughes, plus interest thereon) may be made by means of subordinated debentures of TWA in the form that such subordinated debentures may be offered to all stockholders of TWA in connection with the proposed financing plan of TWA. Pending the issuance of subordinated debentures in connection with such financing plan, payments from TWA to Hughes pursuant to this agreement shall be made by delivery to Hughes of subordinated notes, on which interest is payable only if earned and on which no principal payment will be made so long as any senior debt is outstanding except out of the proceeds of the sale of subordinated obligations issued under the definitive financing program or of the sale of capital stock. The interest rate on such subordinated notes, and on the subordinated obligations issuable by TWA to Hughes pursuant to agreements between TWA and Hughes dated April 1, 1960 and April 14, 1960, respectively, shall be the same as that agreed upon by TWA and the lending banks for the temporary loans to TWA pending completion of the proposed definitive financing program for TWA.

9. Notwithstanding any of the above provisions it is further agreed that:

(a) This agreement is entered into subject to approval of the Civil Aeronautics Board and until an order has been entered by the Civil Aeronautics Board permitting the transaction covered by this agreement no sums shall be payable by TWA to Hughes hereunder.

(b) This agreement is subject to the necessary consents of the holders of obligations issued by TWA under its outstanding indentures, chattel mortgages and loan agreements. TWA will diligently endeavor to secure such consents, but in the absence of such consents no sums shall be payable by TWA to Hughes hereunder.

(c) TWA's obligation to make any payment, deliver any subordinated obligations or assume any liabilities or other obligations with respect to the purchase of any aircraft or other property hereunder is in each case subject to completion of financing arrangements (either temporary or definitive) relating thereto completely satisfactory to TWA.

If the foregoing is acceptable to TWA please so acknowledge by executing and returning the enclosed copy of this letter.

Very truly yours,
HUGHES TOOL COMPANY

Order No. E-15430

UNITED STATES OF AMERICA
CIVIL AERONAUTICS BOARD
WASHINGTON, D. C.

Adopted by the Civil Aeronautics Board
at its office in Washington, D. C.
on the 23rd day of June, 1960

In the matter of the application of HUGHES TOOL CO. for approval under section 408 of the Federal Aviation Act of 1958, as amended, of the acquisition of control of TRANS WORLD AIRLINES, INC.	Docket 11882

ORDER

By notions filed April 1, 1960, April 14, 1960, and May 6, 1960, Trans World Airlines, Inc. (TWA) requests modification of Order 3219, 1/ as amended and modified by subsequent orders, which restricts commercial transactions between TWA and Hughes Tool Co. (Toolco) and between TWA and any subsidiary or affiliate of Toolco to a maximum of $200 each and an aggregate annual expenditure in such transactions of $10,000.

The further modifications are desired to permit TWA to finance its obligations with respect to the acquisition of 25 Boeing 707 and 20 Convair 880 jet aircraft, together with the necessary engines, spares and equipment required to operate these aircraft on TWA's certificated routes. 2/ In addition, TWA desires to acquire Toolco's interests in a flight simulator manufactured by Link Aviation, Inc. for the purpose of training flight crews in the operation of 880 aircraft.

The total cost of these aircraft, engines, spares and equipment is approximately $260,000,000, which would be raised by (1) the sale of $160,000,000 of senior securities (bonds), at 5-1/2% interest, to banks and institutional investors, and (2) the sale of $100,000,000 of junior securities

1/ 6 CAB 153 (Docket 1182).

2/ Twenty of the Boeing aircraft are already on lease to TWA from the owner, Toolco. These leases were approved by Orders E-13542; E-13873; E-14169; E-14504; and E-14877. Under the terms of the instant arrangements, TWA will purchase these aircraft from Toolco. Toolco will assign to TWA its interest and contract rights to the remaining five Boeing aircraft. In addition, Toolco will assign its interest and contract rights to TWA in certain aircraft currently on order from the manufacturer.

3043

sold through a rights offering to TWA common stockholders. 1/ In the event that such stockholders do not subscribe to their pro rata share of the offering, Toolco will guarantee a net of $100,000,000 to TWA. 2/ In addition, Toolco has agreed to lend TWA an additional $50,000,000 to enable TWA to complete the financing plan and maintain its net working capital at not less than $10,000,000. Pending completion of these arrangements, TWA will borrow $50,000,000 from banks on a short term basis, such loan to be guaranteed by Toolco, and repaid from the proceeds of the permanent financing.

TWA believes that the acquisition of the aircraft engines, spares and equipment described above is necessary and desirable to the conduct of its domestic and international operations and that the terms of the financing program and the transactions with Toolco necessary to carry out these programs are reasonable and in TWA's best interest.

The Board has previously approved the control of TWA by Toolco 3/ under section 408 of the Act. It is true that, should the rights offered to TWA stockholders be in the form of common stock and Toolco purchased all the new stock pursuant to its guarantee, Toolco's interest in TWA would increase from the present 78 percent to approximately 90 percent. Although, normally, an increase of 12 percent in stock ownership would be considered substantial and would give rise to a new control relationship under section 408, in view of the overwhelming control of TWA by Toolco by virtue of Toolco's ownership of 78 percent of the stock, the Board concludes that any increase of control is insignificant and does not call for a reexamination of the relationship under section 408.

Upon the basis of the application and the representations contained therein, the Board finds that the acquisition of the 45 aircraft and the proposed financing program, including the possible increased percentage of common stock held by Toolco in TWA, do not appear to violate the intent of the original restrictions imposed on transactions between TWA and Toolco. Accordingly, further modification of Order 3210 is just and reasonable and is in the public interest. It appears, however, that the transactions may otherwise be subject to section 408 in that they may involve TWA's purchase of a substantial part of the properties of Toolco. However, upon the basis of the above circumstances, the Board finds that the enforcement of section 408 would be an undue burden on TWA by reason of unusual circumstances affecting its operations and would not be in the public interest. Therefore, for the reasons expressed above, the Board will exempt TWA from section 408 to the extent that such section might prohibit the transactions without prior Board approval.

1/ The rights offering may be in the form of (1) subordinated debentures convertible into common stock; (2) subordinated debentures with detachable common stock purchase warrants; (3) common stock; or (4) a combination thereof.

2/ This guarantee might require Toolco to subscribe to 120% of the offering.

3/ 6 CAB 153, 12 CAB 192, Order E-11432 dated June 11, 1957.

ACCORDINGLY, IT IS ORDERED:

1. That the restrictions imposed on transactions between Toolco and TWA by Order 3219, as modified, are further modified to permit TWA to consummate the transactions described in the aforesaid motions;

2. That TWA be and it hereby is exempted pursuant to section 416 from the requirements of section 408 to the extent necessary to enable it to purchase the instant aircraft and equipment from Toolco, a person engaged in a phase of aeronautics;

3. That the decisions of the Board, as expressed in ordering paragraphs 1 and 2, shall not be deemed a determination for rate-making purposes of the reasonableness of any of the transactions specified herein;

4. That the motions, except to the extent granted herein, are denied; and

5. That this order may be amended or revoked at any time in the discretion of the Board without hearing.

By the Civil Aeronautics Board:

/s/ Robert C. Lester

July 1, 1960

BEFORE THE

CIVIL AERONAUTICS BOARD

In the matter of the application of	:	
HUGHES TOOL COMPANY	:	
for approval of the acquisition of control of Trans World Airlines, Inc.	:	Docket No. 1182

MOTION OF TRANS WORLD AIRLINES, INC.
FOR APPROVAL OF TRANSACTIONS WITH
HUGHES TOOL COMPANY

1. By motion in this proceeding dated May 6, 1960 TRANS WORLD AIRLINES, INC. (herein referred to as "TWA") advised the Board with respect to definitive financing plans for the TWA jet aircraft program under which it was proposed that TWA would acquire title to 15 Boeing Model 707-131 jet aircraft, 10 Boeing Model 707-331 jet aircraft, 20 Convair Model 880 jet aircraft and the spare parts, equipment and provisioning therefor previously acquired or ordered by Hughes Tool Company (herein referred to as "Hughes"). The proposed transactions between TWA and Hughes relating to such financing program, outlined in such motion of May 6, 1960 and in TWA's motions in this proceeding of March 30, 1960 and April 14, 1960, were approved by Board Order No. E-15430, dated June 23, 1960.

2. It is now proposed that the foregoing program be supplemented so that TWA will acquire title to 2 additional Boeing Model 707-331 aircraft,

making a total of 12 such aircraft that TWA will receive, and so that TWA will also acquire title to 5 additional spare engines for Boeing Model 707-331 aircraft. Such acquisition by TWA would be covered by the amendment to the agreement of May 9, 1960 effected by the agreement attached hereto as Exhibit A. The acquisition of the additional aircraft and engines would be on the same terms and conditions as the transactions set forth in TWA's motions in this proceeding referred to in paragraph 1 hereof and approved by Board Order No. E-15430, dated June 23, 1960. To finance the acquisition of these additional aircraft and engines the senior debt to be sold to banks and institutional investors, referred to in paragraph 6 of TWA's motion of May 6, 1960, would be increased from $160,000,000 to $168,800,000.

3. In implementation of the prior agreements between TWA and Hughes referred to in the motion of May 6, 1960 and approved by Order No. E-15430, and as a part of the long-term financing program outlined in such motion, TWA proposes to enter into various agreements with lending banks, insurance companies, indenture trustees and others, including Hughes. Among these agreements are the following:

(a) A proposed agreement (in substantially the form attached hereto as Exhibit B) between TWA, Hughes and the holders of the senior debt referred to in paragraph 6 of TWA's motion dated May 6, 1960, defining in more detail the terms of the subordinated obligations to be issued by TWA to Hughes and Hughes' obligation to advance TWA up to $50,000,000 on a subordinated basis, if needed, providing for the issuance by TWA of interim subordinated notes in payment of amounts due by TWA to Hughes pending the completion of the public offering of TWA's subordinated

debentures and outlining some of the terms of the public offering.

(b) A proposed Final Accounting and Debenture Purchase Agreement between TWA and Hughes (in substantially the form attached hereto as Exhibit C), which implements the transactions between the two companies outlined in the motion of May 6, 1960, as supplemented by the agreement referred to in paragraph 2 hereof, sets forth the method by which TWA's obligations to Hughes will be settled, and establishes certain of the terms of, and a procedure for determining other terms of, the public offering of TWA's subordinated debentures within the conditions specified in the agreement referred to in paragraph 3(a) hereof.

(c) A proposed Three Party Agreement between Hughes, TWA and Irving Trust Company, as Notes Agent, representing the holders of TWA's senior debt (substantially in the form attached hereto as Exhibit D), providing that in the event of default by TWA under certain covenants in the indenture securing such borrowing, Hughes would subject to a voting trust agreement all shares of the common stock of TWA held by Hughes.

4. Save for the desirable supplementing of TWA's Boeing Model 707-331 jet aircraft fleet by the addition of 2 more aircraft and spare engines described in paragraph 2 hereof, the proposed agreements referred to above do not change the substance of the transactions between TWA and Hughes outlined in TWA's motions of March 30, 1960, April 14, 1960

and May 6, 1960, approved by Order No. E-15430. To the extent that the consummation of the transactions outlined herein requires further approval from the Board in this proceeding, the issuance by the Board of an appropriate order, to enable TWA to conclude its long-term financing program, would be in the public interest.

WHEREFORE, Trans World Airlines, Inc. respectfully prays that the Board enter an order herein modifying its Order Serial No. 3210, as amended, so that its order will permit TWA to enter into such additional transactions with Hughes Tool Company as are described above and to consummate its proposed long-term financing program.

Respectfully submitted,

Senior Vice President-Finance
and Treasurer

Attention: Mr. A. V. Leslie

Re: Purchase of Boeing Model 707-131 and 707-331 Jet Aircraft and Convair Model 880 Jet Aircraft

Dear Sirs:

This will confirm our understanding that the agreement between us, dated May 9, 1960, on this same subject, is amended in the following respects:

1. The date "June 30, 1960" in paragraph 5 thereof is changed to "July 31, 1960".

2. The first sentence of paragraph 2 thereof is changed to read as follows:

"Hughes hereby assigns to TWA the rights of Hughes to acquire from Boeing Airplane Company four Boeing Model 707-331 jet aircraft (Manufacturer's Serial Nos. 17685, 17687, 17688 and 17690) manufactured by Boeing Airplane Company under the 331 Purchase Agreement."

3. Exhibit 3 thereof is amended by changing the reference to "10 Pratt & Whitney aircraft engines Model JT4A" to "15 Pratt & Whitney aircraft engines Model JT4A".

Pending the issuance of any order by the Civil Aeronautics Board that may be required with respect to the transactions contemplated hereby no sums shall be payable by TWA to Hughes with respect to the 2 additional Boeing Model 707-331 jet aircraft and the spare engines therefor added to the agreement of May 9, 1960 by this amendment thereof. This amendment will not become effective until any necessary consents have been obtained from the holders of obligations issued by TWA under its outstanding indentures, chattel mortgages and loan agreements.

If the foregoing is acceptable to TWA please so acknowledge by executing and returning the enclosed copy of this letter.

Very truly yours,
HUGHES TOOL COMPANY

Agreement

AMONG

HUGHES TOOL COMPANY

AND

TRANS WORLD AIRLINES, INC.

AND

IRVING TRUST COMPANY, as Notes Agent

1960 THREE-PARTY AGREEMENT

Dated July , 1960

AGREEMENT dated July , 1960, among HUGHES TOOL COMPANY, a Delaware corporation (hereinafter called "*Hughes*"), party of the first part, TRANS WORLD AIRLINES, INC., a Delaware corporation (hereinafter called "*TWA*"), party of the second part, and IRVING TRUST COMPANY, a New York trust company (hereinafter called the "*Notes Agent*"), party of the third part.

WITNESSETH:

WHEREAS Hughes is the owner of not less than 5,221,301 shares of Common Stock, par value $5 per share, of TWA, comprising approximately 78% of the outstanding 6,674,155 shares of Common Stock of TWA; and

WHEREAS TWA has executed and delivered to Chemical Bank New York Trust Company, as Trustee (hereinafter called the "*Trustee*"), an Indenture of Mortgage dated as of July 1, 1960 (hereinafter called the "*Note Indenture*"), which provides for (a) the delivery thereunder of $74,000,000 principal amount of 6% Equipment Mortgage Serial Notes of TWA, maturing serially on June 30, 1961, and quarterly thereafter through June 30, 1968 (hereinafter called "*Serial Notes*"), and (b) the issuance thereunder of $91,800,000 principal amount of 6½% Equipment Mortgage Sinking Fund Notes of TWA, due June 30, 1972 (hereinafter called "*Sinking Fund Notes*"), all said Serial Notes and Sinking Fund Notes being hereinafter collectively called the "*Notes*" (which term, as used herein, shall also mean the Serial Notes or the Sinking Fund Notes, as the context or circumstances may require); and

WHEREAS TWA has entered into an agreement dated as of July , 1960 (hereinafter called the "*July 1960 Loan Agreement*"), with Irving Trust Company and the other Banks named therein (hereinafter collectively called the "*Banks*"), pursuant to which the Banks have agreed to lend an aggregate of $74,000,000 to TWA, such loans to be evidenced by an equal aggregate principal amount of Serial Notes; and

6748

6748

WHEREAS TWA has entered into agreements dated July , 1960 (hereinafter called the *"Note Purchase Agreements"*), with The Equitable Life Assurance Society of the United States and Metropolitan Life Insurance Company (hereinafter together called the *"Insurance Companies"*), pursuant to which the Insurance Companies have agreed to purchase from TWA an aggregate of $94,800,000 principal amount of Sinking Fund Notes; and

WHEREAS it is a condition precedent to the obligation of the Banks to advance any monies to TWA pursuant to the July 1960 Loan Agreement, and it is a condition precedent to the obligations of the Insurance Companies to purchase any Sinking Fund Notes from TWA pursuant to the Note Purchase Agreements, that this Agreement shall have been duly executed and delivered by the parties hereto; and

WHEREAS the Notes Agent has been duly authorized by the Banks and the Insurance Companies to enter into this Agreement; and

WHEREAS, for the purposes of this Agreement, (a) the term *"a majority of the Noteholders"* shall mean the holders of more than 50% in principal amount of all the Notes at the time outstanding (excluding any Notes held by Hughes or by any Hughes Affiliate), (b) the term *"TWA Stock"* shall mean the Common Stock of TWA, as the same shall be constituted from time to time, and shall also mean and include, in the event TWA shall merge into or be consolidated with another corporation, or shall sell all or any substantial portion of its assets to another corporation in exchange for voting securities of such other corporation, all voting securities of such other corporation which shall be issued or become issuable in respect of the Common Stock of TWA in connection with or as a result of any such merger, consolidation or sale of assets, and (c) the term *"Hughes Affiliate"* shall mean any person, firm or corporation (except TWA and its subsidiaries) controlling, controlled by or under common control with Hughes Tool Company.

NOW, THEREFORE, in consideration of the premises, the parties hereto agree with each other as hereinbelow set forth:

§ 1. In the event that

(a) default shall be made in the performance or observance of any covenant, agreement or condition contained in § 4.16, § 4.18, § 4.21, § 4.22, § 4.24, § 4.26, § 4.30, § 4.31, § 4.32, § 9.1 or § 10.1 of the Note Indenture; or default shall be made in the performance or observance of any covenant, agreement or condition contained in § 4.15 of the Note Indenture and such default shall not be remedied within a period of 30 days after the happening of such default; or any of the Events of Default described in § 11.1H or § 11.1I of the Note Indenture shall have happened; or

(b) TWA shall at any time be in default in the payment of interest on any of the Notes and such default shall not be remedied within a period of 10 days, or TWA shall at any time be in default in the payment of the principal of or premium on any of the Notes when and as the same shall become due and payable, whether at maturity, by declaration, by call for redemption or otherwise;

then, and in any such event, Hughes hereby agrees that it will, within 10 days after the service on it of a request therefor by the Notes Agent, cause to be subjected to a Voting Trust Agreement in the form attached hereto as Schedule A (hereinafter called the *"Voting Trust Agreement"*), all shares of TWA Stock owned by Hughes at the date hereof and all shares of TWA Stock hereafter acquired by Hughes or by any Hughes Affiliate in any manner (including, without limitation, any acquisition through the exercise of conversion rights contained in any convertible securities of TWA or through the exercise of Warrants or rights to subscribe to TWA Stock or otherwise) prior to the execution and delivery of the Voting Trust Agreement (except any such shares theretofore sold by Hughes or by any Hughes Affiliate on any national securities exchange or in connection with a bona fide public offering with respect to which a registration statement became effective under the Securities Act of 1933, as amended, and not thereafter acquired or reacquired by Hughes or by any Hughes Affiliate). TWA and Hughes hereby agree that they will take all action requisite on their part to cause the Voting Trust Agreement to be executed and delivered by TWA and Hughes, respectively, and by the Voting

Trustee to be nominated by Hughes as hereinafter provided. The Voting Trustees under the Voting Trust Agreement shall consist of three persons, two to be nominated by the Notes Agent and one to be nominated by Hughes, *provided, however*, that in the event that Hughes shall fail to designate such nominee within the aforesaid period of 10 days after the service on it of such request by the Notes Agent, or in the event such nominee shall fail to execute the Voting Trust Agreement within said 10 day period, the third Voting Trustee shall be a person designated by the two Voting Trustees nominated by the Notes Agent. Any such request by the Notes Agent shall be in writing, shall specify the names of the two Voting Trustees nominated by the Notes Agent, and shall contain a certification that the Notes Agent has been authorized to serve such request and to designate such two Voting Trustees by a majority of the Noteholders, and, concurrently with the service of such request upon Hughes, a copy thereof shall be served upon TWA. In order to subject said shares of TWA Stock to the Voting Trust Agreement, Hughes will transfer and assign or cause to be transferred and assigned said shares to said Voting Trustees and will deposit or cause to be deposited with the Agent of the Voting Trustees named in the Voting Trust Agreement the certificates for said shares, all of which certificates, if not registered in the names of the Voting Trustees, shall be duly endorsed in blank for transfer or accompanied by proper instruments of assignment and transfer thereof duly executed in blank, in either case with signatures guaranteed and with all requisite stock transfer tax stamps thereto affixed. Hughes further agrees that if, at any time or from time to time after the execution and delivery of the Voting Trust Agreement, Hughes or any Hughes Affiliate shall acquire additional shares of TWA Stock in any manner (including, without limitation, any acquisition through the exercise of the conversion rights contained in any convertible securities of TWA or through the exercise of warrants or rights to subscribe to TWA Stock or otherwise), it will forthwith upon the acquisition of any such additional shares cause the same to be subjected to the Voting Trust Agreement in the same manner as hereinabove set forth with respect to the shares of TWA Stock owned

by Hughes at the time of the execution and delivery of the Voting Trust Agreement. The Voting Trust Agreement shall be dated on or as of such date, not earlier than the date of the aforesaid request therefor by the Notes Agent and not later than the date of execution thereof, as the Notes Agent shall determine, and shall be expressed to terminate on June 30, 1980, or ten years after the date of the Voting Trust Agreement, whichever shall be earlier. TWA and Hughes agree that, in the event that the Voting Trust Agreement would terminate ten years after the date thereof, as contemplated by the foregoing sentence and by clause (a) of Article Thirteen of the form of Voting Trust Agreement attached hereto as Schedule A, they will, at the written request of the Notes Agent, take all action requisite on their part to extend the duration of the Voting Trust Agreement for such additional period (not exceeding, however, the maximum period then permitted by the laws of the State of Delaware) as shall be specified in such request of the Notes Agent.

§ 2. Hughes agrees that as regards such shares of TWA Stock owned by it at the date hereof as are presently pledged, it will concurrently with the execution hereof obtain (a) the consent of such pledgee to the execution and delivery of this Agreement by Hughes and to the performance by Hughes of its undertakings and agreements hereunder, and (b) the agreement of such pledgee to conform to the requirements of the next succeeding sentence of this § 2, with respect to the TWA Stock pledged with such pledgee, subject, however, to the proviso contained in the second next succeeding sentence of this § 2. Hughes further agrees that in the event that it or any Hughes Affiliate shall, subsequent to the date hereof and prior to the execution and delivery of the Voting Trust Agreement, pledge or otherwise transfer, by sale or in any other manner, any shares of TWA Stock at any time owned by Hughes or by such Hughes Affiliate (except any shares sold by Hughes or by such Hughes Affiliate on any national securities exchange or in connection with a bona fide public offering with respect to which a registration statement became effective under the Securities Act of 1933, as amended, and not thereafter acquired or reacquired by

In the matter of application of	:
HUGHES TOOL COMPANY	:
for approval under section 408 of the Federal Aviation Act of 1958, as amended, of the acquisition of control of TRANS WORLD AIRLINES, INC.	: Docket 11189

ORDER

By Order E-15430, issued June 23, 1960, the Board authorized Trans World Airlines, Inc. (TWA) to consummate certain transactions with Hughes Tool Company (Toolco) providing for the acquisition of 45 jet aircraft (25 Boeing 707's and 20 Convair 880's) and related equipment. 1/ TWA's long term financing program for the acquisition of the aircraft was also before the Board for consideration.

By motion filed with the Board July 1, 1960, TWA requests approval of the acquisition of title to two more Boeing 707 aircraft and five additional jet engines from Toolco. To finance this acquisition, TWA's senior debt will be increased from $160,000,000 to $168,800,000 by the sale of an additional $8,800,000 of its securities to banks and institutional investors.

The motion also presents proposed agreements between TWA and Toolco and between TWA, Toolco and the lending institutions which are intended to implement the transactions approved by the Board in the aforementioned Order E-15430. In addition to the terms and conditions previously reported to the Board, the agreements provide for an increase in TWA's senior debt from $150,000,000 to $168,800,000 of which $74,200,000 will be obtained from banks at 6% interest and $94,600,000 will be obtained from the insurance companies at 6½% interest. 2/ The subordinate or junior debt remains at $100,000,000 which will be obtained by an offering of debentures bearing common stock purchase warrants to the holders of TWA's common stock. Toolco will make up the difference between the amount subscribed by the other

1/ The authorization granted was in the nature of (1) modification of Order E-9210 of October 17, 1958, which limited the amount of transactions between TWA and Toolco and (2) an exemption from section 408.

2/ The interest rate of 5½% noted in Order E-15430 applies only to payment

DX322 id., Item 11(...
(CAB Orders & Documents)

stockholders and $100,000,000. These debentures will bear an interest rate of 6¼%. The revolving credit arrangement with Toolco, the purpose of which is to maintain TWA's net working capital at a minimum of $10,000,000 remains at $50,000,000 which, as of the date of purchase of the last jet aircraft in the program, will be converted into a note for the balance then due. Such note shall likewise bear interest at the rate of 6¼%.

A voting trust agreement between TWA, Toolco and Irving Trust Company as Notes Agent, for the holders of TWA's senior debt provides that, in the event of default by TWA, Toolco's holdings of TWA's common stock shall be placed in a voting trust which shall be administered by a committee composed of two representatives of the holders of the senior debt and one representative of Toolco.

TWA submits that, except for the addition of the two jet aircraft and five engines, the agreements leading to the conclusion of its long term financing program do not change the substance of transactions approved by the Board in Order E-15430.

The Board finds that the acquisition of two additional jet aircraft and necessary engines and the implementation agreements covering the overall financing of TWA's jet aircraft program do not violate the intent of the original restrictions imposed on transactions between TWA and Toolco in Order 3210, as modified by Order E-15430 issued June 23, 1960. Accordingly, a further modification of that Order is just and reasonable and in the public interest. While the transaction may be subject to section 408 in that it may represent the acquisition by TWA of an additional substantial part of the properties of Toolco, it does not change the substance of the transactions approved by the Board in Order E-15430 which granted an exemption under section 416 from the requirement of section 408 to enable TWA to purchase aircraft and equipment from Toolco, a person engaged in a phase of aeronautics. Under these circumstances, the Board finds that enforcement of section 408 would be an undue burden on TWA by virtue of unusual circumstances affecting its operations and would not be in the public interest. Therefore, the Board exempts TWA from the provisions of section 408 insofar as that section might prohibit the transactions without prior Board approval.

ACCORDINGLY, IT IS ORDERED:

1. That the restrictions imposed on transactions between Toolco and TWA by Order 3210, as modified by Order E-15430 issued June 23, 1960, are further modified herein to permit TWA to consummate the transactions described in the aforesaid motions;

2. That TWA be, and it hereby is exempted pursuant to section 416 from the requirement of section 408 to the extent necessary to enable it to purchase two additional jet aircraft and five engines from Toolco, a person engaged in a phase of aeronautics;

3. That this order shall not be deemed a determination for rate-making purposes of the reasonableness of any of the transactions specified herein; and

4. That this order may be amended or revoked at any time in the discretion of the Board without hearing.

By the Civil Aeronautics Board:

/s/ Robert C. Lester

BEFORE THE

CIVIL AERONAUTICS BOARD

In the matter of the application of	:	
HUGHES TOOL COMPANY	:	
for approval of the acquisition of control of Trans World Airlines, Inc.	:	Docket No. 1182
	:	

MOTION OF TRANS WORLD AIRLINES, INC.
FOR APPROVAL OF TRANSACTIONS
IF SUCH APPROVAL IS NECESSARY

TRANS WORLD AIRLINES, INC. (herein referred to as "TWA") respectfully requests the Board to enter an order herein amending its Order No. E-15561, issued July 21, 1960, modifying the restrictions imposed on transactions between TWA and HUGHES TOOL COMPANY (herein referred to as "Hughes") if any such amendment is necessary in order to permit the consummation of the proposed financing for TWA, and to grant such other approvals under Sections 408 and 409 of the Act (or exemptions therefrom) as the Board may consider necessary in connection therewith.

1. TWA's motions dated May 6, 1960 and July 1, 1960 outlined proposed temporary and definitive financing arrangements to be entered into by TWA, including the sale of secured obligations to banks and institutional investors, the sale of junior securities to stockholders, the issuance of subordinated obligations to Hughes and other proposed transactions between TWA and Hughes connected with TWA's acquisition of jet equipment.

2. The proposed transactions between TWA and Hughes relating to TWA's acquisition of jet equipment and the financing thereof were approved by Orders of the Board

DX322 id., Item 11g, p
(CAB Orders & Documents)

dated June 23, 1960 and July 21, 1960 (Nos. 15430 and 15561).

3. Pursuant to the agreement dated May 9, 1960 between TWA and Hughes, the form of which was attached as Exhibit A to TWA's motion dated May 6, 1960, providing for the acquisition by TWA from Hughes and from the manufacturers of a fleet of Boeing Model 707-131, Boeing Model 707-331 and Convair Model 880 jet aircraft, spare engines, spare parts, equipment and provisioning therefor (subject to the completion of either temporary or definitive financing arrangements completely satisfactory to TWA), and pursuant to agreements between TWA and Hughes dated April 1, 1960 and April 14, 1960 (covering transactions approved by Order No. E-15430), TWA has acquired 2 Boeing Model 707-131 aircraft, 8 Boeing Model 707-331 aircraft, 1 Convair Model 880 aircraft and spare engines, spare parts, equipment and provisioning for Boeing Model 707-131, Boeing Model 707-331 and Convair Model 880 aircraft. Such acquisitions have been facilitated through temporary debt financing of TWA, guaranteed by Hughes, and the issuance of subordinated obligations by TWA to Hughes, in the manner outlined in TWA's motion of May 6, 1960.

4. The definitive financing outlined in TWA's motions of May 6, 1960 and July 1, 1960 has not yet been accomplished. It is now proposed that such financing be accomplished and that the first closing under this financing be held on December 29, 1960. The terms of this financing and of the transactions between TWA and Hughes relating thereto are to be substantially the same as those set forth in TWA's motions of May 6, 1960 and July 1, 1960, approved by orders of the Board dated June 23, 1960 and July 21, 1960. Among the changes, which it is believed do not affect the substance of the transaction, are the deposit by Hughes

at the time of the first closing under the definitive financing arrangements, of Hughes' TWA stock, in the voting trust (which was previously to be established only under certain conditions) and the granting to Hughes by the purchasers of TWA's secured obligations of options to acquire such obligations from the holders thereof under certain conditions.

Attached hereto are copies of the following proposed agreements reflecting changes in the drafts of documents relating to TWA's long-term financing program submitted to the Board with TWA's motion of July 1, 1960:

(a) An agreement (in substantially the form attached hereto as Exhibit A) between TWA, Hughes and the prospective holders of the senior debt of TWA. This agreement, among other things, reflects a reduction in the total amount of senior debt (Notes) to be issued by TWA from $168,800,000 to $165,000,000, and changes in the maturity dates of the Notes, caused by the postponement of the financing and the resulting increased depreciation on the flight equipment to be mortgaged to secure the Notes. This proposed agreement is a revision of the agreement attached as Exhibit B to TWA's motion of July 1, 1960.

(b) A Final Accounting and Debenture Purchase Agreement between TWA and Hughes (in substantially the form attached hereto as Exhibit B). This agreement, among other things, redesignates the particular 20 Convair 880 airplanes to be acquired by TWA, without changing the total number of aircraft to be so acquired. This proposed agreement is a revision of the agreement attached as Exhibit C to TWA's motion of July 1, 1960.

(c) An agreement between TWA, Hughes and the Voting Trustees described therein (substantially in the form attached hereto as Exhibit C), providing for the deposit by Hughes in a voting trust of all shares of common stock of TWA held by Hughes. This agreement is a revision of the Voting Trust Agreement attached as Schedule A to the proposed Three Party Agreement which was Exhibit D to TWA's motion of July 1, 1960, and reflects the present proposal that such a voting trust be created prior to the consummation of the long-term financing.

(d) An Option Agreement between Irving Trust Company, as Bank Agent, The Equitable Life Assurance Society of the United States, Metropolitan Life Insurance Company and Hughes (in substantially the form attached hereto as Exhibit D), pursuant to which Hughes would be given options, under certain conditions, to purchase the Notes to be issued under the financing program from the holders thereof (herein called the "Option Agreement").

5. The proposed agreements referred to above do not change the substance of the transactions between TWA and Hughes outlined in TWA's motions of May 6, 1960 and July 1, 1960, approved by Order No. E-15430. The consummation of this long-term financing program is in the best interests of TWA and the public.

6. While TWA believes no further approval by the Board is necessary to enable it to consummate its proposed financing, it respectfully requests any such approval as the Board deems required.

7. Of the three Voting Trustees under the Voting Trust Agreement referred to in paragraph 4(c) hereof, Raymond M. Holliday has been appointed a Voting Trustee by Hughes. Mr. Holliday is a director of TWA and a director and officer of Hughes. Such relationships and the interlocking relationships resulting from the holding by Mr. Holliday of any other directorships and offices within the system of affiliated and subsidiary companies composed of Hughes and TWA were approved by the Board under Section 409 of the Act by Order No. E-14251, dated July 22, 1959. TWA believes no further approval by the Board is necessary under Section 409 to permit Mr. Holliday to hold the position of one of such Voting Trustees.

The other two Voting Trustees are to be designated by the Notes Agent, as agent for the holders of the Notes to be issued by TWA in connection with the proposed financing.

TWA believes that no Section 409 approval is necessary with respect to the Voting Trustees, since a Voting Trustee is not an officer or director and Section 409 applies only to officers and directors of air carriers.

WHEREFORE, TRANS WORLD AIRLINES, INC. respectfully prays that the Board either (a) enter an order herein amending its Order No. E-15561 and modifying its Order Serial No. 3210, as amended, so that such order will permit the consummation of the proposed financing for TWA, if the Board finds that any such further order is required, and enter an order granting such other approvals under Sections 408 and 409 of the Act (or exemptions therefrom) as the Board considers necessary, or (b) enter an order herein determining that no such further orders are required; and grant it such other and further relief as may be appropriate.

Respectfully submitted,

Thomas K. Taylor

Thomas K. Taylor
Vice President

HUGHES TOOL COMPANY

Voting Trust Agreement

Relating to Common Stock of
Trans World Airlines, Inc.

FARMERS BANK OF THE STATE OF DELAWARE
AGENT FOR THE VOTING TRUSTEES

Dated as of December 15, 1960

AGREEMENT dated as of December 15, 1960, among TRANS WORLD AIRLINES, INC., a Delaware corporation (hereinafter called the *"Corporation"*), party of the first part, and RAYMOND M. HOLLIDAY, and , the survivors or survivor of them and their respective successors appointed as in this Agreement provided, as Voting Trustees (hereinafter called the *"Voting Trustees"*), parties of the second part, and HUGHES TOOL COMPANY, a Delaware corporation (hereinafter called *"Hughes Tool"*), party of the third part.

WITNESSETH:

WHEREAS, the Corporation is a corporation duly organized and existing under and by virtue of the laws of the State of Delaware with an authorized capital stock consisting of 15,000,000 shares of Common Stock, par value $5 per share (hereinafter called *"TWA Stock"*), of which 6,674,155 shares are presently issued and outstanding; and

WHEREAS, at the date of this Agreement, Hughes Tool is the owner of 5,221,301 shares of TWA Stock, comprising approximately 78% of the outstanding shares of TWA Stock, and no Hughes Affiliate (which term, as used herein, shall mean any person, firm or corporation, except the Corporation and its subsidiaries, controlling, controlled by or under common control with Hughes Tool) owns any TWA Stock; and

WHEREAS, the Corporation has executed and delivered to Chemical Bank New York Trust Company, as Trustee (hereinafter called the *"Trustee"*) an Indenture of Mortgage dated as of December 1, 1960 (hereinafter called the *"Note Indenture"*), which provides for (a) the delivery thereunder of $72,200,000 principal amount of 6% Equipment Mortgage Serial Notes of the Corporation, maturing serially on December 31, 1961, and quarterly thereafter through December 31, 1964 (hereinafter called *"Serial Notes"*), and (b) the issuance thereunder of $92,800,000 principal amount of 6½% Equipment Mortgage

AGREEMENT dated as of December 15, 1960, among TRANS WORLD AIRLINES, INC., a Delaware corporation (hereinafter called the "*Corporation*"), party of the first part, and RAYMOND M. HOLLIDAY, and , the survivors or survivor of them and their respective successors appointed as in this Agreement provided, as Voting Trustees (hereinafter called the "*Voting Trustees*"), parties of the second part, and HUGHES TOOL COMPANY, a Delaware corporation (hereinafter called "*Hughes Tool*"), party of the third part.

WITNESSETH:

WHEREAS, the Corporation is a corporation duly organized and existing under and by virtue of the laws of the State of Delaware with an authorized capital stock consisting of 15,000,000 shares of Common Stock, par value $5 per share (hereinafter called "*TWA Stock*"), of which 6,674,155 shares are presently issued and outstanding; and

WHEREAS, at the date of this Agreement, Hughes Tool is the owner of 5,221,301 shares of TWA Stock, comprising approximately 78% of the outstanding shares of TWA Stock, and no Hughes Affiliate (which term, as used herein, shall mean any person, firm or corporation, except the Corporation and its subsidiaries, controlling, controlled by or under common control with Hughes Tool) owns any TWA Stock; and

WHEREAS, the Corporation has executed and delivered to Chemical Bank New York Trust Company, as Trustee (hereinafter called the "*Trustee*") an Indenture of Mortgage dated as of December 1, 1960 (hereinafter called the "*Note Indenture*"), which provides for (a) the delivery thereunder of $72,200,000 principal amount of 6% Equipment Mortgage Serial Notes of the Corporation, maturing serially on December 31, 1961, and quarterly thereafter through December 31, 1964 (hereinafter called "*Serial Notes*"), and (b) the issuance thereunder of $92,800,000 principal amount of 6½% Equipment Mortgage

Sinking Fund Notes of the Corporation, due December 31, 1972 (hereinafter called *"Sinking Fund Notes"*), all said Serial Notes and Sinking Fund Notes being hereinafter collectively called the *"Notes"*; and

WHEREAS, the Corporation has entered into an agreement dated as of December 1, 1960 (hereinafter called the *"December 1960 Loan Agreement"*), with Irving Trust Company and the other Banks named therein (hereinafter collectively called the *"Banks"*), pursuant to which the Banks have agreed to lend an aggregate of $72,200,000 to the Corporation, such loans to be evidenced by an equal aggregate principal amount of Serial Notes; and

WHEREAS, the Corporation has entered into agreements dated as of December 1, 1960 (hereinafter called the *"Note Purchase Agreements"*), with The Equitable Life Assurance Society of the United States and Metropolitan Life Insurance Company (hereinafter together called the *"Insurance Companies"*), pursuant to which the Insurance Companies have agreed to purchase from the Corporation an aggregate of $92,800,000 principal amount of Sinking Fund Notes; and

WHEREAS, it is a condition precedent to the obligation of the Banks to advance any moneys to the Corporation pursuant to the December 1960 Loan Agreement, and it is a condition precedent to the obligations of the Insurance Companies to purchase any Sinking Fund Notes from the Corporation pursuant to the Note Purchase Agreements, that this Agreement shall have been duly executed and delivered by the parties hereto; and

WHEREAS, under and by virtue of the provisions of an agreement dated as of December 1, 1960 (hereinafter called the *"Noteholders' Agreement"*), between Irving Trust Company, as agent for the Banks, the Insurance Companies, and Irving Trust Company, as agent for the holders of Notes (hereinafter called the *"Notes Agent"*, which term, as used herein, shall include any successor to such Notes Agent),

the Notes Agent has designated and appointed and as Voting Trustees under this Agreement; and

WHEREAS Hughes Tool has designated and appointed Raymond M. Holliday as a Voting Trustee under this Agreement; and

WHEREAS, each of the Voting Trustees under this Agreement is a citizen of the United States;

NOW, THEREFORE, a voting trust in respect of the TWA Stock is hereby created and established subject to the following terms and conditions, to all and every one of which the parties hereto expressly assent and agree:

FIRST: Hughes Tool agrees that concurrently with the execution and delivery of this Agreement it will transfer and assign, or cause to be transferred and assigned, to the Voting Trustees 5,221,301 shares of TWA Stock and will deposit or cause to be deposited hereunder with the hereinbelow mentioned Agent (hereinafter called the "*Agent*") of the Voting Trustees the certificates for such shares, all of which certificates, if not registered in the name of the Voting Trustees, shall be duly endorsed in blank for transfer or accompanied by proper instruments of assignment and transfer thereof duly executed in blank, in either case with signatures guaranteed and with all requisite stock transfer tax stamps thereto affixed.

SECOND: Hughes Tool agrees that if it or any Hughes Affiliate shall hereafter acquire in any manner (including, without limitation, any acquisition through the exercise of the conversion rights contained in any convertible securities of the Corporation or through the exercise of warrants or rights to subscribe to TWA Stock or in connection with any merger, consolidation or sale of assets of the Corporation or otherwise) any shares of TWA Stock, in addition to those hereinabove mentioned, it will transfer and assign, or cause to be transferred and assigned, to the Voting Trustees such additional shares and will deposit or cause to be deposited hereunder with the Agent the certificates for such additional shares, which certificates, if not registered in the name of the Voting Trustees, shall be duly endorsed in blank for transfer or

accompanied by proper instruments of assignment and transfer thereof duly executed in blank, in either case with signatures guaranteed and with all requisite stock transfer tax stamps thereto affixed. The term *"TWA Stock"*, as used in this Article Second, shall mean the Common Stock of the Corporation, as the same shall be constituted from time to time, and shall also mean and include, in the event the Corporation shall merge into or be consolidated with another corporation, or shall sell all or any substantial portion of its assets to another corporation, all voting securities of such other corporation.

THIRD: The Voting Trustees shall from time to time issue in respect to the TWA Stock so deposited hereunder with the Agent a Voting Trust Certificate or Voting Trust Certificates for a like number of shares of such TWA Stock, in substantially the following form and registered in the name of Hughes Tool or in such name as shall be specified in writing by Hughes Tool:

No. .....

..... Shares

TRANS WORLD AIRLINES, INC.

Voting Trust Certificate For Common Stock

THIS IS TO CERTIFY THAT

will, upon the termination of the Voting Trust Agreement hereinafter mentioned and subject to the provisions thereof, upon surrender hereof and upon payment of any stamp tax or other charge in connection with the delivery, be entitled to receive a certificate or certificates, expressed to be fully paid, for shares of Common Stock, par value $5 per share, of Trans World Airlines, Inc., a Delaware corporation (hereinafter called "the Corporation"), heretofore deposited under said Agreement, and is in the meantime entitled to receive payments equal to the cash dividends, if any, collected by or for the account of the Voting Trustees hereinafter named, or their successors, upon a like number of shares, and to receive Voting Trust Certificates (or scrip therefor) in respect of any dividends payable in Common Stock of the Corporation so collected.

This certificate is issued under and the rights represented hereby are subject to, and each successive holder hereof by ac-

cepting the same consents and agrees to be bound by, all the terms and conditions of a certain Voting Trust Agreement dated as of December 15, 1960 (hereinafter called the "Voting Trust Agreement"), by and between the Corporation, party of the first part, Raymond M. Holliday, and , the survivors or survivor of them and their respective successors appointed as in the Voting Trust Agreement provided, as Voting Trustees, parties of the second part, and Hughes Tool Company, a Delaware corporation, holder of certain shares of Common Stock of the Corporation, party of the third part. An original counterpart of the Voting Trust Agreement is on file at the principal office of the Corporation in the State of Delaware, and is open to the inspection of any holder of stock of the Corporation or of any Voting Trust Certificate daily during business hours.

No voting right passes by or under this certificate or by or under any agreement expressed or implied, it being expressly understood and agreed that, until the actual delivery of a stock certificate or certificates to the registered owner hereof or his assigns, the Voting Trustees at any time acting under the Voting Trust Agreement shall possess and be entitled in their discretion to exercise in respect of any and all shares of stock called for by this certificate, all rights and powers of every name and nature, including the right to vote thereon and to take or omit to take any other action in respect thereof.

The Voting Trust Agreement will remain in effect until December 15, 1970, unless previously terminated or unless the duration of the Voting Trust Agreement is extended as provided therein.

No stock certificate shall be deliverable in respect hereof until December 15, 1970, or until such earlier or later termination of the Voting Trust Agreement, except as otherwise provided in the Voting Trust Agreement in certain specific cases. Any such delivery shall in any event be subject to the provisions of the Voting Trust Agreement.

This certificate is transferable only on the books of the Voting Trustees at the office of their Agent in the City of Wilmington, Delaware, by the registered owner in person or by attorney duly authorized and upon surrender hereof properly endorsed and payment of any taxes imposed by law on such transfer, and otherwise as provided in the Voting Trust Agreement.

Title to this certificate, when duly endorsed, shall to the extent permitted by law be transferable with the same effect as in the case of a negotiable instrument. The Voting Trustees and their Agent may nevertheless deem and treat the registered holder hereof (or, when presented duly endorsed in blank, the bearer hereof) as the absolute owner hereof for all purposes whatsoever, and neither the Voting Trustees nor their Agent shall be affected by any notice to the contrary.

This certificate is not valid for any purpose until signed by the Agent of the Voting Trustees.

IN WITNESS WHEREOF, the Voting Trustees have caused this certificate to be signed by their duly authorized Agent.

Dated

RAYMOND M. HOLLIDAY

.....

.....

Voting Trustees.

By FARMERS BANK OF THE STATE OF DELAWARE,

Agent

By .....

Such certificates shall have a form of assignment on the back thereof in substantially the following form:

FOR VALUE RECEIVED the undersigned hereby sells, assigns and transfers unto the within certificate and all right, title and interest represented thereby, and irrevocably constitutes and appoints attorney to transfer the same on the books of the Voting Trustees with full power of substitution in the premises.

The Voting Trustees may make such changes in the form of such certificates and may add or append such legends or endorsements thereon as may be required by the rules of any stock exchange on which application may be made to list such certificates or to conform to any usage.

FOURTH: As hereinafter in Article Eighth contemplated, the Voting Trustees may also issue scrip representing fractional interests in respect of Voting Trust Certificates, which scrip shall be in bearer form and transferable by delivery and unless otherwise expressly stated shall have only the rights (1) of exchange for full Voting Trust Certificates and (2) to participate, upon the termination of this Agreement, proportionately in the stock or avails thereof held for the benefit of such scrip. Such scrip shall be of such tenor and form, not inconsistent with the provisions hereof, as the Voting Trustees may approve.

FIFTH: The Voting Trust Certificates shall be printed and shall be signed in the name of the Voting Trustees by their Agent appointed for the purpose, and shall be transferable only on the books of the Voting Trustees at the Office of their Agent in the City of Wilmington, Delaware, as provided in the Voting Trust Certificates and in accordance with the rules from time to time established for that purpose by the Voting Trustees.

The transfer books may be closed by the Voting Trustees for a reasonable time prior to the payment or distribution of any dividend, as well as at any other time or for any other purpose when deemed by the Voting Trustees to be desirable. In lieu of the closing of the books against transfers of Voting Trust Certificates as aforesaid, the Voting Trustees may, if they deem it advisable, fix a date as a record date for the determination of the Voting Trust Certificate holders entitled to receive such dividends; and the owners of Voting Trust Certificates of record on such date shall exclusively be entitled to participate in the distribution of such dividends.

SIXTH: In case any Voting Trust Certificate shall become mutilated or become lost, destroyed or stolen, the Voting Trustees may, in their

uncontrolled discretion, issue and deliver in exchange therefor and upon cancellation of the mutilated Voting Trust Certificate, or in lieu of the lost, destroyed or stolen Voting Trust Certificate, a new Voting Trust Certificate representing the same number of shares of stock, upon the production of evidence of such loss, destruction or theft, satisfactory to the Voting Trustees, and upon receipt of indemnity satisfactory to them, and upon compliance also with such other reasonable regulations as they may prescribe.

SEVENTH: The certificates for TWA Stock deposited with the Agent of the Voting Trustees shall, if not registered in the name of the Voting Trustees, be surrendered and cancelled and new certificates therefor issued to the Voting Trustees. In all certificates issued in the name of the Voting Trustees it shall appear that they are issued pursuant to this Agreement, and in the entry of such ownership in the books of the Corporation that fact shall also be noted.

Such TWA Stock shall be held, used and applied by the Voting Trustees and their successors in office for the purposes of and in accordance with this Agreement.

The Voting Trustees may cause any TWA Stock at any time held by them under this Agreement to be transferred to any name or names other than the name of the Voting Trustees herein named, if such transfer becomes necessary by reason of any change in the persons holding the office of Voting Trustees as hereinafter provided or by reason of any statutory requirement relative to directors' qualifying shares.

EIGHTH: Until the delivery as hereinafter provided of stock certificates or the avails thereof in exchange for Voting Trust Certificates, either upon the termination of this Agreement or pursuant to Article Seventeenth or Article Eighteenth, each registered owner of a Voting Trust Certificate shall be entitled from time to time to receive payments equal to cash dividends, if any, collected by or for the account of the Voting Trustees upon the number of shares of TWA Stock called for by such Voting Trust Certificate, and to receive Voting Trust Certificates (or scrip therefor) in respect of any dividends payable in TWA Stock so collected.

Any dividends received by the Voting Trustees other than cash dividends or dividends payable in TWA Stock shall as soon as conveniently possible be transferred to and distributed among the registered owners of Voting Trust Certificates in accordance with their respective interests therein, all at such time and in such manner as the Voting Trustees shall determine is appropriate.

In case the holders of TWA Stock shall be offered the right to subscribe for or purchase any shares of capital stock of the Corporation, the Voting Trustees shall promptly notify the registered owners of Voting Trust Certificates of the terms of such offer. Upon receipt from a registered owner of any Voting Trust Certificate, within the period fixed by the Voting Trustees for such purpose, of a request to subscribe for or purchase shares of such capital stock pursuant to such offer (in an amount not in excess of the ratable amount which might be subscribed for or purchased by a holder of the number of shares of TWA Stock represented by such Voting Trust Certificate), accompanied by funds sufficient to pay the subscription or purchase price thereof, the Voting Trustees will make such subscription or purchase and will pay the subscription or purchase price to the Corporation or other person making such offer for the account of the registered owner of such Voting Trust Certificate, and (a) in the event TWA Stock has been subscribed for or purchased, will issue an additional Voting Trust Certificate (or scrip therefor) in respect of such TWA Stock to the registered owner of such Voting Trust Certificate, upon receipt by the Voting Trustees of such TWA Stock from the Corporation or other person making such offer, or (b) in the event capital stock of the Corporation (other than TWA Stock) has been subscribed for or purchased, will deliver the certificate or certificates for such capital stock to the registered owner of such Voting Trust Certificate, upon receipt by the Voting Trustees of such certificate or certificates from the Corporation or other person making such offer.

In case the holders of TWA Stock shall be offered the right to subscribe for or purchase any other securities of the Corporation (other than shares of capital stock of the Corporation), the Voting Trustees, in their discretion, may either (a) follow the procedure set forth in the

immediately preceding paragraph with respect to rights to subscribe for or purchase shares of capital stock of the Corporation (other than TWA Stock) with respect to the rights to subscribe for or purchase such other securities of the Corporation, or (b) by agreement with the Corporation or other person making such offer, waive their right to receive such subscription or purchase rights in respect of the shares of TWA Stock held by the Voting Trustees, on condition that the Corporation or other person making such offer make such offer directly to the registered owners of the Voting Trust Certificates, at the same time and on the same terms that such offer is made to holders of TWA Stock.

The Voting Trustees shall not be required to make any such subscriptions or purchases on behalf of registered owners of Voting Trust Certificates (or to issue any Voting Trust Certificates in respect of the TWA Stock which shall be the subject of any such subscription or purchase offer) unless provided by such owners with funds sufficient to pay (in addition to the subscription or purchase price thereof, as aforesaid) any taxes or other expenses which may be incurred by the Voting Trustees in connection therewith. The Voting Trustees shall not be required in any event to make any such subscription or purchase in respect of deposited shares of TWA Stock represented by scrip. The Voting Trustees shall have full power and discretion to prescribe and regulate any and all details in connection with any such subscription or purchase rights and the exercise thereof including, without limitation, the power to issue subscription warrants covering such subscription or purchase rights to the registered owners of Voting Trust Certificates and to determine the terms and conditions under which such warrants may be assigned and transferred.

NINTH: The Voting Trustees may adopt their own rules of procedure. The action of a majority of the Voting Trustees for the time being in office taken at a meeting, or taken without a meeting by a writing signed by such a majority, shall, except as otherwise herein specifically provided, constitute the action of the Voting Trustees and have the same effect as though taken by all the Voting Trustees. Any

Voting Trustee may vote or may act in person or by his proxy given to any other Voting Trustee or Voting Trustees or to any other person or persons. Any Voting Trustee may act as a director or officer of the Corporation and may vote for himself as such, and he or any firm of which he is a member or any corporation of which he may be a stockholder, director, officer, agent or employee may purchase, sell, own, hold or deal in Voting Trust Certificates, and may contract with the Corporation or be or become pecuniarily interested in any manner or transaction to which the Corporation or any affiliated company may be a party or in which the Corporation may in any way be concerned, as fully and freely as though he were not a Voting Trustee.

TENTH: The Voting Trustees assume no liability as stockholders, their interest hereunder being that of trustees merely. In voting the TWA Stock represented by the stock certificates held by them hereunder (which they may do either in person or by proxy to any one or more of them or to any other person or persons or to his or their substitute or substitutes), the Voting Trustees will exercise their best judgment to secure the election of suitable directors of the Corporation, to the end that its business and affairs shall be properly managed, and the Voting Trustees will likewise vote and act in other matters in accordance with their best judgment; but they assume no responsibility in respect of such management or in respect of any action taken by them or taken in pursuance of their vote so cast, and no Voting Trustee shall incur any responsibility as trustee or otherwise by reason of any error in law, mistake of judgment, or of any matter or thing done or suffered or omitted to be done under this Agreement except for his own individual malfeasance.

The Voting Trustees assume no responsibility with respect to the validity or genuineness of any of the stock certificates (or other securities received in lieu thereof) deposited with them hereunder or of any notice, request, assignment, power of attorney, acknowledgment or other paper or document, and they shall be entitled to assume that any such stock certificates (or other securities) so deposited with them and any such other paper or document are genuine

and valid and what they purport to be and have been signed by the proper parties or party and that any endorsements and assignments thereof are genuine and legal; and in making delivery of stock certificates (or other securities or cash received in lieu thereof), upon the surrender of Voting Trust Certificates representing the same, the Voting Trustees shall be entitled to deliver any stock certificates (or other securities received in lieu thereof) purporting and believed by the Voting Trustees to be genuine and legal.

The Voting Trustees may retain counsel to advise and represent them in any and all matters arising under this Agreement and may employ and fix the compensation of accountants and other agents who may do or perform any acts in behalf of the Voting Trustees within the scope of their respective agencies which the Voting Trustees are authorized hereunder to do or perform, and the reasonable charges of such counsel and other disbursements and expenses made or incurred by the Voting Trustees in the administration of their trust hereunder, including all taxes or other governmental charges imposed upon the Voting Trustees in connection with the transfer or issuance of any stock or Voting Trust Certificates or subscription warrants or in respect of the ownership of the TWA Stock (or other securities received in lieu thereof) held by them as trustees or in respect of any dividends, distributions or other rights in respect of such TWA Stock (or other securities) and the expenses of printing the Voting Trust Certificates (and scrip therefor) shall be borne and promptly paid by the Corporation, and the Corporation hereby agrees to pay or advance the same forthwith from time to time upon the demand of the Voting Trustees. The Voting Trustees may pay any taxes which they shall lawfully be required to pay out of any funds in their hands or of any dividends or distributions and shall have a lien with interest for any sums so paid upon the respective shares of TWA Stock (or other securities) or dividends or distributions held by the Voting Trustees upon which any such tax may be applicable.

The Voting Trustees shall be entitled to receive and Hughes Tool will pay reasonable compensation for their services hereunder, in such amount as may be agreed upon from time to time between the Voting

Trustees and Hughes Tool. In the event that the Voting Trustees or any of them and Hughes Tool are unable to agree upon the compensation to be paid by Hughes Tool for such services, the controversy shall be settled by arbitration in accordance with the Rules of the American Arbitration Association. All expenses of such arbitration, including, without limitation, the fees and expenses of counsel for the Voting Trustees and all other expenses incurred by the Voting Trustees in connection with such arbitration, shall be borne and promptly paid by Hughes Tool.

Without in any wise limiting the generality of the foregoing, the Corporation and Hughes Tool agree, jointly and severally, to indemnify each of the Voting Trustees against, and hold each of them harmless from, any and all claims, damages or liabilities, joint or several, to which he may become subject, and to reimburse each of the Voting Trustees for any legal or other expenses incurred by him in connection with any actions, suits or proceedings to which he may be made a party or in which he may be otherwise involved (including, without limitation, any proceeding instituted by or before any Federal or State governmental or regulatory authority), in so far as such claims, damages or liabilities or such actions, suits or proceedings arise out of or are based upon the administration by the Voting Trustees of their trust under this Agreement or the exercise of any powers or the performance of any duties by the Voting Trustees as herein provided or contemplated, or otherwise arise by reason of his being or having been a Voting Trustee hereunder, except that no Voting Trustee shall be entitled to any such indemnification or reimbursement in relation to matters as to which he shall be finally adjudged in any such action, suit or proceeding to be liable by reason of his own individual malfeasance.

ELEVENTH: Until the delivery as hereinafter provided of stock certificates or the avails thereof in exchange for Voting Trust Certificates, either upon the termination of this Agreement or pursuant to Article Seventeenth or Article Eighteenth, the Voting Trustees shall possess and shall be entitled in their discretion, not subject to any review, to exercise in person or by their proxy, in respect of any and all shares of TWA Stock at the time on deposit under this Agreement all rights

and powers of every name and nature, including the right to vote thereon or to consent to any and every act of the Corporation.

Without in anywise limiting the generality of the foregoing, the Voting Trustees are specifically authorized in the exercise of their sole and absolute discretion in respect of any and all TWA Stock at any time deposited under this Agreement to vote for or consent to: the election of directors of the Corporation, the removal of directors of the Corporation, any increase, reduction or reclassification of the capital stock of, or any reduction of the capital of, the Corporation, any changes or amendments in or to the Agreement and Act of Consolidation of the Corporation constituting its Certificate of Incorporation, the sale or disposal in any manner of all or any part or parts of the property, assets or business of the Corporation, any consolidation or merger of the Corporation with or into any other corporation, any merger of any other corporation into the Corporation, and any reorganization of the Corporation, and any action with respect to any of the foregoing which any stockholder might lawfully take, and upon any such increase, reduction or reclassification of stock, reduction of capital or merger, consolidation or reorganization becoming effective, to make such surrender of TWA Stock deposited under this Agreement as may be proper or expedient and to receive and hold under this Agreement in lieu thereof any and all stock issued in exchange for such surrendered TWA Stock, and thereafter, in the discretion of the Voting Trustees, they may receive and appropriately issue Voting Trust Certificates against other stock issued pursuant to any such corporate change. For all purposes of this Agreement any such stock so received by the Voting Trustees in exchange for TWA Stock so surrendered shall take the place of the TWA Stock so surrendered by them.

TWELFTH: Any Voting Trustee may at any time resign by filing at the principal office of the Corporation in the State of Delaware his resignation in writing and concurrently notifying the Corporation, the Agent, the other Voting Trustees and the Notes Agent in writing of such filing of such resignation, and such resignation shall be effective 10 days after the date of such filing of such resignation without any acceptance thereof.

Raymond M. Holliday or any successor to Raymond M. Holliday (and such successor's successor and so on in line of succession) may be removed by the registered owners of a majority in interest of the Voting Trust Certificates at the time outstanding by an instrument or concurrent instruments signed by such owners or their duly authorized attorneys-in-fact and filed at said principal office of the Corporation. or or any successor to or (and such successor's successor and so on in line of succession) may be removed by the Notes Agent by an instrument signed by or on behalf of the Notes Agent and filed at said principal office of the Corporation.

In the event of the resignation, removal, death, loss of United States citizenship or other inability to act of any Voting Trustee a vacancy shall be deemed to exist in his office and such vacancy may be filled at any time by the appointment of a successor in the manner hereinafter provided. Any such successor to any Voting Trustee shall, at the time of his appointment, be a citizen of the United States.

Any successor to Raymond M. Holliday (and such successor's successor and so on in line of succession) as Voting Trustee shall be appointed by the registered owners of a majority in interest of the Voting Trust Certificates at the time outstanding by an instrument or concurrent instruments signed by such owners or their duly authorized attorneys-in-fact and filed at said principal office of the Corporation.

Any successor to or (and such successor's successor and so on in line of succession) as Voting Trustees shall be appointed by the Notes Agent by an instrument signed by or on behalf of the Notes Agent and filed at said principal office of the Corporation, *provided, however*, that if any vacancy in the office of either of such Voting Trustees shall have continued for more than 10 days, then or , or any successor to or theretofore appointed by the Notes Agent (and such successor's successor and so on in line of succession) may appoint a successor Voting Trustee to fill such vacancy.

Concurrently with the filing at said principal office of the Corporation of any such instrument of removal of any Voting Trustee or any such instrument appointing a Voting Trustee, the person filing the same shall notify the Corporation, the Agent, the Voting Trustees (or the other Voting Trustees, as the case may be) and the Notes Agent in writing of such fact and, as promptly as possible after such filing, the Corporation shall mail written notice thereof to the Agent, to the Voting Trustees (or the other Voting Trustees, as the case may be) and to the Notes Agent.

If any vacancy in the office of a Voting Trustee shall have continued for more than 10 days the remaining Voting Trustee or Voting Trustees may exercise all the rights, powers and privileges of the Voting Trustees hereunder until such vacancy or vacancies shall have been filled by the appointment of a successor Voting Trustee or successor Voting Trustees in the manner hereinabove provided.

Any successor Voting Trustee appointed as herein provided shall indicate his acceptance of such appointment by signing a counterpart of this Agreement on file at said principal office of the Corporation and thereupon such successor shall be vested with all the rights, powers, duties and immunities herein conferred upon the Voting Trustees as though such successor had been originally a party to this Agreement as a Voting Trustee. The term "Voting Trustees" as used in this Agreement and in the Voting Trust Certificates issued hereunder shall apply to and mean the parties of the second part hereto, the survivors or survivor of them and their respective successors.

THIRTEENTH: This Agreement shall terminate on the earliest of the following dates, namely: (a) December 15, 1970 (being less than ten years from the date of execution and delivery of this Agreement), unless the duration of this Agreement shall be extended as provided in Article Eighteenth hereof, or (b) the date on which the Trustee under the Note Indenture shall execute an instrument acknowledging satisfaction of and discharging the same, or (c) the date on which there shall be delivered to the Corporation an instrument signed by or on behalf of the Notes Agent terminating this Agreement.

FOURTEENTH: Upon the termination of this Agreement the Voting Trustees in exchange for and upon surrender of any Voting Trust Certificate then outstanding shall, in accordance with the terms hereof and upon payment, if the Voting Trustees shall so require, of a sum sufficient to reimburse them for any tax or other governmental charge in connection with such delivery, deliver certificates for TWA Stock in the amount called for by such Voting Trust Certificate, and the Voting Trustees may require the holder of such Voting Trust Certificate to surrender the same for such exchange. Nothing in this Article Fourteenth or elsewhere in this Agreement contained shall, however, be construed to deprive the Voting Trustees, or their nominee or nominees, of the right as record holder or holders of the deposited shares to vote the same and to execute consents with respect thereto, notwithstanding the termination of this Agreement, so long as they shall continue to be the record holders thereof.

After any termination of this Agreement as above provided, the Voting Trustees may in their discretion deposit any stock or other property then held hereunder with the Agent with authority and instructions to make delivery thereof in exchange for outstanding Voting Trust Certificates as provided in this Article Fourteenth, and thereupon all further obligations or duties of the Voting Trustees under this Agreement or any provision thereof shall cease.

The Voting Trustees shall give the owners of the Voting Trust Certificates notice of any termination of this Agreement prior to the date stated in clause (a) of Article Thirteenth hereof.

FIFTEENTH: All notices to be given to the owners of Voting Trust Certificates shall be given by mailing the same to the registered owners of Voting Trust Certificates addressed to their respective addresses as shown on the books of the Voting Trustees, and any notice whatsoever when mailed by or on behalf of the Voting Trustees to such registered owners of Voting Trust Certificates as herein provided shall have the same effect as though personally served on all holders of Voting Trust Certificates.

SIXTEENTH: Farmers Bank of the State of Delaware is hereby appointed the Agent of the Voting Trustees to receive certificates repre-

senting shares of TWA Stock and to sign and issue Voting Trust Certificates in the name and as Agent of the Voting Trustees and to transfer Voting Trust Certificates. The Agent now or hereafter appointed by the Voting Trustees may resign upon 30 days' written notice to the Voting Trustees or on such shorter notice as the Voting Trustees may accept. The Voting Trustees shall have the power to remove any Agent and in case of the resignation or removal of any Agent or in case any Agent shall in any way become disqualified from acting, a successor Agent having an office in the City of Wilmington, Delaware, may be appointed by the Voting Trustees and they shall cause notice of such appointment to be given to the Corporation and to the registered owners of Voting Trust Certificates. Upon the resignation, removal or disqualification of any Agent, the Agent shall, upon payment of its proper charges, deliver the custody of the stock certificates held hereunder as well as all other property held hereunder to the successor Agent or otherwise as the Voting Trustees shall direct and the successor Agent shall have and possess all the rights and immunities of the Agent originally named herein.

The Voting Trustees and the Agent shall be fully protected in acting in the discharge of any of their or its duties hereunder upon any instrument, document or paper believed by them or it to be genuine and to have been executed by the proper parties and the Agent shall be fully protected in issuing any Voting Trust Certificates hereunder, or in taking or in refraining from taking any action hereunder in reliance upon any direction or statement, purporting to be signed by the Voting Trustees or their authorized proxies, as to the existence or nonexistence of any fact or the performance or nonperformance of any act and may accept as conclusive any such statement.

The Agent shall not incur any liability to anyone by reason of anything done or permitted or omitted to be done by it at the request or direction of the Voting Trustees, or because of any disposition which it shall make at the request or direction of the Voting Trustees of any stock certificate or other document or paper or funds or property deposited with it pursuant to any of the provisions hereof, or for any

action which it may take or refrain from taking in respect thereof upon like request or direction, it being the intent and purpose of this Agreement that such stock certificates, documents, papers, funds and property shall be wholly at the order of and under the control of the Voting Trustees; and no Agent of the Voting Trustees shall incur any liability whatsoever except for its own individual malfeasance in the discharge of its duties as specified in this Article Sixteenth, nor shall it be liable for negligence of its agents, officers or employees, if chosen and retained with due care. The Agent shall be entitled to reasonable compensation for its services hereunder and to be reimbursed for all expenses incurred by it hereunder, and all such reasonable compensation and expenses shall be deemed to be expenses of the Voting Trustees required to be borne and promptly paid by the Corporation as provided in Article Tenth hereof.

SEVENTEENTH: On the terms and subject to the conditions specified in this Article Seventeenth, holders of Voting Trust Certificates complying therewith shall be entitled, prior to the termination of this Agreement, to surrender such Voting Trust Certificates to the Voting Trustees and to obtain in exchange therefor certificates for the shares of TWA Stock represented by the Voting Trust Certificates so surrendered.

The limited right created by this Article Seventeenth to withdraw TWA Stock from deposit under this Agreement shall be subject to the conditions precedent that each holder of a Voting Trust Certificate desiring to avail himself of such right shall establish by evidence satisfactory to the Voting Trustees that

(A) such holder (1) is Hughes Tool or a Hughes Affiliate, and (2) has sold or has entered into a firm contract to sell the shares of TWA Stock represented by such Voting Trust Certificate in a bona fide public offering (as that term is hereinafter defined), or

(B) such holder (1) is a pledgee, who holds such Voting Trust Certificate under a bona fide pledge thereof to secure a loan

or other obligation incurred by Hughes Tool or a Hughes Affiliate as to which such pledgor is presently in default, (2) has elected to foreclose such pledge in accordance with its terms, and (3) pursuant to such foreclosure has sold or has entered into a firm contract to sell the shares of TWA Stock represented by such Voting Trust Certificate in a bona fide public offering (as that term is hereinafter defined).

Upon compliance to the satisfaction of the Voting Trustees with the conditions specified in the preceding paragraph with respect to any Voting Trust Certificate, the Voting Trustees shall deliver a certificate or certificates for the shares of TWA Stock represented by such Voting Trust Certificate in exchange for and upon surrender of such Voting Trust Certificate, provided, however, that if the TWA Stock represented by such Voting Trust Certificate shall have been the subject of a firm contract of sale, the Voting Trustees shall not be required to deliver a certificate or certificates for such shares of TWA Stock until the Voting Trustees receive satisfactory evidence that such contract of sale has been or is to be consummated in accordance with its terms. Any such exchange shall be effected in the manner provided in Article Fourteenth as if this Agreement had been terminated.

Whenever reference is made in this Article Seventeenth to TWA Stock "represented by" a Voting Trust Certificate, such reference shall mean the number of shares of TWA Stock expressed in such Voting Trust Certificate to be deliverable in respect of such Voting Trust Certificate upon the termination of this Agreement.

The term "bona fide public offering", as used in this Article Seventeenth with respect to any sale of shares of TWA Stock, shall mean (a) a bona fide sale of such shares "regular way" (but not pursuant to crossed orders or pursuant to any special offering) on any national securities exchange, whether or not pursuant to a registration statement which shall have become effective under the Securities Act of 1933, as amended, or (b) a bona fide public offering of such shares by or through securities dealers made pursuant to a registration state-

ment which shall have become effective under the Securities Act of 1933, as amended, unless (in the case of any sale otherwise than by or on behalf of Hughes Tool or any Hughes Affiliate) the Voting Trustees shall have received an opinion of counsel satisfactory to the Voting Trustees that such public offering does not require the registration of such shares under the Securities Act of 1933, as amended. The term "public offering" shall not include any sale by auction or at broker's board, or any other sale at which the shares being offered might be purchased by a single purchaser or by a group of purchasers acting in concert.

EIGHTEENTH: This Agreement shall not be terminated except as provided in Article Thirteenth hereof, nor shall the duration of this Agreement be extended or this Agreement amended or modified in any other respect except by an instrument or concurrent instruments in writing signed by or on behalf of the Notes Agent, by the Corporation, by all the Voting Trustees and by the registered owners of a majority in interest of the Voting Trust Certificates at the time outstanding or their duly authorized attorneys-in-fact and filed at the principal office of the Corporation in the State of Delaware, provided, however, that in the case of any extension of the duration of this Agreement, (1) the instruments effecting such extension shall be signed and filed as aforesaid only during the 12-month period immediately preceding the termination date specified in clause (a) of Article Thirteenth, (2) no such extension shall extend the duration of this Agreement beyond the maximum period then permitted by the laws of the State of Delaware, and (3) no such extension shall affect the rights or obligations of any holder of Voting Trust Certificates who shall not consent to such extension.

In the event that the duration of this Agreement shall be extended pursuant to this Article, the Voting Trustees shall forthwith give notice of such extension in the manner provided in Article Fifteenth to all registered owners of Voting Trust Certificates. Each holder of any Voting Trust Certificate who shall not have signed a written

instrument consenting to such extension, in person or by duly authorized attorney-in-fact, shall be entitled to receive from the Voting Trustees, from and after the termination date specified in clause (a) of Article Thirteenth, a certificate or certificates for TWA Stock in the amount called for by the Voting Trust Certificate held by such holder, in exchange for and upon surrender of such Voting Trust Certificate, and the Voting Trustees shall effect such exchange. Any such exchange shall be effected in the manner provided in Article Fourteenth as if this Agreement had been terminated.

NINETEENTH: Hughes Tool agrees to pay the reasonable compensation of the Notes Agent for its services under this Agreement and the Noteholders' Agreement, including any services rendered by the Notes Agent to the Noteholders, or any of them, in connection with the transactions contemplated by this Agreement and the Noteholders' Agreement and to reimburse the Notes Agent for any out-of-pocket expenses incurred in connection therewith, including the fees and disbursements of any counsel which the Notes Agent may retain in connection with or incident to any of such transactions.

Hughes Tool further agrees that, so long as it or any Hughes Affiliate shall be the beneficial owner of any Voting Trust Certificates, it will not consolidate with, merge into, or convey or transfer all or substantially all of its property as an entirety to, any person unless the successor formed by or resulting from such consolidation or merger or to which such conveyance or transfer is made shall execute and deliver to the Corporation and the Voting Trustees and the Notes Agent, simultaneously with such consolidation, merger, conveyance or transfer, a supplemental agreement to this Agreement wherein the due and punctual performance of the covenants and agreements herein which are to be performed or observed by Hughes Tool shall be assumed by such successor corporation.

TWENTIETH: All notices and other communications hereunder shall be in writing and shall be addressed to each of the respective parties named below at its address set forth below, unless such address

shall have been changed by written notice to the other parties of such change, in which event it shall be addressed to such changed address:

(a) If to the Corporation:

Trans World Airlines, Inc.,
c/o The Corporation Trust Company,
100 West Tenth Street,
Wilmington 99, Delaware

with a copy to:

Trans World Airlines, Inc.,
380 Madison Avenue
New York 17, N. Y.

Attention: *Senior Vice President—Finance and Treasurer*

(b) If to the Voting Trustees:

Raymond M. Holliday
c/o Hughes Tool Company,
2200 Gulf Building,
Houston 2, Texas.

.....

.....

(c) If to Hughes Tool:

Hughes Tool Company,
2200 Gulf Building,
Houston 2, Texas.

Attention: *Mr. Raymond M. Holliday, Vice-President—Finance*

(d) If to the Agent:

Farmers Bank of the State of Delaware,
Wilmington, Delaware

Attention: *Mr. O. H. P. Baldwin, President.*

(c) If to the Notes Agent:

Irving Trust Company,
One Wall Street,
New York 15, N. Y.

Attention: *Mr. Robert A. Kerr,*
Vice President

Any such request, notice or other communication shall be deemed sufficiently served if mailed by registered or certified mail, postage prepaid, addressed as hereinabove in this Article Twentieth provided.

TWENTY-FIRST: All the covenants, conditions and provisions of this Agreement shall enure to the benefit of and shall be binding upon the parties hereto and the Agent and the Notes Agent and their respective successors and assigns.

TWENTY-SECOND: In the event that any provision of this Agreement shall be held to be invalid or unenforceable in whole or in part under the laws of the State of Delaware, such invalidity or unenforceability shall not in any wise affect the validity of the other provisions of this Agreement. For the purposes of this Article Twenty-second, each and every provision of each Article of this Agreement shall be deemed to constitute a distinct and separable provision from the other provisions of this Agreement.

TWENTY-THIRD: This Agreement may be executed in several counterparts, each of which so executed shall be deemed to be an original, and all of such counterparts shall together constitute but one and the same instrument.

TWENTY-FOURTH: Until the termination of this Agreement one original counterpart hereof and of any amendment or modification hereof shall be filed at the principal office of the Corporation in the State of Delaware and open to the inspection of any holder of stock of the Corporation or of any Voting Trust Certificate daily during business hours.

TWENTY-FIFTH: This Agreement has been made in the City of Wilmington, Delaware, and this Agreement and the trust hereby created shall be construed and governed by the laws of said State and the validity and effect of said trust and of this Agreement shall be determined in accordance with the laws of said State.

IN WITNESS WHEREOF, the parties hereto have duly executed this Agreement as of the day and year first above written.

DX 322 id., Item 11g, Ex.D, page 1
(CAB Orders & Documents)

Exhibit D

Agreement

AMONG

IRVING TRUST COMPANY, as Bank Agent

AND

THE EQUITABLE LIFE ASSURANCE SOCIETY OF THE UNITED STATES and METROPOLITAN LIFE INSURANCE COMPANY

AND

HUGHES TOOL COMPANY

OPTION AGREEMENT

Dated as of December 1, 1960

AGREEMENT dated as of December 1, 1960, among IRVING TRUST COMPANY, a New York trust company, as agent for the hereinbelow-mentioned Banks (hereinafter called the *"Bank Agent"*), party of the first part, THE EQUITABLE LIFE ASSURANCE SOCIETY OF THE UNITED STATES, a New York corporation (hereinafter called *"Equitable"*), party of the second part, METROPOLITAN LIFE INSURANCE COMPANY, a New York corporation (hereinafter called *"Metropolitan"*), party of the third part, and HUGHES TOOL COMPANY, a Delaware corporation (hereinafter called *"Hughes"*), party of the fourth part.

WITNESSETH:

WHEREAS Trans World Airlines, Inc., a Delaware corporation (hereinafter called *"TWA"*), has executed and delivered to Chemical Bank New York Trust Company, as Trustee (hereinafter called the *"Trustee"*), an Indenture of Mortgage dated as of December 1, 1960 (hereinafter called the *"Note Indenture"*), which provides for (a) the delivery of $72,200,000 principal amount of 6% Equipment Mortgage Serial Notes of TWA, maturing serially on December 31, 1961, and quarterly thereafter through December 31, 1964 (hereinafter called *"Serial Notes"*), and (b) the issuance thereunder of $92,800,000 principal amount of 6½% Equipment Mortgage Sinking Fund Notes of TWA, due December 31, 1972 (hereinafter called *"Sinking Fund Notes"*), all said Serial Notes and Sinking Fund Notes being hereinafter collectively called the *"Notes"* (which term, as used herein, shall also mean the Serial Notes or the Sinking Fund Notes, as the context or circumstances may require); and

WHEREAS Hughes is the owner of not less than 5,221,301 shares of Common Stock, par value $5 per share, of TWA, comprising approximately 78% of the outstanding 6,674,155 shares of Common Stock of TWA (hereinafter called *"TWA Stock"*); and

WHEREAS TWA has entered into an agreement dated as of December 1, 1960 (hereinafter called the *"December 1960 Loan Agreement"*),

DX 322 id., Item 11g, Ex. D, page 3
(CAB Orders & Documents)

with Irving Trust Company and the other Banks named therein (hereinafter collectively called the "*Banks*") and the Bank Agent, pursuant to which the Banks have agreed to lend an aggregate of $72,200,000 to TWA, such loans to be evidenced by an equal aggregate principal amount of Serial Notes; and

WHEREAS TWA has entered into agreements dated as of December 1, 1960 (hereinafter called the "*Note Purchase Agreements*"), with Equitable and Metropolitan (hereinafter together called the "*Insurance Companies*"), pursuant to which the Insurance Companies have agreed to purchase from TWA an aggregate of $27,800,000 principal amount of Sinking Fund Notes; and

WHEREAS it is a condition precedent to the obligation of the Banks to advance any moneys to TWA pursuant to the December 1960 Loan Agreement, and it is a condition precedent to the obligations of the Insurance Companies to purchase any Sinking Fund Notes from TWA pursuant to the Note Purchase Agreements, that an Agreement dated as of December 15, 1960 (hereinafter called the "*Voting Trust Agreement*"), among TWA, the Voting Trustees described therein and Hughes, in the form annexed to the Note Purchase Agreements as Exhibit C, shall have been duly executed and delivered by the parties thereto and all shares of TWA Stock owned by Hughes at the date of the Note Purchase Agreements and all shares of TWA Stock subsequently acquired by Hughes or any Hughes Affiliate (as hereinafter defined) shall have been validly subjected to the Voting Trust Agreement; and

WHEREAS the parties hereto are entering into this Agreement in order to afford Hughes the right, at its option, to purchase all the Notes and thereupon to terminate the Voting Trust Agreement; and

WHEREAS the Bank Agent has been duly authorized by the Banks to enter into this Agreement; and

WHEREAS, for the purposes of this Agreement, (a) the terms *"Hughes Affiliate"* and *"Notes Agent"* shall have the respective meanings specified in the Voting Trust Agreement, and (b) the term *"assignee"* shall mean any person acquiring any of the Notes from any of the Banks pursuant to § 1.4 hereof or from any of the Insurance Companies pursuant to § 2.5 hereof and each successor assignee of any such assignee;

NOW, THEREFORE, in consideration of the premises, the parties hereto agree with each other as hereinbelow set forth:

ARTICLE ONE

Bank Option

§ 1.1. On the terms and subject to the conditions hereinafter set forth, the Bank Agent hereby irrevocably grants to Hughes the non-transferable right and option (hereinafter called the *"Bank Option"*) to purchase from the Banks and their respective assignees, if any, at any time after December 31, 1961, at the principal amount thereof plus accrued interest thereon to the Bank Closing Date hereinafter specified, all (but not less than all) the Serial Notes then held by the Banks and such assignees, *provided, however*, that the Bank Option may be exercised only as provided in § 1.2 hereof and the right of Hughes to exercise the Bank Option shall be subject to the conditions that (a) Hughes shall, concurrently with its exercise of the Bank Option, exercise the Insurance Company Options granted to Hughes by the Insurance Companies pursuant to Article Two hereof in accordance with their terms, and (b) the purchase by Hughes of the Serial Notes pursuant to the Bank Option shall not require any consent or approval of any Federal or State governmental or regulatory authority or, if such consent or approval is required, the same shall have been validly granted, shall be in full force and effect, and shall be valid and sufficient therefor on the date when Hughes shall give notice of its election to exercise the Bank Option as provided in § 1.2 hereof.

DX 322 id., Item 11g, Ex. D, page 5
(CAB Orders & Documents)

§ 1.2. The Bank Option may be exercised by Hughes by giving written notice to the Bank Agent, which notice shall state the election of Hughes to exercise the Bank Option, shall fix a date, not less than 60 days nor more than 90 days after the date upon which such notice shall be given by Hughes, for the delivery of the Serial Notes and the payment of the purchase price thereof (the date of such delivery and payment being herein called the "*Bank Closing Date*") and shall contain (a) a representation and warranty by Hughes that, concurrently with such exercise of the Bank Option, Hughes has exercised the Insurance Company Options and has designated as the Insurance Company Closing Date in its notice of exercise of the Insurance Company Options the same date as it has designated as the Bank Closing Date in its notice of exercise of the Bank Option, and (b) a representation and warranty by Hughes that it is purchasing all the Serial Notes for its own account, for investment, and not with a view to the distribution thereof. Such notice of exercise of the Bank Option shall be accompanied by an opinion of counsel for Hughes, satisfactory in scope and substance to the Bank Agent, to the effect that the exercise of the Bank Option by Hughes has been duly authorized by all requisite corporate action of Hughes and that the purchase by Hughes of the Serial Notes pursuant to the Bank Option does not require any consent or approval of any Federal or State governmental or regulatory authority or, if such consent or approval is required, that the same has been validly granted, is in full force and effect, and is valid and sufficient therefor.

§ 1.3. On the Bank Closing Date the Bank Agent shall deliver or cause to be delivered to Hughes, at the office of Irving Trust Company, One Wall Street, New York, N. Y., the Serial Notes to be sold to Hughes by the Banks and their respective assignees, if any, pursuant to the Bank Option, duly endorsed in blank or accompanied by duly executed assignments in blank (without recourse) and in proper form for transfer, against payment in full of the purchase price by certified or official bank check payable in Federal Reserve funds to the order of the Bank Agent or otherwise as directed in writing by the Bank

DX 322 id., Item 11g, Ex. D, page 6
(CAB Orders & Documents)

Agent. Hughes shall be liable for, and hereby agrees to pay, any and all transfer taxes which may be imposed upon the sale of the Serial Notes to Hughes pursuant to the Bank Option.

§ 1.4. The Bank Agent agrees that the option granted by it to Hughes pursuant to § 1.1 hereof shall apply to and cover all the Serial Notes at any time held by the Bank Agent and any of the Banks and that neither it nor any of the Banks will sell, assign, transfer or otherwise dispose of any of the Serial Notes at any time held by it except to another of the Banks unless (a) such disposition is made pursuant to an instrument of assignment duly executed by the assignor and assignee of such Serial Note or Notes, by which the assignee shall agree to assume and to be bound by all the obligations of the assignor under this Agreement in respect of the Serial Note or Notes which are the subject of such assignment, and (b) there shall be endorsed upon the Serial Note or Notes which are the subject of such assignment, prior to the delivery thereof to the assignee, the following legend:

> "This Note is subject to the provisions of an Agreement dated as of December 1, 1960, pursuant to which Hughes Tool Company has the right at its option to purchase this Note on the terms and subject to the conditions set forth in said Agreement, a copy of which is on file with the Trustee under the within mentioned Indenture."

The Bank Agent further agrees that it will promptly deliver to Hughes an executed counterpart of each instrument of assignment executed by any holder of Serial Notes pursuant to the provisions of this Section.

§ 1.5. In the event that Hughes shall exercise the Bank Option and the Insurance Company Options in accordance with their respective terms, and thereafter shall fail to pay in full on the Bank Closing Date the purchase price of all the Serial Notes then subject to the Bank Option and all the Sinking Fund Notes then subject to the Insurance Company Options, upon tender thereof to Hughes as provided in this Agreement, the Bank Option shall become void and shall terminate at the close of business on the Bank Closing Date.

DX 322 id., Item 11g, Ex. D, page 7
(CAB Orders & Documents)

§1.6. The Bank Option shall be non-transferable and any assignment by Hughes of the Bank Option, or of any interest therein or any right created by the terms thereof, without the written consent of the Bank Agent, shall be void.

ARTICLE TWO

Insurance Company Options

§2.1. On the terms and subject to the conditions hereinafter set forth, each of the Insurance Companies hereby irrevocably grants to Hughes the non-transferable right and option (hereinafter collectively called the "*Insurance Company Options*") to purchase from it and its assignees, if any, at any time after December 31, 1961, at the purchase price specified and computed as provided in § 2.2 hereof, all (but not less than all) the Sinking Fund Notes then held by it and such assignees, *provided, however*, that the Insurance Company Options may be exercised only as provided in § 2.3 hereof and the right of Hughes to exercise the Insurance Company Options shall be subject to the conditions that (a) Hughes shall concurrently exercise its option thereunder to purchase all (but not less than all) the Sinking Fund Notes then subject to the Insurance Company Options, and (b) the purchase by Hughes of the Sinking Fund Notes pursuant to the Insurance Company Options shall not require any consent or approval of any Federal or State governmental or regulatory authority or, if such consent or approval is required, the same shall have been validly granted, shall be in full force and effect, and shall be valid and sufficient therefor on the date when Hughes shall give notice of its election to exercise the Insurance Company Options as provided in § 2.3 hereof.

§2.2. The purchase price to be paid by Hughes for the Sinking Fund Notes upon the exercise of the Insurance Company Options shall be an amount equal to the sum of (a) the principal amount thereof plus accrued interest thereon to the Insurance Company Closing Date hereinafter specified, plus (b) a premium which shall be 22% of the prin-

DX 322 id., Item 11g, Ex. D, page 8
(CAB Orders & Documents)

cipal amount of such Sinking Fund Notes, if the Insurance Company Closing Date shall be on or before March 31, 1962, and which shall thereafter be reduced by ½ of 1% for each quarterly period of three calendar months which shall elapse from January 1, 1962 to the Insurance Company Closing Date.

§ 2.3. The Insurance Company Options may be exercised by Hughes (a) by giving written notice to the Insurance Companies and to each assignee of any of the Sinking Fund Notes named in an instrument of assignment delivered to Hughes pursuant to § 2.5 hereof, and (b) if the Supplemental Indenture referred to in § 3.1 hereof shall have been executed and delivered, by giving written notice also to the Trustee, as provided in § 3.1(b) hereof, which notice shall state the election of Hughes to exercise the Insurance Company Options, shall fix a date, not less than 60 days nor more than 90 days after the date upon which such notice shall be given by Hughes, for the delivery of the Sinking Fund Notes and the payment of the purchase price thereof (the date of such delivery and payment being herein called the "*Insurance Company Closing Date*"), shall state the purchase price (computed as provided in § 2.2 hereof) to be paid by Hughes for the Sinking Fund Notes, shall state whether or not Hughes has concurrently exercised the Bank Option, and shall contain a representation and warranty by Hughes that it is purchasing all the Sinking Fund Notes for its own account, for investment, and not with a view to the distribution thereof. Such notice of exercise of the Insurance Company Options shall be accompanied by an opinion of counsel for Hughes, satisfactory in scope and substance to the Insurance Companies and their respective assignees, if any (and to the Trustee, if the Supplemental Indenture referred to in § 3.1 hereof shall have been executed and delivered), to the effect that the exercise of the Insurance Company Options by Hughes has been duly authorized by all requisite corporate action of Hughes and that the purchase by Hughes of the Sinking Fund Notes pursuant to the Insurance Company Options does not require any consent or approval of any Federal or State governmental or regulatory authority or, if such consent or approval is required, that the same has been

HUGHES TOOL COMPANY

Executive Offices
Twenty-Second Floor Gulf Building
Houston 2, Texas

NOAH DIETRICH
Executive Vice President

January 8, 1947.

To the Board of Directors of Transcontinental & Western Air, Inc.:

Hughes Tool Company, as the owner of approximately 46% of the capital stock of Transcontinental & Western Air, Inc., makes the following proposal to the Board of Directors of the latter company, contingent upon a final consummation of the present refinancing deal with Equitable Life Assurance Society, and subject to necessary approval by governmental authority:

(1) The present refinancing deal with Equitable Life Assurance Society contemplates that the present $40,000,000 loan will be revised so as to rearrange sinking fund requirements, but that interest shall be paid as and when due. Upon final consummation of this financial arrangement, Hughes Tool Company will thereupon immediately lend Transcontinental & Western Air, Inc. the sum of $5,000,000 in cash, and on or before June 1, 1947, upon the request of Transcontinental & Western Air, Inc., when the need therefor has been determined by the Board of Directors of said company, will lend said company an additional sum of $5,000,000 in cash. These loans shall be in the form of notes maturing on the day following the maturity of the outstanding Equitable debentures but shall be subordinate as to principal and interest to said debentures, as well as to any loans which may be extended to Transcontinental & Western Air, Inc. by the Reconstruction Finance Corporation as a result of the establishment of a $40,000,000 line of credit hereinafter referred to. The notes to be issued to Hughes Tool Company shall bear interest at the rate of 2-3/4% per annum, payable only out of earnings of the company, but interest shall be cumulative and payable in full at maturity.

(2) During the life of the notes to be issued to Hughes Tool Company, and at any time after the necessary additional shares of common stock of Transcontinental & Western Air, Inc. is legally authorized to be issued, Hughes Tool Company shall have the option of converting said notes, principal and

C
O
P
Y

accumulated unpaid interest, into Transcontinental & Western Air, Inc. common stock on the following basis:

At a price to be determined by the average of the closing market prices of the stock on the New York Stock Exchange for the ten days preceding the date upon which Hughes Tool Company exercises its option to so convert by written notice to Transcontinental & Western Air, Inc.; provided, however, that on January 1, 1950, Transcontinental & Western Air, Inc. shall have the right to require Hughes Tool Company to convert said notes into the common stock of Transcontinental & Western Air, Inc. by notice in writing to Hughes Tool Company. In such event, the conversion price per share shall be determined by the average of the closing market prices of such stock on the New York Stock Exchange for the ten days preceding the date of the written notice from Transcontinental & Western Air, Inc. to Hughes Tool Company. However, in case Transcontinental & Western Air, Inc. does not require Hughes Tool Company to convert said notes into common stock on said date, as above set out, then Hughes Tool Company's option to convert said indebtedness into common stock shall continue until maturity of the indebtedness.

(3) Hughes Tool Company will diligently endeavor to arrange a $40,000,000 line of credit with Reconstruction Finance Corporation, and in order to procure said line of credit will agree with Reconstruction Finance Corporation to enter into a voting trust agreement covering all of its stock in Transcontinental & Western Air, Inc., the members of said voting trust to be selected as follows:

One by Reconstruction Finance Corporation or Equitable Life Assurance Society (as agreed upon between them), one by Hughes Tool Company, and the third by agreement between Hughes Tool Company and Reconstruction Finance Corporation.

Such voting trust shall only become effective if, as and when the first monies may be actually advanced by Reconstruction Finance Corporation to Transcontinental & Western Air, Inc. under the aforesaid $40,000,000 line of credit, and said voting trust shall continue in effect

C
O
P
Y

until all monies borrowed by Transcontinental & Western Air, Inc. from Reconstruction Finance Corporation have been repaid in full, principal and interest. In the event, however, of any default in payment of principal or interest by Transcontinental & Western Air, Inc. in the Reconstruction Finance Corporation loan, if made, the mutually selected member on the aforesaid voting trust shall, upon demand in writing of Reconstruction Finance Corporation, resign and Reconstruction Finance Corporation shall be entitled to nominate the third member of said voting trust.

N.D.

(4) In the event no money is actually borrowed from Reconstruction Finance Corporation under aforesaid $40,000,000 line of credit, and only in that event, and any default in principal or interest payments occurs on the Equitable Life Assurance Society's loan, then in that event Hughes Tool Company agrees that it will enter into a voting trust agreement with said Equitable Life Assurance Society covering all of its stock in Transcontinental & Western Air, Inc., and the members of this voting trust shall be elected as follows:

Two by Equitable Life Assurance Society and one by Hughes Tool Company.

In case the aforesaid voting trust agreement with Reconstruction Finance Corporation (paragraph (3)) becomes effective, then Equitable Life Assurance Society shall have no right to require the establishment of the voting trust contemplated by this paragraph.

Upon final consummation of the revised refinancing deal with Equitable Life Assurance Society mentioned above in paragraph (1), and approval by governmental authority, and delivery to Transcontinental & Western Air, Inc. by Hughes Tool Company of the first $5,000,000 in cash referred to in paragraph (1) above, the Board of Directors will be reconstituted so that a majority of directors will be nominees of the Hughes Tool Company.

Until all of the changes contemplated above have been made, no changes in the by-laws of Transcontinental & Western Air, Inc. will be made without written consent of Hughes Tool Company.

C
O
P
Y

Board of Directors of
Transcontinental & Western Air, Inc.
page 4

The proposals contained in this letter are necessarily dependent upon various contingencies, and upon final consummation it will be necessary for Hughes Tool Company and Transcontinental & Western Air, Inc. to execute various legal documents. The form of these various documents must, of course, be acceptable to Hughes Tool Company.

January 10, 1947

Docket No. 1182

Honorable James M. Landis, Chairman
Civil Aeronautics Board
Department of Commerce Building
Washington 25, D. C.

Dear Sir:

Reference is made to the application of Hughes Tool Company contained in the letter, dated January 10, 1947, from Mr. Palmer Bradley, attorney for Hughes Tool Company, to the Honorable James M. Landis, Chairman, Civil Aeronautics Board, for approval by the Civil Aeronautics Board of the loan by Hughes Tool Company to Transcontinental & Western Air, Inc. of the sum of $10,000,000, as set forth in the agreement between Hughes Tool Company and Transcontinental & Western Air, Inc.

On January 9, 1947 the Board of Directors of Transcontinental & Western Air, Inc. accepted by unanimous action the proposal of the Hughes Tool Company to the Board of Directors contained in the written communication to the Board of Directors dated January 8, 1947.

As attorney for Transcontinental & Western Air, Inc., I have been instructed by the Board of Directors of that company to inform you that they and the officers of the company join in the application of Hughes Tool Company for the approval of the loan contained in the agreement referred to above and urge that such approval be granted as soon as is conveniently possible.

Respectfully yours,

/s/ Gerald B. Brophy

Houston 2, Texas

January 10, 1947

Docket No. 1182

Honorable James M. Landis, Chairman
Civil Aeronautics Board
Department of Commerce Building
Washington 25, D. C.

Dear Sir:

Reference is made to the Order of the Civil Aeronautics Board issued on the 17th day of October 1944, in the above Docket and the amendment thereto, dated the 26th day of January 1946, approving, under the conditions stated therein, control of Transcontinental & Western Air, Inc. by Hughes Tool Company under Section 408 of the Civil Aeronautics Act of 1938, as amended.

Transmitted to you herewith is a copy of an agreement between Hughes Tool Company and Transcontinental & Western Air, Inc. in the form of a letter, dated January 8, 1947, and accepted by the Board of Directors of Transcontinental & Western Air, Inc. on January 9, 1947, providing, among other things, for the loan by Hughes Tool Company to Transcontinental & Western Air, Inc. of the sum of $10,000,000 upon the terms and conditions stated therein.

On behalf of Hughes Tool Company, application is hereby made to the Civil Aeronautics Board for approval of said loan by Hughes Tool Company to Transcontinental & Western Air, Inc., if such approval is deemed necessary under the terms of the Order dated the 17th day of October, 1944, as amended, and referred to above, and for the approval of any other provision of the agreement between Hughes Tool Company and Transcontinental & Western Air, Inc. submitted herewith under said Order of the Civil Aeronautics Board, if such approval is deemed necessary.

It is believed that the Civil Aeronautics Board is fully aware of the serious financial condition of Transcontinental & Western Air, Inc. It is in an immediate need of substantial working capital

C
O
P
Y

in order to carry on its current operations. The loan to the company in the sum of $5,000,000 by Hughes Tool Company, upon approval by the Civil Aeronautics Board, is designed to alleviate the pressing needs of the company for working capital at the present time. The commitment of the Hughes Tool Company to provide up to an additional sum of $5,000,000 on or before June 1, 1947 assures further working capital to Transcontinental & Western Air, Inc. to carry on its operations.

In addition to working capital, it is believed that the company may require further funds in order to keep abreast of aircraft development and the service afforded by its competitors and for the purpose of serving adequately the routes for which it has been certificated. Accordingly, you will note that the agreement between Hughes Tool Company and Transcontinental & Western Air, Inc. provides that efforts will be made to obtain a credit of $40,000,000 from the Reconstruction Finance Corporation or other sources.

In addition, the agreement contemplates a revision of the present indenture securing the debentures of Transcontinental & Western Air, Inc. held by The Equitable Life Assurance Society of the United States so as to eliminate defaults under the present indenture which might occur during the coming year.

In effect, the agreement between the Hughes Tool Company and Transcontinental & Western Air, Inc. contemplates a complete financing program for Transcontinental & Western Air, Inc. to enable it to perform its obligations under the certificates of convenience and necessity issued to it by the United States.

It is requested that the application contained herein be approved in order that the financing contemplated by the enclosed agreement may be completed without delay.

Enclosed also is a letter from the attorney for Transcontinental & Western Air, Inc. in which that company joins in the application contained herein.

Respectfully Submitted,

/s/ Palmer Bradley

Re: TWA-Hughes Tool Company Agreement

Dear Sir:

In reply to your letter of January 12, 1947, to which there was attached a certain agreement between TWA and the Hughes Tool Company, you are hereby advised that the Board is of the opinion that neither the loan from Hughes Tool Company to TWA provided for in such agreement nor any other provision of such agreement constitutes the kind of commercial transaction intended to be governed by the conditions imposed by the Board's Order, Serial No. 3210, dated October 17, 1944, as amended by Order, Serial No. 4437, dated January 20, 1946, and, accordingly, no approval by the Board of said loan or other provisions of the Agreement is deemed necessary under such orders.

Nothing in this letter is to be construed as a determination that approval by the Board of this agreement pursuant to the provisions of Section 408 of the Civil Aeronautics Act is not required.

Sincerely yours,

(Original file copy approved by all members of the Board loaned to Minutes Section.)

In the Matter of transactions between	:	
HUGHES TOOL COMPANY	:	Docket No. 2796
and	:	
TRANSCONTINENTAL & WESTERN AIR, INC.	:	
and related matters	:	

ORDER OF INVESTIGATION

IT APPEARING TO THE BOARD:

1. That the Board by Order Serial No. 3210, dated October 17, 1946, Docket No. 1182, approved the acquisition by Hughes Tool Company (hereinafter called Hughes Tool) of control through stock ownership of Transcontinental and Western Air, Inc. (hereinafter called TWA) subject to certain conditions as set forth in said order, as amended by Order Serial No. 4437, dated January 26, 1946; and

2. That Hughes Tool has transmitted to the Board a copy of a letter agreement between that company and TWA, dated January 8, 1947, and accepted by the Board of Directors of TWA on January 9, 1947, providing among other things (1) for a loan by Hughes Tool

-2-

(2).for the reconstitution, upon the occurrence of certain events, of the Board of Directors of TWA, so that a majority of directors will be nominees of Hughes Tool; and

3. That as a consequence of, or in connection with, the foregoing, there may have been or may be such a change in the character or extent of the control of Hughes Tool over TWA as to constitute an acquisition of control requiring approval under section 408 of the Civil Aeronautics Act of 1938, as amended; and

The Board acting on its own initiative and pursuant to the powers vested in it by the Civil Aeronautics Act of 1938, as amended, particularly sections 205(a), 408, and 1002(b) thereof, and finding that an investigation of the foregoing matters is necessary in order to carry out the provisions of said Act and to exercise and perform its powers and duties thereunder;

IT IS ORDERED:

1. That an investigation be, and it hereby is, instituted for the purpose of:

(1) Determining whether the letter-agreement of January 8, 1947, between Hughes Tool and TWA, accepted by the Board of Directors of TWA on January 9, 1947, or any arrangement or action related thereto, or any change in the activities of Hughes Tool in the field of aeronautics since October 17, 1946, has resulted or will result in an acquisition of control of TWA for which Board approval is required pursuant to section 408 of the Civil Aeronautics Act of 1938, as amended;

(2) Determining whether such acquisition of control, if any, is consistent with the public interest and fulfills the conditions of said

(3) Entering any such order or taking any such further action herein as may be appropriate pursuant to the provisions of the Civil Aeronautics Act of 1938, as amended.

2. That the proceeding ordered herein be assigned for hearing before an Examiner of the Board at a time and place hereafter to be designated.

3. That Hughes Tool and Fox be made parties to the proceeding herein and that a copy of this order be served upon such parties.

By the Civil Aeronautics Board:

/s/ M. C. Mulligan
M. C. Mulligan
Secretary

TRANSCONTINENTAL & WESTERN AIR, INC.

DOCKET NO. 2796

and related matters.

ORDER OF INSPECTION AND EXAMINATION

It Appearing to the Board:

1. That the Board by order Serial No. E-289, dated February 7, 1947, instituted an investigation into certain transactions between Hughes Tool Company (Hughes Tool) and Transcontinental & Western Air, Inc. (TWA), evidenced by letter agreement of January 8, 1947, between Hughes Tool and TWA, and

2. That said investigation was ordered to determine whether said letter agreement of January 8, 1947, accepted by the Board of Directors of TWA on January 9, 1947, or any arrangement or action related thereto, or any change in the activities of Hughes Tool in the field of aeronautics since its acquisition of control of TWA by stock ownership was approved by the Board on October 17, 1944, has resulted or will result in an

acquisition of control of TWA, for which Board approval is required pursuant to section 408 of the Civil Aeronautics Act of 1938, as amended, to determine whether such acquisition of control, if any, is consistent with the public interest and fulfills the conditions of said section 408, and to determine what order or what further action may be appropriate pursuant to the provisions of the Civil Aeronautics Act of 1938, as amended; and

The Board, acting pursuant to the powers vested in it by the Civil Aeronautics Act of 1938, as amended, particularly section 407(c) thereof, and finding that an inspection and examination by its representatives of the accounts, records, and memoranda, including all documents, papers and correspondence, now or hereafter existing, and kept or required to be kept by TWA, is necessary for the administration of the Act, and particularly in connection with its Order of Investigation dated February 7, 1947, referred to in paragraph I, hereof;

IT IS ORDERED:

That any employee or employees of the Board designated by the Secretary of the Board in writing shall at all times during the pendency of the proceeding instituted by Order Serial No. E-289, dated February 7, 1947, Docket No. 2796, have access to and authority to inspect and examine all accounts, records, and memoranda, including all documents, papers, and correspondence, now or hereafter existing, and kept or required to be kept by TWA.

DOCKET NO. 2796

ORDER OF INSPECTION AND EXAMINATION

It appearing to the Board:

1. That the Board by Order Serial No. E-289, dated February 7, 1947, [illegible], ordered an investigation into certain transactions between Hughes Tool Company (Hughes Tool) and Transcontinental & Western Air, Inc. (TWA), evidenced by letter agreement of January 8, 1947, between Hughes Tool and TWA; and

2. That said investigation was ordered to determine whether said letter agreement of January 8, 1947, accepted by the Board of Directors of TWA on January 9, 1947, or any arrangement or action related thereto, or any change in the activities of Hughes Tool in the field of aeronautics since its acquisition of control of TWA by stock ownership was approved by the Board on October 17, 1944, has resulted or will result in an acquisition

f control of TWA, for which Board approval is re

ection 408 of the Civil Aeronautics Act of 1938, as amended, to determine whether such acquisition of control, if any, is consistent with the public interest and fulfills the conditions of said section 408, and to determine what order or what further action may be appropriate pursuant to the provisions of the Civil Aeronautics Act of 1938, as amended; and

The Board, acting pursuant to the powers vested in it by the Civil Aeronautics Act of 1938, as amended, particularly sections 407(c) and 408(d) thereof, and finding that Hughes Tool is a person heretofore authorized to acquire control and having control of TWA, and finding further that an inspection and examination by representatives of the Board of accounts, records, memoranda, documents, papers, and correspondence hereinafter described in paragraph 1 below, is reasonably necessary for the administration of said Act, particularly in connection with its order of investigation dated February 7, 1947, referred to above;

IT IS ORDERED:

1. That the provisions of sections 407(c) and 408(d) of the Civil Aeronautics Act are made applicable to Hughes Tool to the extent necessary to afford the Board and its representatives access to and authority to inspect and examine, with respect to the period from and after October 17, 1946, (1) all correspondence between Hughes Tool, or any director, officer, stockholder, or employee thereof, and TWA, or any director, officer, employee thereof, (2) all correspondence between Hughes Tool, or any director, officer, employee, or stockholder thereof, and Reconstruction Finance Corporation, or any banking, financial, [illegible] institution or

any director, officer, or employee thereof, re to TWA or the financing of TWA in any manner, (3) all accounts, records, and memoranda, including all documents, papers, and correspondence, relating to the purchase or sale by Hughes Tool or any director, officer, employee, or stockholder thereof of stock of TWA, (4) all accounts, records, and memoranda, including all documents, papers and correspondence, relating to the sale or purchase of aircraft by Hughes Tool, and (5) all other accounts, records, and memoranda, including all documents, papers, and correspondence, which relate to activities of Hughes Tool as a person engaged in a phase of aeronautics or in connection with its stock interest in TWA, now or hereafter existing, and kept or required to be kept by Hughes Tool.

2. That any employee, or employees, of the Board designated by the Secretary of the Board in writing shall at all times during the pendency of the proceeding instituted by Order Serial No. E-289, dated February 7, 1947, have access to and authority to inspect the accounts, records, and memoranda, including documents, papers, and correspondence, now or hereafter existing, and kept or required to be kept by Hughes Tool, set forth in ordering paragraph 1 hereof.

By the Civil Aeronautics Board:

/s/ M. O. Mulligan

M. O. Mulligan

(SEAL)

STATE OF TEXAS }
COUNTY OF HARRIS }

WHEREAS Transcontinental & Western Air, Inc., a Delaware corporation, (hereinafter called "TWA") is in process of certain negotiations with Lockheed Aircraft Corporation of Burbank, California, looking to the acquisition of certain airplanes and equipment; and

WHEREAS Hughes Tool Company, a Delaware corporation, (hereinafter called "COMPANY") is the holder of certain obligations of TWA in the form of debentures issued pursuant to a three-party agreement dated January 31, 1947, between TWA, COMPANY, and the Equitable Life Assurance Society of the United States; and

WHEREAS in the event of the purchase of the airplanes and equipment from Lockheed Aircraft Corporation referred to above, it will be necessary for COMPANY to subordinate the obligations of the debentures to the obligation of TWA in favor of Lockheed Aircraft Corporation; and

WHEREAS TWA has requested COMPANY to facilitate these negotiations in the respect just mentioned; and

WHEREAS COMPANY is willing at this time to agree and make it certain that at no time in the future will a demand for money be made upon TWA based upon the debentures, provided that COMPANY shall be given the right to approve any contract between TWA and Lockheed Aircraft Corporation arising out of or resulting from the present negotiations above referred to, as it would otherwise have had the power to require as a condition to its subordination of the obligations contained in the debentures;

NOW, THEREFORE, in consideration of th

I.

COMPANY hereby agrees that it shall at all times hereafter forever be foreclosed from asserting that it has any right to a payment on account of any of the above mentioned debentures, in money or in any form other than stock in TWA in accordance with the provisions of the debentures. It is the purpose hereof to assure TWA, and all persons, with whom it might deal, of the fact, and to bind COMPANY to the fact that the above referred to debentures shall at all times hereafter remain only a measure of the right of COMPANY to acquire stock in TWA in satisfaction thereof. This act of COMPANY in no sense constitutes an election to convert the debentures into stock as of this date, or of any other date, and it shall be construed only as a waiver of, and agreement by COMPANY that it shall not hereafter have, any rights under the debentures not relating to stock acquisition. Insofar as they relate to stock acquisition, the debentures and the agreement shall remain in all respects in full force and effect and shall constitute the measure of, as well as the basis for, the right of COMPANY to acquire additional stock in TWA in satisfaction of such debentures, all as therein provided and as if this agreement had not been executed.

II.

TWA agrees that it will enter into no final contract with Lockheed Aircraft Corporation pursuant to the negotiations now being carried on and which were the subject of letter of November 19, 1947 from COMPANY to Lockheed Aircraft Corporation, unless COMPANY shall have approved such contract

IN WITNESS WHEREOF the parties have executed this instrument IN DUPLICATE ORIGINALS as of the 26th day of December, 1947.

UNITED STATES OF AMERICA
CIVIL AERONAUTICS BOARD
WASHINGTON, D.C.

Release authorized
Edward T. Stodola
Examiner
Jan. 30, 1948.

DOCKET NO. 2796

TRANS-HUGHES TOOL COMPANY INVESTIGATION

In the matter of transactions between the Hughes Tool Company and Transcontinental & Western Air, Inc., and related matters.

REPORT OF EDWARD T. STODOLA, EXAMINER

Served: 1-30-48

Opens:
Thomas A. Slack for Hughes Tool Company.
Gerald B. Prorby for Transcontinental & Western Air, Inc.
Gabriel J. Paterno, Public Counsel.

Exceptions, if any, must be filed with the Secretary, Civil Aeronautics Board, Washington, D. C., and served upon all parties within 10 days from the date of service shown above. Briefs to the Board, if any, may be filed with the Secretary of the Board and served on all other parties within 10 days after date fixed for filing exceptions.

DOCKET NO. 2796

TWA-HUGHES TOOL COMPANY INVESTIGATION

Recommended, that the Board find that the transaction evidenced by the letter agreement between the Hughes Tool Company and Transcontinental & Western Air, Inc., dated January 8, 1947, and accepted by the Board of directors of TWA on January 9, 1947, have resulted in a further acquisition of control by Hughes Tool Company over TWA within the meaning of section 408 of the Act.

Recommended, that a subsequent hearing be held to determine whether such further or additional acquisition of control by the Hughes Tool Company is consistent with the public interest and fulfills the conditions of said section 408.

Appearances:

Thomas A. Slack (Andrews, Kurth, Campbell & Bradley) for Hughes Tool Company.
Gerald P. Brophy (Chadbourne, Wallace, Parke & Whiteside) for Transcontinental & Western Air, Inc.
Gabriel J. Patavia and James L. Highsaw, Jr., Public Counsel.

(CAB Orders & Doc

REPORT OF EDWARD T. STODOLA, EXAMINER

PRELIMINARY STATEMENT

This proceeding arises out of an order of the Board instituting an investigation into a letter agreement between the Hughes Tool Company (Toolco) and Transcontinental and Western Air, Inc. (TWA), dated January 8, 1947, and accepted by the board of directors of TWA on January 9, 1947. Among other things, this agreement provided for a substantial money loan by Toolco to TWA in exchange for shares of the corporation into shares of common stock of the carrier, and for the reconstitution, upon the occurrence of certain events, of the board of directors of TWA. The Board instituted this proceeding to determine whether said letter agreement or any arrangement or action related thereto, or any change in the activities by Toolco in the field of aeronautics since October 17, 1944, has resulted or will result in an acquisition of control of TWA for which its approval is required pursuant to section 408 of the Civil Aeronautics Act of 1938, as amended; to determine whether such acquisition of control, if any, is consistent with the public interest and fulfills the conditions of said section 408; and for the purpose of entering any such order or taking any such further action as may be appropriate pursuant to the provisions of the Act.

On May 15, 1947, after a prehearing conference had been held on the issues raised by the Board's order instituting this proceeding, respondents Toolco and TWA filed a joint motion requesting an order of the Board to hear and determine

---

1/ Order Serial No. E-289, dated February 7, 1947.

2/ This is the date of the Board's approval of the original acquisition of control by Hughes Tool Company of TWA under section 408 of the Act, Docket No. 1182, Transcontinental & W.A., Control by Hughes Tool Co., 6 C.A.B. 153;

separately "the preliminary questions" raised by said order of investigation, and to limit the evidence in the proposed preliminary proceeding accordingly. Upon consideration of the motion, the Board on June 18, 1947, ordered that a preliminary hearing be held to determine the question of whether the said letter agreement of January 8, 1947, or any arrangement or action related thereto, or any change in the activities of Toolco in the field of aeronautics since October 29, 1946, has resulted or will result in an acquisition of control of TWA pursuant to section 408 of the Act, and ordered further that the hearing on the other issues raised by the Board's order of February 7, 1947, be deferred pending decision on the aforesaid issue. The Board, however, denied the motion of the parties with respect to any limitation of the evidence in this initial or preliminary proceeding. Hearings were held pursuant to this latter order of the Board in Los Angeles, Calif., on September 10 and 11, 1947.

STATEMENT OF ISSUES

Section 408(a)(5) of the Act, makes unlawful, without Board approval, an acquisition of control of an air carrier by a person engaged in a phase of aeronautics. In November 1943, Toolco applied to the Board under section 408 of the Act for "approval * * * of the control by the applicant of Transcontinental & Western Air, Inc." Toolco was then and thereafter, by reason of several activities, a "person engaged in a phase of aeronautics."

As of December 31, 1943, Toolco owned 440,050 shares of the capital stock of TWA, or approximately 45.6 percent of the total 965,173 TWA shares outstanding on that date. Hearing on the Toolco application for approval of

---

1/ Order Serial No. E-857, granting in part and denying in part the [illegible] of Hughes Tool Company and Transcontinental and Western Air, Inc.

control was held on March 17, 1944. Upon a record in which it was stipulated that the stock then owned by Toolco constituted control of the carrier, the Board approved the acquisition of control of TWA by Toolco. 1/

The order of approval contains no specific reference either to the extent of stock ownership which might be enjoyed by Toolco or to the nature of the aeronautical activities in which Toolco might engage. The Board, however, placed certain conditions in its order of approval which in effect limits the right of Toolco to engage in commercial transactions involving aeronautical property with TWA. 2/

1/ Transcontinental & W.A., Control by Hughes Tool Co., supra.

2/ The following is the text of order of approval issued October 17, 1944:

"Hughes Tool Company, an industrial corporation, having filed an application requesting that the Board approve the acquisition of control, by the purchase of common stock, of Transcontinental & Western Air, Inc., under section 408 of the Civil Aeronautics Act of 1938, as amended, and a full public hearing having been held thereon, and the Board, upon consideration of the record in this proceeding, having issued its opinion containing its findings, conclusions, and decision, which is attached hereto and made a part hereof,

IT IS ORDERED, That the application of Hughes Tool Company be and it is hereby approved, subject to the following conditions:

1. That said approval shall be effective so long as commercial transactions between TWA and Hughes Tool Company and between TWA and any affiliate or subsidiary of Hughes Tool Company are limited to transactions involving complete items of property, the price of which does not exceed $[illegible] each, with the further limitation that the total annual expenditure involved in such commercial transactions by either party shall not exceed $10,000;

2. That TWA shall furnish with its annual report to the Board a supplement thereto showing the total of all cash transactions between TWA and Hughes Tool Company and/or any affiliate or subsidiary thereof, the number of such transactions, the maximum and minimum price of items of property, and the general nature of the commodities involved; and

3. That nothing herein shall restrict or affect the right of purchase by Hughes Tool Company through TWA of aircraft, the purchase of which is provided for in existing agreements between them." (P, 158)

The basic question to be resolved herein is whether under the facts of record in this proceeding there has been any additional acquisition of control of TWA by Toolco requiring approval by the Board under section 408 of the Act. This question in turn raises two problems: First, whether there can be any acquisition of control of TWA by Toolco which requires Board approval in view of the fact that the Board has previously approved acquisition of control of the air carrier by Toolco; secondly, if, as a matter of law, there can be an additional acquisition of control, notwithstanding the Board's prior approval of control pursuant to section 408 of the Act, whether the instant record shows an acquisition of control of such character as must be approved by the Board. Further, as a part of the general problem of the Board's jurisdiction in this type of case but separate from the question whether or not the transaction represented by the letter agreement has resulted in a further acquisition of control, it appears appropriate to inquire whether or not the Board has continuing jurisdiction over a control relationship previously approved by it under said section 408.

STATEMENT OF FACTS

Both TWA and Toolco are Delaware corporations. TWA is holder of certificates of public convenience and necessity issued by the Board authorizing it to engage in air transportation both in the United States and in the international field. All of the capital stock of Toolco is owned by Howard R. Hughes; its principal business is located in Houston, Tex., and consists of the manufacture of oil well drilling tools and equipment. Through an unincorporated division of its business, operated under the name of "Hughes Aircraft Company," with its principal place of business at Culver City, Calif., Toolco has been and is at present engaged in certain activities in the field of aeronautics.

Toolco's control over TWA was acquired through gradual purchases of shares of stock, beginning with an initial purchase of only 600 shares in March 1939. By the end of 1939 Toolco held 157,700 shares. The Board in the original acquisition case, decided in October 1944, found that Toolco's first participation in any phase of civil aeronautics followed the acquisition of its interest in TWA in 1939. 6/ Prior to 1939, the only activities of Mr. Hughes, the sole stockholder of Toolco, or Toolco itself, associated with any phase of aviation were in experimental and developmental work upon the privately owned and operated equipment of Mr. Hughes or his company. Since 1939, and between that time and 1944, the Board found that Toolco's engagement in a phase of aeronautics consisted in the collaboration between Messrs. Jack Frye, then president of TWA, and Hughes, in the preparation and development, primarily for use by TWA, of the transport plane now known as the Constellation, and in Toolco's development and manufacture of aircraft and aircraft accessories in furtherance of the war effort.

In brief, the aeronautical activities of Toolco represented by the Constellation program involved arrangements between Toolco and the Lockheed Aircraft Corporation for the construction and purchase of this four-engine passenger transport plane. After various changes and modifications as to priorities, deliveries, and the number of aircraft to be purchased, Toolco's agreements with Lockheed were assigned to TWA, with Toolco reserving an option to purchase through TWA 25 of the 40 aircraft to be built under the Constellation specifications. The Board, in holding that Toolco was a person engaged

6/ Transcontinental & W.A., Control by Hughes Tool Co., supra, p. 1.

in a phase of aeronautics, paid particular attention to the fact that it retained rights under the Lockheed contracts to 25 Constellations which might have been resold for commercial airline operations. Toolco's option under the contracts has since completely expired and this phase of aeronautical activities on the part of Toolco must be considered ended.

About the time of the contracts for the construction of the Constellations, Toolco acquired 40,000 shares of stock in the Lockheed Aircraft Corporation and was at one time Lockheed's largest stockholder. Toolco's executive vice president described this purchase of stock as a necessary expedient so that there would be a closer contact with Lockheed's operations. When the Army took over the Constellation program during the war, Toolco decided to dispose of its stock in Lockheed. However, through inadvertence, the brokers making the sale failed to dispose of 400 shares of the stock. To the extent that these remaining shares represent an interest in a manufacturer of aircraft, Toolco is engaged, at least indirectly, in that phase of aeronautics. However, this interest in Lockheed perhaps no longer represents a relationship of any real significance, particularly since Toolco's connections with the production and sale of the Constellation aircraft has been terminated. 7/

Aside from the termination of Toolco's relationship with Lockheed in the development of the Constellation transport, the record shows that there has been no substantial change in the aeronautical activities of Toolco since the Board's order of 1944 approving control of TWA. At the time of the hearing in the original control proceeding, Toolco's aeronautical activities were, as

---

7/ As far as shown by this record, TWA has no equipment on order from Lockheed. But, even assuming there have been purchases by TWA of equipment from Lockheed since the date of the hearing or that there may be such purchases in the future, it is difficult to see how any unlawful influence could result

already indicated, closely associated with the war effort.

Located at Houston were the Aircraft Strut Plant, manufacturing aircraft landing gear and struts for the Army, and the Dickson Gun Plant, which manufactured gun barrels and was operated for the Army by Tenico under a management contract. Operations in both of these plants terminated following the close of the war. The major wartime aeronautical enterprise of Tenico consisted of the development of the planned flying boat, HK-1, and a photo reconnaissance plane, known as the XF-11, both on Government contracts. Only one of the former and three of the latter type planes have been produced.

The XF-11 is a plane developed for use in combat and is not adaptable to commercial air transport service. The original contract for the production of the XF-11 contemplated the manufacture of 101 units of this type ship. At the end of the war that contract was cut back to three planes: one static test model and two flying models. The static test model has been delivered to the Army and the first flying model crashed in a test flight and was completely destroyed. The third ship is now in the process of being tested by the U. S. Army, under its responsibility.

HK-1, commonly called the cargo ship, is the only one of its type in existence. This ship, an eight-engine craft alleged to be the largest airplane in the world, was built under a contract let by the Defense Plant Corporation to the Kaiser-Hughes Company. [1/] This contract was later canceled and a new contract was set up between the Defense Plant Corporation (succeeded in interest

---

1/ Kaiser-Hughes Company, which was organized in connection with the cargo ship contract, is legally still alive, though it no longer functions. The charter of this company permits it to engage in the manufacture and opera[illegible] [illegible] there is no indication in the record that this company

by the Reconstruction Finance Corporation) and the Hughes Aircraft Company. Under this contract an arrangement is provided whereby Toolco may be permitted to retain the ship for further experimental purposes of its own at prescribed rental rates. This arrangement permits Toolco to get a credit not to exceed $3,000,000 if it expends more than that sum beyond the $18,000,000 fixed price under the contract for the plane. According to Mr. Deitrich, executive vice president of Toolco, this latter clause was included in the contract to enable Toolco to get whatever experimental and developmental experience from the work that possibly existed in it. As of July 31, 1947, Toolco had expended over $7,000,000 of its own funds in the construction of the cargo plane. While it is clear that the cargo ship itself cannot be used for commercial aviation and that it was not intended to be so used, there is no reason to assume that the experience obtained by Toolco from its construction cannot be used to develop a plane along the lines of this ship, either for the carrying of cargo over long distances or long-range passenger operations.

In addition to the activity involved in the production of the four planes referred to above, which were considered by the Board in the original control proceeding, Toolco has developed and sold, or has contracted to sell, the Hughes Airline Radar Device and certain items of airplane armament, all developed by the aircraft division of the company at Culver City. Furthermore, aside from said purchase contracts, the company has contracts with the United States Government for the following work in the aeronautical field: (1) experimental evaluation of three remote control devices for throttles on airplane engines; (2) experiments on a parevane antenna for Army and Navy aircraft; (3) experiments on controlling aerodynamic devices by fixes on celestial [illegible] (4) experiments involving the design and control of pilotless aircraft;

(5) experiments on radio devices in the VHF (very high frequency) field; (6) the manufacture of ammunition hoists and machine gun feed mechanisms for Army and Navy aircraft; and (7) the production of ammunition feed chutes and booster for machine guns for the United States Navy. From the foregoing, it is evident that the plant at Culver City is primarily a large scale development laboratory for aeronautics.

A further aeronautical activity of Toolco consists of conversion work on 14 C-47 aircraft, which represent Army surplus equipment acquired by Toolco since January 1947 for conversion and resale. The record shows that this activity did not commence with orders for said planes before their purchase, but that Toolco went out and purchased these planes in the hope that they would be readily resalable after conversion. Certain of these planes are currently being sold.

The only equipment directly usable by commercial aviation now being manufactured by Toolco is the Hughes Airline Radar.[2/] This device is an instrument which works on the radar principle and is capable of warning the pilot of his proximity to any obstruction. These devices are now being sold by Toolco to all commercial airlines that wish them, on a nonprofit basis. The sale of the radar device will also be made to TWA at cost. Purchase orders from that carrier have been received by Toolco which recite that the purchases would be made subject to the terms and conditions of the Board's order approving control by Toolco, as amended,[1c/] in Docket No. 1182. Apart from the prospective

---

2/ The other devices manufactured by Toolco and developed by it consist of the ammunition hoists, machine gun feed mechanism and boosters and are purely military equipment.

1c/ On October 29, 1947, the Board, by Order Serial Number E-922, modified the original order approving the acquisition in Docket No. 1182 so as to permit Toolco to sell the radar units to TWA.

sales to TWA, the effect and extent of which is controlled by the Board, Teolco has marketed, and apparently will continue to market, these devices to other purchasers. However, there has been no attempt to market the device formally, the orders received having been more or less spontaneous, flowing from the advertisements which have appeared in connection therewith.

With respect to the contracts upon which Teolco is now engaged for experimental work, the paravane antenna and the very high frequency devices are most likely to be effectively adapted to commercial aviation use. The record shows that title to all the devices now being developed on an experimental basis, save the ammunition hoists and the machine gun feed chute, is in the United States Government and their manufacture for commercial use would require governmental approval. However, there is no reason to believe that the knowledge obtained by Teolco in the manufacture of the paravane antenna or any of the other devices hereinabove referred to, could not readily be applied to the manufacture of similar equipment useful in commercial aviation. The record, however, indicates that Teolco has no present plans for engagement in the commercial production and sale of such aircraft equipment.

There have been but small additions to the stock held by Teolco in TWA since the date of the Board's approval of control. Whereas on October 17, 1944, Teolco owned a total of 440,050 shares, or about 45.1 percent of TWA's outstanding stock, it held but 14,600 more shares, or approximately 46.1 percent of TWA's total outstanding shares, on January 1, 1947. The remaining share holdings are widely dispersed.

The present and contemplated aeronautical activities of Teolco clearly establish its engagement in a phase of aeronautics under section 408 of the Act. We now turn to an examination of the letter agreement of January 8, 1947.

To understand the reason for the letter agreement of January 8, 1947, it is necessary to examine Teolco's relationship to TWA during the period between the end of the recent war and the date of the agreement. The history of this

effect upon Toolco's control of the carrier.

Prior to the end of the war TWA was described by Mr. Deitrich as having "plenty of capital". Like other carriers, TWA was then operating under war-engendered restrictions in equipment. With the war's end, however, came the necessity for expansion, both in equipment and personnel, to operate a network of newly authorized routes. To this end it became imperative to raise additional capital. Efforts at additional financing, however, disclosed a gradual but ever widening rift between the TWA management and Toolco with respect to [illegible] ting plans and policies for the carrier. No attempt will be made here to recount or outline all of the differences between the TWA management and its principal stockholder. Nor are the merits of such differences of concern here. They are relevant here only as they reflect the background of the events which led to the letter agreement.

As early as January 1945 there were some preliminary discussions between Mr. E. Lee Talman, then senior vice president of TWA, and Mr. Deitrich, with respect to financing for the carrier. Mr. Deitrich then recognized that TWA's capital needs could not be financed without increasing the carrier's common stock base. Mr. Deitrich further informed Mr. Talman that final decision in the matter was up to Mr. Hughes, but indicated that he would do all he could to assist in obtaining Mr. Hughes' approval. Thereafter, Mr. Fryo, then president of TWA, and Mr. Hughes had a number of discussions with respect to further financing for TWA. Nothing, however, came of these efforts.

There is evidence to indicate that the management of TWA had been considering plans for capital expansion long before the financial condition of TWA became critical. The officials of TWA and Mr. Deitrich were in agreement that the company needed a broader stock base and that any plan for raising capital required the sale of additional [illegible] stock. Yet, no definite program for

arriving at a financing program acceptable to Toolco were impeded by the lack of faith on the part of Mr. Deitrich and the board of directors of Toolco in the TWA management. In fact, Mr. Deitrich testified that he had lacked confidence in the TWA management for several years.

Following the failure of the TWA management and Toolco to agree on a method to finance TWA's postwar needs, a number of other proposals to raise the required capital came into being. During the latter part of 1945, Mr. Frye approached the Export-Import Bank to establish a line of credit in the amount of 15[illegible] million dollars. This loan was to be reduced by the amount of funds and credit secured from private sources. Efforts were also made about this time to secure a loan from the Reconstruction Finance Corporation in the amount of 10[illegible] million dollars. On the assumption that one or the other of the foregoing loans might materialize, the management of the carrier felt that perhaps some interim financing might suffice. This led to a proposed bank loan in the amount of 17 million dollars for the purchase of equipment in which the Commercial National Bank and Trust Company of New York and other banks were to participate. Mr. Frye, however, considered this loan inadequate. Meanwhile, during November 1945 a program of debt financing was entered into with the Equitable Life Assurance Society of the United States whereby Equitable purchased an issue of 3 percent sinking fund debentures from the carrier in the principal amount of 3[illegible] million dollars. 11/ Then in the early months of 1946 Equitable purchased an issue of 2½ percent sinking fund debentures in the amount of 10 million dollars from TWA. Sinking fund payments of 4 million dollars annually were required under the two series of debenture loans. These payments were to be used forthwith for the retirement of outstanding debentures.

11/ The debentures were issued pursuant to a purchase agreement dated [illegible]ecember 3[illegible], 1945, and in accordance with the provisions of an indenture dated [illegible] 1, 1946. The Equitable loan was an equipment loan [illegible] that 60 percent

There is nothing in the record to indicate that a successful flotation of stock in a large volume could not have been accomplished at any time during 1945 and during the greater part of 1946. But even as late as 1946 no plans for equity financing had been agreed upon since Mr. Hughes had not consented to such financing. It appears that TWA officials were apparently unable to obtain a firm commitment from Mr. Hughes for equity financing, although the record shows that there probably would have been no objection to such financing on the part of Mr. Hughes "under proper conditions." One of such conditions, as far as both Mr. Deitrich and Mr. Hughes were concerned, was a change in the management of the carrier. Accordingly, it definitely can be concluded that the lack of financing at least up to this date, resulted from the differences of opinion between the TWA management and its principal stockholder and from the lack of faith expressed by Mr. Deitrich and the board of directors of Trafco in such management.

It further appears from the record that the TWA board of directors were divided over plans to finance the carrier and with regard to policies regarding its operation. Prior to January 9, 1947 all the directors of TWA were persons acceptable to Mr. Frye. Of the 11 directors who were members of the TWA board prior to its reconstitution on January 9, five were employees of the company and opposed a managerial reorganization of the carrier. The six other nonemployee directors -- the so-called "outside" directors -- sided with Trafco on the necessity for reorganization of the carrier's administrative or managerial set-up. In Mr. Deitrich's opinion, the division in the board of directors was a very strong one, although the minutes of the directors' meetings during this period do not reveal such dissension.

When the anticipated loans from the Export-Import Bank and the RFC did not materialize, presumably because the carrier failed to establish that pri-

led to negotiations for large-scale financing through a group of bankers headed by the Bankers Trust Company of Pittsburgh, now the Mellon National Bank and Trust Company. In August 1946 a concrete plan was evolved which would have raised considerable capital. The plan proposed equity financing for TWA to the extent of 25 to 35 million dollars, direct credit from the banks to the extent of 25 million dollars, and an additional 10 million dollars to be furnished by Toolco. The amount to be furnished by Toolco was also to be raised through a stock issue. This plan thus contemplated equity financing to the total extent of 35 or 45 million dollars. It did not involve prepayment or retirement of the Equitable loan. The banks attached two conditions to the proposed financing: (1) a change of management for TWA, and (2) the security market maintaining its relatively favorable mid-1946 level.

The TWA management was favorable to the so-called Bankers Trust plan except that it did not want itself replaced. Again, differences of opinion between the management of the carrier and the principal stockholder apparently delayed the acceptance of the Bankers Trust plan, even though Mr. Hughes had agreed to the substantial equity financing involved in that proposal. In the end nothing was done until an unfavorable turn in the security market about September 1946 resulted in a withdrawal of the Bankers Trust plan.

Toward the end of 1946 TWA's financial condition had become critical. All efforts at refinancing had failed. The record shows that in the closing months of 1946 TWA could not attract any capital and was facing bankruptcy. The record further shows that Toolco was willing to be of further financial assistance but was unwilling to advance additional money to save the carrier without taking precautions to assure itself that the money would be wisely spent. It was Mr. Deitrich's definite opinion that certain economies were necessary [illegible] life and welfare of TWA and he believed that the TWA management prior

to January 9, 1947 was not disposed to effectuate them. Because it was felt that the viewpoint of the majority of stockholders was not adequately represented on the TVA board of directors, plans were made to increase their number or to shorten their term of office. This, however, was not effected because the carrier's bylaws at that time prevented the proposed changes and because of Mr. Deitrich's fear of possible unfavorable publicity which might result. Thus one of the purposes of the letter agreement was the selection of a new or more sympathetic board to run the carrier.

All these factors contributed to the crisis confronting TVA in the late months of 1946. The letter agreement of January 8 became the means chosen to reorganize the carrier and to save it from bankruptcy.

The letter agreement of January 8, 1947, between Toolco and TVA was accepted by the board of directors of TVA on January 9, 1947. This agreement provides, among other things, for: (1) a loan by Toolco to TVA in the amount of 10 million dollars and the issuance to Toolco of 2 3/4 percent notes due June 2, 1956, for such loan with an option to convert said notes into common stock of TVA; (2) diligent endeavor on the part of Toolco to arrange a 40-million dollar loan of credit with the RFC; [12/] (3) a rearrangement of the Equitable financing under the 40-million dollar debenture loan; (4) a reconstitution of the board of directors of TVA so that the majority thereof will be nominees of Toolco; and (5) a requirement that no change be made in the bylaws of the carrier without the written consent of Toolco until all the foregoing changes and conditions had been made.

12/ The loan contemplated was also to be an equipment loan and is no longer being pressed because it was Mr. Deitrich's opinion that no additional equipment is required by the carrier. However, attempts were being made along the line of the hearing herein to secure a general credit from the RFC in the [illegible] amount of 10 million dollars.

The notes issued to Toolco under the agreement may be converted at any time prior to their maturity, on 10 days notice, into TVA common stock at the option of Toolco and there appears no possible way for the carrier to avoid the conversion whenever Toolco elects, save bankruptcy. The notes themselves are convertible at a price equal to the average price of the TVA stock for the last 10 days prior to the notice date on the New York Stock Exchange, but in no event for a price less than $5 per share. To provide for the possible conversion, 2,000,000 shares of TVA common stock at $5 par value have been authorized. Thus, if Toolco were to acquire the entire 2,000,000 shares authorized at the minimum conversion price, it would then be the owner of about 80 percent of the common stock of TVA issued and outstanding.[13/] It should be noted that stock in TVA carries with it no preemptive rights, so that upon the issuance of additional shares present stockholders, other than Toolco, may not require that they be permitted to subscribe to shares proportionate to their present holdings in the carrier. Accordingly, the letter agreement gives Toolco an inalienable right to acquire up to a possible 80-percent stock interest in TVA. It should also be noted that the letter agreement further provides that TVA may not make payments on Toolco's loan before payment in full is made in the 6-million dollar debenture loan held by Equitable, and any advances made to the carrier by the RFC. Under the circumstances, it is not likely that conversion, if Toolco should so elect, could be avoided except by an act of bankruptcy by the carrier.

13/ There is a possibility, however, that TVA may accelerate the conversion since the agreement provides that on January 1, 1950, TVA may require Toolco to exercise its option to convert. The record is not clear as to why such condition was inserted into the letter agreement.

If Toolco should convert at $15, the closing market price of TVA stock on [illegible], 1947, it would obtain approximately 67 percent of all TVA stock

The loan by Toolco, as just noted, is junior to the 40-million dollar indebtedness to Equitable. TWA was technically in default on this loan at the time the letter agreement was accepted. As a partial consideration for Toolco's loan, Equitable agreed to a rearrangement of the sinking fund requirements under the indenture by making the terms of payment more lenient. The 16-million dollar Toolco loan was advanced to TWA in staggered sums, with an initial advance of 5 million dollars on January 31, 1947. Under a so-called three-party agreement, Equitable agreed to amend the indenture to permit the Toolco loan when the full 16 million dollars became available to the carrier. This was handled in such a manner as to automatically place TWA in default of the indenture if Toolco failed to loan the second 5 million dollars. In the event of default after the full loan had been made, Toolco and Equitable agree to execute a voting trust agreement to which will be pledged all Toolco's shares in TWA either presently owned or subsequently acquired. Toolco will appoint one and Equitable two of the three voting trustees.

Immediately upon the consummation of the letter agreement, the board of directors of TWA was reconstituted and 13 additional directors were added to the original 11 then upon the board. The directors added were all nominees of Toolco.[16/] In addition to the reconstitution of the board of directors, certain

---

15/ Agreement between Toolco, TWA, and Equitable.

16/ These were Palmer Bradley, Thomas A. Slack, William Streetman, and Richard F. Burns, all members of the law firm representing Toolco; A. V. Leslie, a former banker and now a Toolco employee; Harry Rogers, a production man brought to Kansas City to study maintenance problems of the carrier; W. H. Seiler, another employee of Toolco; A. D. Simpson, president of the National Bank of Commerce of Houston; Oscar Holcomb, Mayor of Houston; and C. E. Millikan, F. J. O'Hara, George C. Summers, and Lloyd Wright, all attorneys. Mr. Deitrich testified that all 13 of these men were well known to the principal stockholder and that he knew that they could be relied upon to exercise that degree of judgment and discretion so that the money loaned to TWA by Toolco would be properly dedi-

other changes were made in the operation and management of the air carrier after January 9. These changes mainly were in the nature of the replacement of the top management of the carrier, the institution of a rigid program of economy, and the importation of Toolco personnel to analyze TWA problems. The top management of TWA was vested in a temporary executive committee which, at all times had as two of its members either Mr. Bradley and Mr. Leslie, or Mr. Deitrich and Mr. Leslie. Messrs. John Collings and Paul Richter, representing the management of the carrier, also served on this Committee.

As a result of these changes the record shows that certain suggestions by Mr. Deitrich were almost immediately thereafter carried into effect. These changes related to the top level management of the company and indicate at least the degree to which the new, and then temporary, management of the carrier on and after January 9, 1947, found itself in agreement with the wishes of the principal common stockholder. Further changes consisted of simplification of the corporate structure of TWA and the cancelation of the Lockheed equipment program.

The regular annual stockholders' meeting of the carrier was held on April 24, 1947. The TWA board was then reduced in number from 24 to 14. Of the 14 individuals who are now members of the TWA board, 6 of the 13 nominated by Toolco on January 9 remained. They are Messrs. Bradley, Leslie, Simpson, Wright, Holcomb, and Streetman. To their number were added Mr. A. B. Eisenhower, a Kansas City banker, and Mr. Deitrich. The remaining 6 members of the present board are carry-overs from the board of TWA that existed prior to January 9. With this board there exists little probability of conflict over Toolco's policy for TWA.

At this annual stockholders' meeting the TWA bylaws were amended to permit the removal of any director without cause by the vote of the majority of the stock present and entitled to vote at any special meeting of the stock-

holders. After the annual stockholders' meeting, the newly elected board of directors further amended the bylaws of the carrier to provide, among other things, that special meetings of the stockholders, for any purpose other than that regulated by statute, could be called at the request of holders of 20 percent or more of the capital stock. At such a meeting the stockholders can increase or decrease the number of directors for the purpose of obtaining control. These amendments were obviously designed to make the new board more responsive to the stockholders' wishes.[17/]

It would appear that all of the management powers acquired by Toolco as a result of the letter agreement could have been assumed in any event through the voting of its stock at the annual stockholders' meeting held on April 24, 1947. However, it is doubtful whether in the absence of the letter agreement Toolco could have brought about these changes prior to that stockholders' meeting.

SUMMARY OF THE LAW

As already indicated, both Toolco and TWA are Delaware corporations. Section 26 of the Delaware Corporation Law[18/] provides that a corporation may amend its certificate of incorporation by adding to or decreasing its corporate powers, or by substituting certain powers and purposes in place of those already present therein, or by increasing or decreasing its authorized capital stock or reclassifying it, or by making any other change or alteration in its certificate that may be desired. Every such amendment, however, requires the affirmative vote of a majority of the stock of that corporation

17/ The bylaws of TWA may be altered or amended by either the stockholders or the board of directors.

18/ Revised Code of Delaware 1935, Chap. 65, Art. 1, Par. 2058, Sec. 26.

entitled to vote on such amendment. Under section 39 of the Delaware Corporation Law[19] proceedings for dissolution must be approved by two-thirds of the voting stock of said corporation, and under section 59 of that law[20] an agreement of merger between a Delaware corporation and another such corporation, or a corporation of any State must, at least insofar as the Delaware Corporation is concerned, have the approval of two-thirds of the total number of shares of its capital stock.

The provisions of the Civil Aeronautics Act which are principally involved herein are as follows:

> "Sec. 408 (a) It shall be unlawful, unless approved by order of the Authority as provided in this section -
>
> • • •
>
> (5) For any air carrier or person controlling an air carrier, any other common carrier, or any person engaged in any other phase of aeronautics, to acquire control of any air carrier in any manner whatsoever;
>
> • • •
>
> (7) For any person to continue to maintain any relationship established in violation of any of the foregoing subdivisions of this subsection."
>
> • • •

Subsection (b) of section 408, which requires an application to the Board and a hearing, provides in part:

> " • • • Unless, after such hearing, the Authority finds that the • • • acquisition of control will not be consistent with the public interest or that the conditions of this section will not be fulfilled, it shall by order, approve such • • • acquisition of control, upon such terms and conditions as it shall find to be just and reasonable and with such modifications as it may prescribe • • •"

19/ Revised Code of Delaware 1935, Chap. 65, Art. 1, Par. 2071, Sec. 39, as amended by 45 Laws of Delaware (1945) Chap. 157, Sec. 3 pp. 596-598.

20/ Revised Code of Delaware 1935, Chap. 65, Art. 1, Par. 2091, Sec. 59, as amended by 43 Laws of Delaware (1941) Chap. 132, Sec. 12, pp. 458-461.

The Board has not heretofore had occasion to render decision upon the question whether, once an acquisition of control of an air carrier has been approved pursuant to section 408, any subsequent transaction can result in an acquisition of control which must also be approved under that section. However, in Railroad Control of Northeast Airlines, 4 C.A.B. 379 (1943) the Board in a dictum laid down an interpretation of section 408 which may be applicable to such situation. In that case, the Board found that the Boston & Maine and Maine Central Railroads jointly exercised complete control of Northeast from the date of its organization until 1938, and enjoyed full and positive control from said date until October 1940. The question presented was whether said railroads acquired control of Northeast Airlines within the meaning of section 408(a)(5) of the Act since the effective date of the Act. The Board found that control had been gradually relinquished so that on the date of the hearing the parties retained only about 4% percent of the stock of Northeast, and concluded that section 408 (a)(5) did not apply to continuance or maintenance of control by said railroads where control had been acquired by them before the effective date of the Act and had since been diminished. The Board recognized:

> ". . . that 'control' as used in section 408 does not necessarily depend upon the ownership of any specific minimum percentage of stock or other ownership rights but rather depends, in the light of all the facts and circumstances in a particular case, upon whether there exists as a matter of fact a power to dominate or an actual domination of one legal personality by another." (p. 381)

After concluding that it had no jurisdiction in that case because control had been acquired prior to the effective date of the Act and not subsequently increased thereafter, the Board said:

"While we do not believe that Congress intended us to exercise jurisdiction over a control relationship created prior to the effective date of the Civil Aeronautics Act and existing unchanged from that date forward, we do believe that we possess jurisdiction in a case where the extent of effectiveness of control has increased. The term 'control' does not connote an absolute concept, but represents the amount of power and influence over the controlled corporation. The number of powers and the degree of influence which the controller held on the effective date of the Act must be deemed approved by Congress, but a subsequent increase in the number of powers, or a strengthening of influence, does not in our opinion share this immunity. This is particularly true in a situation where the control at the time Congress acted was only partial, but becomes complete after that time. [illegible] in the event of a change in control whereby different or other common carriers acquired controlling interests in an airline, this change would, of course, be subject to our approval under all of the provisions of section 408." (p. 366)

Factually, the situation under consideration in the present proceeding differs somewhat from that involved in the Northeast case. Since the railroads had acquired control of Northeast prior to the effective date of the Act, such control was recognized as lawful by the Board on the ground that it must be deemed approved by Congress. This control was not required to meet the statutory test of public interest; no pre-existing approval of control by the Board was involved. Control on the part of the railroads had not increased since the effective date of the Act. Accordingly, the Board found it unnecessary to pass upon the applications for approval of control. However, the Board insisted that it would pass upon any increase in "the extent of effectiveness of control."

Though the circumstances giving rise to the obiter in the Northeast case differ from the facts herein, the present proceeding likewise raises the issue of the application of the words "increase in the extent of effectiveness of control," if the acquisition of additional shares of stock by Toolco would thereby enable it to exercise greater power or effectiveness of control than that contemplated under the Board's original order of approval of October 27, 1944.

Provisions of the Civil Aeronautics Act relating to consolidation, merger, and acquisition of control were modeled after similar provisions of the Interstate Commerce Act and amendments thereto. Section 408 of the Civil Aeronautics Act was borrowed almost word for word from section 213 of the Motor Carrier Act of 1935.[21] Section 213, on the other hand, was patterned on section 5 of the Transportation Act of 1920.[22] Accordingly, persuasive weight may be given herein to decisions of the Interstate Commerce Commission construing the word "control" and dealing with the concept of acquisition of control or changes in the extent of effectiveness thereof in relationships comparable to that before us in the instant proceeding.[23]

The Commission has rendered decisions in varying situations involving changes in the character, extent or effectiveness of control on the part of an acquirer of a carrier subject to the unification and control provisions of the Interstate Commerce Act. In brief, public counsel have submitted a survey of I.C.C. cases bearing on the general issue of the Commission's jurisdiction as affected by existing conditions of control and the scope or extent of further control sought to be established.

21/ 49 Stat. 868.

22/ 41 Stat. 481. The Motor Carrier Act became Part II of the Interstate Commerce Act. The unification and acquisition of control provisions of the Interstate Commerce Act were further revised by the Transportation Act of 1940 (54 Stat. 905). This latter Act in its Part III extended Commission jurisdiction to water carriers, while Parts I and II govern as theretofore rail and motor carriers, respectively. Section 213 of the Motor Carrier Act was repealed; its provisions were removed to Section 5, Part I. Section 5(2) to (13) now deals with unification and acquisition of control for all three types of carriers.

23/ Acquisition of Marquette by T/A-Intercontinental Division 2 C.A.B. 479 (1940); American President Lines, et al., Petition, 7 C.A.B. 799 (1947); Cf. United States Navigation Co. v. Cunard S.S. Co., 284 U.S. 474, 480-481 (1932).

A number of the decisions involve somewhat different ownership and control relationships than under consideration herein. To the extent, however, that the various decisions hold that further control of a carrier may be acquired through stock purchases where the pre-existing control does not cover all of the corporate activities of the controlled company they constitute a rather consistent policy on the part of the Commission in requiring approval of stock-purchase transactions vesting substantive rights in an acquirer of stock it did not theretofore have. In fact, several of these decisions involve situations which bear strong analogy to the circumstances present in the instant proceeding.

The Commission's holdings as to its jurisdiction with respect to applications proposing acquisitions in situations involving pre-existing control of one type or another may be summarized as follows:

(1). Where the applicant already owns a majority of the stock more of which is sought to be acquired, Commission approval is not required where such acquisition will not result in any other or further control on the part of the acquirer.

It was so held in Control of Peoria & Eastern by Big Four, 71 I.C.C. 767 (1922) where an application was filed with the Commission by the Cleveland, Cincinnati, Chicago & St. Louis Railway Company to purchase all the outstanding stock of Peoria not already owned by the applicant. At the time of filing of said application, applicant owned $5,000,100 par value of Peoria's capital stock of which there was outstanding $9,994,000 out of total authorized capital of $10,000,000. Based upon these facts the Commission stated:

"By paragraph (2) of section 5 of the Interstate Commerce Act, we are authorized to approve the acquisition, to the extent indicated by us, by one carrier engaged in interstate commerce of the control of any other such carrier by the purchase of stock or in any other manner specified. In this case, however, so far as appears, the purchase of the remaining stock of the carrier will not give the applicant any other or further control over such carrier than that which it had acquired prior to the enactment of the paragraph. It can only be said that the applicant, in this proceeding, is seeking to acquire that which it admittedly has heretofore acquired. We are, therefore, of the opinion that the application is not within the scope of the paragraph above referred to." (pp. 747-748).

A similar conclusion was reached in Kittrell-Central-Dixie Motor Coach Corp., 35 M.C.C. 25 (1939) where the Commission stated that a majority stockholder need not obtain approval of the purchase of additional shares of stock. The Commission in passing upon an application filed under section 213 of the Motor Carrier Act said:

> "* * * as previously indicated, applicant already controls Sunshine through ownership of a majority of its capital stock. The proposed purchase by applicant of 611 additional shares of stock in Sunshine accordingly does not involve an acquisition of control of that carrier within the meaning of section 213 * * *" (p. 28).

Other decisions have followed the same rule.[24/] However, the Commission has assumed jurisdiction to approve control by lease where control by stock ownership, even if legally complete, already existed.[25/]

2. Where an acquisition by one who is already a majority stockholder of a carrier results in the domination of more activities of the controlled company than permitted a majority stockholder or in the creation of a substantive measure of additional control, the Commission has taken the position that such an acquisition is subject to its jurisdiction.

24/ See, in accord, Securities of Colorado & Southern, 86 I.C.C. 213, 218 (1924); Securities of Chesapeake & N. Ry. Co., 156 I.C.C. 248, 249 (1929).

25/ Acquisition of Control of C.V. & N.W.R. by P.R.R., 70 I.C.C. 201

Perhaps the leading case on this proposition is Control of Pig Four by New York Central, 72 I.C.C. 98 (1922). This case involved prior control on the part of the New York Central through ownership of 52.9 percent of the common stock of the Pig Four, but none of the latter's preferred stock, which had the power to reject any increase in bonded indebtedness or any lease resulting in increased fixed charges. The Commission, in assuming jurisdiction and granting New York Central authority to acquire a majority of the preferred stock, said: 28/

"* * * Such ownership (of 52.9 percent), however, does not constitute complete control, since it appears that the consent of a majority of the preferred stock is required for the issuance of the Pig Four of any evidences of funded debt or the making by it of any lease of railway property which may entail increased fixed charges. This application is made, therefore, for authority to acquire that further and more complete measure of control which will result from the ownership by the applicant of at least a majority of the preferred stock." (pp. 96-97, emphasis added).

Similarly, in Control of C. St. P., M. & O. Ry. Company, 105 I.C.C. 543 (1926) application was filed under section 5(2) of the Interstate Commerce Act by the Chicago & Northwestern Railway, which then owned 50.04 percent of the stock in Omaha Railway, for authority to acquire further control of the latter road. The Commission adopted the view that further control of the Omaha Rail-

---

28/ Respondents argue that this and the two cases that follow are distinguishable from subject proceeding on the grounds that (a) no order of prior approval authorizing the pre-existing control had been issued by the Commission in those cases, and (b) that acquirers voluntarily applied for approval. The absence of a prior ratification by the Commission of the status of control existing at the time of the applications for approval of further control in these cases does not make irrelevant the doctrine established by this group of decisions. The Commission took the position that "control" within the meaning of the statute meant complete legal control. The existence of a prior order of approval would have been significant only to the extent that it may or could have by its terms granted the acquirer the full and complete control contemplated by the statute. Moreover, even if there had been prior orders of approval, they may not have approved degrees or elements of control not then in existence. Furthermore, the fact that the applications for approval were voluntarily made does not make those decisions less useful as authority. Obviously, jurisdiction under the statute could not have been conferred upon the Commission by the parties, assuming the parties are correct, whether it acts pursuant to voluntary applications or on its own motion.

way by applicant would enable applicant to take steps toward complete unification of operations through lease or merger or consolidation, as permitted by law, and exercised jurisdiction to approve the acquisition. In Peoria & E. Ry. Co. Control, 236 I.C.C. 749 (1940) the Commission approved acquisition by applicant Cleveland, Cincinnati, Chicago & St. Louis Railway of further control of the Peoria & Eastern by purchase of additional shares of stock where the applicant already owned a numerical majority (50.02 percent) of the shares outstanding. The Commission found that while a bare majority gave the applicant a measure of control over the Peoria & Eastern, under the laws of Illinois various corporate actions, including the renewal of a charter by railroad corporations, must be approved by a vote of more than such a majority. The applicant sought approval of the purchase of additional shares of stock in order to accomplish renewal of the Peoria & Eastern charter in accordance with Illinois law. 27/ The purchase of additional shares was found to represent a further acquisition of control.

A case recently decided by the Commission has likewise recognized that control through stock ownership of most but not all corporate activities does not prevent the Commission from authorizing further or additional control. In Wheeling and Lake Erie Railway Company Control, Finance Docket 15685, decided June 25, 1947, an application by the Nickel Plate, the Chesapeake and Ohio Railway Company and the Allegheny Corporation was filed under section 5(2) of the Interstate Commerce Act, seeking approval of the acquisition by Nickel Plate of certain shares of stock in the Wheeling Railway Company. C. & O. and Allegheny

---

27/ The charter of a railroad corporation can be renewed, under the laws of Illinois, by stockholder's action if three-fourths of the votes cast at any regular election for that purpose favor such renewal, provided, however, that those voting for renewal agree to purchase the stock of those opposed. Applicant sought approval of its plan to purchase additional shares in order to be able to vote for renewal and to be in the position to make the required agreement, if necessary.

joined in this application because of C. & O.'s direct control of Nickel Plate and Alleghany's indirect control of Nickel Plate through the C. & O. Nickel Plate is controlled by C. & O. through ownership of 77 percent of its outstanding common stock and C. & O. is in turn controlled by Alleghany through the ownership of 6.74 percent of C. & O.'s common stock. Nickel Plate's interest in Wheeling amounts to nearly 47 percent. C. & O.'s interest in it is 21 percent, and Alleghany's interest in that company is 0.01 percent. Collectively these interests aggregated approximately 68 percent.[28] It was proposed that Nickel Plate purchase C. & O.'s and Alleghany's stock interests in Wheeling, which would have the effect of giving it, Nickel Plate, the approximate 68 percent ownership of that company. The Interstate Commerce Commission held, on these facts, that Nickel Plate's acquisition "of further control of the Wheeling and Lake Erie Railway Company through stock ownership • • • is a transaction within the scope of section 5(2) of the Interstate Commerce Act • • •"

The Commission thus found that the conversion of a 47-percent interest into a 68-percent legal ownership of the company was a transaction subject to its jurisdiction, and in so finding stated as follows:

> "Protection of the Nickel Plate's interest in Wheeling might be affected through acquisition of enough of the latter's stock, 3 or 4 percent, to give the Nickel Plate a majority, or numerical control; but the applicants urge that merger or consolidation of the companies is necessary to accomplish benefits of unified operation, and for that purpose a 2/3 assenting vote is required by Ohio law." (p. 12).

28/ This control relationship was previously approved in Finance Docket No. 15161 et al, Wheeling & Lake Erie Railroad Co. Control, 267 I.C.C. 163 decided December 10, 1946, wherein the Commission approved the sale to Nickel Plate of 78,145 Wheeling shares beneficially owned by the C. & O. Nickel Plate thereby acquired a near 47-percent interest in Wheeling. Prior thereto the C. & O. and Nickel Plate owned 35.1 and 32.9 percent, respectively, of the voting stock of the Wheeling and all of these shares of stock were deposited in trust. Before December 1946, there therefore existed, as far as C. & O. and Nickel Plate were concerned, a separation of ownership from control. The events leading to the trusteeing of the Wheeling stock are set forth in 156 I.C.C. 667. However, by supplemental report and order in Finance Docket No. 15161, dated March 10, 1947, the Commission approved and authorized, among other things, a termination of the trust of all of the Wheeling stock acquired by Nickel Plate.

It thus appears that the Commission recognized in this case that a change from actual to legal ownership of Wheeling, where the change referred to carried with it the power to satisfy the provisions of Ohio law with respect to a possible prospective merger or consolidation of Nickel Plate and Wheeling, that did not theretofore exist in the acquirer, was a transaction subject to its jurisdiction and for which its approval was required under section 5 of the Act.

It is true, as respondents point out, that the Commission has exercised almost continuous jurisdiction over the stock of the Wheeling railroad and, further, that the Commission, in the same proceeding in which it approved the acquisition of a 47-percent interest in Wheeling on the part of Nickel Plate, ordered the shares still owned by the C. & O. and Allegheny, representing 21 percent of the voting stock of Wheeling, placed in another trust. But it is obviously absurd to contend, as respondents do, that the terminology of the Commission in approving the acquisition by the Nickel Plate of "further control" of the Wheeling in Finance Docket No. 15665 was a mere characterization of the change from pre-existing shared control by the three carriers to individual control by Nickel Plate. On the contrary, the Commission clearly approved the "further control" on the part of Nickel Plate as a jurisdictional acquisition within the meaning of section 5(2) of the Interstate Commerce Act. 29/

3. An increase in the ownership of the number of shares which transforms what constitutes de facto or actual control into legal control represents an acquisition subject to the jurisdiction of the Commission.

29/ The application in Docket No. 15665 was made under section 5(2) of the Act. If no element of increased or additional control were involved the Commission should have dismissed the application for the want of jurisdiction and perhaps merely entertained an application to terminate the second trust to permit Nickel Plate to buy the remaining voting stock in Wheeling.

Jurisdiction in this type of situation was first upheld by the Commission in Control of Columbia, Newberry & Laurens R. R., 117 I.C.C. 219 (1926). There the applicant, Atlantic Coast Line Railroad, already owned 45.8 percent of the stock of the Columbia, and enjoyed virtual control through the cooperation of interests friendly to the applicant, who held 7.5 percent of the stock. In spite of finding that applicant enjoyed de facto control the Commission assumed jurisdiction and approved applicant's request for further control.

In Dollar Lines - Purchase - United States Steamship Co., 30 M.C.C. 69 (1941), Pacific Greyhound Lines, owner of 60 percent of Dollar Lines outstanding stock, sought authority under section 5 of the Interstate Commerce Act to acquire control of Dollar Lines through the purchase of the remaining 60 percent of its outstanding stock. 30/ It was contended by Greyhound that it exercised exclusive actual control and management of Dollar Lines with the oral consent of the single 60 percent stockholder and that no acquisition of control was involved because the proposed purchase of 60 percent of the stock would give it no further control than that which it was already exercising.

The Commission found that Pacific Greyhound was in actual control of the company at the time of the application but rejected its argument, stating:

> "Apart from the question of whether or not Pacific Greyhound acquired actual control of Dollar prior to the effective date of the Act, and which question we are not now determining, these applications * * * seek our authority for acquisition of control of Dollar by Pacific Greyhound through ownership of its capital stock. Such acquisition of control clearly requires our prior authorization under section 5. In considering this proposal, we cannot overlook the fact that Pacific Greyhound at present holds actual control of Dollar * * *" (p. 74).

30/ This case also involved a joint application by Dollar Lines and the United States for the purchase by Dollar of the operating rights of United States.

While the Commission disapproved the proposed acquisition on the part of Greyhound, principally because the 49-percent control was effectuated without prior Commission approval, the rule established by the decision on the jurisdictional issue involved appears sound. Greyhound was attempting to transform a working practical control into an assured legal domination of the controlled carrier. The Commission recognized that a change from actual to legal control was a substantive acquisition requiring its approval.

The Commission has required approval of increase in control in other cases involving transfer of actual control to legal control. In Hegshire-Control - M.E. & C. Motor Lines, Inc., 35 M.C.C. 33 (1939), the Commission approved an application under section 213 of the Motor Carrier Act whereby Hegshire, a 33 - 1/3-percent stockholder became a 50-percent stockholder through the retirement of 2C shares of the company's stock, leaving 4C shares outstanding equally owned. Subsequently, Hegshire sought the Commission's authority under the same section to acquire the remaining shares of stock of M. E. & C. Motor Lines. This application was likewise approved by the Commission, as consistent with the public interest, under that section. Hegshire - Control M. E. & C. Motor Lines, Inc., 35 M. C.C. 487 (1940). Similarly, in Black Hills Stages Inc. - Purchase - Black Hills Transp., 25 M.C.C. 529 (1939), the Burlington Transportation Company, a 50-percent stockholder in Black Hill Stages was permitted to acquire complete control of Black Hills Stages, through the purchase of the remaining 50 percent of its outstanding stock. 31/

Respondents argue that the Hegshire and Black Hills decisions are irrelevant to the problem before us because they involve changes from shared control to individual control. It is much the same claim of inapplicability that

---

31/ Prior to the approval, the Commission had permitted Burlington Transportation to acquire control jointly with Black Hills Transportation Co. of Black Hills Stages (25 M.C.C. 171).

respondents attempted to apply to the Wheeling case, supra. The argument proceeds on the premise that where several parties each own a control of a carrier, the purchase by one of the interest of another is, both practically and legally, the acquisition of "a control" by the purchaser. In other words, it is contended that the acquisition of "complete" or further" control referred to by the Commission in these cases simply represents the acquisition by the purchaser of the remaining interests in the controlled carrier.

This is by no means so. As already noted in the comments on the Wheeling case, the Commission specifically treated the transfer of interests involved in this type of situation as jurisdictional acquisitions within the meaning of the statute. True, the Commission did not elaborate on its reasons for so doing. But there would appear to be no reason why an acquiring stockholder could not secure an additional quantum of control through an acquisition of stock from one or more stockholders of a controlled carrier rather than from the corporation itself.

4. A change from indirect to direct control through the elimination of an intermediate controlled subsidiary or through a change in the form of ownership may constitute an acquisition subject to the jurisdiction of the Commission.

Subject proceeding, of course, does involve any change in the corporate person of either the acquirer or the controlled carrier. But this line of decisions reveals how far the Commission had gone in refusing to restrict its authority on the issue of jurisdiction under section 5 of the Interstate Commerce Act. It in effect placed changes in the form or character of control on par with transactions increasing the power of control on the part of an acquirer.

The leading case on the foregoing type of control situation is Atchison, T. & S.F. Ry. Co. - Control - Santa Fe Trail Transp., 15 M.C.C. 469 (1938). In that case an application under section 213 of the Motor Carrier Act for approval and acquisition of stock of the Santa Fe Trail Transportation Company was made

indirectly controlled the rater carrier through a zeene holding company, and it was desired to change the form of control from indirect to direct. The projected change was to be accomplished by the railroad's purchase of approximately 55 percent of the Transportation Company's stock from the General Improvement Company, a wholly-owned subsidiary of the railroad. The contention was made at the hearing by certain intervenors that where a railroad controls a rater carrier indirectly through a subsidiary company it is not necessary that approval be given by the Commission for the acquisition of control, the argument being that once a railroad has acquired control, of whatever character, of a rater carrier, it may modify or shift the form of control without Commission approval or authorization under section 213, because it was not thereby acquiring anything within the meaning of that section. In assuming jurisdiction and approving the acquisition, the Commission took the position that section 213(a)(1) must be read as a whole. It wrote as follows:

> "It is clear that one of the purposes of the section is to make sure, if an acquisition of control is approved, that its terms and conditions shall be just and reasonable. However, if a railroad could secure approval of an acquisition of indirect control upon terms which we find to be just and reasonable, and could then, without our supervision, shift such indirect control to direct control, it could at the same time also, by means of such transaction, in effect modify the terms and conditions upon which control is held. For this reason we believe that to give effect to the obvious intent of the section a change in character of control must be regarded as a transaction requiring our approval and authorization under section 213(a)(1). It is evident that otherwise a control consistent with the public interest might be so changed as to become inconsistent therewith. As a further illustration of what might happen, a desirable direct control might be shifted to an undesirable indirect control." (pp. 471-472)

As the foregoing language indicates, the Commission has taken the position that a conversion of indirect control over a carrier to direct control may in effect modify the terms and conditions imposed in an order of approval and therefore represents a change in control subject to the Commission's authorization.

Other decisions of the Commission followed the Allegheny case. In Chesapeake & Ohio Railway Company - Purchase, 261 I.C.C. 239 (1945) the Allegheny Cor-

acquire control through the Chesapeake and Ohio of the properties of the Norfolk Terminal and Transportation Co. In holding the application of Allegheny subject to approval under section 5 of the Interstate Commerce Act, the Commission said at page 260:

> "The two applications contemplate a change of existing control in that the Chesapeake & Ohio would control, through purchase, the properties of Terminal, instead of control through stock ownership and by lease, and Allegheny's control of the two companies would likewise be changed. Such 'internal re-arrangement of corporate structure' must have our approval under section 5(2) of the Act or be unlawful."

Thus, the Commission in this case recognized that while Allegheny [illegible] indirectly controlled both companies, as a result of the proposed transaction its control was to be changed, through purchase, and that an acquisition of control would take place under section 5 of the Interstate Commerce Act.

An indication of the extent to which the Atchison doctrine has been applied is shown in Standard Freight Lines, Inc. - Merger, 46 M.C.C. 41 (1945).[32] In that case Standard Freight Lines and Bates' Motor Transport sought authority under section 5 of the Interstate Commerce Act to merge the operating rights and properties of Bates into Standard. One Chaddick, who controls Standard through ownership of all its stock and who controlled Bates through ownership of 65.3 percent of its stock, filed application to acquire control of the operating rights and properties of Bates through the merger. The Commission in that case held, citing the Atchison case, that although Chaddick already controlled both of the carriers involved, such control is at present exercised over separate entities and the proposed merger would result in the change in the form of that control through unification of the properties in Standard. It stated at page 421:

32/ For other I.C.C. cases following the theory of the Atchison case see: Southern Pacific Co. - Control - Pacific Motor Trucking Co., 25 M.C.C. 121, 122; Greyhound Corporation - Control - Toronto Greyhound Lines, 36 M.C.C. 599; [illegible] Universal Carloading Co. - Control - [illegible]

"The fact that the instant merger would result only in a formal change in the manner in which Chaddick exercises his control over the properties of Yates does not negative the fact that such change in the form of this control is a transaction subject to section 5, just as the merger itself is such a transaction."

Commissioner Miller dissented, pointing out that Chaddick's acquisition of control of operation rights and properties of Yates through the merger added nothing to the control which he already had over that company. The majority, however, held Chaddick a necessary party applicant in the proceeding requiring the Commission's authorization for the change in the form of his control.

The foregoing class of cases establishes that where the form of control has been altered through change from indirect to direct control or through a change in the character of the person or corporation holding control, the transactions are subject to Commission approval. In other words, the Commission has gone as far as to hold that certain changes in the form of control as well as increases thereof are subject to its approval.

There is perhaps another aspect of the problem here presented which bears upon a determination of whether or not the Board has jurisdiction. It concerns the power of the Board to maintain continuing authority over control relationships previously approved by it under section 408 of the Act. It is evident from the language of the Atchison opinion that the Interstate Commerce Commission feels it needs to maintain continuing jurisdiction over control relationships approved by it. The Commission acknowledged the necessity of a continuing power to enforce such terms and conditions as it might prescribe in approving an acquisition of control.

It is true that the Board advised Pooles that the transaction embodied in the latter agreement was not the kind of commercial transaction intended to be governed by the terms and conditions of the original order of approval and, accordingly, no approval by the Board of the loan or other provisions of the agreement

was deemed necessary under the order. 23/ But the Board further advised respondents that its advice was not to be construed as a determination that approval by the Board under section 408 of the Act was not required. 24/

The fact that the letter agreement fails directly to affect the terms and conditions of the original order of approval does not dispose of the question of the extent to which we can rely on the doctrine of continuing jurisdiction in the present proceeding. One approach to this problem rests on the proposition that the power to impose reasonable terms and conditions under section 408 impliedly gives the Board continuing authority to prescribe new terms and conditions in the event of any material change in relationship previously approved, as well as power to see to it that the terms and conditions originally imposed are followed. There, however, may be another basis in the Act for asserting the doctrine of continuing jurisdiction.

Without exploring the several situations where an administrative order has or should have the effect of finality, it may be safely stated that the judicial concepts of res judicata and equitable estoppel do not ordinarily apply to administrative determinations. In the present situation, resort can be had to the statute under which the Board operates to determine the effects of decisions thereunder. Section 1005 of the Act provides grounds for vesting a continuing

---

23/ By letter, dated January 22, 1947, after both Toolco and TWA had requested approval of the transaction under the terms of the order of approval entered in Docket No. 1182.

24/ Assuming the transaction entered into under the letter agreement represents an additional acquisition of control pursuant to section 408, query, whether failure of respondents to make application for approval under that section does not constitute a violation of the Act.

power upon the Board to take account of events following approval of control relationships under section 408. [35] Courts, of course, have always enjoyed the power to modify or even revoke their judgment or decree during the term of court when the judgment or decree was entered. [36] If it can be concluded that section 1005 grants the Board substantive rather than procedural powers, then there is a considerable analogy between the control of orders by a court during the term in which they were rendered and the control by the Board of its orders at all times. [37]

It is next necessary to examine the present Toolco-TVA relationship to determine whether Toolco has acquired any greater control over the carrier than that contemplated by the Board's order of October 17, 1944. Obviously, if neither the letter agreement of January 8, 1947, nor any change in the aeronautical activities of Toolco since October 17, 1944, has resulted in any further acquisition of control of TVA within the meaning of section 408 of the Civil Aeronautics Act there is nothing in this proceeding for which Board approval is required under that section. However, the word "control" as used in the Act may embrace every form

---

35/ Section 1005(a) provides, in part, that orders of the Board "shall continue in force until further order . . ." Section 1005(d) empowers the Board "to suspend or modify its orders upon such notice and in such manner as it shall deem proper." It will be argued no doubt that the provisions of section 1005 are intended to be merely procedural. But its language may reasonably be construed as a grant of authority to change not only orders having a procedural effect but also those effecting substantive interests. Significant in this connection is the fact that the section contemplates that some changes may be made upon notice. Moreover, it seems that if section 1005 were intended only to provide a procedural mechanism for the exercise of substantive powers granted elsewhere in the Act, it would have been couched in language similar to that of section 205. There the Board is empowered, among other things, to amend orders where the amendment is deemed "necessary to carry out such provisions [of the Act] and to exercise and perform its powers and duties under this Act." No such language will be found in section 1005.

of control, actual or legal, direct or indirect, negative or affirmative. It also includes the power to control whether that power is currently used or can be exercised in the future.[38] Finally, irrespective of whether subject transaction has resulted in further acquisition of control under section 408, it appears appropriate to inquire whether the applicable law confers upon the Board continuing jurisdiction over control relationships already approved by it under said section.

CONCLUSIONS

The record made in this proceeding indicates that there has been no significant change in the activities of Toolco in the field of aeronautics since the Board's original order of approval of October 17, 1944. While it is clear that Toolco continues as a person engaged in a phase of aeronautics under section 408 of the Act, there has been no change in its aeronautical activities since said date for which Board approval is required.

The record shows, however, that the letter agreement clearly resulted in an immediate increase in the effectiveness of Toolco's control over TWA. Following the acceptance of the letter agreement by TWA and pursuant thereto, the TWA board of directors was reconstituted. The directors who were added were all nominees of Toolco. Through the reconstituted board Toolco achieved, for the first time since its control of the carrier was approved by the Board, unquestioned dominance of the management of the carrier. There then followed significant changes in the management of the affairs of the carrier, including, among other things, a replacement of the top management of TWA, a modification of its internal organizational framework, and certain changes in the day-to-day operation of company.

38/ Pan Am. Airways, Inc., Acquisition of Panagra, 4 C.A.B. 803 (1943); and cases there cited; Re the Detroit Edison Company, 7 S.E.C. 908 (1940).

There is no doubt of Toolco's desire of certain changes in TWA before injecting additional money into the carrier, and that, in the absence of the letter agreement Toolco or its representatives could not have brought about changes made prior to the date of the annual stockholders' meeting on April 24, 1947. On April 24, Toolco took steps that promised to assure it of authority to enforce its policy decisions respecting the operations [illegible] changes were chosen, the majority of whom were well known to the principal stockholder. The by-laws of the carrier were amended. These amendments were definitely designed to prevent any future impasse between the principal stockholder and the TWA board.

It appears certain that on April 24, 1947, Toolco could have accomplished as effective a reconstitution of the TWA board as was achieved pursuant to the letter agreement. As a matter of fact, at the April 24 annual meeting of the stockholders, called under the pre-existing by-laws, Toolco accomplished a change in the board of directors under which there exists very little probability of conflict with Toolco policy for TWA. Nevertheless, during the interim period, January 9 - April 24, 1947, the letter agreement made possible the unity of management control which Toolco was able to exercise over the carrier after the acceptance of the agreement. However, since all the management powers assumed by Toolco as a result of the January 9 agreement could have been exercised in any event not later than April 24, such increased or additional control as took place during this short period would hardly require approval under the Act. It would be straining the language of section 408(a) to say that this

is the "control" intended to be covered by the Act. Insofar, therefore, as the letter agreement of January 9 may be considered as affecting matters of management control of TWA by Toolco during the period from January 9 through April 24 of 1947, it probably did not more than to accomplish on and after January 9 what Toolco could and would have done without the agreement on April 24.

However, the $40,000,000 loan made to TWA under the agreement carried the right on the part of Toolco to have the debt retired by converting it to common stock. We have noted that this letter agreement thus gives Toolco a right to acquire up to a possible 80 percent of the common stock of TWA. This right rests solely at Toolco's option unless bankruptcy ensues. Accordingly, it becomes necessary to determine whether the acquisition or potential acquisition, wholely on Toolco's option, of the substantially greater stock interest in TWA represented by shares acquirable through conversion of the debt has resulted in any change in the extent or effectiveness of control of Toolco of TWA.

Reference to the I.C.C. cases hereinbefore summarized reveals that where there had been a substantial increase in the extent, effectiveness or power of control through stock purchases, the additional control which resulted therefrom required approval by the Commission. This doctrine is supported by a number of the I.C.C. cases reviewed. These cases all discount the argument that where control in one form exists, a change in that control or an increase thereof need not be approved. The decisions rendered in four of the cases in particular — the Big Four, Control of [illegible], the second Peoria & Eastern, and the Wheeling cases —

have definitely established the proposition that the creation of a substantial measure of additional control in an acquiring stockholder, whose pre-existing control was for one reason or another legally incomplete, represents an acquisition subject to the approval of the Commission under the Interstate Commerce Act. Factually, as already pointed out, these cases are not "on all fours" with the instant proceeding. But the facts which grounded the decisions on the jurisdictional issue before the Commission in each of them are strikingly similar to the situation before us and the cases are therefore authority for the doctrine that pre-existing control, unless legally complete, does not preclude an additional acquisition for which further approval is required. Moreover, the scope of the Board's dictum in the Northeast case plainly indicates that there can be a transaction amounting to an acquisition of control of an air carrier which must be approved by the Board under section 408 of the Act, even though the Board has approved a prior acquisition of control of such air carrier by the same person.

There can be little dispute with the proposition that "control" of a corporation means power to dictate the complete action of the corporation. Under Delaware law, Toolco, with a majority stock ownership in TWA can, alone and on its own initiative, perform such important corporate acts as amending TWA's certificate of incorporation by adding to or decreasing its corporate powers, or by substituting certain powers and purposes in place of those already present therein, or by increasing or decreasing its authorized capital stock or reclassifying it, or by making other changes or alterations in said certificate. Further, a two-thirds common stock interest in TWA would enable Toolco, for the first time, and using only its

voting power, to satisfy the provisions of Delaware law with respect to such vital matters as merger, consolidation or dissolution of the carrier. Accordingly, the acquisition or potential acquisition, wholly at Toolco's option, of a majority or two-thirds stock ownership in TWA creates in Toolco, alone, the power of change and of life and death over TWA.

We thus come to the crux of this case. It is clear that the letter agreement of January 9, insofar as it gives Toolco the option to acquire a substantially greater stock interest in TWA, thereby enabling it to exercise any of the corporate activities or powers conferred by Delaware law upon a majority or two-third owner of a Delaware Corporation, represents in fact a change in the extent of effectiveness of control and constitutes in law an acquisition of control, unless it can be shown that the control approved by the Board in Docket No. 1182 was, for all purposes, complete or absolute control.

Respondents rest their case principally upon the proposition that the Board in Docket No. 1182 approved the highest possible degree of control. They contend that the effect of the Board's order was to permit Toolco to acquire TWA common stock without any limitations as to the amount of stock, time of purchase or any other factor. In other words, it is argued that the Board's order in Docket No. 1182 approving control contemplates and covers the very type of transaction represented by the letter agreement of January 9. Respondents further contend that even if this were not true, Toolco has, after the date of the original approval of control, at all times exercised complete legal control since the [illegible] shares voted by Toolco "plus the management proxies" at each [illegible] have consistently constituted more than two thirds of the out-

standing stock of TWA.

To determine whether the Board intended to approve blanket, unlimited control in future by Toolco over TWA, it is necessary to examine the Board's concept of the "control" it ratified in other acquisition proceedings before it under section 408 and to analyze the language of the Board's opinion and order in Docket No. 1182.

The Board has in various acquisition cases set forth its interpretation of the word "control" as used in section 408 of the Act. [39/] It has recognized that control does not connote an absolute concept; that it may apply to and cover a great variety of situations; and that it represents the amount of power and influence necessary to give its possessor substantial influence over the controlled corporation. The Board has also recognized that the quantum or degree of control may change. For example, in the Northeast case, the Board noted that the measure of control may increase. In another proceeding it recognized that changed circumstances following a period of effective control resulted in a reduction in the quantum of control. Thus, in the Aerovias de Guatemala case, the Board considered an application of Pan American Airways relating to its ownership of 40 percent of stock in Aerovias, a Guatemalan carrier. The Board found that Pan American in fact did control the carrier for a period of time. Subsequently, Pan American's holdings in Aerovias were materially reduced. This reduction in Pan American's holdings, plus other changes in the relationship between the parties, represented so substantial a change in

---

- 4 -

Pan American's influence over the carrier that the Board concluded that Pan American no longer controls Aerovias. The Board clearly recognized that "control" is not a static concept. It said:

> "... it is apparent that where the word "control" is used in a public utility statute without any qualification or limitation, the legislature did not intend any artificial restrictions should be placed on its meaning. Thus, the existence of "control" is a factual matter to be ascertained by a weighing of all of the evidence in each particular case and the drawing of reasonable inferences and conclusions therefrom, in the light of the objectives and purposes of the statute. It is therefore important in this case, among other things, to scrutinize all of the facts and circumstances which resulted in Pan American's acquisition of 40 per cent of Aerovias' stock, and to ascertain what rights, if any, such stock interest gives to Pan American in the conduct of the affairs of Aerovias. This necessarily requires a careful examination into the past and present relationship between Aerovias and Pan American, including a full inquiry into all transactions between the two companies." (page 405).

It is obvious that the Board, in passing upon an application for approval of an acquisition of control under section 408, does not concern itself with more than the specific degree of control involved in the situation before it. Ordinarily, the Board would not and could not grant approval of an acquisition in future unless the issue was raised during the adjudication of the proceeding or at best recognized by the Board in its opinion or order. Whether the scope of approval granted in Docket No. 1182 has had the effect of approving all future acquisitions must be resolved from the action of the Board in that case.

After reciting the number and per centum of its capital stock interest in TAI, Toledo's application in Docket No. 1182 for approval of control of the carrier, requested "approval by the Civil Aeronautics

Board, if such approval is deemed necessary, of the control by the applicant[40] of Transcontinental & Western Air. Presumably the control referred to was the measure of control existing at the time of the application.

Examination of the briefs of Public Counsel and of Toolco, the report of the examiner, and the Board's opinion and order in Docket No. 1182 reveals that all parties to the proceeding concerned themselves with the control relationship then present. Throughout the entire proceeding, an acquisition as of that time was in contemplation of the parties. Thus, Public Counsel urged that "the acquisition of control"[41] of TWA by Toolco be approved, subject to such terms as he proposed. Counsel for Toolco spoke of the "control here involved"[42] in urging approval. The examiner likewise viewed the control relationship in terms of the stock interest that Toolco then owned in TWA. However, for the most authoritative evidence of the precise relationship approved in that proceeding resort must be had to the final action of the Board.

It is elementary that in interpreting an administrative order it is necessary to construe the order and the accompanying opinion or report as a whole. Therefore, the Board's order in Docket No. 1182 must be read in the light of the opinion upon which it was based.

In arguing that Board approval in this proceeding is not required respondents rely heavily upon the specific language used by the Board in

---

40/ Paragraph 4 of application filed November 19, 1943; emphasis supplied.

41/ Brief of Public Counsel, Pages 12 and 27; emphasis added.

42/ Brief on behalf of Toolco, page 3; emphasis added.

its order of approval. Pointing ~~presumably~~ to words set forth in the introductory paragraph of the order (see footnote 5, supra) respondents insist the Board approved "the acquisition of control, by the purchase of common stock" of TWA. And it is this language, the contention continues, which indicates an intention on the part of the Board to grant approval of unlimited control in future through the acquisition of stock.

The words of the introductory paragraph referred to are merely descriptive of the application of Toolco in that case. It is true that the Board ordered the application so described be approved. However, the terms of the order, must, as already noted, be read in the light of the Board's opinion.

The Board's opinion in Docket No. 1182 recites that "control" for the purpose of that proceeding was stipulated, and the principal issue facing the Board for decision was whether Toolco, the acquirer, was a person engaged in a phase of aeronautics, within the meaning of section 408(a)(5) of the Act. Finding that to be the fact, and together with the fact that the controlled corporation was an air carrier, and that "control" was stipulated, the Board approved the relationship subject to certain limitations relating to commercial transactions between Toolco and TWA.

The Board's opinion carefully described Toolco's history of stock ownership in TWA from 1939 to the date of the opinion, when Toolco, the Board recognized, owned 45.6 percent of the shares then outstanding. The Board's findings with respect to the control relationship involved were ~~s~~ in terms of the amount of stock interest then owned by Toolco. The

Board said:

> "For the purpose of this proceeding applicant (Toolco) concedes that the stock now owned constituted control of the carrier. There is very little room to doubt that for all practical purposes such control has existed since the end of 1940 at least when 42.1 percent was owned. Ownership of so great a proportion of outstanding stock, the remainder of which is dispersed among many owners, represents such a dominating influence in the affairs of the corporation that, in the absence of circumstances indicating the contrary, control either affirmative or negative, must follow. Much smaller interest have been found so to result." (Supra. p. 154 emphasis supplied)

After making other findings on various aspects of relationship before it, the Board concluded:

> "Soo we find that acquisitions of control of TWA by Hughes Tool through the purchase and ownership of a stock interest therein will not be inconsistent with the public interest." (Supra. p. 157, emphasis supplied).

It is clear from the foregoing that the board did not and could not have intended complete, in future approval of the relationship between Toolco and TWA. The decision clearly relates to the quantum of control represented by the then ownership of common stock in the controlled company. Doubtless it will be argued that the Board would have used the phrase "the stock interest" had only the then existing stock ownership been covered by its approval. Contrariwise, it can be contended that had the Board intended approving such control as would have been covered by an unlimited acquisition of stock in the future it would have used the words "any stock interest". It would be possible to further play upon the words used in the order and opinion originally granted approval. Suffice it to say that the words "a stock interest" when read in the context of the entire opinion, clearly connote the specific ownership

relationship existing at the time of Toolco's original application.

It must also be recognized that merely because the Board approved Toolco's control flowing from the ownership of 45.6 percent of TWA's common stock; Toolco need not come before the Board with the purchase of each successive share of stock. As a matter of fact, the record shows that between October 17, 1944 and June 30, 1947, Toolco made small acquisitions (and sales) of TWA stock. 23/ Obviously, minor acquisitions not substantially affecting the measure of control need not have successive approvals. However, conversely, the Board's approval of a specific control relationship, upon certain facts and conditions, does not obviate the necessity of approving a further acquisition resulting from a significant increase in the extent or effectiveness of control. This position is given point by the fact that the Board has no jurisdiction over the issuance of airline securities. If the law in this regard were otherwise securities which Toolco could acquire pursuant to the letter agreement would be controlled. But the potential stock interest represented in the 10 million dollar loan to TWA is not controlled. Through this transaction Toolco has attained new and highly important substantative rights over the carrier. The transaction, therefore, has created another acquisition of control, subject to the Board's jurisdiction. 24/

23/ The percentage of outstanding TWA stock held by Toolco between said dates never varied more (or less) than by 1 percent from the amount held on October 17, 1944.

24/ The very fact that the Board issued its order of investigation in this proceeding negates the argument of respondents that the Board consulted its order of October 17, 1944, to constitute an unlimited, [illegible] of Toolco's acquisition of control of the carrier.

49

Let us restate the foregoing in another way. Perhaps it can be more simply expressed. To begin with, it is obvious that factually there can be more than one acquisition of control. The I.C.C. cases reviewed make that clear. The Toolco-TWA situation itself demonstrates that proposition nicely. In 1944 a 45 percent stock interest gave Toolco a certain degree of power or control over the corporate activities of the carrier. In 1947 an indefeasible option to acquire up to a possible 78 percent stock interest gave Toolco a substantially greater degree of power or control over the corporate activities of the carrier. It follows then that factually there was another, further or second acquisition of control. This is true regardless of the interpretation placed upon the original order of approval; factually, the situation before us involves a further or second acquisition regardless whether or not there legally has been such another acquisition. In other words, there has been a further or second acquisition as a matter of fact, even if it could be successfully established that there has not been such an acquisition as a matter of law.

Now, we have seen that it is also possible to have a further or second acquisition of control as a matter of law. The Interstate Commerce Commission has so held in numerous cases. The Board said so in the Northeast case. To determine whether there has been another acquisition as a matter of law on the part of Toolco under the transaction of January 9, 1947, we must look to see what the Board originally approved in 1944. It is clear that it approved the acquisition that was then before it; it could not at that time have approved or reasonably anticipated an acquisition which took place some three years later. The Board's original order of approval, when read in light of the report of the case and the record upon which it was based, cannot be interpreted to have contemplated a blanket approval of any and all subsequent acquisitions. The record in Docket No. 1182 is clear to the effect that the issue of approving complete, blanket, control in

settle an issue which was never raised or recognized, the argument that the Board approved the highest degree of control must fail.

The further basis for respondent's argument that Tcolco's control over TUA has not increased and cannot increase may be very briefly set at rest. It turns upon the claim that Tcolco, by controlling management proxies since October 17, 1944, has, together with such proxies, had the power to take any corporate action necessary with respect to the carrier in compliance with Delaware law. An answer to this claim requires the distinction between having the required voting power under Delaware law upon the vote of Tcolco alone as against having such power dependent upon the use of proxies to vote stock owned by others, who may not always acquiesce. Further, while Tcolco has been able to secure proxies sufficient to enable it to control the day-to-day affairs of the carrier, it may not be able to obtain that acquiescence in matters such as a merger, consolidation or dissolution of the carrier. But even if it be assumed that Tcolco could at all times obtain sufficient votes to put in effect any desired corporate action, the fact remains that the letter agreement, through the retirement of the indebtedness therein created by conversion to stock, makes unnecessary any dependence upon other stock interests in TUA. Certainly, therefore, a control relationship has been established where the controlled company, which formerly responded to orders from one person with assistance from others by proxies, or otherwise, now responds or may respond to one person at its sole instance.

There is no doubt that an assertion of jurisdiction in this case clearly can stand on the proposition that the transaction embodied in the letter agreement of January 9 has resulted in "an acquisition" of control within the meaning of section 5. The fact that an increase in the extent or effectiveness of control over TUA is present by virtue of the terms of the letter agreement and that that increase [illegible] further acquisition as a matter of law are sufficient to require the

with the vindication of the public interest in so important and dynamic a field as civil aviation has the responsibility of asserting all such powers as the law gives it to effectuate the policy committed to its care. Accordingly, the examiner urges that the Board consider whether under the provisions of the Act it may also assert authority over the matter in issue in this proceeding on the ground that it has continuing jurisdiction over control relationships previously approved by it under section 408.[45]

It can be plausibly argued that the continuance in the public interest of a previously ratified control relationship is a condition precedent to any approval of an acquisition which the Board may grant under section 408 of the Act. There is of course an overriding public concern in seeing to it that control of an airline is not exercised in a manner inconsistent with the objectives set forth in section 2 of the Act. A person acquiring control, it may be argued, should not be allowed to frustrate the purpose of the statute by acting, subsequent to the acquisition, in a manner which would have prevented approval of the acquisition in the first instance.

45/ Strong support for continuing jurisdiction on the part of the Board can be found in the following statement made at the hearing by Thomas A. Black, counsel for Tecolco in this proceeding: "Of course the Board has jurisdiction. It knows it has jurisdiction. I will concede the Board has jurisdiction. The question is not whether it has jurisdiction, but whether in this case it should do anything about its jurisdiction. The Board could unquestionably enter an order and say, 'Here, we want to reopen this thing and look at the whole picture, bring that in and let us have a look at it,' but that is not the question here, whether the Board has jurisdiction. It is a question of whether it is called upon in view of the letter of January 8th to call its jurisdiction into force and to do something about it, and the two thoughts and concepts are as far apart as day and night." A similar position was taken by George A. Spater, counsel for Tecolco in the proceeding under Docket No. 1182. In a letter addressed to the Board under the date of August 14, 1944, protesting a condition proposed by Public Counsel for incorporation into the order of approval, Mr. Spater argued that Public Counsel failed "to appreciate (1) the practical considerations involved in [that] case and (2) the significance of the continuing jurisdiction of the Board with its power to prevent any over-reaching." As to the second point, Mr. Spater said: " . . . the attention of the Board is directed to its ability to retain continuing jurisdiction over the relationship between Eastern Air Lines, Inc. and Tecolco. The Board could at any time re-

The foregoing is not to imply in the least that the further acquisition of control of TWA by Toolco may not be consistent with the public interest. That issue is not before us here. It is merely intended to explore the possible existence of a continuing power on the part of the Board to review a prior approval of an acquisition under section 408 in the absence of a specification in the order of approval reserving such authority.

As already noted, section 408(b) provides that the Board may impose in an order approving an acquisition such terms and conditions as it shall find just and reasonable. Section 1005(a) provides, in part, that the orders of the Board shall continue until its further order; section 1005(d) authorizes the Board to modify its orders. It may therefore be argued that sections 408 and 1005 read together, plus the implied power of the Board to require that an approved acquisition is exercised in a manner consistent with the high purposes of the Act, confers upon the Board continuing control of the relationships previously ratified by it and authorizes it to amend prior orders of approval to impose such new terms and conditions as it may deem necessary. Perhaps the foregoing is the rationale which prompted Toolco's counsel in the present proceeding to concede that the Board has continuing jurisdiction and which moved counsel in the original case to urge that the Board had and would retain continuing control over the Toolco-TWA relationship.

No doubt the contention will be made that the Board is foreclosed here from relying on section 1005 since the order instituting this proceeding fails specifically to state that this section of the Act is involved. But in addition to specifying the issues involved under section 408 of the Act, the Board's order of investigation of February 7, 1947, also has as one of its recited purposes the entry of "any such order or taking of any such further action as may be appropriate pursuant to the provisions" of the Act. This proceeding can there-

rely on section 1005 to assert continuing jurisdiction.

The examiner suggests that the Board has continuing jurisdiction irrespective of the existence of a further acquisition. However, since the facts and the law so clearly establish an additional acquisition as a result of the transactions embodied in the letter agreement, it is urged that jurisdiction herein be asserted on the ground that Tcolco has acquired further or additional control of the carrier.

Accordingly, it is concluded that the letter agreement of January 9, 1947, insofar as it gives Tcolco the right to acquire additional stock interest in TWA, thereby vesting Tcolco with certain substantive rights over the carrier it did not theretofore possess, represents such an increase in the extent or effectiveness of control over TWA that it must be considered "an acquisition of control" within the meaning of section 408 of the Act.

RECOMMENDATIONS

It is recommended that the Board find that the transactions evidenced by the letter agreement of January 9, 1947, have resulted in a further acquisition of control over TWA on the part of Tcolco under section 408 of the Act. It is further recommended that a subsequent hearing be held to determine whether such a further or additional acquisition of control is consistent with the public interest and fulfills the conditions of said section 408.

AGREEMENT made this 25th day of March, 1948, by and between HUGHES TOOL COMPANY, a Delaware corporation (hereinafter called "Hughes"), of the first part, BANK OF AMERICA NATIONAL TRUST & SAVINGS ASSOCIATION, BANK OF THE MANHATTAN COMPANY, BANKERS TRUST COMPANY, CALIFORNIA BANK, CENTRAL HANOVER BANK AND TRUST COMPANY, THE CHASE NATIONAL BANK OF THE CITY OF NEW YORK, CONTINENTAL ILLINOIS NATIONAL BANK AND TRUST COMPANY OF CHICAGO, THE FIRST NATIONAL BANK OF BOSTON, GIRARD TRUST COMPANY, MELLON NATIONAL BANK AND TRUST COMPANY, J. INCORPORATED, THE NEW YORK TRUST COMPANY, THE PHILADELPHIA NATIONAL BANK and SECURITY-FIRST NATIONAL BANK OF LOS ANGELES (hereinafter called the "Lending Banks"), WRIGHT AERONAUTICAL CORPORATION, a New York corporation (hereinafter called "Wright") and CURTISS-WRIGHT CORPORATION, a Delaware corporation (hereinafter called "Curtiss"), all of the second part, LOCKHEED AIRCRAFT CORPORATION, a California corporation (hereinafter called "Lockheed"), of the third part, TRANS-CONTINENTAL & WESTERN AIR, INC., a Delaware corporation (hereinafter called "TWA"), of the fourth part, and BANKERS TRUST COMPANY, a New York trust company, as agent under a certain Credit Agreement between the Lending Banks, Wright, Curtiss, Lockheed and TWA (said Credit Agreement being hereinafter called the "Credit Agreement" and said agent being hereinafter called the "Agent"), of the fifth part,

WITNESSETH:

WHEREAS Hughes is the owner of $10,000,000 principal amount of Subordinated Convertible 2¾% Notes (hereinafter called the "Convertible Notes") of TWA, issued and outstanding pursuant to an agreement dated January 31, 1947 between Hughes, TWA and The Equitable Life Assurance Society of the United States (hereinafter called the "Three-Party Agreement"); and

WHEREAS TWA owns nine (9) Lockheed Constellation Model 049 aircraft (hereinafter called the "049 Aircraft") in respect of which TWA is indebted for the unpaid balance of the purchase price upon its promissory notes payable to Lockheed now held by Bankers Trust Company and Mellon National Bank and Trust Company, two of the Lending Banks; and

WHEREAS TWA deems it desirable to purchase from Lockheed twelve (12) Constellation Model 749 aircraft (hereinafter called the "749 Aircraft") and spare parts therefor (hereinafter called the "Lockheed Spare Parts") and from Wright, forty-eight (48) Wright 749C18BD1 engines (hereinafter called the "Engines") and spare parts, tools and equipment therefor (hereinafter called the "Wright Spare Parts") and from Curtiss seventeen (17) Curtiss 632S-A14 propeller assemblies (hereinafter called "Propellers") and spinners, spare parts, tools and equipment therefor (hereinafter called "Curtiss Spare Parts"); and

WHEREAS TWA has arranged, for the purpose of assisting it in refinancing the debt held by Bankers Trust Company and Mellon National Bank and Trust Company above referred to and for the purpose of assisting it in financing the purchase of the 749 Aircraft and Lockheed Spare Parts, to borrow under the Credit Agreement sums up to $16,276,942.50 from the Lending Banks acting through the Agent upon its promissory notes (hereinafter called the "Bank Notes") payable to the Agent and, for the purpose of assisting it in financing the purchase of the Engines, Wright Spare Parts, Propellers and Curtiss Spare Parts, the extension of credit by Wright and Curtiss up to $2,300,000 and $200,000, respectively, upon its promissory notes (hereinafter called, respectively, the "Wright Notes" and the "Curtiss Notes") likewise payable to the Agent (the Bank Notes, Wright Notes and Curtiss Notes all hereinafter collectively called the "Notes"), all to be secured by an Indenture of Chattel Mortgage between TWA and Bankers Trust Company as Trustee (said Indenture and all indentures and chattel mortgages supplemental thereto executed and delivered to confirm the lien of the original Chattel Mortgage on the property of TWA now owned and therein specifically described and on the property of TWA to be hereafter acquired as contemplated by the Chattel Mortgage as originally executed being hereinafter called the "Chattel Mortgage" and said Trustee being herein called the "Mortgage Trustee"); and

WHEREAS TWA proposes and intends fully and effectively to transfer, grant, bargain, sell, mortgage, assign and pledge to the Mortgage Trustee for the security of the Notes, the 049 Aircraft, the 749 Air-

craft, the Lockheed Spare Parts, the Engines, the Wright Spare Parts, the Propellers and the Curtiss Spare Parts *inter alia*; and

WHEREAS Hughes, as owner of all the Convertible Notes, is desirous that TWA refinance the debt held by Bankers Trust Company and Mellon National Bank and Trust Company, and that TWA acquire the 749 Aircraft, the Lockheed Spare Parts, the Engines, the Wright Spare Parts, the Propellers and the Curtiss Spare Parts, and to enable TWA so to do, Hughes is willing to consent to all necessary action by TWA in connection therewith,

NOW, THEREFORE, in consideration of the premises and of the mutual covenants and promises herein contained, the parties hereto agree with each other as hereinbelow set forth:

1. Hughes expressly consents to and approves the following:

(a) The prepayment in full with interest by TWA of the indebtedness incurred by it in the purchase of the nine (9) 049 Aircraft evidenced by its promissory notes payable to Lockheed, held, as of March 11, 1948, by the following Lending Banks and in the following unpaid principal amounts: Bankers Trust Company, $1,238,662.50; and Mellon National Bank and Trust Company, $2,386,000.00;

(b) The execution and delivery by TWA with Lockheed of Contract LD-42 and the agreement covering the purchase of the Lockheed Spare Parts, both dated as of November 18, 1947, and all amendments thereto, with respect to the purchase by TWA of the 749 Aircraft and Lockheed Spare Parts; and the execution and delivery of Purchase Agreements with Wright and Curtiss with respect to the purchase, respectively, of the Engines and Wright Spare Parts and the Propellers and Curtiss Spare Parts;

(c) The incurring or creation by TWA, for the purpose of refinancing the promissory notes referred to in subparagraph (a) above and of financing the purchase from Lockheed of the 749 Aircraft and the Lockheed Spare Parts, of indebtedness to the Lending Banks under the Credit Agreement up to an aggregate principal amount of $16,276,942.50 upon Bank Notes payable to the Agent upon the terms and conditions provided in the Credit Agreement;

(d) The incurring or creation by TWA with respect to the purchase from Wright of Engines and Wright Spare Parts and with respect to the purchase from Curtiss of Propellers and Curtiss Spare Parts, of indebtedness to Wright up to an aggregate principal amount of $2,300,000 and to Curtiss up to an aggregate principal amount of $200,000, evidenced by Wright Notes and Curtiss Notes, respectively, payable to the Agent upon the terms and conditions provided in the Credit Agreement;

(e) The transferring, granting, bargaining, selling, mortgaging, hypothecating and pledging by TWA to the Mortgage Trustee under the Chattel Mortgage, for the security of the Notes, of (i) the nine (9) 049 Aircraft and each of them; (ii) the twelve (12) 749 Aircraft and each of them; (iii) the Lockheed Spare Parts and each and every item thereof; (iv) the Engines and each thereof and the Wright Spare Parts and each and every item thereof; (v) the Propellers and each thereof and the Curtiss Spare Parts and each and every item thereof; and (vi) all items of property covered by the Chattel Mortgage and all items of property substituted for or in replacement of any thereof in accordance with the terms of the Chattel Mortgage; and

(f) The execution and delivery by TWA of the Chattel Mortgage.

2. Hughes hereby confirms with TWA its agreement expressed in paragraph 1 of a certain agreement between Hughes and TWA dated December 26, 1947 and agrees with each other party hereto that it shall at all times hereafter forever be foreclosed from asserting that it has any right to any payment on account of the Convertible Notes or any of them in money or in any form other than shares of stock in TWA in accordance with the provisions of the Convertible Notes; that it shall at no time hereafter have any right as a creditor of TWA to receive or claim in respect of the Convertible Notes any payment in money or any property of TWA; and that the Convertible Notes shall at all times hereafter remain only a measure of and

basis for the right of Hughes or the holders thereof to acquire shares of stock in TWA in satisfaction thereof. Hughes further agrees, forthwith upon the execution of this Agreement, to cause each of the Convertible Notes to be stamped on its face with a legend indicating the same is in all respects subject to the provisions of this Agreement and setting forth the substance of this paragraph.

IN WITNESS WHEREOF, the parties hereto have caused these presents to be executed by their respective officers thereunto duly authorized the day and year first above written.

Order No. E-12604

UNITED STATES OF AMERICA
CIVIL AERONAUTICS BOARD
WASHINGTON, D. C.

Adopted by the Civil Aeronautics Board
at its office in Washington, D. C.
on the 4th day of June, 1958

In the matter of an investigation of proposed transactions between HUGHES TOOL COMPANY and TRANS WORLD AIRLINES, INC.	Docket No. 8061, et al.

ORDER [illegible] INVESTIGATION

On May 10, 1956, Trans World Airlines, Inc. (TWA) filed a motion in Docket No. 1182 that the Board modify its order therein so as not to restrict the right of TWA to purchase from the Hughes Tool Company (Toolco) up to 25 jet-powered aircraft suitable for operation by TWA on both its domestic and international routes.

By Order No. E-10360, adopted June 8, 1956, the Board instituted the instant investigation to determine whether Toolco's proposal to manufacture and sell up to 25 jet-powered aircraft for TWA and other airlines would result in a transaction requiring further Board consideration, under section 408, of Toolco's control of TWA, and if so, whether the Board should approve or disapprove such transaction under section 408(b). The Board also consolidated therein the aforementioned TWA's motion.

Pursuant to a request by counsel for Toolco and TWA, all procedural steps in this proceeding were indefinitely postponed on July 31, 1956. By letter of May 27, 1958, TWA has formally withdrawn its motion of May 10, 1956 in Docket No. 1182, and has requested that the proceedings thereon and in Docket No. 8061 be dismissed without prejudice.

Inasmuch as the proceeding in Docket No. 8061 was instituted to investigate the effect of Toolco's proposal as set forth in its motion of May 10, 1956 in Docket No. 1182, the Board finds that the withdrawal of said motion by TWA

renders the instant investigation moot, and requires dismissal of said motion;

ACCORDINGLY, IT IS ORDERED THAT:

1. The investigation instituted in Docket No. 8061 be and it hereby is terminated; and

2. TWA's motion of May 10, 1956 in Docket No. 1182 be and it hereby is dismissed without prejudice.

By the Civil Aeronautics Board:

/s/ Marvin Bergsman

Marvin Bergsman
Acting Secretary

REVISED SUMMARY OF CATEGORIES OF DIFFERENCE BETWEEN ESTIMATES OF MR. WEMPLE AND MR. SIMAT

This revised memorandum is submitted by defendants in response to the wish expressed by the Special Master (Tr. 7898) for a summary of the "categories of difference" between the estimates made by plaintiff's expert, Mr. Wemple, and defendants' expert, Mr. Simat, of the changes in plaintiff's operating profits that would have resulted from certain assumed changes in plaintiff's jet aircraft fleet during the period 1959-1963. It is intended as an objective comparison.

Mr. Simat's estimates in this memorandum have been revised to reflect (1) the deletion of B-331B costs and (2) the application of revised marginal load factors based upon Mr. Simat's corrected method of adjusting for economic growth.

1. Overall Comparisons

The overall difference in the estimate of changes in operating profits (excluding changes related to the issue of leasing versus ownership of B-131s and B-331s in 1959 and 1960) is approximately $91.8 million. Mr. Wemple has estimated that operating profits would have been improved by $51.5 million, while Mr. Simat has estimated that they would have deteriorated by $40.3 million.

These figures are not entirely comparable, however. Although Mr. Wemple's figures provide for an increase in depreciation costs of jet aircraft of $44.1 million, a figure supplied to him by Price Waterhouse, and an increase in insurance costs of $5.5 million, both of which figures are adopted by Mr. Simat,[1] they make no provision for reduction in the costs of depreciation and insurance attributable to piston aircraft removed from operations. The latter are estimated by Mr. Simat at $14.6 million.[2] If the savings in piston aircraft depreciation and insurance expense are not considered, the difference between the two estimates would be increased by $14.6 million to $106.4 million.

Each of these estimates represents a combination of estimates, by year and by Division, for increased jet operations and for decreased piston operations. The yearly estimates for the entire period, arranged in these categories, are as follows:

1/ TWA 4-C(4), Items A. of Ex. F, pp. 12, 20, 27, 35, 42, 56, 64; Ex. G, pp. 11, 19, 27, 35; Ex. H, pp. 10, 19; Ex. J, pp. 10, 19, 27, 36. DX 331, as amended by Mr. Simat letter of November 16, 1967, to Mr. Hayes, enclosed in Mr. Perkins' letter to Mr. Tenney of November 16, 1967, to reflect the correction of the 1963 marginal load factor in DX 330. All further references to DX 331 are intended to incorporate this amendment.

2/ DX 331.

1/ Source: TWA Ex. 4C-1, pp. 27, 30, 37-38, 48, 49, 50, 64, 72, as amended TWA Exs. 42, 42(a), 43, 43(a). For Chapters II and III of C & C Report, cargo revenues allocated between Domestic and International Divisions in proportion to passenger revenues. Incidental revenues of $.2 million for 1959, Chapter III (p. 49), allocated entirely to Domestic Division.

2/ DX 331.

3/ Mr. Wemple computes only the net changes in jet and piston operations.

4/ The difference between this and the prior estimated change in DX 327 ("no change" to $0.6 million) results from accumulated differences in rounding in the calculation of international revenues. For example, the initial percentage of TWA's reconstructed share of IATA seats was rounded to three digits (12.43) in DX 271A, but carried out to eleven digits by the computer, printing out seven (12,44998). This difference in rounding practice carried from percentage of IATA seats through percentage of IATA passenger absolute number of IATA passengers, percentage increase in IATA passengers to increased International Division revenues, leads to the ultimate difference of $0.6 million here noted.

5/ Difference of $0.2 million between amount shown here and on DX 331 due to rounding.

Comparison of the estimates could also be made in terms of each of the four Chapters in the C & C Report (Chapters II-V) which deal with different equipment premises, but we do not believe this would serve the Master's present purpose.[1/] What we propose here is a comparison of the basic equipment and operational assumptions, followed by a comparison of the procedures used in estimating the revenue and cost changes resulting therefrom, together with an assessment of the separate significance of the different procedures for the overall estimates in so far as it is possible to do so.

2. Equipment and Operating Assumptions

Mr.Simat accepts Mr. Wemple's assumptions as to the number of jets to be added and as to the dates at which they would be added. Overall Mr. Wemple assumed that the additional jets and the earlier deliveries of such jets, when placed in operation, would displace then existing piston services. Mr. Simat accepts and follows this assumption. They differ in their assumptions as to what pistons

---

1/ The detailed results of Mr. Simat's estimates corresponding to each of the four C & C Chapters are set forth in DX 331.

would be deleted in the Domestic Division, although Mr. Simat accepts Mr. Wemple's assumption that the pistons deleted in the International Division would be 1649As.

a. Jet

For the purposes of this report, Mr. Simat has used the assumptions made by Mr. Wemple as to the additional annual availabilities of jet aircraft and their allocation between the Domestic and International Divisions (SHE Report, Vol. I, Table II-A at II-5). He has also used Mr. Wemple's estimate, based on these additional availabilities, of the number of additional jet plane miles which would have been flown each year in each Division (Tables II-B and II-C at II-6).

In addition, Mr. Simat has estimated, with respect to domestic operations only, the average length of hop at which services with each type of jet would have been added in each year (marginal stage length of added jet services). Mr. Wemple does not discuss length of hop as a factor in his estimates. It is Mr. Simat's opinion, however, that Mr. Wemple's methods of estimating domestic yields on the basis of annual averages and direct operating costs on the basis of plane miles flown inherently assume that jet services would have been added at the average existing stage lengths for the year in question.

Mr. Simat's method of estimating marginal stage lengths is treated in Vol. II (DX 271B), Part A of his report. The formulas for deriving marginal stage lengths of added jet services are stated at A-7. Their principal significance is in the estimation of yields and direct operating costs for added domestic jet operations.

b. Piston

For the International Division, Mr. Simat has assumed, as Mr. Wemple did, that all of the piston aircraft miles deleted would have been those flown with L-1649As and that such plane miles would have been deleted in the same annual amounts as those estimated by Mr. Wemple. (C&C Report, Vol. II, Table B-XII, at p. B-18.) For the Domestic Division, the estimates differ. Both Mr. Wemple and Mr. Simat estimate additional deletions of piston plane-miles by the use of experienced ratios of piston-miles deleted to jet-miles added.[1/] Mr. Wemple confines his deleted miles to those flown with the longest-range planes, the L-1049Gs and L-1649As. Mr. Simat allocates the deleted plane miles among all the various types of piston aircraft

---

1/ Mr. Simat uses the ratios of total plane-miles added and deleted in each year. Mr. Wemple uses these ratios in connection with added B-131 and B-331 plane-miles (C&C Report, pp. 29, 44) but uses ratios derived from certain pairs of cities and in different time periods in connection with added CV-880 plane-miles (Id. pp. 61-62, 69-70).

being operated in proportion to the experienced deletion of plane miles by each such type during the year in question. Mr. Simat's discussion of his method is contained in Volume II, Part B of his report. His estimates of the additional piston-miles deleted each year by type of plane are set forth in Table B-XI at B-12.

The differences in estimation of the number of additional piston-plane miles deleted (with respect to added CV-880 plane-miles) and in the allocation of the deleted miles to the various types of pistons affect a number of aspects of the estimates, both of piston revenues lost and piston expenses saved, particularly under Mr. Simat's procedures. It would be a very difficult task to assign a figure to their net impact on the overall estimates.

Mr. Simat has derived formulas for estimating the stage-length of deleted piston services (Vol. II, Table A-I at A-7), and these affect his estimates of the yields and direct operating costs applicable to the deletion of domestic piston operations.

Applying rates of utilization for 1958 to his estimates of piston-plane miles deleted, Mr. Simat has estimated the number of additional piston aircraft retired each year (Vol. II, Tables B-XIII and B-XIV at B-22, 23,

24, 25). This is for the purpose of estimating the depreciation costs ($14 million) and insurance costs ($.6 million) saved. Mr. Wemple has not estimated the number of L-1049Gs and L-1649As which would have been retired under his procedures, nor the associated savings in depreciation and insurance.

3. Revenue Estimates - Domestic Division

The estimates of gain or loss in domestic passenger revenues associated with the estimated addition or deletion of jet and piston plane miles are based upon the estimation of changes in traffic (added or deleted revenue passenger-miles), to which estimated yields (cents per revenue passenger-mile) are then applied. Mr. Simat has followed Mr. Wemple in adding 5% to estimated changes in passenger revenues in order to arrive at estimated changes in total transportation revenues.

a. Traffic Estimates

Mr. Wemple has applied the average load factor experience by plaintiff in a particular year with a particular type of jet (B-131, B-331, CV-880) or piston (L-1049G, L-1049 to his estimate of the added or deleted seat-miles flown with that type of plane in that year. Mr. Simat has applied the experienced average load factor at which all types of jets

were added by plaintiff in the subsequent year (marginal load factor) to his estimate of added jet seat-miles for a particular year. He has likewise applied marginal load factors for all types of pistons to his estimates of deleted piston seat-miles. The marginal load factors are adjusted to remove the influence of economic growth.

Marginal load factors are treated by Mr. Simat in Vol. II, Part C. The adjusted marginal load factors are set forth in Table C-IX at C-23.

Mr. Wemple's use of average load factors results in the addition of 3,940 million jet revenue passenger miles and the deletion of 1,760 million piston revenue passenger miles, or a net increase of 2,180 million revenue passenger miles (TWA 4C-1, pp. 30, 45, 63, 70, as amended by TWA Ex. 42, 42(a), 43, 43(a)). Mr. Simat's use of adjusted marginal load factors results in the addition of 2,366.0 million jet revenue passenger miles and the deletion of 2,847.3 million piston revenue passenger miles, or a net decrease of 481.3 million revenue passenger miles.

Application to these figures of the average yields used by Mr. Wemple results in a difference of $98.3 million in the estimates of added passenger revenues from additional jet operations and a difference of $63.7 million in the estimates of deleted passenger revenues from displaced piston

operations (Vol. II, C-27). This makes a total difference of $162.0 million in the estimates of changes in domestic passenger revenues, reflecting principally the difference in the estimates of load factors applicable to added and deleted domestic operations. 1/

1/ In the case of deleted piston services, it also reflects the difference in the estimates of plane miles deleted for added CV-880 plane miles and the difference in the estimates of seat-miles deleted flowing from Mr. Simat's allocation of deleted plane miles among all types of pistons.

b. Yield Estimates

Mr. Wemple computes added passenger revenues by applying to his estimates of added revenue passenger miles flown the average yield per passenger mile experienced by TWA for all revenue passenger miles flown in its Domestic Division for the year in question (e.g., C & C Report, p. 30). Since passenger yields per mile diminish as length of trip increases, Mr. Simat estimates yields appropriate to the average trip length at which, in his opinion, jet passengers would be added (longer than the average) and piston passengers deleted (shorter than the average) in each year.

Mr. Simat's procedures for obtaining his yield estimates are treated in Vol. II, Part D. The formulas for relating passenger revenue to trip length are set forth in Tables D-III and D-V at D-8 and D-10. The relationships between the estimated ratios of trip length of passenger to stage length of aircraft are stated separately for jets and pistons at D-18. Mr. Simat applies these ratios to the marginal stage lengths for added jet services and deleted piston services as estimated by him in accordance with the formulas in Part A.

An indication of the relative significance of the difference in estimation of yields is provided by Table D-IX at D-21, in which Mr. Simat has applied to Mr. Wemple's estimates of net added passenger miles the annual yields

determined by his formula as those realized by the plaintiff for a trip length of 1,453 miles (the actual average trip length of all passengers added by plaintiff during the period 1959-1963). The application of these yields[1/] reduces Mr. Wemple's estimates of net added passenger revenues from $127.0 million to $122.6 million, or $4.4 million.

The combined effect of the differences in the estimation of added and deleted traffic and in the yields applied thereto result in an overall difference of $164.5 million in the estimates of added passenger revenues as follows:

	Mr. Wemple	Mr. Simat	Difference
Added Jet	$229 Million	$136.5 Million	$92.5 Million
Deleted Piston	(102) "	(174) "	72.0 "
Net Change	$127 Million	($37.5) Million	$164.5 Million

(TWA 4C-1, pp. 30, 45, 63, 70, as amended by TWA Exs. 42, 42(a), 43, 43(a); DX 331.)

1/ These are, of course, only an approximation of the yields actually applied by Mr. Simat which vary with his estimates of the marginal stage lengths at which different types of equipment were added and deleted.

Comparison of this $164.5 million difference with the difference of $162.0 million obtained by application of Mr. Wemple's yields to Mr. Simat's estimates of added traffic gives another indication of the relative significance of the varying yield estimates.

4. Revenue Estimates - International Division

Plaintiff's passenger revenues in its International Division are derived in part from scheduled transatlantic services (IATA traffic) and in part from scheduled services beyond the European gateway cities (beyond-the-gateway traffic) and from non-scheduled (charter) services. The estimation of changes in international passenger revenues requires, under Mr. Simat's procedures but not under Mr. Wemple's, separate consideration of IATA traffic and non-IATA traffic. As in the case of domestic revenue estimates, Mr. Simat has again followed Mr. Wemple in adding 5% to estimated changes in passenger revenues in order to arrive at estimated changes in total transportation revenues.

a. Non-IATA Traffic

Mr. Wemple has applied his estimated percentage increases each year in the amount of plaintiff's IATA traffic to the passenger revenues for the entire International Division in order to obtain his estimates of

added international passenger revenues (e.g., C & C Report, pp. 26-27). This assumes that plaintiff's beyond-the-gateway and charter traffic would have increased in the same proportion each year as that estimated by Mr. Wemple for its IATA traffic.

In Mr. Simat's opinion, the assumed additions of plane-miles in the International Division would not have been accompanied by any increase in beyond-the-gateway or charter traffic, for the reasons stated in Vol. II, Part E at E-23 through E-45. He estimates that the resulting overstatement of International Division passenger revenues by Mr. Wemple is $11.2 million in respect of beyond-the-gateway revenues (Table E-XVII at E-39) and $3.2 million in respect of charter revenues (Table XX at E-45), or a total of $14.4 million.

b. IATA Traffic

Both Mr. Wemple and Mr. Simat estimate that plaintiff's scheduled transatlantic passenger traffic would have increased each year by the same percentage as that by which its share of total transatlantic capacity (IATA seats) would have increased as a result of the assumed additional jet availabilities.

Mr. Wemple has assumed that the other IATA carriers would not have offered additional seats in the 1959-1963 period and, further, that in 1959 and 1960 the

added seats would have been "transferred" from Pan Am. He therefore measures plaintiff's increased share of IATA seats against a base (total IATA seats) which is unchanged from the historical in 1959 and 1960 and which thereafter is increased only by the amount of the assumed addition to plaintiff's seats.

In Mr. Simat's opinion, Pan Am and the other IATA competitors of plaintiff would have reacted to the assumed increase in plaintiff's capacity by offering additional capacity of their own. He has, therefore, measured plaintiff's percentage gain against a larger base which reflects his estimate of the greater number of seats which would have been offered by plaintiff's competitors. This results in a smaller estimate than Mr. Wemple's of the increase in plaintiff's scheduled transatlantic passengers.

Mr. Simat's discussion of competitive reaction by other carriers appears in Vol. II, Part E at E-3 through E-18. His estimates of the percentage increases in plaintiff's share of IATA passengers are set forth in Tables E-X and E-XI at E-21 and E-22. These are to be compared with the estimates in the C & C Report at pages 26, 47 and 48 respectively.

Mr. Simat obtains his estimates of the resulting

increase in passenger revenues by applying his estimated percentage increases in the number of plaintiff's passengers to the dollar amount of International Division passenger revenues realized in the corresponding year, after subtracting those revenues which he estimates to be derived from beyond-the-gateway and charter operations. Mr. Wemple uses total passenger revenues of the International Division without segregating the non-IATA portion thereof.

Mr. Wemple's estimate of net additional passenger revenues for the International Division is $85 million (C & C Report, pp. 27, 48), of which Mr. Simat has estimated that $14.4 is attributable to non-IATA traffic, leaving $70.4 as the portion attributable to IATA traffic. This is to be compared with Mr. Simat's estimate of $45.1 million (SHE Report, Vol. I, pp. IV-113, 114 and V-80, 81). The difference is therefore about $25 million in the estimates of added revenues from additional scheduled transatlantic passenger traffic. The difference in the estimates of total International Division passenger revenues is about $39.5 million.

5. Cost Estimates - Direct Operating Expenses

Mr. Wemple estimates that direct operating expenses

(except insurance and depreciation) would have changed in proportion to aircraft miles flown. In Mr. Simat's opinion, block hours rather than aircraft miles provide the appropriate costing unit for estimating changes in such expenses where aircraft are operated over varying stage lengths. He has accordingly estimated changes in these expenses for domestic operations in proportion to his estimated changes in the block hours flown with the various types of aircraft added and deleted. For international operations, where there would have been no significant change in stage lengths, he has used Mr. Wemple's method of estimating in proportion to changes in plane miles flown.

Mr. Simat's procedures for estimating changes in direct operating expenses in domestic operations are treated in Vol. II, Part F. His estimates of added and deleted block hours depend upon his estimates of the marginal stage lengths of added and deleted flights. With respect to displaced piston operations, they also depend upon his estimates of the allocation of deleted piston miles among the various types of pistons.

The corresponding estimates may be tabulated as follows:

(Revised Summary-Categories of Differences-Wemple vs. Simat)

Estimates of Changes in Direct Operating-Expense
(Less Depreciation and Insurance)
(Millions of Dollars)

	Mr. Wemple[1]	Mr. Simat[2]	Difference (Mr. Wemple's Estimate Less Mr. Simat's)
Domestic			
Jets	98.8	+ 99.88	- 1.08
Pistons	-71.5	-103.98	+32.48
Net	+27.3	- 4.10	+31.40
International			
Jets	+35.7	+ 35.30	+ .40
Pistons	-16.4	- 16.40	0
Net	+19.3	+ 18.90	+ .40
System			
Jets	134.5	$135.18	- .68
Pistons	87.9	-(120.38)	+32.48
Net	46.6	$ 14.80	+31.80

As stated previously, there is no difference in the estimates of increases in costs of insurance ($5.5 million) and depreciation (44.1 million) attributable to added jet availability, but Mr. Simat has included, as Mr. Wemple did not, estimated savings of $14.6 million in such costs as a result of piston retirements.

1/ TWA Ex. 4-C(4), Ex. F, pp. 3-4, 6-8, 13-15, 21-23, 28-30, 36-38, 43-45, 51-52, 57-59; Ex. G, pp. 3-6, 12-15, 20-22, 28-30; Ex. H, pp. 2-5, 11-13; Ex. J, pp. 3-5, 11-14, 20-22, 28-30, as amended by TWA Exs. 42, 42(a), 43, 43(a).

2/ DX 331.

6. Cost Estimates - Ground and Indirect Expenses

Mr. Wemple divides indirect costs into two components: (1) fixed components in which he estimates no change for changes in the level of operations and (2) variable components in which he estimates that changes would occur in direct proportion to changes in a costing unit selected by him as appropriate to the particular component under consideration.

Mr. Simat has selected costing units through analysis of the historical cost experience, domestic and international, of plaintiff and of the industry in the period 1959-1963. Through the use of regression analysis, he has obtained formulas for estimating the amount of change in the various categories of indirect expense that would accompany a unit change in the costing unit found by him to be appropriate to the particular category under consideration.

Mr. Simat's procedures for estimating changes in ground and indirect expenses are treated in Vol. II, Part G. Table G-VIII at G-42 compares the costing units used by Mr. Simat with those used by Mr. Wemple. Exhibit G-H displays the variable unit costs derived by the regression analysis which are to be applied to the appropriate costing units to obtain the estimated change in each category of indirect expense. The same variable unit costs are applied each year to changes in jet and piston operations, but different

unit costs are applied to changes in domestic and international operations.

The differences in the estimates of indirect and ground expenses may be tabulated as follows:

Difference in Estimates of Ground and Indirect Expense
(Millions of Dollars)

	Mr. Wemple[1]	Mr. Simat[2]	Difference (Mr. Wemple's Estimate Less Mr. Simat's)
Domestic			
Jet	-[3]	+ 67.48	-
Piston	-	- 95.45	-
Net	+40.9	- 27.97	+68.87
International

PART I

INTRODUCTION

A. Our Request for Internal TWA Records

In our earlier report, DX 271, we noted that we were handicapped, in estimating the consequences of adding jet aircraft to TWA's available fleet, by a lack of detailed information concerning TWA operations and operating results at levels less aggregated than the operating division. We pointed out that, lacking finer grained information, we had to forego the use of estimating methods which we would have preferred to use. Instead, we used an estimating approach that was fashioned to the limitations of the available data. While this approach led to estimates that we believe are reasonable and in accord with historical experience, we maintained that improved and more realistic estimates could and would be made, if we had access to certain detailed information concerning the actual usage of aircraft during the period of jet inventory build-up and the traffic and revenues resulting from actual aircraft usage. This was the reason for the request that TWA produce specified categories of internal records from its files.

In describing our needs for additional and more detailed information, we specified data on the traffic and financial performance of scheduled flight services, by individual flight segments. We also specified routing chart information which, together with the flight performance data, would enable us on the basis of TWA's own experience to make more accurate judgments regarding how additional aircraft would have been used and how this usage would have affected the operations of existing aircraft and the volume of traffic carried. In addition we specified on-line, on-flight, and passenger revenue yield information in order to improve and add realism to our estimates of passenger revenues.[1/]

B. Limitations on Our Use of the Material Furnished by TWA

In our report of progress, dated October 25, 1967 (DX 325)[2/] we reviewed the principal objectives of our supplemental report, described the status of the material furnished to us by TWA and outlined the analysis program then underway or contemplated. We noted that the scope of

---

1/ See affidavit of Nathan S. Simat, dated June 29, 1967, annexed to defendants' motion filed June 30, 1967.

2/ Status of Supplemental Report by Simat, Helliesen & Eichner, delivered to the Special Master and counsel for plaintiff on October 25, 1967 and received in evidence on October 26, 1967 (Tr. 8391-92).

that program was contingent upon a clarification of the data made available to us and confirmed our previous estimate that the analytical work would be completed by the end of the year and that a written report would be ready for submission by the end of January or early in February.

Since the submission of DX 325, we have been compelled to carry out some portions of our projected program on a more limited basis than originally planned and to shelve other parts entirely. This resulted, in part, from difficulties in processing the materials received and, in part, from inherent deficiencies in the information recorded. The decision of the Special Master to require submission of our supplemental report by January 1, 1968, even though its scope was at the same time confined to TWA's Domestic Division (Tr. 8606), was another factor that obliged us to be selective in our analysis.

Unforeseen difficulties in processing materials were especially pronounced in the case of flight traffic performance data. In checks of the information keypunched from the basic source records supplied to us, we found that there were duplications in the data that required extensive tracing and corrections of the keypunched data before the accuracy could be established. Routing chart information, though

no less complete than was noted in our progress report, was not entirely legible in some instances and required time-consuming cross-checking with flight performance data to assure that flight information contained in the routing charts was properly recorded.

The principal deficiencies in the information were found in the passenger revenue yield data. We noted in our progress report that the information supplied was for a period subsequent to 1959-1963 and, furthermore, that we were not certain that the information afforded an improvement over the relationships we had developed from industry data and adjusted to TWA's average passenger revenue yield levels. As a result of further examination of the information, it appears it was not developed from analysis of tickets covering the transportation provided by TWA over individual flight segments, but was estimated from quoted fares between the terminals of flight segments by applying average divisional percentage differences between fares and revenue yields. Since there is much evidence that the percentage differences between fares and revenue yields vary from segment to segment, generally in relation to segment distances, the yield information supplied by TWA was not even as accurate or as realistic as the relationships that we obtained from industry data.

Accordingly, we lacked the basis for undertaking a further analysis of revenue yields, as contemplated. Since no more accurate basis for estimating passenger revenue yields was derivable from the information at hand, we have relied on the method of estimating passenger revenue yields developed in our earlier report as the best available. We have, however, been able to improve our estimates of the relationship between length of hop and passenger trip length.

Finally, because of the other difficulties encountered, we had to delay the recording and processing of information on the competitive services operated by other airlines in markets where TWA historically operated nonstop flights with piston and jet aircraft. As a result, our analyses of the influence of flight schedules of competing airlines on TWA's aircraft usage and share of available traffic are not as extensive as we had planned.

Notwithstanding our inability to undertake in full the analyses originally contemplated, we have been able for the first time to ascertain the detailed usage and operational results of the aircraft which TWA did have available and, in consequence, to effect significant improvements in our estimates of the usage, traffic and revenues which would most probably have ensued from assumed additional jet capacity.

C. Projects Undertaken in This Report

This report has two major parts. Part II contains our analysis of the domestic jet operations historically conducted by TWA in 1959-1963. Part III contains our estimates of the traffic and revenues which TWA would have obtained in 1959-1963 if it had operated the additional capacity assumed by Mr. Wemple for the Domestic Division.

In Part II, using information from TWA's routing charts and on-board reports, we have determined the average stage lengths and load factors in each month of the 1959-1963 period for every one of the active jet aircraft in TWA's domestic fleet. The results confirm the conclusions as to the trends in stage lengths and load factors expressed in our earlier report. Furthermore, we have determined for each such aircraft, using both our own estimating procedures and those of Mr. Wemple, the operating profit or loss obtained in each month of the period. This analysis of profitability by individual jet aircraft reinforces our previous opinion that throughout the greater part of this period TWA could not have added jet capacity at a profit.

In Part III, we present our improved estimates of the effect on operating profits of the assumed operation by TWA of additional jet capacity in its Domestic Division.

The additional data have provided a firmer foundation for estimating in three significant areas:

1. Aircraft scheduling. We have now been able to make detailed estimates of the changes in aircraft usage associated with the availability of additional jet aircraft by flight segments, grounded on the scheduling policies of TWA disclosed by actual aircraft usage. Rather than estimating the average stage length of added and deleted flight operations by the use of divisional average relationships between the stage lengths of existing and added and deleted services, we were able to estimate directly the changes in flight operations for each flight segment affected and to derive the stage lengths of added and deleted flights from the individual flight segment data.

2. Traffic estimating. The additional data enabled us to effect major improvements in the traffic estimates. We have now been able to estimate the added and deleted traffic resulting from changes in flight operations on an individual segment basis, rather than on the basis of average marginal load factors. We took into consideration the characteristics of the flight segment (its length in miles and whether it was competitive or noncompetitive) and also the experienced relationships, among flight segments of like characteristics, between traffic volumes added and deleted and changes in flight operations.

3. Passenger trip lengths. As a result of a comprehensive analysis of TWA's on-line traffic for individual flights, we were able to improve the estimates of the trip lengths of passengers added and deleted as a result of the contemplated additions and deletions of jet and piston aircraft services.

In addition to the foregoing improvements in the estimates of changes in aircraft operations and traffic which were anticipated to flow from the supplementary data and studies, we further found that the analyses of historical aircraft usage and operating results, made possible by the availability of routing chart and flight information, disclosed characteristic patterns of differences among aircraft of the same type, not only as to how individual aircraft were used but also as to the profit or loss contribution of the individual aircraft. We found that the differences were so uniform among the individual aircraft and varied so consistently among fleets of different numbers of aircraft that it was possible from the data to independently estimate the amount of operating profits and losses that would be added and deleted by changes in the number of aircraft available and used. This afforded an alternative basis for estimating the financial effects of

fleet additions and deletions that was not not anticipated.

The estimates detailed in Part III provide a further substantiation for our opinion that operation of the additional jet capacity assumed by Mr. Wemple would have contributed significant operating losses to TWA's Domestic Division.

PART II

PART II

HISTORICAL PERFORMANCE OF TWA'S JET AIRCRAFT 1959 - 1963

Our analysis of TWA's domestic operations with jet aircraft owned or leased in 1959-1963 confirms three of the major conclusions stated in our prior report (DX 271):

1. As jets were added, they were flown on increasingly shorter stage lengths with the result that the average stage length over which each jet fleet was operated suffered a progressive decline;
2. As jets were added, they were operated at increasingly lower load factors with the result that the average load factor achieved by each jet fleet suffered a progressive decline;
3. As jets were added, the lower stage lengths and load factors at which they were operated produced lower operating profits for the added jets. Operations conducted at a marginal profit or at a loss, even before deduction of interest and other costs of capital, occurred at an early stage in the introduction of each of the jet fleets.

The historical performance provides a backdrop for projecting the results that TWA would have obtained if it had operated the additional capacity postulated by Mr. Wemple.

Analysis of TWA's records establishes definite trends to lower stage lengths, lower load factors and consequently lower operating profits (or higher operating losses) as jets were added. In our opinion, the operation of still more jets in any year of the 1959-1963 period would necessarily have accelerated these historical trends.

Airline managements attempt to employ their invested capital and physical resources as profitably as possible. An airline does not use a multi-million dollar jet unprofitably if it has an opportunity to fly it profitably. If at any point in time opportunities do not exist for profitable employment of all the aircraft in a particular fleet, an airline may nevertheless choose to operate them all even though some must be flown on unprofitable routes. Various considerations may underlie such a choice. The management may hope to cover some of the operating costs which are incurred whether or not a plane is put in the air - principally, depreciation and hull insurance, while avoiding the expenses associated with any extended grounding. Or management may misjudge the profit opportunities, hoping for greater traffic and revenue production than proves, in actuality, to be attainable. Managements are especially vulnerable to this kind of overoptimism in periods of stagnant traffic growth, such as that from 1959 to mid-1963.

When management becomes aware of loss operations it attempts

to solve the problem by rescheduling its equipment. This is one of the reasons why changes in aircraft schedules and routings occurred so frequently during the 1959-1963 period.

The fact that TWA operated many of its jet aircraft at a marginal profit level or at a loss throughout most of this period, despite efforts to find profit opportunities through equipment shifts and rerouting, does not suggest that TWA stood in need of still more jet equipment. On the contrary, it is proof that, with more jets on its hands, TWA management would have faced an even more difficult problem of profitable deployment.

A. Analysis of Individual Jet Aircraft Performance

The new information upon which this part of our report is based was obtained primarily from TWA aircraft routing charts and TWA monthly on-board reports.[1/] We have now been able to ascertain the historical usage, the passenger load and the profitability of each jet aircraft scheduled in the 1959-1963 routing charts furnished to us by TWA.[2/]

1. Aircraft Routing Charts

TWA, like other airlines, assigned operating routes to the active aircraft in each of its fleets through the

---

1/ Furnished by plaintiff upon defendants' motion filed June 30, 1967 and granted by the Special Master July 13,1967 (Tr. 7021).

2/ It has proved impossible for us to make a similar anaylsis of piston aircraft performance within the time limitation fixed by the Special Master.

medium of routing charts. A routing chart displays the flight patterns over a 24-hour period for each of the active aircraft of a particular type, such as the B-131 or the CV-880. For one B-331, the daily pattern might be from Los Angeles to Idlewild to Los Angeles. For another, it might be from Idlewild to Indianapolis to Idlewild to Chicago. The sum of the daily flight patterns for each of the aircraft in a particular fleet constitutes the overall scheduling of the fleet.

The routing chart does not purport to identify by license frame numbers or otherwise the physical piece of equipment which performs each daily pattern. What it does tell us is that, during each day it is in effect, one of the active aircraft in the fleet will perform one of the daily flight patterns. A flight pattern may or may not be performed day after day with the identical piece of equipment. Typically it will not be the identical piece of equipment. The usual procedure is to rotate all of the aircraft in a fleet in sequence through each daily flight pattern so that each piece of equipment may undergo the periodic maintenance checks built into the scheduling. (Some routing charts assign an aircraft to maintenance for an entire aircraft day.) But if there are, say, 15 B-131s being operated, then the number of daily flight patterns flown by B-131s will be exactly 15, no more - no less. Fifteen "actives" produce 15 "aircraft days."

Chart II-A on page II-6 reproduces a sample TWA routing chart, issued October 18, 1963 and assigning the daily routing of 23 of TWA's 26 CV-880s effective October 27, 1963. Of the other three 880s, one was assigned as a spare, one was assigned to pilot training and one remained unassigned.[1/]

The chart schedules 23 aircraft days, one day for each of the 23 active CV-880s. The day for the aircraft performing Flight 138 (upper left corner) begins at 12:30 A.M. with a departure from San Francisco to Pittsburgh. It continues with departures from Pittsburgh at 11:35 A.M. on Flight 142 for Boston, from Boston at 2:20 P.M. on Flight 193 for St. Louis, and from St. Louis at 6:45 P.M. on Flight 194 to Boston, where it terminates upon a scheduled arrival at 11:19 P.M. Clearly, the same piece of equipment could not repeat this schedule on the succeeding day, but would perform Flight 91, as indicated (lower left corner), departing from Boston at 8:15 A.M. for Chicago. Flight 138 would be performed on the succeeding day with the equipment which had completed Flight 161 from Cincinnati to San Francisco (upper right corner) as the last lap of its aircraft day. Thus the chart moves each of the 23 active aircraft through each of the 23 aircraft days.

1/ An indication that management did not envisage any possibility of profitable employment for this aircraft.

"DX359A, page II-6
(Supplemental S.H.E. Report - Volume A)"

The flight number attached to each pair of origin and destination points on the routing chart is the same number by which the flight is designated in the TWA timetable effective during the same period of time and in the TWA on-board reports which record data on the flights as actually performed. The flight numbers in the routing charts do not necessarily designate non-stop flights. The number of scheduled segments making up a given flight can be determined from the appropriate timetable. The number of segments actually flown with that type of equipment each month for a given flight is recorded in the TWA on-board reports.

In analyzing the performance of individual jet aircraft, we have used the aircraft routing charts as the basis for individualizing aircraft performance. Each daily flight pattern for each of the active aircraft is considered to be the daily performance of one aircraft, - i.e., one "aircraft day." An aircraft day performed throughout a month is considered to be the performance of one aircraft for that month. It is, of course, immaterial to our analysis that in the course of the month each piece of equipment in the fleet may have been rotated through each of the daily flight patterns. The sum of the aircraft days is always equal to the number of active aircraft in the fleet. If there had been three fewer active jet aircraft in any fleet at any time, there would

have to have been three fewer aircraft days scheduled in the routing chart for that fleet at that time. If there had been five more active jets, there would have to have been five more aircraft days scheduled.

Since the TWA on-board reports provide flight performance data on a monthly basis, it was necessary to combine routing charts where two or more were effective during the same month. Daily flight patterns assigned in the first routing chart in a month were matched with those assigned in the succeeding chart or charts in that month. In most instances the great majority of flight patterns were preserved intact throughout the month. Where a flight pattern was discontinued, an effort was made to match it to a pattern with like characteristics.

2. On-Board Reports

The TWA on-board reports provide monthly summaries of data by flight number, segment and type of equipment for all revenue flights performed by TWA. From these reports we obtained the number of departures and the number of revenue passengers carried each month by each type of jet over each segment constituting part of a scheduled flight indentified by a flight number. By combining these data for all segments comprising a flight and for all flights comprising an aircraft day, as assigned in the routing chart, we obtained the total number of flights performed and passengers carried in

each month by each aircraft in each of TWA's jet fleets for which we were furnished routing charts.

From the origin and destination points of these flights we obtained aircraft miles, block hours, and departures. Multiplying the aircraft miles by the seating configurations gave us the seat miles flown by each aircraft on each segment for each month.[1] From these statistics we computed, for each aircraft in TWA's jet fleet, the average monthly stage length (aircraft miles flown during the month divided by monthly departures) and the average monthly load-factor (revenue passenger miles operated during the month divided by available seat miles offered). We also computed, for each such aircraft, the monthly operating profit or loss, according to the methods described in Section D of this part of our report.

The number of flights actually performed and recorded in the on-board reports is not in every instance the same number of flights scheduled for a particular type of equipment in the aircraft routing charts. Weather conditions or equipment failures sometimes caused flights to be cancelled or operated with substitute equipment.[2] In other instances,

---

[1] Aircraft miles were computed by multiplying the segment distance (airport-to-airport) by the number of departures. Seat miles were computed by multiplying the aircraft miles by the average number of seats for the month and aircraft type in question as set forth in the TWA monthly report on operating statistics (TWA C&C-3).

[2] The strike in February, 1961 also caused a number of cancellations.

flights departed as scheduled but landed at non-scheduled destinations, usually because of weather. Our analysis pertains, of course, only to flights actually operated. Cancelled flights were not counted. Flights performed with substitute equipment of another aircraft type, whether jet or piston, were not counted. We did count scheduled flights performed with the scheduled type of equipment where for one reason or another a non-scheduled departure or landing was made. For example, Flight 87, scheduled in November 1961 to be operated with a B-131 from Albuquerque to Los Angeles, flew 25 departures as scheduled and one departure from Albuquerque to Ontario, an airport some 50 miles east of Los Angeles, also with a B-131. We included the statistics for the Albuquerque-Ontario flight with the statistics for the 25 Albuquerque-Los Angeles flights in determining the performance of the B-131 aircraft performing Flight 87 in November 1961.[1]

---

[1] We did not add in any additional expense of ferrying the flight from Ontario to Los Angeles as a non-scheduled trip.

B. Stage Lengths Operated by TWA's Jets

The historical deterioration of the stage lengths scheduled for TWA's jets commenced as early as the second month of service with its first jet fleet. When the B-131s were scheduled in April 1959, the first full month of operation, they were used upon transcontinental nonstops averaging 2404 miles per trip.1/ As departures doubled in May from 143 to 286, the average scheduled stage length dropped by 96 miles from 2404 to 2308. This drop in the average indicates that the added jets were scheduled at an average stage length shorter than the pre-existing average. This distance, the marginal stage length of the added operations was, in fact only 2,211 miles.2/ In June, with a 48% increase in scheduled departures, the marginal stage length fell to 1,570 miles.3/

This was the start of a continuing process which applied with equal force to every single one of TWA's jet fleets during the whole of the 1959-1963 period, as shown in Table II-A.

1/ Computer printout entitled "Domestic Schedule Average Stage Length," table for "Aircraft Type B70," the code designation for B-131 (workpaper).

2/ Ibid. TWA scheduled 316,236 additional aircraft miles in May. Dividing this figure by 143, the number of added departures, gives 2,211 miles per added departure.

3/ Ibid. Departures increased from 286 to 424, and 216,594 additional aircraft miles were flown, an average of 1,570 miles per added departure.

Source: To obtain averages for all fleets combined, scheduled aircraft miles, C&C-4(24), were divided by scheduled departures, C&C-4(25). The separate averages for the various aircraft types were obtained from the printout Domestic Schedule Average Stage Length, supra at II-11, fn. 1., and are the figures shown for December in each year in the column headed "Running Average Stage Length."

The average scheduled stage length of B-131 flights dropped from 1,888 miles in 1959 to 648 miles in 1963, and that of B-331 flights from 2,027 miles in 1960 to 827 in 1963. The decline in average stage lengths of the later-introduced jet types,

though not so dramatic, was equally definite. The progressive decline in average stage lengths reflected, of course, a progressive decline in marginal stage lengths, as added jets were scheduled on segments which were generally shorter than the pre-existing average.

This deterioration in average jet stage lengths occurred even though the average stage length for all TWA flights increased each year from 1959 to 1963. The overall increase was not occasioned by an increase in average piston stage lengths since these too fell continuously every year for every type. The reason is that TWA eliminated a large number of trips from its schedules, most of them short haul, and downgraded the stage lengths of the individual aircraft types operated on the remaining frequencies.

Within any one year the downward trend of stage lengths is partially obscured by seasonal fluctuations, caused principally by the demand patterns of the California markets. The influence of these seasonal patterns can be removed through the use of a 12-month moving average, which combines the average stage length for a given month with the averages for the 11 preceding months.[1] Twelve-month moving averages of the stage lengths scheduled each month by each of the jet types in TWA's fleet during the 1959-1963 period (beginning in each case with the twelfth full month of operation) are displayed in Table II-B on page II-14.

---

[1] Where the general trend is downward, as here, the moving average for a given month is necessarily higher than the actual average for that month, since it is influenced by the generally higher averages of the preceding 11 months.

Sources: Cols. 3-8: Computer printout, supra at II-11, fn. 1.
Col. 9: TWA 4c-4, Ex. B., Col. 11, 12-month moving average.

It is evident from Table II-B that month by month as jets were being added to TWA's fleets, each fleet was being operated at progressively lower average stage lengths. The downward trend was unremitting for the B-131s throughout the entire period, as it also was, with minor exceptions, for the CV-880s. Even the later-introduced B-131Bs show a constantly declining trend. The trend is equally marked for the B-331s until May 1963, when an upturn occurs.

The decline in average stage lengths was produced by the operational requirements of scheduling the individual aircraft within each fleet. The routing charts and the on-board reports furnished by TWA permit an understanding of the scheduling patterns which underly the averages. In Table II-C, on page II-16, we have analyzed the stage lengths operated by each active jet in TWA's fleet[1/] during the month of December in each year of the 1959-1963 period.

Table II-C shows, for each type of jet and for the fleet as a whole, the number of aircraft operating in four distance categories - over 2,000 miles, 1,000 to 1,999 miles, 700 to 999 miles and under 700 miles. The pattern of scheduling may be illustrated by tracing what happened to the B-131s.

1/ With the exception of the B-331Bs, for which no domestic routing charts were furnished us.

Source: Appendix B.

1/ Although TWA did not furnish 1963 routing charts for the B-331, TWA 40-3 indicates that a B-331 was operating nonstop between New York and Los Angeles in December 1963.

In May 1959, with six active jets, TWA operated three B-131s at average stage lengths over 2,000 miles and three at average stage lengths between 1,000 and 1,999 miles.[1/] In the following December, when TWA had received its full fleet of 15 B-131s, four B-131s were now being operated at average stage lengths over 2,000 miles, while the remaining ten active 131s were operated at average stage lengths between 1,000 and 1,999 miles (Table II-C). Clearly, opportunities did not exist to schedule the additional B-131s on the longer hops.

By December 1960, only one B-131 was operating at an average stage length over 2,000 miles. The first three B-331s added to the domestic fleet had now taken over the longer hops with the result that B-131 operations were downgraded. Ten B-131s still flew hops averaging between 1,000 and 1,999 miles, and four were now flying average hops of 700 to 999 miles. As more jets were added to TWA's other fleets, B-131 operations underwent a progressive further downgrading. In December 1963, none of the 14 active B-131s was operated at an average stage length as long as 1,000 miles, and nine were flying average hops under 700 miles, less than the distance from New York to Chicago.

1/ Computer printout showing monthly average stage length, average load factor and operating profit or loss by Mr. Wemple's method for each scheduled jet aircraft operated by TWA in 1959-1963. A copy of this printout is annexed to this report as Appendix B.

Looking at TWA's jet fleet as a whole, one can see that, as additional jets came in, they were either assigned to shorter stage lengths than the existing average for the particular jet type or they compelled the downgrading of aircraft of other jet types. 1/ While the total number of aircraft of all types operating at an average stage length of 2,000 miles or more remained fairly constant (4, 4, 3, 2, 5) the number operating at stage lengths in each of the lower categories increased from year to year. No jets are shown as operating at average hops below 700 miles until December 1961, when there were three.2/ In December 1963, the number below 700 miles had grown to 20.

In Chart II-B on Page II-19 we present a graphic comparison of the average stage lengths operated by the four B-131s having the highest average with those of the four having the lowest average within each month of the 1959-1963 period beginning in July 1959. If TWA had operated additional jets in any year of the 1959-1963 period,there can be no doubt, in our opinion, that the trends shown in Chart II-B for the B-131s, as well as the similar trends obtaining for the other jet types, would have been accentuated.

1/ Piston aircraft schedules were also downgraded as they were rippled down to shorter and shorter segments.

2/ The first jet to be operated at an average stage length below 700 miles was a B-331 in January 1961 (Appendix B).

SOURCE: APPENDIX B

C. Load Factors Experienced by TWA's Jets

TWA suffered constantly declining load factors during the first four and one-half years of the 1959-1963 period. As shown in Table II-D, TWA's annual average load factor for all aircraft, jet and piston, diminished by six or seven percentage points from year to year until 1963. The B-131s, the B-331s and the CV-880s were all introduced at relatively high average load factors, which then dropped sharply in the second year of operation. All three jet fleets struck bottom in 1962 and rose moderately in 1963.

TABLE II-D

TWA DOMESTIC LOAD FACTORS 1959-1963

The decline in TWA's average monthly load factors preceded the decline in its average annual load factors. Since seasonal variations in load factors are even more pronounced than those in stage lengths, we have compiled 12-month moving average load factors for each jet type in order to demonstrate the monthly trend after eliminating the effect of seasonal fluctuations.[1/] These moving average load factors, together with the monthly averages, are shown in Charts II-C-1 through II-C-6 on pages II-22-27. The steady downward drift of load factors, persisting throughout 1960, 1961 and 1962 as more and more jets were introduced in the face of a nearly static market, is unmistakable.

1/ As in the case of the moving average for stage lengths, the moving average load factor lags the actual decline in load factors owing to the influence of the generally higher load factors in the preceding eleven months. The difference can be seen in the II-C charts.

Even during periods of relatively high load factors, such as the introductory years of the B-131, B-331 and CV-880 jet fleets, there was great variation in the load factors achieved by individual aircraft within each jet fleet. We have computed the individual load factors from the data recorded in TWA's on-board reports.

The CV-880 average load factor of 66% in 1961 was much higher than the 56% average in 1962, but even in 1961 TWA was unable to achieve a 66% load factor in all of its 880 operations. In April, for example, four out of the 12 active CV-880s were already operating at load factors below 66% (Appendix B). One of these operated at a load factor of only 51%. Four months later, in August, a much stronger month for air passenger travel, seven out of 17 active CV-880s were operating below 66%, and again one was operating as low as 51%. By October, when TWA had received all 20 CV-880s and was scheduling 18 of them in active use, ten were operating at load factors below 66%. Four of these were now at 51% or below, with the lowest at 43%. It is apparent that TWA could not have operated additional CV-880s at a load factor as high as 66%.

Since load factors directly and sharply affect profitability, there can be little doubt that management would have operated these aircraft at higher load factors

if it had been able to do so. There can be no doubt that it could not have operated any additional 880s, let alone ten more at load factors close to the 66% average.

In 1962, the situation grew far worse for the CV-880s, as TWA's average annual load factor dropped ten points to 56%. In November, when the full fleet of 20 had been available for a year, eleven of the 18 active 880s experienced load factors below 50%, three of them below 40%. The operations by these jets were contributing substantially to the losses which TWA sustained in 1962. If there had been ten additional CV-880s in November 1962, it is our opinion that they could have achieved load factors no better, and would almost certainly have experienced load factors worse than those of the three 880s actually operated at load factors below 40%.

In spite of the upturn in traffic that occurred in the last half of 1963, in November of that year TWA was unable to operate the six additional CV-880s with which by then it had augmented its fleet, at load factors above 50%. Of the 24 CV-880s active in November, eight experienced load factors below 50%. Six of these had load factors ranging from 45% down to 39%.

Charts II-D-1 and II-D-2 on pages II-31 and II-32 graphically compare the four highest with the four lowest average monthly load factors obtained by individual aircraft

of the B-131 and CV-880 fleets in each month during the 1959-1963 period. In our opinion, if TWA had operated additional B-131s or CV-880s, they would have experienced load factors not greater, and in most cases less, than the lowest load factors historically experienced in the corresponding month and fleet, as shown in Charts II-D-1 and II-D-2.

D. Profitability of TWA's Individual Jet Aircraft

We have determined the monthly operating profit or loss for each jet aircraft operated by TWA in 1959-1963 for which we were furnished routing charts. We have done this on two different bases, estimating revenues and costs (1) according to the S.H.E. procedures (Appendix A)[1/] and (2) according to Mr. Wemple's procedures (Appendix B). Both estimates are based upon the distances actually flown and the number or passengers actually carried in each month by each jet aircraft.

While the profit or loss determined under the S.H.E. procedures is, in our opinion, substantially more accurate, the difference is not significant to the present analysis. For both methods demonstrate with equal certainty, although in different degree, that individual aircraft in each of TWA's jet fleets varied strikingly in their earning capacity, depending upon their scheduling, and they also demonstrate that, as jets were added, the additional jets were placed on routes where they began to contribute not profits, but losses.

1. Profit or Loss Under S.H.E. Procedures

The monthly profit or loss for each jet aircraft is based upon information appearing in the TWA routing charts and on-board reports. The following illustrates how we used such information.

1/ Appendix A is a computer printout similar to Appendix B but with operating profit or loss computed by S.H.E. methods.

TWA routing charts for June 1962 show a B-131 as operating flight number 42 from San Francisco to Idlewild. This was the entire daily scheduled activity for one aircraft.[1/] The on-board report for June 1962 shows that flight 42 operated from San Francisco to Idlewild 29 times nonstop as scheduled and once with a stop at Baltimore. The number of passengers carried on flight 42 with a B-131 aircraft over each of the three segments San Francisco-Idlewild, San Francisco-Baltimore and Baltimore-Idlewild is recorded in the on-board report for June. The number of aircraft miles flown over each of the three segments was obtained by multiplying the airport-to-airport mileage for the segment by the number of departures flown over the segment as shown in the on-board report. The number of passengers multiplied by the number of aircraft miles gave the passenger revenue miles for each segment. The appropriate yield was then applied (see, e.g., DX 271B, Part D and DX 271A, pp. IV-27, 28) to arrive at the passenger revenues realized on each segment. The total of the passenger revenues for the three segments, multiplied by 105% to obtain transportation revenues, appears in Appendix A as the total revenues earned in June 1962 by A/C 040, the B-131 performing flight 42.

1/ This was A/C 040 in Appendix A, June 1962 table for B-70s (B-131s).

In instances of irregular operations (operations performed with scheduled equipment under a scheduled flight number but on a non-scheduled segment), where two or more routing charts were effective in the same month and where the same flight was scheduled for different aircraft in the second or subsequent routing charts, we allocated the departures, aircraft miles and block hours flown and passengers carried over a segment among such different aircraft. Allocation was necessary because the on-board reports do not show the day of the month on which a flight was performed. We made such allocations in proportion to the number of days the pertinent flight patterns were effective during the month. In a very few instances, where such allocation resulted in apportioning less than one-half of a departure to an aircraft, the printout (Appendix A) shows departures as zero, but the computer in determining average stage lengths for the purpose of yield and cost estimation used the appropriate fraction less than 0.5.

Flying operations costs, maintenance and maintenance burdan, all of which vary with the amount of operations performed, were based upon block hours flown as recorded in the on-board reports and upon block hour-cost

ratios derived from total annual block hours flown and total annual direct operating costs experienced for the aircraft type and year in question (see DX 271B, Part F). To determine the direct costs which vary with fleet size (depreciation, hull insurance and leased aircraft rentals), we computed the historical costs per aircraft day and applied these units to the number of days in each month that each aircraft was scheduled as active. These costs are understated because the aircraft days reported by TWA and used by us to derive our unit costs included all aircraft in a fleet, active and inactive, but we did not apply the unit costs to aircraft which were unassigned, assigned as spares, assigned to pilot training or in maintenance for whole aircraft days.1/

We have not attempted to determine profit or loss for scheduled trips performed with substituted equipment of another jet aircraft type: for example, a scheduled CV-880 run performed with a B-131. In many instances, no doubt, the substituted aircraft was one assigned as a spare or unassigned. Lack of time prevented the extension of our

---

1/ There was considerable variation from year to year and fleet to fleet in the percentage of active aircraft. In 1961, for example, 97 percent of the reported available B-131 aircraft days were scheduled in the routing charts compared with 82% in 1959.

program to this kind of irregular operation.1/ We estimate that the operations for which we have determined profit or loss account for 90 percent or better of all jet operations conducted by TWA. The inclusion of these irregular operations would not, in our opinion, significantly affect our results.

Ground and indirect expenses were determined in accordance with the procedures set forth in DX 271B, Part G. Data set forth in or compiled from TWA routing charts and on-board reports furnished us with the basis for estimating our various indirect costing units as outlined on page G-42 of DX 271B.

a. The B-131s

In 1959, the B-131s all operated at high load factors and showed substantial operating profits, except for the aircraft which operated in November at a load factor of 51%.

In January 1960, the least profitable B-131s began operating at a loss. One or two B-131s incurred losses each month thereafter through May. During the peak summer season the B-131s were operated profitably in June and September, but the respite was brief. In every month from October 1960 through December 1963, one to eight B-131s sustained operating losses.2/

1/ We did, as stated above, p. II-10, include irregular operations performed with aircraft of the type scheduled by TWA.

2/ After December 1960, TWA owned all its B-131s, so that aircraft of this type which returned a small operating profit were no longer returning a net profit after cost of capital.

Thus, during 47 months out of 57 in the April 1959-1963 period, never less than one, and often as many as six, seven or eight B-131s failed to return an operating profit. Chart II-E-1 on page II-39 compares the monthly operating profits earned by the four most profitable B-131s in each month from July 1959 through December 1963 with the operating profit or loss experienced by the four least profitable B-131s in each month.

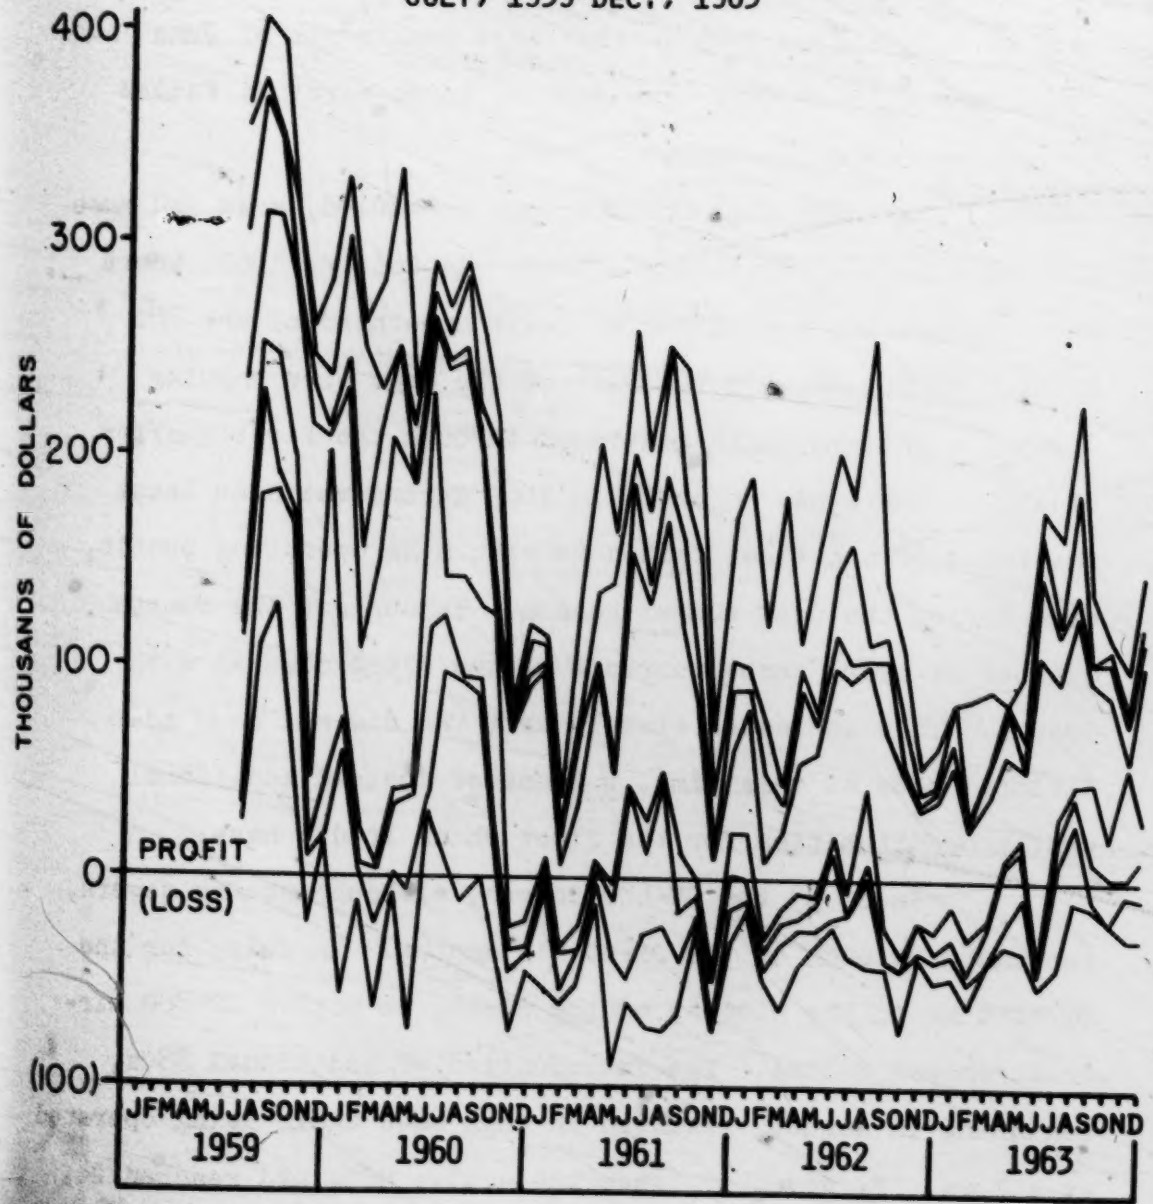
CHART IIE-1

MONTHLY OPERATING PROFIT OR LOSS FOR INDIVIDUAL B-131 AIRCRAFT

SHOWING THE FOUR MOST PROFITABLE AND FOUR LEAST PROFITABLE IN EACH MONTH

JULY, 1959-DEC., 1963



SOURCE: APPENDIX A

b. The CV-880s

Beginning in February 1961, the first full month of operation, at least one CV-880 experienced an operating loss every month through December 1963, with the one exception of July 1963. Even in the first peak month of June 1961, when only 14 880s were active, three aircraft failed to earn an operating profit.

As additional CV-880s were scheduled, more and more of them sustained operating losses. In October 1961, there were substantial losses for at least one-third of the 880 fleet. In November, a majority of the 880s were showing losses, a pattern which continued through the first quarter of 1962. There was no month in 1962 during which at least one-third of the fleet failed to return an operating profit, even during the peak summer season. Throughout the fourth quarter of 1962, three quarters of the fleet came in with losses. This indicates clearly that TWA did not need additional 880s at this time, but needed instead additional profit opportunities for the fleet which it did have.

In 1963, the CV-880 losses, although not as severe, continued in each of the first six months. In July, for the first time in the history of the fleet, no active CV-880 aircraft showed a loss. The introduction of additional 880s, beginning in August, resulted in some 880s again being operated at a loss. By November, when the active 880s had reached 24, seven were showing losses.

c. The B-131Bs

This fleet first appears in the routing charts in April 1962, but TWA did not have a substantial number of active B-131Bs until August 1962. In September 1962, when 15 aircraft were active, two of them showed operating losses. It can be said in general that TWA's B-131B fleet operated profitably. This can be traced to a number of factors, including the upturn in traffic in 1963, the use of B-131Bs over the more profitable TWA routes formerly operated with B-131s, and the cost economies associated with the fan jet.

Chart II-E-3 on page II-44 compares the operating profits and losses of the top four and bottom four B-131Bs in each month from August 1962 through December 1963.

SOURCE: APPENDIX A

d. The Minor Domestic Jet Fleets: B-331s, 720Bs, B-331Bs

Only a few aircraft in these fleets were operated domestically by TWA during the 1959-1963 period.[1/] TWA furnished no B-331 routing charts for the period May 1962 through December 1963, and, consequently, we did not compute individual B-331 profit or loss after April 1962. TWA furnished routing charts for its four 720Bs only for the first few months of operation. Since the 720B schedules remained fairly static, we were able in this case to determine profits and losses for individual aircraft throughout most of the period of 720B operation. Since no B-331B routing charts were furnished for domestic operations, we did not compute profit or loss for individual B-331Bs.

The few B-331s used domestically were scheduled on long haul high load factor flights in the highly seasonal California market and were profitable in 1960 and 1961 during peak months. In off-peak months, some of the domestic B-331s realized operating losses. In 1962, the off-season losses continued. Chart II-E-4 on page II-47 presents the individual operating profits and losses of all B-331s flown domestically in each month from March 1960 through April 1962.

TWA never operated all of its 720Bs at a profit. In eight of the 13 months for which we were able to determine the profitability of individual aircraft, at least three, and sometimes all four, of the 720Bs showed substantial operating

---

1/ See TWA 4C-4, Ex. B.

losses.[1/] The profit picture improved in the peak summer season of 1962, but the fleet as a whole operated in the red during the lease period.

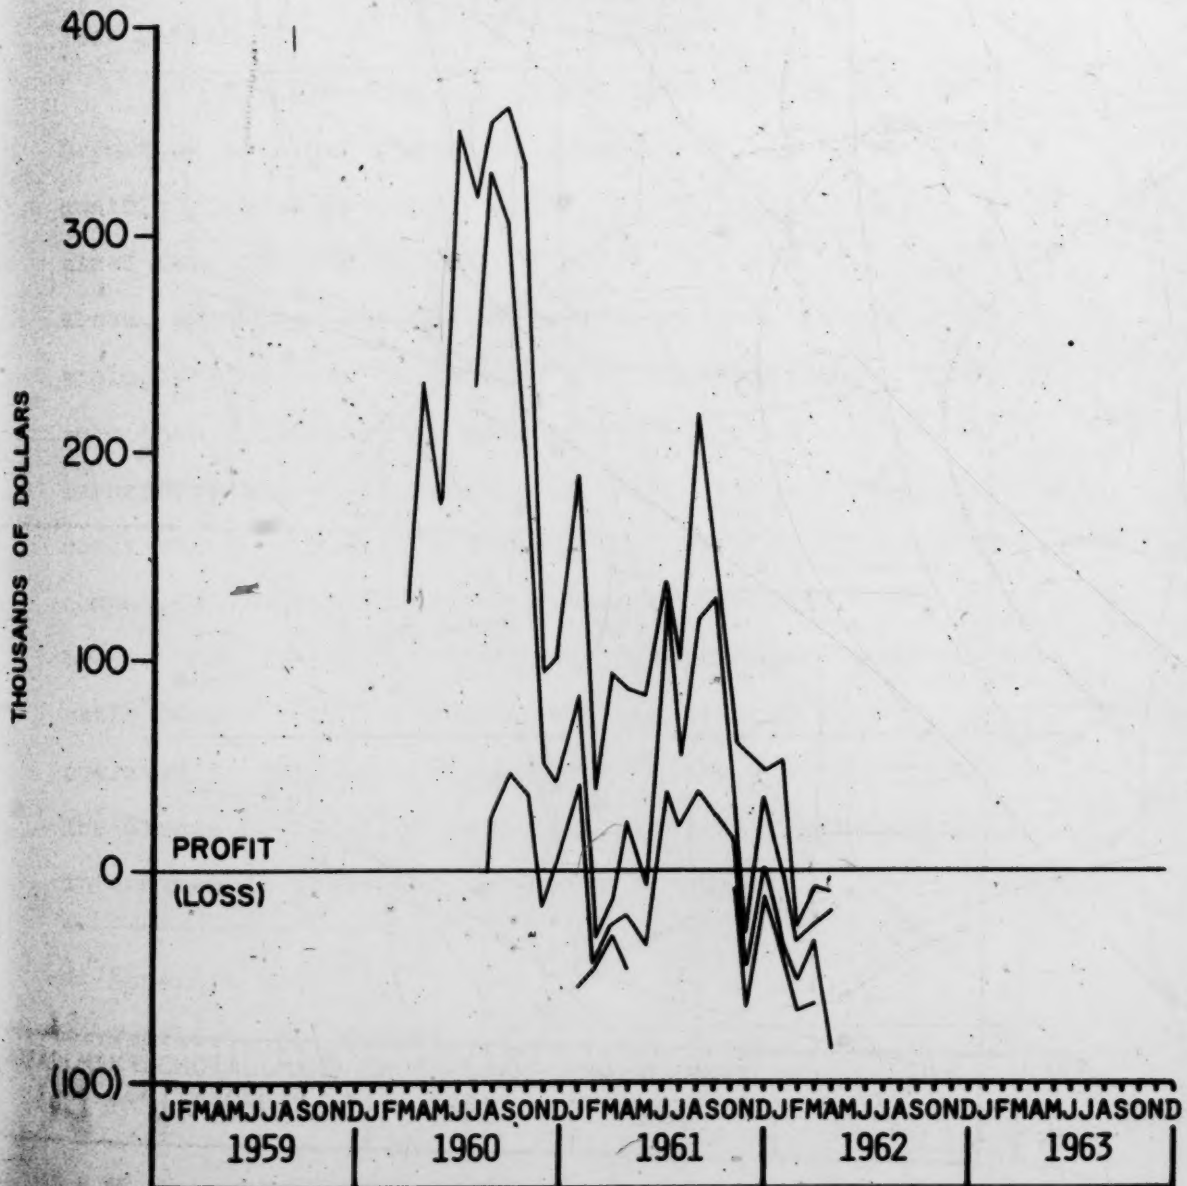
This conclusion is confirmed by an estimate of the profitability of the 720B fleet based on aircraft miles operated and revenue passenger miles achieved by the fleet as reported to the CAB. We found that the fleet lost $895,449 in 1961 and earned $9,307 in 1962 for a net operating loss of $886,142 over the period of the lease.[2/]

Chart II-E-5 on page II-48 presents the individual operating profits and losses of all 720Bs in each month from September 1961 through September 1962.

1/ Since the 720Bs were leased aircraft, rentals are included in direct operating costs.

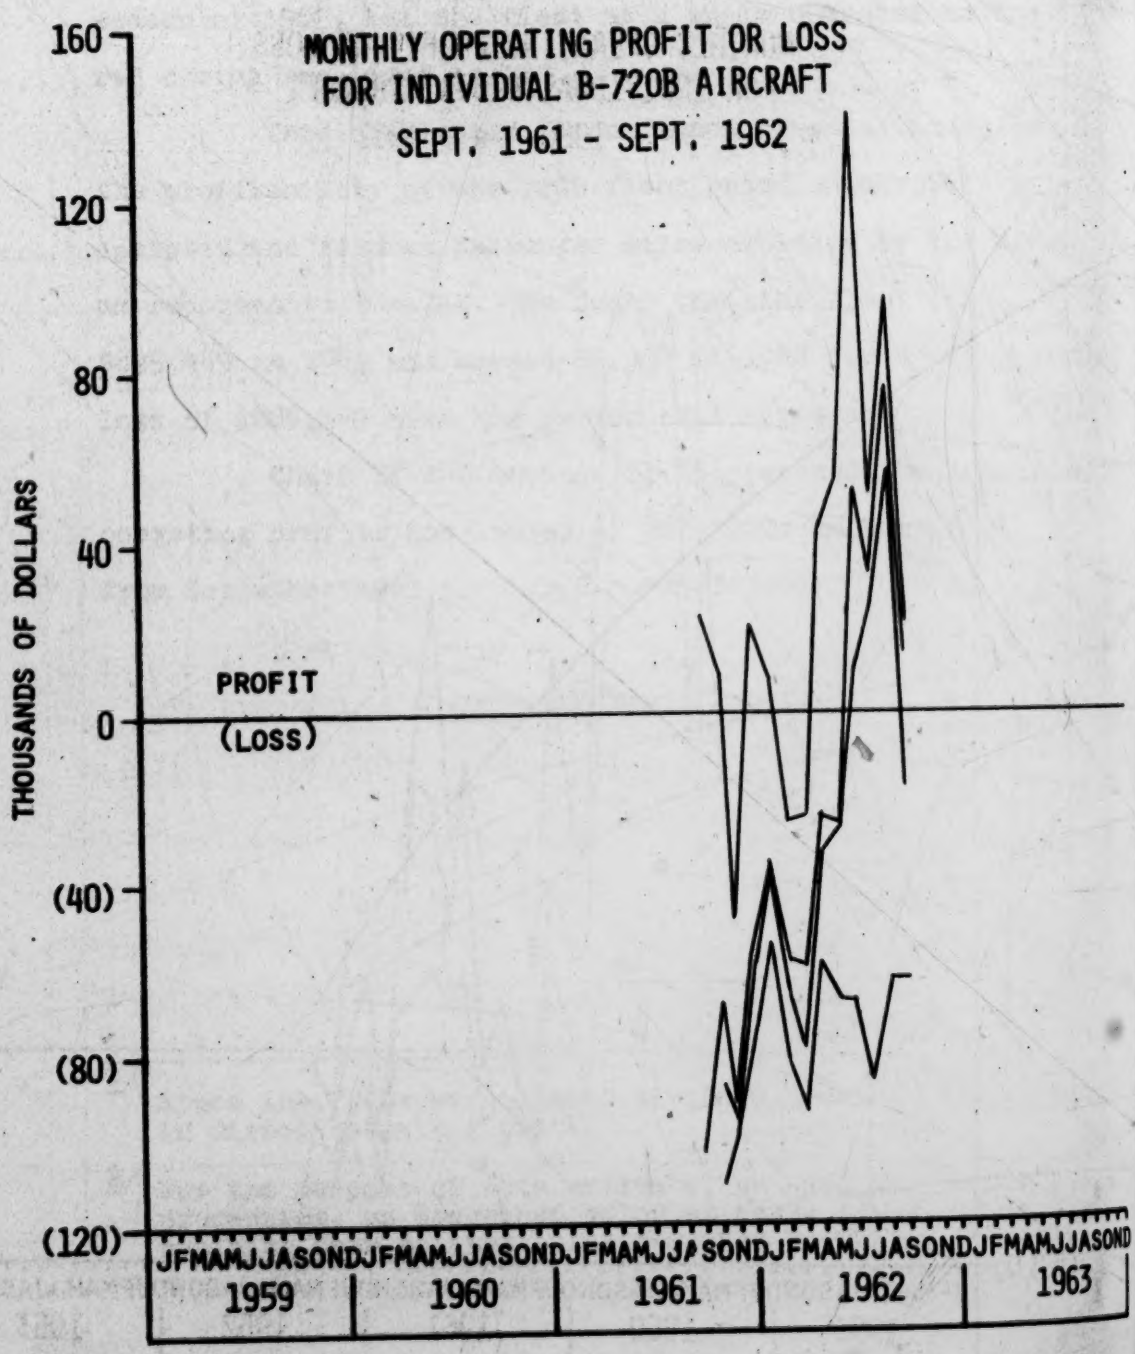
2/ For the purpose of this estimate, we used Mr. Wemple's procedures, as described below at pages II-49, 50, applying them to statistics reported by TWA in Form 41s.

MONTHLY OPERATING PROFIT OR LOSS FOR INDIVIDUAL B-331 AIRCRAFT MAR., 1960-APR., 1962



SOURCE: APPENDIX A

CHART IIE-5



SOURCE: APPENDIX A

2. Profit or Loss Under Mr. Wemple's Procedures

The conclusion that TWA operated many of its jets at a loss during the 1959-1963 period does not depend upon using the S.H.E. revenue and costing procedures. The use of Mr. Wemple's procedures results in a similar profit and loss pattern.[1/]
